NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 7TH, 1894.

DEATH.

At Stuttgart, Germany, on Sunday, 1st July, 1894. EMMA KESSLER, the beloved wife of Hermann Kessler, Tokyo.

SUMMARY OF NEWS.

MR. KIM, the Korean Minister, has left for home.

VOLUNTEER corps are organising in various parts of the country.

THE price of coal is rising owing to the dislocation of the coastwise traffic.

THE graduation ceremony of the Imperial University takes place on the 10th inst.

THE yacht *Spray*, late *Momotaro*, is the holder of the Weston Challenge Shield for the year.

MR. MIYAGAWA KYUJIRO, newly appointed Japanese Consul at Lyons, left for his post on the 30th ult.

THE British Squadron on the China-Japan station left Yokohama for a cruise in northern waters on Tuesday. The ships comprised

H.M.S. *Centurion*, *Alacrity*, *Daphne*, *Linnet*, *Mercury*, *Plover*, and *Severn*.

HIS MAJESTY the Emperor has sent presents of cigarettes and cognac to the Japanese soldiers in Korea.

H.B.M. CONSUL at Yokohama, Mr. James Troup, left for Hakodate on Tuesday on board H.M.S. *Severn*.

THE long drought in Yokohama is over. Rain began falling on Friday evening, and is continuing steadily.

LIGHTNING has killed several persons during the last few days; houses have also been fired and animals injured.

A SOSHI who assaulted Mr. Shimada Saburo has been sentenced to imprisonment for one year and seven months.

H.I.H. THE CROWN PRINCE leaves the capital on the 16th inst. for Numadzu, where he intends staying for about four weeks.

IN the cricket match last Saturday, Mr. G. Philip took five wickets for eight runs; two centuries were made on Wednesday.

THE Yokohama Four-staples Exchange was opened with much *eldi* on Sunday. Mr. Kaneko Kentaro was among the speakers.

THE Kanagawa local authorities propose widening the public roads at Motomachi, Yokohama, devastated by the recent big conflagration.

DR. RITTER, Vice-Consul at Yokohama for the Swiss Republic, has returned from Korea, whence he had gone on Government business.

AMERICAN Independence Day was duly celebrated on the fourth of July, with two sailing races, a cricket match, and a display of fireworks.

COUNT SAIGO, Minister of the Navy, entertained Admiral Fremantle and his principal flag officers at his villa at Meguro, Tokyo, on Saturday, the 30th ult.

A GREAT deal of uneasiness prevails among the Chinese of Yokohama Settlement concerning the Korean embargo; none venture outside the Settlement limits after dark.

DR. AOYAMA and Surgeon Ishigami have been attacked by the plague while prosecuting their medical researches in Hongkong. Latest news gives hopes of their recovery.

A CERTAIN large coal company of Kiushu has resolved not to sell coal to Chinese. The Coal Merchants Guild at Wakamatsu have agreed to take a similar step.

A COOPER on board H.M.S. *Mercury*, while in an intoxicated condition, fell from a sampan into the harbour and was drowned. The body was recovered the following morning, Monday.

THE veteran *Daimyo* won the handsome bronze trophy presented by the officers of the British Navy, lately in harbour, and raced for by boats of the A division of the Yokohama Sailing Club.

A NUMBER of leading residents of Tokyo and Yokohama are preparing to give a congratulatory dinner to Professors Kitazato and Aoyama upon their return from Hongkong. The local physicians are preparing a reception in their honour.

FIGHTS have taken place in various parts of Kanagawa in connection with the water privileges. The appearance of the rice-fields around Yokohama before the rain came was

most pitiable, the earth being deeply cracked while the untransplanted rice was turning a rusty yellow.

THE Commencement exercises of the Yokohama Kyoritsu Jo-Gakko took place on Monday; the High School for Girls broke up on Wednesday, when prizes and diplomas won during the last half-year were distributed by the Principal, Mrs. Smedley.

A SERIOUS explosion has taken place in a coal mine at Pontypridd, Wales, and 260 men are buried alive. The agreement between Great Britain and Germany regarding the Congo Treaty, already cabled, has been officially confirmed. The parleying with France, on the same matter, continues and an agreement with that Power is likely to be less easy. Meanwhile, France is sending a large force to the Ubanghi region of the Congo. The British Budget has passed the Committee stage in the House of Commons by a majority of thirteen votes. The wine and beer duties have been increased in the three Kingdoms. The new Lord Chief Justice of England is Sir Charles Russell, the distinguished pleader who was lately appointed a Lord of Appeal in Ordinary. The strike of railway workmen in the United States is developing aggressively and troops are being called out. A new French Cabinet is being formed in France by M. Dupuy. The U.S. Tariff Bill has passed the Senate by five votes, and goes into force on August 1st. Sir Ed. Grey has announced that the British Government has addressed communications to China and Japan in the interests of peace, advising them to make every effort to arrive at an amicable settlement.

THE Import market has been ruling very dull and apathetic this week, and in Yarns there has been practically nothing done. Quotations are declining in the interior, owing, it is said, to the fears of a poor harvest, and dealers say that they cannot go on with the prices prevailing here. Some demand for Twills sprang up in the earlier part of the week, and some few calls were made for Scotch Fingerings; beyond these things are stagnant. In Metals, some decrease of about 10 cents per picul is to be noted in Wire Nails; if Plate Iron fell a trifle below present quotations we believe some considerable business might be done—holders, however, declare, that they cannot go lower. No sales of importance are reported among Kerosene dealers, and, notwithstanding the large stock now in hand, prices are well maintained. This has been a quiet week for Sugar, though the up-country demand is said to be improving a little; holders are strong at late rates. The opening of the Produce Exchange has not yet begun to affect exports, though there can be no doubt that as time advances its influence will be felt on occasion. Even this week the Japanese brokers have been speculating in Choicest Leaf as high as \$35, a figure which foreign buyers refuse to entertain. The Silk season of 1893-94 closed on the 30th ult. opening again on the 2nd July. The total settlements for the past season were 45,700 piculs, as against 47,700 piculs last year, leaving a stock of 5,350 piculs to be carried into the new season, as against 500 piculs on the 30th June, 1893. Business has been dull in Raw during the past few days, through rumours are afloat of large pending transactions. Arrivals are coming in freely, principally of full sizes. In Waste things are dull. The total settlements for the closing season were 30,000 piculs, against 46,500 piculs for the previous season, the stock carried over being 12,200 piculs as against 2,500 piculs last year. Exchange has been remarkably steady during the week and closes firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Some Japanese papers, as we have already observed, are impatient of what they suppose to be the Government's delay or hesitation about declaring war against China. At present there is no just ground of war against China. Her mere refusal to act in concert with Japan for the regeneration of Korea does not in itself indicate a hostile attitude, and besides, China has a plain right of choice in such a matter. Only when the Peking Government openly essays to obstruct Japan's policy in Korea will the latter be justified in declaring war against the Middle Kingdom. The metropolitan papers know this very well, but they take it for granted that China is determined upon a policy of obstruction. The diplomatic measures that she is taking for an amicable settlement of the complication, are, in the opinion of these papers, a device to gain time for completing her warlike preparations. Viewing the situation in that light, they declare that a collision is only a question of time, and, consequently insist that Japan should so manage matters as to make it impossible for China to rely any longer upon her accustomed policy of procrastination.

The *Mainichi Shimbun*, at first the most moderate and peaceful of the metropolitan papers, is now an ardent advocate of immediate action. In our contemporary's opinion, China's refusal to cooperate with Japan for the work of reform in Korea and her allusion to Korea in diplomatic documents as her dependency, are sufficient to show that she is determined on appealing to the *ultima ratio*. The longer the delay, the keener and more serious will become the struggle. In another article, our contemporary alludes to the erroneous policy pursued by Japan in Korea in 1884, and recommends the Government to take prompt and decisive measures at the present juncture so as to make both China and Korea fear and respect Japan.

The *Kokkai* deprecates any rash and hasty step, but at the same time is strongly opposed to a situation of continued uncertainty. It declares that the Japanese Government is competent to terminate this uncertainty. Japanese statesmen, continues our contemporary, seem to be now waiting for China to commence hostile operations. Nothing could be more fatal to Japan's interests than such a passive policy. The Japanese Cabinet should send an ultimatum to the Peking Government, warning them against further interference in the internal affairs of Korea, and demanding the withdrawal, within a stated period, of the Chinese troops from Korea. Should China consent to the course suggested by Japan, the question will be settled. But should she refuse to act as desired, it will then be time for Japan to declare war against her. In conclusion, the *Kokkai* expresses satisfaction with the news that the Japanese Government has declined to entertain offers of mediation on the part of certain Powers. It advises the Cabinet never to pursue a passive policy against China.

The *Yiji Shimpō* takes pains to assure outsiders, as well as those concerned, that Japan has no designs upon the territory of Korea. It is not unnatural that some persons should entertain a suspicion of Japan's secretly harbouring an intention of annexing the peninsula. "But we do not hesitate to assure such persons that, in our opinion, Japan will never pursue a policy of aggrandisement in Korea.....Should there be a land suitable for them to settle or occupy, the Japanese would not decline to do either. But nothing could be gained by annexing Korean territory; on the contrary, such a measure on Japan's part might be prejudicial to the general peace and tranquillity of the East. Apart from any question of morality, considerations of more interest counsel us against the annexation of the peninsular Kingdom."

Our contemporary then proceeds to dilate upon the dangers attending the direct contact of strong Powers, and upon the advantage of maintaining a buffer state between them to soften the shock of collision. Some years ago, a party in Japan advocated the amalgamation of Korea into this country's territory, but a better understanding of the state of affairs has awakened these persons from their dream of conquest. Japan's object in despatching troops to Korea, is simply to see to the placing of Korean progress and independence on a sound basis. As to the reformatory measures to be adopted, our contemporary suggests, first, that the official organization should be thoroughly revised so as to invest the Ministers of State and other high officials with a due share of responsibility; secondly, that laws should be enacted on modern lines, and strictly enforced; thirdly, efficient systems of police and *gendarmerie* should be created; fourthly, the foundations of financial and economical development should be laid; fifthly, the Army and the Navy should be remodelled, or rather created; sixthly, educational institutions should be thoroughly reorganized; and seventhly, that reforms should be introduced in every other department of national life. In short, the *Yiji* insists that the work of reorganization should be thorough and complete. Special attention is directed to the importance of abolishing the custom of maintaining a staff of eunuchs at Court. The thing is contrary to nature, and such an institution is liable to work serious mischief in politics. It has happened frequently that eunuchs of exceptional force of character and extraordinary talent obtained such complete ascendancy over the minds of the King and the Queen as to constitute themselves (in all but form) the real rulers of the country.

The *Niroku Shimpō* thinks that in the event of war Japan ought to direct her energies to the annihilation of the Chinese Navy. There are some people, says our contemporary, who advocate that troops should be at once landed in China and marched in the direction of Peking. That is a fatal error. Before anything of the kind can be attempted, Japan must be sure of complete supremacy on the sea. Without such supremacy, she would be unable not only to invade the Chinese in their land, but even to maintain her ground in Korea. When once maritime supremacy is obtained by Japan, the *Niroku* apparently thinks it a comparatively easy task to humble China. Triumphant on the sea and with Korea as a basis of land operations, Japan, we are told, would unquestionably have her big neighbour at her mercy.

The *Kokumin Shimbun* takes it for granted that there will be war between Japan and China, and that the former will be entirely victorious. Our contemporary consequently does not think it too early to consider the demands which this Empire ought to prefer to the vanquished China. First of all, Japan should demand an indemnity sufficient to cover the expenses incurred in the prosecution of war as well as in making provision for the wounded and the families of the slain. Japan should further insist on the payment of the sum in gold. The *Kokumin's* idea is that the money thus obtained should be employed for the adoption of a gold standard in this country. In fact, our contemporary proposes that Japan should imitate what Germany did with the war indemnity obtained from France. Another demand which Japan ought to make is that the treaty between the two countries should be revised, in the sense that, on the one hand, the Japanese in China should enjoy all the privileges accorded to the most favoured nation, as well as some other special advantages, and that, on the other, the Chinese in Japan should be brought under the jurisdiction of the Japanese Courts.

The *Nichi Nichi Shimbun*, writing on the same subject, observes that the policy of maintaining Korean independence and furthering her

progress is one which Japan has always pursued in the past. The principal recompense Japan seeks to obtain for her trouble is the creation of a neutral state provided with fair means of self-protection against foreign invasion. In matters of immunities and privileges in the peninsula, Japan ought to be satisfied with such as may be granted to other Powers. It is not, however, (continues our contemporary), to be expected that Japan can incur heavy expenses on account of Korea without some means of repayment. Even, however, in securing the recovery of some part of the outlay made by Japan, she ought to be liberal and magnanimous. Our contemporary cannot, therefore, agree with those who insist that Japan should obtain especial advantages in the Korean peninsula. With regard to the carrying out of the mission undertaken by Japan in the peninsula, the *Nichi Nichi* states that she will not be induced, under whatever circumstances, to abandon the task before it shall have been completed, and that she will be compelled to regard as her enemy whatever Power may interfere with her work in the peninsula. Concerning the impatience shown by the majority of the metropolitan papers about the suspense of the present situation, the *Nichi Nichi* reminds those journals of the fact that the primary object of the Japanese troops in Korea is now to guard the independence of the peninsula, and not to fight China. As the result of certain diplomatic negotiations, Japan has to take upon her own shoulders the responsibility of maintaining progress in the peninsula. In order to discharge this important trust efficiently, the presence of a large body of troops is essential. "With all respect for the independence of Korea and her sovereignty, it is to be recognized that the troops now stationed there may be regarded in the light of a permanent garrison. In fact, the consequence of the present policy will be the establishment of a Seventh Garrison in the peninsula. The troops are to remain in Korea until she shall have become strong enough to defend herself." Such being the case, there is no cause to be impatient about the inaction of the force in Korea. Should China, however, attempt to block Japan's path in the peninsula, she ought to fight. But in that event, the theatre of war will not, in the *Nichi Nichi's* opinion, be Korea. Japan must be prepared, if necessary, to sustain the conflict for any length of time. There is no necessity for taking any ill-advised and precipitate motion.

Concerning the Tientsin Treaty, a large section of the press advocates its abrogation. These papers maintain that the object of the treaty being negative, its stipulations are incompatible with the positive policy which Japan has now decided to pursue in Korea. The Chinese Government, in the opinion of these journals, is opposed to the abolition of the treaty, and consequently the opening of negotiations for that purpose is believed to be the best means of bringing the complication to a speedy issue one way or other. They further demand that the negotiations should be carried on with the Chinese Government by a special Ambassador appointed for the purpose.

The *Nichi Nichi Shimbun*, the *Yiji Shimpō*, and some other papers are of a different opinion. They laugh at the great noise made by certain journals about the abrogation of the Tientsin Treaty. They fail to perceive, in the first place, that its abrogation is not yet necessary; and in the second, that, should such a course become advisable, the object could be attained more expeditiously by means of a diplomatic note or even by a single telegraphic communication.

There being a tendency to offer insults to the Chinese residents in the streets of Tokyo, the *Kokkai* advises its countrymen to be civil and considerate even in the event of war between the two countries. Profound sympathy is expressed by the whole press on account of the sickness of Professor Aoyama and Surgeon Ishigami in Hongkong.

EDITORIAL NOTES.

EXCITING SCENE IN THE TOKYO CITY ASSEMBLY.

A SCENE of no small confusion was recently presented in the Tokyo City Assembly, originating in a motion of a want of confidence put by one of the members. The motion was directed against the Committee formerly selected for the transaction of all business connected with street-improvements. Some time ago, our readers may remember, the City Assembly decided that the width of the streets as stipulated in the Improvements Regulations, ten *ken* (=60 feet), was too great, and that therefore the average width should be reduced to eight *ken* (48 feet). This resolution was reported to the Minister of Home Affairs by the Street Improvement Committee, ten members of which body are selected from out the City Assembly. The Minister in question has, however, rejected the presentation and decided to abide by the stipulations of the Regulations. Now the City Assembly has for some time since had a special Committee commissioned to investigate into the actual state of affairs, and, in behalf of this body Mr. Nakajima Matagoro suggested, at the recent meeting, that, as a temporary measure, the width should be reduced to eight *ken*. He further stated—and not with any too great discretion, in our opinion—that, with regard to the nature of the required business, should the prosperity of the City in another fifty or one hundred years necessitate the widening of the streets as put down in the Regulations, this might be done at that time, in accordance with the needs of the metropolis at that distant date. A few members objected to this proposal, but when the sense of the meeting was taken a large majority were found in favour of Mr. Nakajima's temporizing proposition, and the motion was accordingly passed. The mover then asked the permission of the Chairman to introduce an urgency motion, and on this being granted, he said that he considered the action of the City members of the Street Improvement Committee directly opposed to the best interests of the City, for they had not properly supported the representation submitted by the Assembly to the Minister of Home Affairs when the latter had occasion to interrogate the Improvement Committee concerning the matter in question. In view of the indifference of the Committee, and particularly of those members who had been selected as representatives of the City Assembly in the matter, the Home Minister had rejected the representation, without formally obtaining the sanction of the Committee as a whole. Mr. Nakajima therefore moved that a vote of want of confidence should be directed against the members in question and that they should further be made to resign their commissioner-ship. A scene of great disorder ensued, but just as another motion was being put as to whether or not the Committee-men thus censured should be required to leave the chamber or continue in their seats, a number of members arose and abruptly left the room. Insufficient for a quorum remaining, Mr. Kusumoto declared the sitting for the day closed. On the following day the deliberation on the second motion was renewed, and it was resolved that the impeached members need not quit their seats and that the strangers' gallery need not be cleared. The voting then commenced. Twenty-eight members were present, and no less than twenty-one of these voted in favour of the motion, only six opposing ballots being cast, the Committee members being thus declared to have forfeited the confidence of the Assembly. The impeached members subsequently held a conference of their own, in which they concluded that they saw no valid reason to comply with the decision of the Assembly, having conscientiously acted as they deemed best for the interests of the metropolis.

A LADY LOYALIST.

THE only survivor, if we remember aright, of the very few lady loyalists who played a conspicuous rôle in the troubled days preceding the Restoration, has just died. Matsuo Tase

was the wife of Matsuo Junsai, a petty retainer of the once powerful Takasu class, in Mino. The lord of Takasu had a small fief not far from Iida, an unpretentious town in Shinano, and Matsuo was one of the retainers of the Takasu clan living in that remote corner of the country. Tase, eldest daughter of Takemura Kagemitsu, a country squire (*goshi*), residing in a village in Shinano on the border of the Takasu fief, and was born in the year 1810, and married Matsuo Junsai at the age of 19. Nothing particular is known of her early womanhood, except that she was fond of literature and bought, when at the age of forty, a complete set of the works of the celebrated Murasaki Shikibu, then a rare and costly possession. Neither Matsuo nor his wife had sufficient money to purchase the books outright, so it was not until she had, with the full consent of her husband, disposed of a part of her marriage dowry that Tase was able to buy the long-coveted volumes. She was an indefatigable seeker after knowledge, and when more than fifty years old—a time in which most Japanese consider themselves only fit to retire from active service, an idea which prevailed far more in the pre-Restoration days than it does at present—she became a disciple of the noted Hirata Atsutane, one of the most famous scholars and fervent loyalists of that time. Earnest perusal of the works of the elder savant and frequent conversations with him awoke in her a sentiment of ardent devotion to the Imperial cause, which was soon to be put to the test. The advent of foreign ambassadors desirous of opening the country to commerce, greatly agitated the minds of those hardy warriors who were already discontented with the Tokugawa Regency, and they flocked in great numbers to the then seat of the Imperial Court, Kyoto, with the intent of encompassing the downfall of the Bakufu and the restitution of Imperial supremacy. The Choshu clan was most notable for its zeal in this loyal cause, and it was with the retainers of that astute clan that Tase held frequent and intimate intercourse. Taking advantage of her comparative immunity from the suspicion of the Regency, which was so strongly directed against the *samurai* supposed to hold advanced views, the brave old lady played a most useful as well as highly dangerous rôle, which would have been followed by immediate detection had it been undertaken by a male agent. It was she who acted as a go-between in the correspondence exchanged between the loyal *samurai* and the courtiers who shared their views. Finding, however, that the sentiment of loyalty was but imperfectly awakened in the *samurai* class and that the great programme which she and her fellow-thinkers had resolved upon met with feeble response on the part of the public, she consulted with her comrades as to the most efficacious method of making some public demonstration. One fine morning the people of Kyoto were astonished at seeing the heads of the wooden images of the first three Ashikaga Shoguns (which images stood in the Toji-in in the western section of the city) exposed in one of the public squares in the manner that the heads of felons were treated in those days. Immediately beneath the heads was a placard stating that the three Ashikaga magnates had been decapitated because they had been and still were intensely hated as most evil usurpers of the Imperial prerogatives. The whole affair was the outcome of conferences that Tase had had with her friends. This audacious step on the part of the loyalists made the agents of the Regency still more vigilant in their espionage of those who had hitherto been regarded as disaffected, and many were the *ronin* who, unjustly, were arrested and imprisoned. In the course of their espionage, the Tokugawa secret agents gradually came to keep a watchful eye on the movements of Madame Tase. She was fully aware of this, but so strictly kept was the watch that she could find no place where she might hope for comparative safety from the spies of the Shogunate. For this reason she boldly determined to be careless of her personal safety, and with heroic resignation awaited in her lodging the arrival of her captors. It was just then,

fortunately, that a friend in the Choshu clan obtained for her permission to reside in the Kyoto mansion of his noble master, and she thus narrowly escaped arrest and imprisonment. The spacious mansion of the lord of Choshu was then a sort of refuge for patriots who aimed at the subversion of the Tokugawa Regency; yet in it there were not a few who, feigning to be devoted to the Imperial cause, really were nothing but spies of the Shogunate. The shrewd eyes of the lady soon discovered a number of these men of questionable honour, whereupon she and her friends reproached them in terms of such bitter and unmeasured invective that the very next day several of them committed suicide out of shame, while others secretly fled from the house and its precincts. After staying for about a month in the mansion of the Lord of Choshu, domestic affairs obliged Madame Tase to return to her home, in company with her son. She still, however, kept up a correspondence with her compatriots in Kyoto and not a few of them found beneath her roof a shelter from the hot pursuit of the Regency agents. This caused some trouble to the family, for the eldest son was summoned to Yedo to answer a charge of being implicated in the disorderly doings of the *ronin*; he was, however, soon released from confinement through the kindly intercession of the lord of Takasu. When the chiefs of the abortive Mito rising against the Shogunate passed not far from her village, she sent her son to them as her proxy, being herself confined to the house by indisposition. He was to tell them that she heartily sympathised with them and wished them all success. When the relations between the Imperialist faction and the Shogunate grew still more strained she hastened to Kyoto accompanied by her two sons. Shortly after this the Imperialist troops set out for Yedo, following the coast and the inland routes. She at once bade her two boys volunteer for the Imperial cause, while she remained in Kyoto. After the successful accomplishment of the Restoration, her life was easy and honoured, as it indeed deserved to be. She received a number of gifts from feudal lords who knew her merits; among others, the lord of Takasu endowed her with twelve-men's ration of rice. She came up to Tokyo more than once and was accustomed to wait on Prince Iwakura, who was one of the very few men for whom the old lady had a profound admiration. Since 1882 she passed the time in peace at home, spending her days in literary studies or in the management and superintendence of her large farm. She died on June 10th at the ripe age of eighty-four. We must add that in 1892 this noble lady loyalist received from the Court several pieces of white and crimson crape, in token of the Imperial recognition of her meritorious services. Few indeed have lived so brave and useful a life as Madame Tase Matsuo.

EFFECTS OF MODERN PROJECTILES.

A REMARKABLE and gruesome series of experiments were recently carried on in Germany for the purpose of determining the effects of modern small-arm projectiles. The Germans went to work in the most practical manner. "They not only succeeded in placing an entire company of corpses in line, but in order to give the tissues all the natural resistance and to give the forms the appearance of real soldiers, they injected coloured fluids, armed and equipped them and exposed them to fire accompanied by living horses. The Surgeon-General of the Prussian army gave the result of the experiments in a report made to the Medical Congress held a few weeks ago at Rome. There were employed in the experiments 483 dead bodies, 13 living horses, and 16 dead horses. These were fired on at distances varying from 150 yards to about two miles, there being an expenditure of 1,000 rifle balls. The report read was too long and technical to be given in full, but portions of it will interest the general reader from a humanitarian point of view. Its general tenor was that wounds made by modern weapons and projectiles are incomparably more serious than those made by the weapons formerly

employed. At moderate distances up to half a mile the clothing is not forced into the wound, but the effects are frightful. All the drops of liquid contained in this part of the body, taking the force and swiftness of the projectile, and trying to escape in every direction, strike the sides of the cavity with terrible force. The bones, instead of being pierced, are crushed in mass, as by an explosion of dynamite, and the fragments are sent off in every direction through the body. The liver and heart are pulverized, the intestines torn into small pieces and lacerated in the most singular manner. The hole made by the ball in entering is scarcely perceptible; that which it makes in leaving the body is sometimes six or eight inches in diameter. It is to be borne in mind that the ball always passes entirely through the body, and through a second and third if they are placed one behind another, only stopping in the fourth. A ball striking the arm or leg destroys the member entirely. If it strikes the head, the neck or the abdomen, it kills infallibly. If it passes through the thoracic cavity the wounded person may recover if the vital organs are spared. Beyond half a mile, and most of the firing in future battles will be beyond that distance, the wounds are a little less serious and the mortality less. The effects are still, however, far more serious than with the weapons formerly in use. From two-thirds of a mile to distances slightly exceeding a mile, the bone is fractured all about the hole made by the ball in its passage. Even when the distance considerably exceeds a mile bone is broken in nearly half the cases, and the splinters are driven in different directions through the flesh. At longer distances the clothing is driven into the flesh, which is always a serious aggravation of a wound, not only on account of the presence of the cloth itself, but because it is generally covered with microbes that produce corruption. The report adds other peculiarities attending the use of the new ball. The envelope, which is composed of sheet steel, loses its shape when it enters the body, and often divides into minute fragments, each of which take a different direction, lacerating all it comes in contact with. Its temperature when it enters the body is greatly elevated, always 70 degrees and sometimes as high as 350 degrees. A few of these peculiarities were observed by the French during the war with Dahomey in the use of the Lebel rifle. The ball of this weapon, which is an exceedingly small, oblong object cased with steel, killed in many cases two of three Dahomans if they happened to be one behind the other, but the French surgeons had not time to study the nature of the wounds. Even if they had dissected and examined minutely all the wounded it is scarcely probable they would have discovered all the singular effects mentioned, numerous changes having been made in Austria and Germany since the Lebel was invented. It is easy to see how uncertain it is to be the issue of future wars with the smokeless powder, these terrible weapons in the hands of the infantry, and an artillery entirely metamorphosed and infinitely more effective. It is not surprising that, furnished with these means of destruction, the great nations of Europe should hesitate to provoke a war the results of which no one can foresee, but which would, in any event, be terribly disastrous."

"TREASURE TROVE."

Mr. C. G. Coningham, already favourably known through his publications "The Policeman's Pocket-book" and "Practical Business Conversation," has placed the public under further obligations by compiling a work called "Treasure Trove" or "A Pocket Encyclopedia of Household Conversation." The sentences are well chosen and adapted to everyday purposes. They have been rendered into Japanese by Mr. S. Takahashi. He is sometimes a little too literal in his rendering and sometimes much too free. Who, for example, desiring to say to his servant "What a tough piece of meat that was you gave us," would put his words in the form:—"omai ga watashi ni kareta niku wa domo katasu niku da ne;" or who, wishing to convey the warning "that might cause a fire"

would say, "ano ban kuwaji ga deta." The former of these examples betrays the too common mistake of translating all English personal pronouns into Japanese in total disregard of the spirit of the two languages, and the latter is simply a blunder. It is delightful to observe Mr. Takahashi's manner of dealing with the difficulties of every day dialogue. When one least expects it he romanizes an English word and imports it frankly into Japanese, while a few pages later on he paraphrases with immense circumlocution a word almost incapable of such treatment. Thus instead of saying *ryori-ban*, as every Japanese does to or of a cook, Mr. Takahashi uses *kokku*, but when he comes to "fender," he "climbs round" it by *hi wo taku tokoro no mat ni aru mono*, which might as well be applied to the hearthrug or the cat as the thing it is intended to signify. Much more serious is the terribly perplexing method adopted of running the Japanese words into each other, the results being sometimes comparable to the celebrated dish of Aristophanes. There is at all events no lack nowadays of Japanese-English conversation books.

SEALING CATCHES.

The following is a list of sealing schooners, with their catches, which have put into Hakodate up to June 28th:—

British Schooners. Seal catches.	American Schooners. Seal catches.
<i>Maud S.</i> 1,097	<i>Alexander</i> 810
<i>C. G. Cox</i> 2,440	<i>Penelope</i> 656
<i>Beatrice</i> 947	<i>Anna Mathilde</i> ... 152

DR. KITAZATO AND THE PEST BACILLUS.

CONCERNING Dr. Kitazato's alleged discovery of the cause of the Pest, the following extract from a letter said to have been received by Messrs. Hamanaka and Co., a firm in Osaka, from the Captain of the *Toyoko Maru*, a steamer plying between Hongkong and Saigon, is interesting. It is true that the letter refers to the matter in rather vague terms, nevertheless the writer is said to have obtained the learned bacteriologist's permission to write as he did—at least so says the *Tokyo Asahi Shimbun*, from which this is transcribed. Drs. Kitazato and Aoyama reached Hongkong on June 12th, and at once began their investigations into the cause of the disease, their experiments being carried on in one of the rooms of the Government Hospital. Dr. Kitazato was soon able to verify the presence of a species of septic bacillus in the blood of the patients, the bacillus being one of those lower organisms commonly found in decaying matter. The plague is directly contagious, in proof of which assumption an attendant of the Hospital actually used, by way of experiment, the bed clothes of a man who died from the plague. Dr. Aoyama is particularly engaged in tabulating the clinical symptoms of the patients and is said to have almost concluded an exhaustive series of investigations. The French Government has despatched some Saigon practitioners to the pest-ridden colony.

The Chief Physician of the Hospital has telegraphically informed the British Government of Dr. Kitazato's discovery. From this point onward the *Asahi* indulges in paeans of gratitude and national pride: both of which, if Dr. Kitazato's has actually fulfilled all the requirements of exact medical science in his discovery, are not out of place. We may, however, parenthetically remark that a great deal has yet to be proved before the Doctor's discovery can be accepted as of real value.

THE SIX SECTIONS OF THE OPPOSITION.

THE various sections of the Opposition having been officially informed that if they desired to work in political union they must abandon their separate organizations, and having perceived that they must obey the injunction or assume an attitude of direct opposition to the law, have finally decided to form one great association under the name of the Central Political Party (*Chuo Seissha*). Accordingly, on the 30th ult., they announced their platform, and formally applied for registration as a political party, the step being immediately followed by the secession of various leading men from the Six Parties, as Mr. Ozaki Yukio from the *Kakushin-to*, Mr. Kudo Kokan from the Reform Party (*Kakushin-to*), Mr. Sasa Tomofusa from the *Kokumin Kyokai*, and Mr. Takenouchi Seishi from the *Chugoku Shimpo*. These gentlemen, together with Messrs. Oi Kentaro, Ayai Takeo, Shiga Choko, and Kurihara Busada appear to have been the first to join the new association. The platform announced is very simple. It consists of only two items; namely, a Sovereign Policy in Foreign Affairs (*Yishuteki Gaikoshugi*), and the establishment of Responsible Cabinets in Domestic. Simplicity has its advantages when the sole object in view is to unite men for a destructive campaign, but politicians, when they have destroyed one administration, have to accept the task of constructing another, and they may then find it inconvenient to be in a camp held together by vague generalities.

DANCING IN TOKYO.

THE large dining-hall of the Hotel Metropole, Tsukiji, was filled on Saturday afternoon by an interested assemblage representing most of the families in Tokyo, who met by invitation to witness an exhibition of dancing by Mrs. Patton's pupils. A complete and fashionable ball-room programme was presented, consisting of Saratoga Lancers, Waltzes, Highland Schottisches, Parisian Quadrilles, a Barn Dance, Walking Polka, etc., besides several special dances for the more juvenile pupils, such as the Norwegian Dance, Sir Roger de Coverley, and the Singing Lancers. The last of these was as pleasing to the parents as to the children themselves. The manner in which all the dances were gone through was much admired, and the easy grace, self-command, and quiet deportment of the young pupils was noticeable. The dancing of a tiny little girl of 4, who threw herself heart and soul into nearly every dance, was a source of amusement to the spectators. The cordial manner in which a few remarks made by Mrs. Patton were received, proved that a most amicable understanding was established between herself and pupils and their parents, and a universal wish was expressed that Mrs. Patton would revisit Tokyo after the summer vacation, when many assurances of additional support were guaranteed.

A THIRD METROPOLITAN NEWS AGENCY.

ALTHOUGH of comparatively recent date, the Tokyo News Agency is the oldest of such institutions in the capital; the oldest and popularly supposed to be the most trustworthy. A little more than two years ago the Teikoku Tsushin-sha was established by the amalgamation of two or three petty and until then rival concerns. Mr. Nakashima Shinichi, a man of good antecedents but deplorably deficient in the sense of commercial honour—as some Yokohama firms can testify—was for about one year President of the Company. Despite his subsequent defection, the Imperial News Agency has prospered as it deserves. And now we have

a third rival establishment in the *Nai-gwai Trushin-sha*, a large new agency started last month by that progressive and indefatigable firm the Hakubun-kwan. There never was a shrewder man of business than Mr. Ohashi, the head of this great publishing house, and it is very easy to foresee that this latest news agency will soon supplant the other two in the public favour. It is, however, an excellent indication of the rapid growth of journalism in Japan when we find three large agencies of this description in one and the same city.

THE "JIJI SHIMPO" AND THE "NORTH-CHINA DAILY NEWS."

THE *Jiji Shimpō* translates into its columns an article from the *North China Daily News* with reference to the Korean embroglio, and prefaces it by some scathing remarks on the ignorance generally displayed by foreign journals in commenting on Japanese affairs. We venture to think that if any fault is to be found on that score—and it must be frankly admitted that great fault does often exist—the Japanese press is at least equally to blame in respect of its treatment of foreign affairs. Nor can we perceive that our Shanghai contemporary's writing is open to such severe censure on the present occasion. It is true that the *N.-C. D. News* has apparently been misinformed as to the Japanese Government's purchase of Cardiff coals, and as to a rumoured embargo upon the export of Japanese coal. But these are trifles. Evidently the chief cause of the *Jiji Shimpō's* umbrage is an assertion of the Shanghai paper's that "China, as far as we can judge, has done nothing in Korea that she ought not to have done, and that it was not her duty and right to do;" and that "nothing could have been more correct of late years than the attitude of the Viceroy Li and the Resident Yuan toward both Korea and Japan." We ourselves disagree most emphatically with the *North China Daily News*. So far from endorsing as right, in accord with duty and superlatively correct, the conduct of China, of the Viceroy Li and of the Resident Yuan in Korea, we are entirely persuaded that the shilly-shally policy of the Middle Kingdom in the peninsula, its alternations of meddling and shrinking, of menace and self-effacement, have been fatal to the development of the Koreans' spirit of independence and to the reform of their domestic administration. But the Shanghai journal thinks differently, and is assuredly entitled to its opinion.

BRITISH MALAYA.

DR. N. B. DENNYS, author of the "Folklore of China," has published an excellent work on British Malaya. It is entitled a "Dictionary of British Malaya," and it appears to justify the title, being an almost exhaustive compendium of information on subjects relating to the portions of Malaya that lies within the sphere of British influence. The method now coming into vogue of embodying matter of the kind in dictionary form is most commendable. The busy man is enabled to find at a glance what he wants to know, whether the information sought be geographical, historical or ethnological. "The Descriptive Dictionary of British Malaya" is a handsomely bound and clearly printed volume of convenient size. Such a work ought to be of the greatest utility to foreigners in the East. It is procurable at Messrs. Kelly and Walsh, Limited.

GOVERNMENT AID FOR LIEUTENANT GUNJI'S PARTY.

It is well-known, says the *Kokkai*, that having fallen into a most distressed condition consequent upon lack of funds for supporting or undertaking any enterprise, Lieutenant Gunji's party, now on the island of Shimushiri in the Kurile Archipelago, has petitioned the Government for a grant-in-aid. The matter was recently brought to the deliberation of the Cabinet, and it has at last been decided to reply to the application affirmatively. Opinion was for some time divided as to whether the next session of the Diet should be waited for or not, in order to bring the matter before that

body; but certain peers greatly interested in the work begun by Lieutenant Gunji and his associates, earnestly endeavoured to induce the Cabinet to grant the subsidy at once, the consent of the Diet to this step to be asked later on. Their efforts have been successful, and it is said that the Treasury will at once forward the aid requested, the money coming out of the reserve fund, as an outlay of great urgency. The subsidy is stated to be fifteen thousand yen.

INTERNATIONAL ARBITRATION.

THE Society for International Arbitration at Paris, under the presidency of Mr. Frederic Passy, recently elected its executive council for the coming year. The honorary members of this council, seven in all, are Jules Simon, Victor Duruy, Berthelot, Guillaume, all of whom are members of the Institute of France, Michel Revoil, Laureate of the same and Professor of Law at the Japanese Imperial University, Jules Gailard, member of the Chamber of Deputies, and Mr. Moneta, a well-known Italian author, journalist, and parliamentarian. Now that the growing spirit of international unrest threatens an anxious world with a formidable and unprecedented explosion, we cannot but wish the highest possible success to the eminently civilising efforts of this Society and congratulate the Imperial University on having one of its instructors in such distinguished company.

THE "DOMEI-KAI" AND KOREA.

THE *Domei* Club held a meeting in the Tokyo Hotel on the 30th ultimo to discuss the Korean question. Very emphatic resolutions were adopted:—That Japan had been the first country to give practical effect to Korea's independence, and that the responsibility of making that independence an accomplished fact, rested with Japan; that inasmuch as not Korean prestige alone but that of Japan also would be seriously impaired if, under such circumstances any interference with Korean independence were permitted, therefore any country attempting such interference must be regarded as the enemy of Japan no less than of Korea; that the time for carrying out the policy of completely establishing Korean independence had now arrived, and that it was Japan's urgent duty to take decisive steps in that sense; that reforms must therefore be introduced in the domestic and foreign affairs of Korea, and that means must be adopted to develop her resources and industries.

DR. KITAZATO AND THE FLAGRA.

FROM a telegram despatched by Dr. Kitazato and which reached Tokyo at half-past ten on the morning of the 2nd instant, we learn that no particular change has taken place in the condition of Drs. Aoyama and Ishigami since the development of the disease. It was expected that their recovery or otherwise would be ascertainable in two or three days. Dr. Ishigami accompanied the two learned professors as assistant. He is a naval surgeon on the retired list and an assistant physician in Dr. Kitazato's hospital.

From a letter sent by Dr. Ishigami to a friend of his in Tokyo, the letter being published by the vernacular press, we make the following extracts. The writer says that he is constantly employed in rendering assistance to Dr. Kitazato in the Government Hospital, working hours being from nine in the morning until six or seven in the evening. The Hong-kong practitioners being acquainted with the fame of Drs. Kitazato and Aoyama and moreover struck with admiration for the remarkable dexterity they display in their investigations, have done all in their power to make everything convenient. So soon as the two learned experimenters signified their intention of beginning investigations into the cause of the plague, the Hospital authorities at once consented to their making autopsies of pest patients and further ceded the right of making all surgical operations to Dr. Aoyama. Upon Dr. Kitazato's discovery of a new and particular species of bacillus in the blood and internal organs of pest-cada-

vers, the authorities afforded the bacteriologist opportunity to examine the blood of infected patients. Five cadavers had been thoroughly examined when the letter, bearing the date of June 19th, was despatched. The bacillus discovered by Dr. Kitazato goes generally in pairs, has a sort of outer envelope, and greatly resembles the organisms found in fowls that have died of chicken-cholera. This strange bacillus is invariably found in the blood of every pest-patient, and abounds in the spleen and lymphatic glands of those who have died of the disease. The cultivation of this bacillus was successfully effected and experiments made on animals were also attended with complete success. The bacillus being thus indubitably shown to be the cause of the plague, telegrams announcing the discovery were sent to the Minister of Home Affairs and other notable personages. A disciple of Dr. Pasteur had arrived from Saigon a few days before and had established a laboratory in the Hospital, but he was not much encouraged in his experiments owing to Dr. Kitazato's rapid and thorough measures. The cause of the disease having thus been discovered and its nature generally determined, Dr. Kitazato intended to inspect on the following day (June 20th) those dwellings in which the pest had made its appearance, in order to determine upon the manner of disinfection, under the guidance of the Chief Physician of the local Hospital. Dr. Kitazato's laboratory was established in one of the Hospital corridors but had not so much as a chair or table. The bed of a patient was thereupon made to do duty as a work-table and empty boxes took the place of chairs. One jug only of distilled water was provided, so that the whole laboratory looked like one of those temporary medical rooms often found in districts laid waste by extensive fires. The heat was intolerable; not a breath of wind. And so the microscopic work was exceedingly trying both to mind and body.

ST. ANDREW'S CHURCH, SHIBA.

THE adjourned meeting to consider the Restoration of St. Andrew's Church after the recent earthquake, took place at St. Andrew's House, Shiba, on Wednesday afternoon. Bishop Bickerseth presided, and was supported by Mr. Paget, H.B.M. *Chargé d'Affaires*. The Church had been thoroughly examined, and the reports were presented to the meeting, from which it appeared that the structure had been irreparably injured. After an interesting discussion, the following resolution proposed by Mr. Paget, and seconded by Mr. Forshaw, was unanimously accepted:—"That a subscription list be opened to build a temporary Church in the place of St. Andrew's Church destroyed by earthquake." Deep regret was felt at the necessity of removing the Church which, both by its history and associations, has become endeared to many. To build the temporary Church at least \$1,500 will be required. A Committee was appointed as follows for the purpose of collecting subscriptions:—Mr. Forshaw, Dr. Seymour, Rev. L. B. Cholmondeley (Secretary). Below is a list of subscriptions promised at the meeting:—Bishop Bickerseth, \$100; Mr. R. S. Paget, \$50; Mr. Kirkwood, \$50; Mr. Forshaw, \$50; Mrs. Forshaw, \$50; Mr. A. Macmillan, \$50; Mrs. Macmillan, \$50; Lieut. James, R.N., \$100; Rev. A. Lloyd, \$25; Mr. W. D. Cox, \$15; Mr. Gemmill, \$25; Dr. Seymour, R.N., \$25; St. Andrew's House \$70—Total, \$660.

ENGLAND'S NEW LORD CHIEF JUSTICE.

BARON RUSSELL, more familiarly known as Sir Charles Russell, has been appointed Lord Chief Justice of England, in place of Lord Coleridge, deceased. The greatest cross-examiner and mellifluous pleader of the sixties and early seventies is thus followed by the foremost cross-examiner and forensic debater of these latter years. None can say that the honour is ill-bestowed. For many years past, Sir Charles Russell has been looked upon by the general public as the only possible successor to Lord Coleridge whenever fate gave the appointment to the Liberal party; and the general verdict at

home, we imagine, will be one of commendation. The new Lord Chief Justice is comparatively a young man for such a distinguished position, but that is an advantage in many ways. His past career gives promise that he may surpass the late Chief Justice as a jurist and clear exponent of the tangled laws of England, for Lord Coleridge, great as were his intellectual gifts, was never considered so good a lawyer as many of his brother judges of less exalted rank in Her Majesty's Courts.

LIGHTNING.

Reports of catastrophes by lightning within the past few days are very numerous. From the Makabe District in Ibaraki Prefecture it is announced that an electric discharge on the 27th ultimo, burnt a house and killed a man, wounding a horse. From Takaichi in Nara Prefecture comes news that two men and one woman were killed by lightning on the 26th ultimo; that in the Toichi District of the same Prefecture one woman was killed on the same day; that in the Yamabe District three men and one woman, and in the Sonoshimo District one man, were killed on the 27th. Other reports are as follows:—one man killed in the Nakakama District of Yamashi Prefecture on the 27th ultimo; one woman killed in the Higashi-chikuma District of Nagano Prefecture on the 27th; one man and one woman killed and one house destroyed in the Mashima District of Okayama Prefecture on the 24th ultimo; one man killed and one house burned in the Kyoto District of Fukuoka Prefecture on the 24th ultimo.

PUBLIC EXECUTIONS.

Many years have elapsed since the public execution of criminals was abolished in England. Caricatures like Lord Tom Noddy and Tiger Tim had probably a considerable influence in bringing about that result. In the United States also public executions have long been abandoned. We speak of lawful executions not of lynching, which is certainly public enough. It is true that the newspapers are generally careful to print such graphic accounts that their readers might almost have been present at the hangings or electrocutions, but still privacy is theoretically secured. In France, however, it is only now that the reform is about to be introduced. The Chamber of Deputies, on May 11th, passed, by 159 votes to 158, the second reading of a Bill providing that the execution of criminals shall hereafter be conducted privately. France, strange to say, has been somewhat tardy in this matter.

THE ATTEMPTED SUICIDE AT KOBE.

From latest Kobe advices we learn that R. Bernhardt, Constable of the German Consulate there, who attempted suicide by shooting himself with a revolver at 2 a.m. on Saturday, was progressing as favourably as could be expected. The bullet entered the side of the head and totally destroyed the right eye. It is probable, says the *Chronicle*, that the act was prompted by a fit of remorse, Bernhardt having recently indulged in a heavy bout of drinking, which resulted in his being discharged from the service of the Consulate.

OPENING OF THE SUMIDA RIVER.

The annual ceremony of opening the Sumida River is to take place on the 21st inst. There will be only one affair of the kind this year, and it is expected to be on a correspondingly large scale.

THE IMPERIAL INSTITUTE AS A GRAND MASONIC TEMPLE.

A SUGGESTION is made in *Truth* by a prominent Freemason that the Imperial Institute buildings at South Kensington—which institution is now pronounced a failure by even its best friends—should be acquired by the Craft as the supreme headquarters or Grand Temple of English Freemasonry. The scheme has much to commend it. Freemasonry in London has long outgrown its narrow habitations, and the Grand Lodge is greatly hampered by the lack of adequate room at its quarterly meetings. The buildings of the Imperial Institute make an imposing

architectural array and would be well worthy of the distinction now proposed, while the size and number of the various halls and courts would provide ample accommodation for Grand, Provincial and private Lodge meetings. Besides, with such a noble home, a Masonic library and museum could be inaugurated for the benefit of the Craft the world over.

THE MOTOMACHI FIRE.

THE Kencho authorities have issued the following detailed statement regarding the disposal of the money subscribed for the relief of sufferers by the Motomachi fire:—

TOTAL DONATIONS TO 4TH JULY, 1894.

	Yen.
Imperial grant	1,000.00
General Contributions	4,386.53
(Of this Yen 3,232.50 were contributed by Japanese and Yen 954.03 by foreigners)	
Total	5,386.53
Meals for 100 persons, given by Japanese.	
350 "Yukata" dresses, given by Japanese.	
500 covers containing medicines, given by Japanese.	
Meals for 670 persons, given by foreigners.	

About 600 yen in addition was contributed privately by foreigners to their native friends or employes who suffered damage by the fire, and Mr. Bramhall's fund to date totals \$946.11.

THE WEATHER.

THE long spell of dry weather—almost without parallel at this season—by which Tokyo was parched throughout the month of June, happily broke on the evening of the 4th, when welcome rain fell for about two hours. This drought seems to have been very local. To the northward of the capital rain has recently been falling copiously every evening, and from Nikko comes news that the nights are usually cold and wet. Even within the limits of Tokyo itself, there have been marked varieties of weather, as on Tuesday 26th June, when a heavy shower fell in the Hongo district, leaving the southern part of the city entirely unvisited.

A SUPPOSED CHINESE SPY.

In the vernacular press we find the statement that a Chinese spy is now in Japan, and that, in company with three or four Japanese, he is trying to effect the wholesale purchase of coal. The man's name is given as Cho Bunso (Japanese pronunciation), and he is said to belong to the staff of a native paper published in Shanghai, although at present disguised as a Japanese under the alias of Nakamura Jiro. The supposed spy came over to Nagasaki shortly after the assassination of Kim Ok-kyun, when it was reported by the Japanese press that he had fled to Japan on account of being suspected by the Chinese Government, as he had severely rebuked Hong Tjyong-on for his treacherous deed. But all this was an artifice by means of which Cho succeeded in reaching Japan without his real purpose being suspected. In spite of his cleverness, the local authorities proved more than a match for him, owing to information received from certain Japanese who were about starting for Shanghai at that time. So when Cho left Nagasaki for Tokyo, as "Nakamura Jiro," he was shadowed by the police as far as Kyoto. There he was lost sight of, but thinking that he must have gone on to the metropolis, detectives came thither and shortly succeeded in discovering his whereabouts. Cho must have found the capital too hot for him, for he left Tokyo on June 20th and returned to Nagasaki by way of Osaka. He is reported to be on terms of suspicious intimacy with three or four Japanese, with whom he is constantly holding secret conferences, their object being to effect the purchase of coal in large quantities. In order to raise the necessary funds one of Cho's Japanese confederates left Nagasaki for Shanghai on the 25th ultimo. The reason of Cho's not being supplied with a sufficiency of funds to carry out his purpose, is explained by the vernacular press by assuming that, although sent from the first as a spy to Japan, the Chinese Government had no idea at the time that it would afterwards be necessary to purchase a large quantity of coal; so it was not until after the outbreak of the *Togaku-to* insurrection that Cho received this additional commission. Cho left Nagasaki on the 26th, and is at present staying at a summer resort not

far from that city. The Japanese papers further state that he was for some time confidential Secretary of Viceroy Li and that he came to Japan in the suite of Admiral Ting on the occasion of the great affray between sailors and Japanese in Nagasaki, some seven years ago. Cho is alleged to be singularly proficient in Japanese colloquial, although he feigns utter ignorance at times. The *Kokumin Shimbun* gives additional particulars of a decidedly alarmist nature. It declares that the China Merchants Steam Navigation Company has purchased no less than 20,000 tons of English coal stored at Nagasaki, the coal being "of the kind used in making torpedoes." The same firm is moreover endeavouring to procure some 30,000 tons of Japanese coal through the medium of a Nagasaki merchant. Finally we learn, still from the *Kokumin Shimbun*, that the Shimonoseki branch of the Mitsui Bussan Kaisha, where a large quantity of coal was stored, has conveyed all the coal in stock to the Shanghai branch of the same firm.

A good deal of the above is probably pure theory, or rather the outcome of the apprehensions of credulous newsmongers. At the same time, it should cause no surprise to find Chinese spies within the borders of this Empire. It would only be an instance of it for tat. We have met and conversed with Chinese who spoke Japanese with an ease and fluency native to the soil, and it is unquestionable that the Chinese Government has long since had emissaries of this description in Japan. On the other hand, Japanese detectives have been despatched to China from time to time, and some are perhaps there at present, who, from their intimate acquaintance with the Chinese idiom, their Mongolian aspect and adoption of the native dress, are indistinguishable from thoroughbred Sons of Han.

RE ORGANIZATION OF THE HIGHER MIDDLE SCHOOLS.

As previously predicted by rumour, all the Higher Middle Schools have been re-organized into Collegiate Institutions, in accordance with Imperial Ordinance No. LXXXV., issued on the 25th of last month. The five Higher Middle Schools are henceforth to be known as High Schools (*Kōtō Gakko*), wherein certain special branches are to be taught. The Ordinance further provides that a High School may establish a Preparatory Course for such as intend to enter the Imperial University, and finally that a special course of lower grade may be provided subordinate to the institution.

Yet despite this Ordinance, as matters stand at present only the Higher Middle School of Kyoto is to be thus reorganized, the other four to be left as they are, perhaps in consequence of lack of funds or some other special consideration. The special courses to be provided in the Kyoto institution embrace technology, law, and medicine.

Tokyo journals adduce several reasons which have caused the Authorities to decide upon the re-organization of the Higher Middle Schools. In the first place, the number of Universities or Collegiate institutions is regarded as quite inadequate to the needs of the country, a point that becomes conspicuously striking when the actual state of affairs in Europe and America is contrasted with that of Japan. Another reason lies in the tendency to cause all young men desirous of receiving special higher instruction to flock to the metropolis, there being only one University in Japan. This great concourse of young men in Tokyo, coming from all parts of the Empire, is a matter that the educational authorities have always regarded with disfavour. Moreover, a student desirous of matriculating at the Imperial University has hitherto been required to graduate from four distinct grades of school: Primary, Higher Common, Ordinary, and Higher Middle. This going from one institution to another means, in the majority of cases, removal from one place to another, thereby involving not only

a considerable expenditure of time and money but also a most severe strain on the mental faculties of the student. Thus while in Europe or America it is not uncommon for a young man to be graduated from a University or Collegiate Institution at the age of twenty-one or twenty-two, in Japan the average age is twenty-six or even twenty-seven. It is therefore an undeniably urgent matter that a shorter course of special instruction should be provided in the educational system of Japan. Besides all this, the establishment of one University only is insufficient to meet the requirements of the times. There are, at present, two hundred and thirty students in the College of Medicine, but even if we assume that they will one and all pass through the course of instruction satisfactorily, this number of alumni will fall far short of keeping up the average of those who are practising medicine. The Department of Justice alone is annually in need of about fifty graduates, and the number of alumni is invariably insufficient. These things surely prove how very defective the present system of education is. Then there are also many students who, from various causes, are prevented from acquiring that special knowledge which they have hoped to obtain, and these are obliged to relinquish their studies midway. This is due to the fact that the Higher Middle Schools have almost wholly confined themselves to equipping their students for University matriculation, without imparting any special course of instruction. In short, the object of the newly organized High Schools is to provide certain particular curricula of high grade, and thus satisfy the requirements of the public and the students themselves. They may, later on, be elevated to a standing as high as that of the Imperial University; but that is a point which we need not discuss at present.

THE ARRESTS IN FUKUOKA PREFECTURE.

PARTICULARS concerning the arrest of eight Japanese in Fukuoka, Kyushu, on suspicion of being implicated in the manufacture of explosives, appear in several Tokyo journals, their information being taken from the Fukuoka local press. It seems that about the middle of last month two Japanese returned from Korea and put up at an inn in Hakata. Shortly afterwards they left the house in company with the landlord and went to Kuruma. They then stayed at the house of a certain citizen of Kuruma, where they were soon joined by six other Japanese. Information thereafter reached the Fukuoka and Kuruma police that the men were holding frequent secret conferences, and that chemicals used in the manufacture of explosives were known to be lying in the room where the meetings were held. They were closely watched after this and it was discovered that they had privately told certain individuals that they intended raising funds and undertaking the opening-up of some land in or near Korea; and finally that they purposed smuggling salt fish to those places in which the Korean insurgents are quartered. It was then found that they were holding correspondence with Japanese friends in Korea, the letters relating to explosives and a number being written in cipher. The suspicions of the police being thus thoroughly aroused, the eight men were arrested. The warrants were made out by the Fukuoka Local Court. Four of the band were taken on the 26th ult. at Hakata, just as they were on the point of crossing over to Tsushima; the other four were arrested on the same day in their lodgings. A thorough search was made in the houses in which they had first stayed while at Fukuoka and thereafter in Kuruma, several swords and oil-paper parcels or packages being seized and impounded. The eight men are now kept in custody at the Fukuoka Local Court.

AN ACT OF FILIAL VIRTUE.

THE *Mainichi* gives unstinted praise to Mr. Togawa Kasaku, of Yokosuka, a local politician of some renown, for a recent filial act of an uncommon character. His old father fell sick with an exceptionally severe abscess, which grew on his back for years and became so bad

lately that several physicians who were consulted saw no alternative but an operation, such as would endanger the life of even a robust man and be more than likely to prove fatal in the case of an aged person well over sixty. Supposing the operation performed, the only way of hastening a cure was to transplant flesh from a healthy body. The son at once proposed to have the flesh cut off from any part of his body, for he owed his existence to his father, and was bound to repay the debt without hesitation. The required amount of skin was then cut from the thigh of Mr. Togawa and transplanted to the back of his father after the abscess had been surgically removed. The *Mainichi* hopes that the wounds of father and son will be healed as soon as possible, to enable them to take part in promoting the welfare of the country, a rôle which they are eminently fitted to play, being members of the Progressionist Party whose organ is the *Mainichi*. It is all a trifle maudlin. Is there any son that would not do as much? Men have frequently submitted to a similar operation in Europe and America to save the life of persons in no way related to them.

THE HOKKAIDO MARKETS.

SEVERE inconvenience was recently experienced by the markets in Hokkaido on account of the interruption of steam service, but things are now improving and a normal condition will soon be re-established. The latest telegrams received by the *Shogyo Shimpo* from Hokkaido are to the following effect:—From Otaru it is reported that orders for fish guano have been received from Osaka, Hyogo, Yokkaichi, and Handa, the market consequently regaining some degree of activity. Guano of this description has risen from five to eight yen according to quality, shipping facilities are, however, fully restored. Hakodate merchants are growing less eager to dispose of their stock of guano, seeing that a favourable turn in the market is to be expected. Rates have gone up about ten yen all around.

The regular steam-service to Hokkaido, temporarily suspended, has been restored, though it is not what it has hitherto been. The Yusen Kaisha has despatched the *Shinagawa Maru* to the northern island, and with this as a beginning it is believed that a resumption of the regular service will shortly be established. The sudden interruption of shipping facilities has been attended with great tightness in the money market, so much so that one individual found it very difficult, in both Hakodate and Otaru, to obtain the advance of so small a sum as five hundred yen. Although this pressure has been somewhat relieved, the local money market is still far from being in a normal state. The Bank of Japan has therefore thought it advisable to remit a sum amounting altogether to one and a half million yen to its two branch offices in Hakodate and Sapporo. It is believed that the timely step thus taken by the Nippon Ginko will go far toward relieving the pecuniary difficulties of merchants and bankers in Hokkaido.

THE P. AND O. STEAMER "CALEDONIA."

THE steamer *Caledonia*, the largest yet built for the Peninsular and Oriental Steam Navigation Company, was launched by Messrs. Caird & Co. at Greenock in May last. Her dimensions are:—length, 486 ft.; breadth, 54 ft.; depth, 37½ ft.—7,600 tons gross. The builders will supply triple-expansion engines of 12,000 i.h.p. with five cylinders, and the vessel is expected to attain a higher rate of speed than any steamer of the fleet. She is to carry 500 passengers, the accommodation for whom is of a superior character. The ship is lighted throughout by electricity by Messrs. Siemens Brothers, Liverpool; and the machinery of the refrigerating chamber has been fitted up by Messrs. Haslam, Derby. The ceremony of christening the steamer was performed by Miss Barnes, daughter of Mr. Barnes, a managing director of the P. and O. Company.

CHINA PONIES FOR THE N.R.C.

THE ponies ordered by the Nippon Race Club from Shanghai are not on the *Saikio Maru*.

When that vessel left a typhoon was blowing on the China coast so it was considered unwise to ship them. There was also some difficulty with the Custom Authorities, who evidently thought the ponies were being sent over to reinforce the Japanese Cavalry. It is hoped this obstacle will be removed before the departure of the *Kobe Maru*.

NOTICE TO MARINERS.

THE following Notice, No. 287, is issued by the Coast Inspector for the China Sea, Kiangchow District. Hoihow Harbour Light—Notice is hereby given that the Hoihow Harbour Light was exhibited for the first time at sunset on the 15th inst. (June). The illuminating apparatus is a four-sided Dioptric one of the Sixth Order, showing three white flashes in rapid succession, followed by a single red flash every 45 seconds. The alternation of flash and eclipse in each revolution is approximately:—

White flash	1½ seconds
Eclipse	6 seconds
White flash	1½ seconds
Eclipse	6 seconds
White flash	1½ seconds
Eclipse	13½ seconds
Red flash	1½ seconds
Eclipse	13½ seconds

45 seconds

The Lighthouse stands 464 yards south of high-water mark on the southern shore of Hoihow Bay, and the Light, which is elevated 73 feet above the level of the sea, should be visible in clear weather at a distance 10 miles in all directions where it is not obscured by land. The tower is round, of iron, with a total height from its base to lantern vane of 22 feet. The tower, dwellings, and boundary wall are white. Approximate position:—Latitude 25° 1' 15" N., Longitude 110° 16' 10" E.

RUMOURD KEROSENE SYNDICATE IN JAPAN.

THE *Hochi Shimbun* is responsible for the statement that a rumour is current relating to the contemplated establishment in this country of a gigantic petroleum syndicate. The proprietors of the scheme are said to be the Standard Oil Company of the United States and the Russian Oil Company, which have been led to take up this idea on account of the gradual fall in the market-price in Japan, despite the steady increase in demand. The projectors attribute this phenomenon to their mutual rivalry, and are therefore anxious to force prices up by making a big syndicate and amicably co-operating in future. The idea originated with the American Company, and in order to arrange matters on some definite basis a committee has been despatched to Russia to begin negotiations with the Government of that country and make some definite general stipulations. It is further stated that both the Russian Minister of Finance and the Russian oil-merchants are very eager to take the matter up, and that the formal ratification of a mutual agreement may shortly be expected. Commenting on this rumour, the *Hochi* says that, in case of all this being true, the result would be to stop for good and all the downward tendency of the market and probably give quotations a rising impetus, which would be a very serious matter, as it must undoubtedly exercise a considerable influence on the economy of the Orient. Our contemporary is disinclined to credit the report; the development of the companies can by no means admit of the establishment of such a league. It was America that first exported petroleum to Japan, and her merchants for years enjoyed a monopoly of the sale of this article. Russian producers have for a comparatively short period only been shipping oil to this country, yet the competition between the two has been very keen. They are bitterly irreconcilable with regard to the sale of kerosene in Japan, so that the rumour of their founding a syndicate is far too strange to win credence. The *Hochi* is strengthened in this view of the matter by the report that the American Company took the initiative, whereas that great corporation have an intense dislike for the newcomer. The Standard Oil

Original from

Company is the outcome of the amalgamation of a number of smaller concerns, and has a capital of no less than one hundred and thirty million *yen*. Being thus the greatest and wealthiest company in the world, so far as transactions in petroleum are concerned, it is not to be expected that it should bend the knee to, or propose a league with, any rival body. But despite the *Hochi's* scepticism, news of a big pool between the two companies has been circulated and credited in Europe and America, the rumoured arrangement being that the Russian Company (really an English Company) will have the undisturbed command of the Eastern markets, the Western being left to the Standard Company.

AN ENGLISH STUDENT OF JAPANESE MUSIC.

In the *Yomiuri Shimbun* we often read stories which require unusual elasticity of imagination in order to be credited. The latest tale is about a certain English gentleman who has taken up the study of Japanese music in a very novel manner. Kineya Rokuzayemon is Japan's foremost singer of *naga-uta*, and his house in Uyekidana, Nihonbashi District, is daily crowded with professionals as well as amateurs who repair thither to exercise their voices to the tuneful accompaniment of the *samisen*. The other day, says our voracious contemporary, just as Rokuzayemon was giving a lesson to a number of his *deshi*, two *jinrikisha* drew up in front of his door. A well-dressed foreigner and a Japanese, apparently an interpreter, alighted and asked for the master of the house. Rokuzayemon wondered who his visitors might be, for they were wholly unknown to him. The Japanese then politely informed him that the foreigner was an Englishman staying at the Imperial Hotel, who had come to Japan for the express purpose of studying the national music. He had asked an official of the Foreign Office to recommend him to some competent master of the art and had been told that Rokuzayemon would be the most efficient instructor; he had therefore come to learn whether the singer would consent to give him some lessons in his craft. Highly pleased with this application, especially as coming from a foreign gentleman, Rokuzayemon replied that he should esteem it a great honour to instruct his new pupil as far as his humble abilities would permit. A few days later a letter reached Rokuzayemon from the Foreign Office, in which he was semi-officially directed to give lessons to the Englishman in question. The instruction hereupon began in earnest, Rokuzayemon going every day for an hour or so to a house in Kobikicho, whither his English pupil had requested him to repair. The musical gentleman is said to be utterly ignorant of Japanese, yet so tenacious is his memory and so remarkable his natural aptitude for time and tune that he has already made unusual progress. So far he is said to have committed a dozen pieces to memory, or at an average of one *naga-uta* in every two days. What is still more remarkable, concludes the admiring *Yomiuri*, is that he has not only got the wording perfectly but even shows great skill in the far more difficult modulations of the voice and the time.

THE DOSHIN KAISHA IN TROUBLE.

THE *Kokkai* gives some sensational news about the Doshin Kaisha of Yokohama. It says that this well known silk exporting firm, managed by Japanese merchants, is on the verge of ruin. In fact the firm has been in a very embarrassed situation since last year, and several influential shareholders have been consulting as to the best mode of restoring it to the prosperous state it once enjoyed. The election of Mr. Kito Teijiro as President was the first step. It was tacitly understood that if he were placed in the chair, several wealthy gentlemen intimate with him and connected with the firm, would consent to lend a certain sum of money and would rescue the firm from its embarrassments. But this project never matured, for a few days after Mr. Kito had been elected chairman, he fell ill, and died suddenly. Mr. Watanabe Koki, ex-Minister to Vienna, was then appointed to succeed him, the other

shareholders fully believing that with Mr. Watanabe's prestige and influence all would go well. But they had miscalculated, for when Mr. Watanabe asked Mr. Kasawara Bumpai, a wealthy merchant of Echigo, and others to advance a certain sum of money, they flatly declined, saying that they had previously consented to the proposal because they placed full confidence in Mr. Kito, and they were therefore disposed to assist him in the task of restoring the prosperity of the firm. Mr. Watanabe was at a loss what to do. He next determined to try whether he could procure the sum from the Specie Bank of Yokohama, and asked its directors, but they replied that should Mr. Ono Kinroku and four or five other leading shareholders of the firm deposit a document with their joint signatures, they would consent to lend 100,000 *yen*, the sum asked for by Mr. Watanabe. The Chairman of the firm then called together several leading shareholders to hear what they had to say to the reply of the Bank. Mr. Ono and others were entirely against the transaction. They averred that rather than raise the money in that way, they had better raise it among themselves, each producing 20,000 *yen* out of his own pocket. This was, however, merely for the sake of argument, for they were all at heart averse to advancing such a sum, considering that they would fare better by applying it to some other enterprise than to bolstering up a firm which was evidently a losing concern. They further declared that should the prospect of restoring the firm to its former activity be uncertain, then an extraordinary general meeting should be held and the firm should be dissolved altogether. This drastic measure was not approved by all those present on the occasion. Mr. Matsugi Naomi contended that the newly elected officers had been simply entrusted with the task of elaborating a scheme to maintain the firm and had not been asked to discuss its dissolution. An excited debate ensued, but about the principal business of raising 100,000 *yen* no definite conclusion was arrived at. This internal difficulty of the firm has been quickly reflected in the market price of its shares. They are falling steadily. A share of 50 *yen* face value paid in full, which was quoted at 38 *yen* on the 14th of May, fell to 33.00 *yen* early in June and to 27.50 *yen* on the 30th of the latter month. The prospect for the firm is very discouraging.

A NEW ASSURANCE COMPANY.

AMONG recent registrations, says a writer in *Fairplay*, is that of the "Lombard Assurance Company, Limited," with a nominal capital of a million in £10 shares, £5 of which is to be treated as a reserve liability, available only in the event of liquidation. The new Company, is, I presume, to acquire the British business of the Hongkong, which finds it to its advantage to withdraw from this Company; and it is to be under the general management of Messrs. Matheson & Co. of 3, Lombard-street. There will, no doubt, be inquisitive people, who will ask how business which was not good enough for the Hongkong can be beneficial to its English successor; and, however influential the great house of Matheson & Co. may be, what are its qualifications for insurance management? I must confess my inability to answer these queries; but it may be assumed that, while the "general" management is vested in Messrs. Matheson, the underwriting, which is after all the main point, will be very much in the hands of officials who know something of the work. As to the *personnel* of these officials nothing has yet been said; but it is to be hoped it will be thoroughly practical and efficient, and that it will not make ducks-and-drakes of the premiums by gratuitously large abatements; otherwise the fate of the new Company can very easily be foreseen.

STEAMERS IN COLLISION.

THE *Yiji Shimpō* states that the *Yoshinogawa Maru*, of the Osaka Shosen Kaisha, and the *Hokuyo Maru*, of the Niigata Hokuyo Kaisha, came into collision off Sekita-Misaki, Shiribeshi, Hokkaido, during a heavy fog on the 28th ult.

Slight damage was sustained by both vessels. The passengers are all safe.

IMPERIAL ORDINANCE.

AN Imperial Ordinance has been issued creating exceptional power to deal with, in the manner of lending or selling, articles purchased as a matter of urgency for military purposes.

NEW MEMBER OF THE UPPER HOUSE.

MR. INUMA SHICHISABURO, has been appointed a member of the Upper House.

MISCELLANEOUS TOPICS.

Prince Konoyo is a rising man. Born in one of the most, if not the most, illustrious families in the Empire, and endowed with no inconsiderable amount of natural ability, he is justly placed by public opinion among the most promising politicians in the House of Peers. He belongs to the coterie of nobles popularly called the Opposition in the Upper House. Of late he has been especially petted by the politicians of the allied Opposition parties, and he has so far identified himself with them as to promise his aid in canvassing the constituencies in their behalf with a view to the coming general election. His promise was announced by the Opposition papers in large characters. The mere fact of his association with them would have produced an excellent impression upon the simple minded country-people, who regard every descendant of the great Kamatari with almost superstitious reverence. But it now seems that the delight of the Opposition politicians was premature. The young nobleman has declined to start on the promised tour of lectures. The reason assigned by himself is that the present is not a time when patriotic men should hamper the hands of the Government by attacking its policy, domestic or foreign. Some people are inclined to attribute his conduct to a deeper reason. He is believed by them to have discovered that he is merely being made use of as a tool by the Opposition politicians. Whatever may be his true motive, he appears now to be less hearty than before in his sympathy with the opponents of the present Cabinet.

The railway problem is still attracting a share of public attention. Opposition to the project of the private purchase of Government lines is becoming stronger and stronger. As we observed some time ago, the public press of the country is unanimous in denouncing the scheme in terms of the strongest disapprobation. The projectors are advised by all the papers not to waste useless labour on behalf of a scheme that has not the slightest hope of success. But they seem to be diligently working out their plan despite all this clamour.

The *Kokumin Shimbun* in one of its latest issues contains a significant note on the late Sir Harry S. Parkes. Our contemporary quotes the following words spoken by the distinguished Englishman to Mr. O'Connor in reply to the latter's enquiries about his illness in 1885:—"I can stand pain. What I cannot endure is that I cannot go on with my work." Our contemporary states that it can not regard the memory of Sir Harry Parkes with love. "But a man who can utter these words is truly fitted to be entrusted with the grave duty of representing his country. It is not without reason that his memory forces itself upon us at the present juncture."

An interesting literary controversy has been going on in the columns of the Tokyo papers. Some time in the month of June, the *Nippon* published a Japanese verse (*uta*) by some poet in the province of Iwashiro. The piece was at once claimed by a well known poet in Tokyo as his own. He alleged that he had composed it in Kyoto about twenty-three years ago. The poet in Iwashiro denied the charge of plagiarism, stated in full the circumstances under which he had composed the verse, and remarked with some justice that, had he contemplated such meanness, he would at least have taken the precaution of making some changes in the wording. The controversy has since been taken up by the whole fraternity of *uta-yomi*. The

supporters of the Iwashiro poet claim that it is by no means impossible that in the case of such a short and somewhat stereotyped species of composition—an *uta* being composed of thirty-one syllables only—two persons should happen, without any intercommunication, to produce precisely the same verse. Indeed the advocates of this view have been able to adduce several instances of such coincidences from the poems of living as well as dead *literati*. We are disposed to agree. At all events, the recent controversy has served to show that interest in the revival of this species of national gliterature is evidently becoming very keen and eneral.

Reform of the stage is again on the tapis. The question first began to receive attention some ten years ago, but at that time the movement ceased without producing any practical results, for the then promoters of reform did not number among their ranks any play-wright of sufficient experience and authority. The present agitation has apparently a better hope of success. We find among the reformers several *literati* of recognized influence in dramatic circles, as for instance, Messrs. Fukuchi Genichiro, Yoda Hyakusen, Yamada Bimyo, Miyazaki Sammai, Teubouchi Shogo, and Mori Ogai. Mr. Fukuchi, as everybody knows, is connected with the Kabuki theatre, the most progressive play-house in Japan. Messrs. Teubouchi, Yoda, and Yamada are the authors of several dramas. These persons are also enthusiastic reformers, but the last named is perhaps the most thoroughgoing and intrepid of all the group. His recent exposures, through the columns of the *Wasada Bungaku*, of the state of affairs existing among actors and play-house managers have attracted wide-spread attention. The reformers have organized a society for criticising each other's productions and considering the general question of stage improvement. Broadly speaking, they are advocates of realism, but on minor points they differ from each other and controversies are constantly carried on among them through the columns of the literary press.

The recent death of Mr. Kitamura Tokoku is deeply lamented by his numerous admirers. He was extremely young, being, as we believe, some years under thirty. But he had already acquired a high reputation as a critic and poet. Undoubtedly a man of genius, he will be remembered as one of the most brilliant pioneers in the development of the new style of national poetry. A graduate of the Tokyo Semmon Gakko, he was at the time of his death a writer on the staff of the *Hydron*, a literary periodical of high standing. The best of his poems is, perhaps, the *Dokuro Mai* (Dance of Skeletons).

COUNTS YAMAGATA AND OKUMA ON THE KOREAN QUESTION.

Messrs. Oi Kentaro and Kato Masanosuke waited on Count Yamagata in his residence at Mejiro on the 29th ultimo. His views on the Korean question being solicited by his visitors, the President of the Privy Council is said to have answered as follows:—"Since the Restoration I have always had more or less connection with the Government's policy toward China and Korea. Especially was I concerned with that policy when our country recognized Korea as an independent State, and when, subsequently China attempted to establish her right of suzerainty over the peninsula. Such being the case, I have always paid vigilant attention to every matter connected with either China or Korea. As to the resolutions recently passed by the advocates of a strong foreign policy, I agree on the whole with the principles underlying those resolutions. What is required is that the task of solving this problem should be undertaken with a determination to fight in case of necessity. A superficial view of the situation might incline one to think that perfect tranquillity reigns over the whole Eastern horizon. But that tranquillity is only temporary and by no means permanent. Countries of the Occident have long been regarding China and Korea with a greedy eye.

Thus far they have not attempted to satisfy their appetite for aggrandisement, simply because the present facilities of land and marine transport are insufficient for their purpose. If we suffer the coming few years to pass away without doing anything, Russia will have completed the Siberian railway and France will have obtained a footing in Siam. With increasing facilities of communication and transportation, dangers to the peace of the East will inevitably increase also. A general complication in this quarter of the globe is only a question of time. It is well said that to forestall others is to control them. Granted that complications are destined to arise in the Orient at no distant date, Japan's wisest plan is to take some decisive action before other Powers become provided with wings of mischief. Hence I agree upon the whole with the views recently expounded by you. The only point on which I cannot agree with you is your advice about the despatch of an Ambassador to China. I am inclined to think such a course rash and ill-considered. Without taking such an undignified step, it will be possible to compel China to send an Envoy to Japan, if only we are thoroughly prepared to fight. And the hostilities must be commenced in Korea."

Messrs. Oi and Kato here remarked that, although the Count's observations appeared just and sensible, they found it difficult to credit the present Cabinet with resolution and strength enough to carry out such a policy, and that if they advised the abrogation of the Tientsin Treaty and the sending of an Ambassador to China, it was because they thus hoped to make the Cabinet decide upon an extreme course of action. To this Count Yamagata replied as follows:—"There are people who say that Ito is weak. I can assure them that they are greatly mistaken, at least in the present instance. I am convinced that Ito is firmly resolved as to the course to be pursued in the present juncture. If anybody doubts that, I will ask him to consider the measures which the Government has thus far taken against China and Korea. As I am not a responsible Minister, I cannot speak definitely on the matter, but I feel certain that the Ito Cabinet will not be rash enough to send an Ambassador to China at the present juncture."

The President of the Privy Council is reported to have further dealt with various important topics, such as the defences of the country, the relative strength of the Japanese and Chinese Armies and Navies, and so forth. He is also said to have expressed the opinion that the present difficulty is not likely to be settled without bloodshed.

Count Okuma's views on the Korean question, published through the columns of the *Hochi Shimbun*, have already been reproduced in these columns. He has since been talking much on the same topic. His latest conversation is published in the *Jiji Shimpō*. He begins by expressing surprise at the circumstance that nothing definite has yet been accomplished in spite of the presence of a large Japanese force in the peninsula for about twenty days. He hopes, however, that the Government is taking all necessary measures. He does not like to cripple the hands of the Government by offering criticisms about diplomatic matters; but he cannot help remarking that the Government's actions thus far have not been as prompt as might have been desired. He earnestly hopes that the Cabinet will adopt rapid and decisive measures in obedience to the well expressed desires of the nation. He does not know what was the intention of the Authorities when troops were first despatched to Korea, but supposes that the Cabinet must have been resolved to accomplish its object even at the point of the bayonet. Alluding to the report that the Government decided on war at a Cabinet Council recently held in the presence of the Emperor, Count Okuma observes that the story must be without foundation. For it being apparent from the first that China would place itself in Japan's way, the decision to fight with that Power must have been taken when the troops were sent to Korea. Especially is he displeased with the

news that the Cabinet Council in question was attended by men who are not members of the Ministry. He finds difficulty in believing that the present Ministers of State should have been alarmed so much by the news of the expected despatch of large reinforcements from China, as to invite the counsel of persons outside the Cabinet. Concerning the proposal for the despatch of an Ambassador to China, Count Okuma is an enthusiastic advocate of such a course. He thinks it is not sufficient that negotiations with China should be conducted by wire or through Mr. Otori. It is absolutely necessary, in his opinion, to send a special Envoy to Peking to definitely settle the matter with China in the shortest space of time possible. For this mission, he thinks that Count Ito himself, or Viscount Kabayama or Viscount Takashima, would be best qualified. The Ambassador, whoever he may be, should, says the Progressionist Leader, demand a definite answer from the Chinese Government in a week's time. In case no answer is given in that space of time, the Japanese Government is either at once to declare war against China, and to commence in earnest the task of reorganizing the Korean Government. Some persons, says the Count, may think that Japan has no good ground of complaint against China. But grounds of complaint are many and important. First of all, China has, since 1882, always treated Korea as though that Kingdom were merely her dependency. The corruption of the official classes, which is the primary cause of the *Togaku-to* disturbance, is owing principally to the ascendancy of the Ming faction under the influence of the Chinese Resident Yuan. If Korea be left to the control of China, it is evident that the peninsula Kingdom's fate is doomed. Under these circumstances, it is only just that Japan should demand the placing of Korean independence on a sound basis. As to the objection that such conduct on the part of Japan would invite the interference of other Powers, as Russia, England, and France, Count Okuma replies that these Powers have no right to meddle with affairs relating to Korea. Should they to do so, there would be no difficulty in putting an end to their interference. What he really fears is that the Japanese Government may not act with sufficient promptitude and decision. Should it be deceived by the cunning diplomacy of China, and order the withdrawal of the troops, Count Okuma fears that the Japanese military officers in the peninsula may take some decisive steps on their own responsibility. Such being the case, he sincerely hopes that the Government will manage the question with a full determination to fight. Japan is not very rich, but she can easily find means to send an expedition of 50,000 or 60,000 troops to Peking. It would not matter much if she spent from fifty to a hundred million *yen* for the purpose of humbling China. He trusts that the Government will not follow the fatal policy of waiting until the blow is struck by the enemy. In conclusion, he is reported to have said that the Government's apparent inaction may possibly be a sign that negotiations with Korea are making satisfactory progress.

If these views were really expressed by Count Okuma, he enjoys the distinction of being the most outspoken statesman that ever held high office, or ever hoped to hold high office again.

THE JAPANESE GOVERNMENT AND THE KOREAN QUESTION.

Our readers, we presume, have formed from what has already appeared in these columns some general ideas about the nature of the diplomatic correspondence lately conducted between the Governments of China, Japan and Korea. What we have stated on the subject is confirmed by the *Nichi Nichi Shimbun*, which has just published very interesting notes throwing valuable light on the proceedings of the Governments concerned. At the present stage, our contemporary is not in a position to reveal in full what has thus far passed between

the three Governments. Consequently several important facts are withheld from publication; nor has the Tokyo journal given any dates in its narration. But despite these unavoidable imperfections, our contemporary's notes enable us to gather tolerably clear ideas about the course of events during the past few weeks. We will, therefore, reproduce the gist of these notes somewhat in full.

Concerning Korea's application for Chinese assistance in the suppression of the *Togaku-to* disturbance, the *Nichi Nichi* states that, although the step was taken by Ming Eishun, he acted at the instigation of the Chinese Resident Mr. Yuan. Ming must have been aware that the despatch of troops by China would be followed by a similar step on Japan's part. But his misgivings in this direction seem to have been silenced by Mr. Yuan's assurance that Japan need not be taken account of. The Korean Government, however, soon discovered its mistake. Alarmed at the prompt despatch of a large force by Japan, the Seoul Ministry made repeated requests to the Japanese Government to withdraw its troops from Korea, on the ground that the *Togaku-to* disturbance has been quieted. At the same time the Chinese Government preferred a similar request to Japan. As for the Korean Government, the Japanese Government is said to have replied that it could withdraw its troops, seeing that, in its opinion, the *Togaku-to* disturbance had not yet been completely quelled, and, further, that nothing had yet been done to avert the recurrence of similar disorders. This reply of the Japanese Government, remarks the *Nichi Nichi*, has been fully justified by the recent revival of the disturbance.

As for China, the Japanese Government not only rejected her request but asked her views with respect to a proposal for united action with the object of effecting thorough reforms in the Government of Korea. The gist of this proposal is said to have been as follows:—That on account of geographical situation, disorders in the Korean peninsula materially affect the vital interests of both China and Japan; that, as China must be aware, things in Korea are daily going from bad to worse, thereby threatening to create a dangerous crisis; that, consequently, Japan proposes, in concert with China, to persuade Korea to introduce thorough reforms in her internal Government, so that all danger of future disorders may be avoided; and that in thus acting Japan's object is purely to promote the independence of Korea and maintain peace in the East. To this China is said to have made an unfavourable answer, declining positively to take any concerted movement with Japan for the reform of the Korean administration, and at the same time repeating her former request that Japan should withdraw her forces simultaneously with the retirement of those of China.

Such being the attitude of China, the Japanese Government at once decided to undertake on its sole responsibility the task of persuading Korea to effect internal reforms. Instructions were sent to the Japanese Minister, Mr. Otori, who is reported to have already approached the Korean Government on the subject. Recent rumours about animated conferences between him and the Korean Foreign Minister doubtless refer to the matter in question. Mr. Otori is also stated to have made strong remonstrances to the Chinese Resident as well as to the Korean Government about a proclamation recently issued by the commander of the Chinese force at A-san, in which document Korea was declared to be a dependency of China. What answer the Korean Government has made to the Japanese Minister about the recommended reforms of administration, the *Nichi Nichi* does not mention. It states, however, that the firmness of the Japanese Government's resolve to carry out its original purpose may be inferred from the course of events since the 1st instant. While such is the attitude of the Japanese Government, the Viceroy Li, in spite of his strong and even threatening language in the earlier stages of the compli-

cation, is now said to have solicited the mediation of some foreign Ministers, at the same time issuing orders to the troops at A-san and the fleet at In-chhōn to remain quiet until further notice. The Viceroy, says our contemporary, erroneously believed that the Japanese Government was too fully occupied with internal politics to send any troops abroad. The unexpected energy and decision shown by the Japanese Government, and a superstitious apprehension of the conservative Court in Peking are believed to have induced the Chinese Ministers to hesitate about taking decisive measures against Japan. The superstition above alluded to is:—The present year being the 61st anniversary of the Empress Dowager's birth, it is feared that should such an auspicious year be stained with bloodshed, dire misfortunes must ensue to the Middle Kingdom. On the other hand, throughout the Franco-Chinese war, Marquis Tseng achieved some success by his policy of bribing the Opposition politicians in Paris. The Viceroy Li, says the *Nichi Nichi*, possibly thinks that such a policy may be resorted to in Japan also. Chinese statesmen are very fond of methods of that nature, and the Viceroy's warlike recommendations may perhaps be adopted by the Ministers of the Tsungli Yamen.

THE CHINESE GOVERNMENT AND THE KOREAN AFFAIR.

Some papers have been made public, which throw light on the ideas entertained by the Chinese Government about the Korean affair. The first is a telegram said to have been originally addressed to the Viceroy Li by the Tsungli Yamen in Peking, and subsequently despatched by him to his lieutenant in Seoul, Mr. Yuan, about the 22nd or 23rd ultimo. It runs as follows:—"No trustworthy report has been forwarded to this office since the recovery of Chōn-ju. Korea now dreads Japan as if the latter were a tiger, and seems to have quite forgotten to attend to the subjugation of the rebels. Japan's pretext for despatching troops is that Korea is incapable of dealing with the insurgents. Not a single leader of them has been captured; nor even is their whereabouts known. Will anybody believe that the rebels who have harassed two provinces have suddenly and entirely disappeared? Under such circumstances, Japan, it must be noticed, has plausible ground for refusing the withdrawal of her troops. What if the insurrection should again break out after the withdrawal of the Japanese troops? It is thus important that, instead of demanding the withdrawal of the Japanese troops, Yuan should urge the Korean Government to suppress the insurrection. When that object shall have been achieved in a satisfactory manner, arrangements must be made with Japan for the simultaneous withdrawal of troops. There is no reason why Japan should not concur in such a step. Everybody knows that she has no pretext to annex Korea, but should a pretext be supplied her for the continued stationing of her troops in Korea, a serious emergency would become unavoidable. For the withdrawal of troops, there are precedents, and it can be managed in due course of time. Meanwhile, General Yeh ought to employ his troops for the capture of the rebels; and Yuan must also urge the Korean Government to send out its forces for the subjugation of the insurgents, so that a report of their complete quelling may be forwarded."

On the receipt of this instruction, the Chinese Resident addressed a note to the Korean Foreign Office, in which, after recapitulating the substance of the telegram from Tientsin, he offered to telegraph to the Chinese Commander at A-san to march the troops and undertake the subjugation of the rebels. To this note the Korean Government is said to have replied that the insurrection having been already put down, there was no need to ask for the assistance of Chinese troops. It will be observed from the above that the Chinese Government is of opinion that the *Togaku-to* disturbance has not been completely subdued.

THE JAPANESE IN KOREA.

(FROM OUR OWN CORRESPONDENT.)

Seoul June 26th, 1894.

The public is exercised no longer about the insurrection in the south, but about the prompt, vigorous, and to some persons mysterious actions of the Japanese Government not only in sending a larger number of troops but in locating them in and around Seoul. The spurs of South Mountain about the Japanese Legation, commanding sites on the ridge of hills half a mile west of the city wall, and two or three places at the river landing, are occupied by Japanese troops. To-day, at noon, a company of cavalry with six cannon rumbled through the main streets, past the Big Bell in the centre of the city, on its way to the East Gate—to prospect. The Bell has seen and heard many things in its history the last 500 years, but the clatter of hoofs and the rumbling of cannon must have seemed as strange to it as they were alarming to the white-robed invertebrates on the side of the street.

The general feeling outside of official circles is that "something" will happen in a few days. The tension is very great. Nobody knows what bold step Japan will take next. Even China does not know, or at least the Chinese here profess ignorance. The women, children and aged of both nationalities have been sent off. The Koreans have been looking their eyes out for "the Chinese army." Day after day hundreds of people have gathered on the city wall at the South Gate to assure themselves that their faithful friends have come at last. But aside from the few sneaks, who are reported to have come into the city dressed in Korean clothing, not a Chinese brave has gladdened the eyes of the Koreans.

The common people are beginning to place the responsibility of the matter upon the Queen's family. The royal favourite, who for the last five or six years has been lining his own and his master's pockets with blood-money drawn from the people, who has sold offices as openly as rice is sold, is beginning to feel alarmed. He was stoned in the street, insulted at the Chinese Residency (if rumour may be trusted), for inefficiency in administering the affairs of State, and has "resigned" two or three of the seven offices he holds. The tide is surely setting in against the high-handed rule of the Ming family, and if some high officials are found missing in case of war, the common people will not go into mourning. Mr. Otori had an audience to-day. The King is helpless, and as he does not know what else to do, proposes to move back to-morrow into the Palace he left a month or so ago.

KOREAN AFFAIRS.

Disquieting rumours are circulated in the capital concerning the situation in Korea. Their substance is that no hope exists any longer of amicable negotiations between Japan and China. But the stories are mere conjectures, probably fabricated by speculators. The impression, however, is general that the situation has become critical.

The Korean Minister, Kim Shitetsu, left Tokyo for home on the 28th instant. He is well-known for his pro-Japanese tendencies. At first he is said to have suspected Japan's intentions towards Korea in the present instance, but a close study of Japanese opinion having convinced him that the Government as well as the people in this country are sincerely anxious for the independence of his native land, he has decided to go home and explain to his Government the real sentiments of the Japanese nation.

According to the *Jiji Shimpō's* latest information, the total strength of the Chinese troops in Korea is about 4,000. Our contemporary states that, according to a telegram received from In-chhōn, a detachment of the Chinese force was sent to the rebel districts on

Original from

the 25th instant. As the *Yiji* justly remarks, the Chinese will not find any rebels to fight with. Possibly the rebel districts may have been a fictitious destination. The troops said to have landed at Nam-yang on the 27th instant probably belong to the same corps.

The *Nichi Nichi Shimbun's* Söul correspondent telegraphs that the real strength of the Chinese troops last arrived at A-san is only 400 with 50 horses and 150 or 160 mines and torpedoes. According to this authority, the total number of Chinese troops in Korea is not more than 2,500.

The *Nichi Nichi Shimbun* is responsible for a report that the Chinese officer in command of the troops at A-san recently issued a proclamation, informing the Korean people that, Korea being her dependency, China had sent an army to subdue the *Togaku-to*. Such being the sole object for which the Chinese troops had been despatched, the Koreans were told to engage in their respective occupations in peace and without any anxiety.

On the 28th instant, fifteen constables received orders to proceed to Korea to augment the police force in the Japanese settlements in that country. Five are to go to Fusan and the rest to In-chhön.

Mr. Kurino, Director of the Investigation Bureau in the Department of Foreign Affairs, has gone to Korea on official business.

The *Kokumin Shimbun* states that Viscount Enomoto has been, or will be, appointed Ambassador to China. But this report is doubtful.

The pass of Ku-hyöng-san (Biel-san), a strategic point of great importance between Söul and In-chhön, is said to have been occupied by the Japanese troops. The *Mainichi*, from which we take this news, further states that a military telegraph line is in course of construction between Söul and In-chhön.

The Tokyo News Agency reports that, according to a telegram received from Tientsin on the evening of the 21st instant, the troops, 5,500 strong, ordered by the Viceroy Li to leave for Korea, have not yet departed probably on account of insufficiency of transports.

The number of Chinese war vessels in the port of In-chhön was at first four or five, but since the 25th instant it has been reduced to two or three.

Last evening the *Tokyo Asahi Shimbun* published an extra containing several important items. One of these was that the Söul-Fusan telegraph lines had been opened on the same day; another, that the *Togaku-to* disturbance has again been revived in the vicinity of Yöng-gwang in Chöi-la-do; a third, that Ming Eishun is now on very bad terms with the Chinese Resident Mr. Yuan. A telegram from the *Asahi's* Söul correspondent, dated 29th instant 2.50 p.m., states that 1,000 Chinese troops arrived at Ma-san-pho; that 4,000 or 5,000 were expected soon to arrive at Kai-Söng in Kyöng-kai-do; and that the arrival of another body at Wi-ju was reported by the Governor of Phyöng-yang. These reports lack confirmation.

It has hitherto been supposed by the Japanese that Li Hung Chang was resolved to adopt hostile measures against Japan in consequence of pressure from Peking. The *Yiji Shimpö*, one of the papers holding that view, is now inclined to credit the following telegram, dated London June 28, 11.15 a.m.:-

"According to a report current in diplomatic circles here, it is stated that, although Li Hung Chang was at one time disposed to adopt hostile measures against Japan in connection with the present Korean question, the Peking Government did not permit him to proceed with those measures, and seems to be waiting for the mediation of some third Power."

The above telegram is said to have been received by a certain Japanese firm in Tokyo. The *Yiji* states that it has good reason to attach importance to the message.

The *Koktai* reports that the Japanese troops hitherto stationed in the settlement in Söul have been removed to important strategic points in the suburbs of that city. The four gates of the city are also to be guarded by Japanese troops.

The same paper thinks that Mr. Kurino Shin-ichiro, of the Foreign Office, who left for Korea

on the 29th ultimo, was entrusted with the last instructions of the Japanese Government to its representative in Söul. Our contemporary further states that, at a Cabinet Council held in the Imperial Palace on the 28th ultimo, it decided to declare war under certain probable contingencies.

The *Nichi Nichi Shimbun* states that a large number of spies have been sent to Japan by the Chinese Government. Some of them are said to be Europeans, while several Koreans and Japanese are also suspected of being in the same service. The Japanese Authorities are reported to be keeping a sharp lookout.

Concerning the mobilization of the troops of the Hiroshima Garrison, the *Nichi Nichi* observes that everything was conducted with such rapidity that, on the fourth day after the receipt of the order for mobilization the first batch, a regiment, left the port of Ujina. It seems that, although intelligence had reached Tokyo on the 1st of June that something unusual was about to take place in Korea, it was not until the afternoon of the 5th that orders were sent to the Hiroshima Garrison for the despatch of troops to the peninsula. The first batch, about 2,000, left on the 9th. It should be remembered that one-half of this number had to be summoned from their homes, for a moiety of the soldiers on active service are always permitted to go home. The officers of the Hiroshima Garrison are said to regard with much pride and satisfaction the celerity and even joy with which the men answered the summons.

According to a telegram, dated Söul, June 29, 4 p.m., transmitted by way of Fusan,—the line having been re-opened on that day,—the recent repeated interruptions of the Wi-ju line were merely a pretext to turn away Japanese applicants from the Telegraph Office, for all the while Chinese messages were transmitted as usual.

Notwithstanding the re-opening of the Söul-Fusan line, the Japanese Military authorities are said to be taking active measures for the construction of a separate military telegraph line between the two places, because the existing line is so ill constructed that it may be interrupted again at any moment. The military line that had been in course of construction between Söul and In-chhön was completed a few days ago, so that the Japanese troops in Korea are now in direct telegraphic communication with Tokyo.

On the 29th ultimo, a Military band was despatched to Korea. It is not stated from what Garrison it was drafted.

The Japanese troops in Korea are reported to be in excellent health. Seven cases of dysentery and other maladies of a light character occurred, but the patients, who, as already stated in these columns, were sent home, are said to have almost completely recovered. These cases occurred at In-chhön. The troops in Söul being stationed in the suburbs, it is reported that not a single case of sickness has arisen among them.

Applications for service as volunteers are pouring in from every locality in the Empire, but there being no necessity to employ volunteers, the applications are not entertained by the Authorities. Contributions of money and articles are also offered, but these, too, have not been accepted thus far.

The report that the *Togaku-to* have again risen in arms in Chöi-la-do is confirmed by a telegram received by the *Nichi Nichi Shimbun* from its Fusan correspondent on the 30th ultimo. The same telegram adds that, "after issuing a very insolent proclamation the Chinese troops marched towards the disturbed districts."

The *Nichi Nichi Shimbun* states that the third batch of troops, which left Ujima on the 24th ultimo on board nine transports, arrived at In-chhön on the 27th. Nothing is said about the number of those troops, but it must have been considerable. Rumour says that they aggregated nearly 4,000. If this report be correct, the total strength of the Japanese troops now in Korea, is not much less than 10,000.

According to the *Yiji Shimpö's* Söul corre-

pondent, writing under date of the 23rd ultimo, the Chinese Government has instructed its troops at A-san by wire not to leave Korea until after the Japanese forces shall have all withdrawn.

The *Kokumin Shimbun* published an extra on Sunday evening, from which we learn that, on the preceding night, a telegraphic message of paramount importance was received at the General Staff Office. The telegram, whatever it may have been, is said to have at once led to hurried consultations of the military authorities, and to constant passing and repassing of messengers between the General Staff Office, the War Department, and the Admiralty. On Sunday, an extraordinary Cabinet Council was held at Count Ito's official residence. It was attended by all the Ministers without exception, as well as by Lieutenant-General Kawakami, Vice-Chief of the General Staff, and Vice-Admiral Nakamura, Chief of the Naval Command Office. Our contemporary believes that the situation has reached a most critical stage.

Correspondents of the *Nippon* and the *Niroku Shimpö* narrate a voyage which they recently made in a small Korean boat from In-chhön to Nai-tong, a roadstead at the entrance of the bay at the head of which is situated A-san, the headquarters of the Chinese force. Leaving In-chhön at dusk on the 21st ultimo, they reached Nai-tong on the afternoon of the following day. So soon as the boat was moored at the beach, an inferior Chinese Naval officer appeared on the shore, and after exchanging signals with a Chinese war vessel lying in the harbour about two miles off, came to the boat and asked the Japanese correspondents who they were and what they wanted. They replied that they were merchants living at In-chhön and that they were going to A-san on business. After forbidding them either to land or to put to sea again until further notice, the Chinese officer left in a boat for the war vessel. About half-way, he was met by a steam launch, but both the boat and the launch together proceeded toward the war vessel. Meanwhile a large number of Koreans collected on the beach where the boat with the Japanese correspondents was moored. The latter put various questions to the Koreans about the Chinese troops at A-san. If their answers can be relied upon, it seems that the troops (about 2,000) first landed at A-san, were carried on board three men of war, that the landing was effected very slowly at Nai-tong; that the Chinese troops were then still encamped at A-san and the neighbourhood; that the bay to above Nai-tong was closed to Japanese as well as Korean vessels and boats, and was moreover too shallow to admit war vessels. After obtaining the above information, the adventurous Japanese thinking it impossible to get on further, put out to sea again, and passing the night in a harbour a few miles away, safely returned to In-chhön in the evening of the 23rd ultimo.

The *Asahi Shimbun's* Söul correspondent writes that the approach of Chinese troops to the Korean capital will be the signal for the opening of hostilities. He also mentions that the Chinese forces at A-san are making preparations for the removal of their headquarters to Su-Wön, about twenty-five miles South of Söul. According to the same correspondent, the Chinese Resident, Mr. Yuan is now endeavouring to excite the enmity of the Koreans against the Japanese by disseminating various false rumours. He is also said to be trying to form a diplomatic combination against the Japanese Minister.

The *Nippon's* Söul correspondent reports that on the 20th ultimo, the Representatives of Russia, France, and Germany held a long conference with the Japanese Minister at the latter's Legation. He further states that although Russia and France have threatened to send troops, the threat will not be carried out.

According to the Japanese News Agency in Söul, the Japanese Minister has despatched Police-sergeant Hagiwara to the rebel districts to find out the truth about the alleged presence of Japanese among the *Togaku-to*.

The *Nippon's* Nagasaki correspondent, writ-

ing under date of June 28, states that the Japanese war vessels *Matsushima*, *Yamato*, *Katsuragi*, *Tenryu*, and *Yoshino*, which had recently returned from Korea to the Naval station at Saseho, again left for In-chhōn on the 27th ultimo, fully equipped for warlike operations.

The *Nippon* publishes a rumour that a collision took place between Japanese and Chinese war vessels either on the 27th or 28th ult. The story is evidently groundless. No such report has thus far reached the Japanese Government.

The Tokyo News Agency claims to have received the following telegram from Sōul, dated June 30:—"A large number of Chinese soldiers are present both in Sōul and In-chhōn under various civilian disguises. The 800 rifles recently brought to A-san by the Chinese transport are probably intended for the use of these soldiers."

Another telegram of the same date, said to have been received in Tokyo, announces that the detachment of Chinese troops which marched in the direction of the rebel district, has returned to A-san.

The Sōul-Fusan telegraph line, re-opened on the 29th ultimo, was, according to the Tokyo News Agency, interrupted on the 1st instant.

The Tokyo News Agency also reports the receipt of the following telegram, dated Tientsin June 30:—"Li Hung-chang is daily holding consultations with his subordinates, civil as well as military, about the policy, diplomatic and military, that should be pursued in the present juncture. The delay in the departure of the troops (5,500) recently ordered to proceed to Korea is owing no less to the uncertain result of these conferences than to insufficiency of transports."

Alarming reports are circulated in Tokyo to the effect that a collision has already taken place between the Japanese and Chinese troops in Korea. But evidently these rumours are without foundation, being in most cases fabricated by speculators. There is no doubt, however, that the situation is very critical. It is generally believed that Mr. Kurino's arrival at Sōul (probably to-day) and the delivery of the message carried by him to Mr. Otori, will precipitate some definite result. Meanwhile the keenest attention is directed to China's movements.

The *Jiji Shimpō* says that it has received the following telegram from London, under date July 1st, 8.30 a.m.:—"The Peking Government, adopting Li Hung-chang's recommendations, has issued orders for the mobilization of troops; and battalions will immediately be despatched to Korea." Our contemporary evidently attaches great importance to this message.

The *Nichi Nichi Shimbun's* Tientsin correspondent despatched the following telegram on the 2nd instant:—"Every preparation has been completed for the despatch to Korea of 15 battalions, about 7,500 strong in all, with the necessary ammunition and provisions. These troops are to land in the province of Phŏng-an-do and to occupy the stronghold of Phŏng-yang. But, strange to say, there is as yet no indication that the troops are to leave for Korea. Moreover, although the battalions under Li Hung-chang are composed of 500 men each, those under the command of other Viceroy's are said to contain less, so that the total actual strength of the army destined for Korea will fall considerably below 7,500.

The *Nichi Nichi Shimbun* published on Tuesday the following extra:—"It is reported that the Government received yesterday a telegram from Tientsin, announcing that, according to a rumour widely circulated at that place, the Chinese Government has decided on war, and 15 battalions were hourly expecting orders to leave for Korea. But according to later intelligence, the troops have not yet taken their departure. This circumstance and other indications induce us to hesitate about placing confidence in the report that the Chinese Government has decided on war."

The Sōul-Fusan telegraph line, which was interrupted on the 1st instant, was re-opened the following day. The construction of a separate line is already going on, and its comple-

tion, according to the *Nichi Nichi*, will take place in a few days.

Correspondence from Korea does not contain any important news. The correspondents have apparently little opportunity to learn anything about what is going on there, or if they happen to obtain valuable intelligence, they are not allowed to publish it. So at present their letters are far from interesting, the only ones worth looking at being those published in the *Kokumin Shimbun*. They contain wood cut illustrations of Korean life and of the Japanese camp by the well-known artist Mr. Kubota Beisen.

The report that China has decided on war is received with incredulity by the leading Japanese papers. The latest telegram to the *Nichi Nichi Shimbun* from its Tientsin correspondent, under date of July 3rd, a.m., is as follows:—"Notwithstanding the report that the Chinese Government has decided to send troops to Korea and that those troops are ready at any moment to set out, there is no appearance of their immediate departure; and it is, consequently, believed that the order for mobilization was issued simply to quiet the clamours of the Military officers." Commenting on this telegram, the *Nichi Nichi* remarks that China's declaration about the despatch of a large body of troops is strangely inconsistent with her application to the Representatives of certain foreign Powers to mediate between herself and Japan. It is also worthy of remark, says our contemporary, that the Chinese Government seems to have taken special care that the reports about warlike preparations should reach the ears of the Japanese officials in Peking and Tientsin. From these circumstances, our contemporary infers that the Chinese Government is still undecided what course to pursue toward Japan. If China be really desirous of peace, why, asks the *Nichi Nichi*, did she not agree to Japan's reasonable proposal for joint action to inaugurate reforms in Korea.

It is reported that the Ministers of some European Powers, especially Russia, have of late been offering to mediate between this Empire and China. But their offers, it is believed, have been declined by the Japanese Cabinet. On this topic the *Nichi Nichi* writes as follows:—"The Chinese Government at first pretended to be disposed to a warlike policy, then showed a semblance of peaceful intentions, and is now again assuming a strong attitude, though its real purpose is extremely doubtful. While China's intentions are thus uncertain, Japan, on the contrary, has throughout pursued the same determined policy. Whatever Powers may hereafter offer to mediate in the solicitation of China, the Japanese Government will never consent to abandon the policy it has thus far pursued with unflinching resolution.

How far the Japanese Minister's negotiations with the Korean Government have met with success, still remains a secret. But letters from Sōul agree in stating that the party in the Korean Government favourable to the introduction of reforms in pursuance of Japan's advice is increasing in numbers and influence. According to the *Jiji Shimpō's* Sōul correspondent, Mr. Kim Kachin, formerly Minister to Japan, has been appointed Adviser to the Department of Foreign Affairs. But another correspondent says that his appointment is the portfolio of Home Affairs. Whichever version be correct, his appointment to an important post in the central Government must be regarded as the surest sign of the increasing power of the pro-Japanese faction. The *Hochi Shimbun's* correspondent believes that the Korean Foreign Minister recently called at the Japanese Legation to ask for the protection of Japan.

Several correspondents state that dissensions have taken place between the Japanese Minister Mr. Otori and Major-General Oshima, Commander of the Japanese troops. According to these writers, Mr. Otori's method of dealing with the Korean Government is said to have been severely censured by the military commander. But we learn that there is no truth in this report; the two officials are co-operating most heartily.

As to Ming Eishun, it is stated that at a recent meeting with the Chinese Resident he had an animated talk with the latter, in the course of which he had his face spat upon by Mr. Yuan. Since then, they are said to regard each other with the bitterest enmity. Ming is also believed to have received a humiliating rebuff from the Tai Wōn-kun. He is, however, enjoying a certain measure of influence at Court through the energetic support of the Queen.

The Chinese Resident is reported to have threatened that under certain circumstances the Chinese Government will require Korea to pay the expenses incurred in the despatch of troops at her request. He is also said to have presented a memorial to the Korean King advising him to execute a living Kim Ok-kyūn, his meaning being probably that Ming Eishun should be beheaded, because, in Mr. Yuan's opinion, his vacillating policy prevented the Chinese troops from entering Sōul before the arrival of the Japanese force.

Reports of the contemplated formation of volunteer corps are arriving from all parts of the country. But the Authorities say that there will be little occasion to make use of their services. It is officially stated that Japan can place in the field 500,000 troops ready equipped for warlike operations.

According to the *Kokumin Shimbun's* Sōul correspondent, the French Catholics there have offered their buildings for the use of the Japanese troops.

The *Nichi Nichi Shimbun* states that the following telegram was received on the afternoon of the 4th instant from Tientsin:—"The troops under orders for Korea are conveying their baggage to the landing place, but not even the shadow of a transport is seen in the harbour."

The *Jiji Shimpō* publishes a later telegram from Tientsin. It is dated July 4th, a.m., and runs as follows:—"A body of troops designated by the ideograph 艦, will, it seems, embark for Korea in two or three days." Commenting on this telegram, our contemporary states that, although the troops mentioned in the message, seem to have completed their preparations for departure, transports do not appear to have yet been provided for taking them to their destination.

The *Nichi Nichi Shimbun's* Sōul correspondent, writing under date of June 26th, states that the Representatives of both England and the United States are maintaining a neutral attitude, but that those of Russia and France are daily having meetings with the Japanese Minister. They are reported to have expressed approval of the step taken by the Japanese Government. Especially the Minister of France is said to have declared that in the event of war the Japanese troops will be at liberty to occupy the grounds belonging to the French Catholic Mission. These grounds lie in front of the Japanese settlement, and a battery located there would easily command the whole city of Sōul.

Vegetables and other articles of food are said to be very scarce in Korea, but eggs and fowls are reported to be in abundance.

According to a rumour current in Sōul, Ming Eishun will be sentenced to banishment on the ground that his application for China's armed assistance was the proximate cause of the present complication. In that event his estates will be confiscated.

Concerning the interview which the Japanese Minister, Mr. Otori, had with the Korean King on the 26th instant, the *Jiji Shimpō's* correspondent mentions a rumour, said to be prevailing among foreigners in Sōul, to the effect that Mr. Otori represented to the King the consistent efforts made by Japan in the past to assist the maintenance of Korean independence, and pointed out the part Japan had taken in introducing the peninsula Kingdom to the world as an independent State. He is further believed to have told the King that, there being grounds to suspect the actions of a certain Power (meaning China of course), Japan was compelled to send out troops to insure Korea's independence as well as to protect her own subjects there, and that until this double object

should have been achieved, the troops would not be withdrawn. The impression among foreigners, says the *Yifu's* correspondent, is upon the whole favourable to the above mentioned representations of the Japanese Minister.

It appears that Mr. Otori is conducting negotiations with the Korean Government on the subject of internal reforms. If the *Nichi Nichi Shimbun's* statement may be trusted, China seems bent on thwarting Japan's policy in the peninsula. According to an apparently credible telegram, dated Seoul July 4th, 10 a.m., received by our contemporary, the following telegram was addressed to the Korean King by the Viceroy Li:—"Japan has despatched a large force, but she is really in a perplexing dilemma. China will cause Japan to withdraw her troops. Consequently, whatever proposals the Japanese Minister Otori may make to your Court, no attention need be paid to them." Writing on this news, the *Nichi Nichi* remarks that it is China which is in an embarrassing dilemma. To all outward appearance, she is pursuing a strong policy and talks of despatching a large force to Korea, but in point of fact she does nothing of the kind. On the contrary, she has solicited some foreign Powers to mediate between herself and Japan. She has, says our contemporary, neither sense enough to cooperate with Japan for the regeneration of Korea, nor courage enough to fight this Empire.

With the sudden decadence of the power of the Ming faction in the Korean Government, attention is naturally directed to the Tai Wōn-kun. Thus far he is said to have strictly refrained from meddling with politics. The correspondents of the Japanese papers, however, believe that sooner or later he will be induced to direct the affairs of the State in the capacity of Regent.

According to a telegram dated Chōn-ju June 26th, 10.27 p.m., received in Seoul from Mr. Takashima, a Japanese student sent by the Department of War, robbers abound in those regions. Mr. Takashima mentions also that twenty Chinese soldiers had arrived there.

The *Togaku-to* in the vicinity of Chōn-ju are said to have dispersed perfectly satisfied with the assurances given them about future administration by the new Governor, Kim. According, however, to the latest correspondence from Seoul, rebellion has again broken out at Mak-pho in Chōl-la-do. The *Togaku-to* are said to be going about in parties of fifty to sixty, exhorting the people to rise in arms, and declaring that, so soon as the Japanese and Chinese troops have been withdrawn, they will at once march upon Seoul.

A strange occurrence is reported from Chhang-wōn. On the 30th ultimo, a party of thirty persons, says the *Kokumin*, entered, robbed, and blew up the mine at that place, using dynamite for the purpose. The depredators are reported to have at once marched in the direction of Chōn-ju. Another and a more probable version given of the affair by the *Yiji Shimpō*, is that five or six Japanese broke into the stores of the gold mine at Yong-dam-san in the prefecture of Chhang-wōn, and carried away a quantity of dynamite. This mine was once worked by the celebrated Japanese miner, Mr. Furukawa Ichibei, but the undertaking was abandoned by him several years ago, and nothing is known about the present owner.

The Korean authorities at In-chōn are reported to have prohibited the people in their district from hiring their labour to the Japanese for any military purpose. Great inconvenience is said to have resulted from this order.

The Chinese Commander at A-san is reported to have issued strict injunctions to the troops under his command not to commit any violence against the the Korean people or to pillage them. But his commands do not seem to be respected, for reports of brutal acts perpetrated by the Chinese soldiers are constantly reaching Seoul.

The Tokyo News Agency has forwarded to us the following telegram, dated Tientsin July 4th, a.m.:—"Li Chun-tang left for Peking last night; he will return here on the 8th inst."

The *Nichi Nichi* publishes the following telegram, dated Tientsin, July 5, 8 a.m.:—"Eight men of war belonging to the Canton fleet have been assembled in the Bay of Chi-li, and now seem to be waiting for orders off Taku."

Concerning the report that the Viceroy Li is on a visit to Peking, the same paper states that no such news has been received either at its office or at the Foreign Department. The thing is in itself not improbable, but our contemporary seems disinclined to believe the report. If it be true, then it shows, in the *Nichi Nichi's* opinion, that the Chinese Government is still undecided on the policy to be pursued toward Japan. Perhaps the Viceroy's object is to see foreign diplomats in the capital and solicit their advice and assistance.

The *Nichi Nichi* has received the following telegram from London:—"China has failed diplomatically, and the fact is commented upon by the *Times* and other journals."

It appears according to later intelligence that the depredators of the Chhang-wōn mine were a party of Japanese *sōshi* under the command of the notorious Tanaka Jiro, the dismissed Army officer.

The following telegram received by the *Niroku Shimpō* from its enterprising correspondent at Fusan probably refers to the same body of men:—"On the 1st instant at the break of day, a party of brave men, armed with Japanese swords and other weapons, were observed to pass along in the vicinity of Chin-ju in Kyōng-sang-do. They encamped on the top of a mountain, hoisting a flag with the three ideographs 天祐僕 (Heaven befriends Chivalry). They assembled together two or three hundred Koreans and addressed them on some important subject. They appear to be about to march in the direction of the Tai-ku garrison (in Kyōng-san-do)."

Commenting on this report, the *Niroku* observes that the object of these men seems to be to turn the *Togaku-to* disturbance into a regular revolutionary war. From the manner in which our contemporary speaks, it seems probable that writers on its staff are in sympathy, if not in communication with these adventurers. At least it is evident that the *Niroku's* correspondent at Fu-san is closely connected with the party of revolutionaries. He constantly makes excursions into the interior, and has lately been prophesying that some thing wonderful would happen in a corner of the peninsula.

The *Nippon's* Seoul correspondent states that on the 24th ultimo, the Commander of the Japanese army despatched a party of military engineers to undertake the repairs of the Sōn-Fusan telegraph line. The line having been re-opened on the 29th, they seem to have completed their task in the remarkably short space of five days.

The same correspondent states that a body of Korean soldiers forming part of the Kang-hwa garrison, and recently sent out against the rebels, is about to be amalgamated with the Chinese troops at A-san.

Concerning the growth of a pro-Japanese party in the Korean Government, it is stated that the principal agents in the revival are An Shijū and Cho Giyen. Even Ming Eishun, the former leader of the anti-Japanese party, is said to have gradually turned round to the opposite side. Besides Kim Kachin, who was recently appointed Adviser to the Department of Home Affairs, Yu Kikan, who was educated at Mr. Fukuzawa's College, is said to have received an appointment as Secretary of the Foreign Office. Other pro-Japanese politicians are stated to be expecting high official appointments. There seems to be even talk of appointing Mr. Boku Eiko, the celebrated refugee in Tokyo, Korean Minister in Japan.

It is reported that recently a party of Japanese troops stationed in the neighbourhood of the pass of Ku-Kyōn-san, hearing reports of guns during the night, sent out scouts to discover what it meant. They brought back a party of Korean soldiers, who, on being questioned, explained that they fired guns in dread of the robbers infesting the region even in the day.

time. These soldiers were on their way to Seoul from the rebel districts.

There is much talk about the presence of Chinese spies in Japan. At a certain ammunition store in Tokyo, some suspicious persons are said to have been discovered in the act of setting fire to the place. Consequently, the sentries have been increased at all Military stores in Tokyo. This reports lacks confirmation.

CHINA'S PROCEDURE IN KOREA.

[ACCORDING TO THE SHANGHAI PAPERS.]

An impression prevails among foreigners, and perhaps also among natives, in China that the warlike preparations of the Chinese Government have been carried much further than we in Japan suppose. China is credited with having 2,500 troops in the peninsula, and is believed to be despatching others rapidly, some by sea and some by land across the northern frontier of Korea. Nothing is said, however, as to the means of transport available for the sea route, and it may be taken for granted that there ideas are greatly exaggerated.

The *North-China Daily News* has repeatedly alleged that China, in disregard of the Tientsin Treaty, failed to give to the Japanese Government any notice of her intention to despatch troops to the peninsula until the first batch had actually landed there. Our Shanghai contemporary puts this forward as Japan's chief grievance against China. But although such a breach of treaty may have taken place for aught we know to the contrary, it has never been seriously complained of by Japan. Neither the Japanese press nor the Japanese Authorities, so far as we are aware, make any charge of the kind against China.

As to the time when the first detachment of Chinese troops landed in Korea, the most definite information we possess is furnished by the *North-China Daily News*. We learn from it that the S.S. *Haeting*, leaving Shanghai on the 3rd of June, met the S.S. *Loonan* setting out from Tongku with the first batch of Chinese troops. Tonku lies a few miles up the Peiho. The *Haeting* ought to have reached there early on the morning of the 6th of June. Hence it follows that no Chinese troops can have landed in Korea before June 8th at soonest. The *Haeting* herself subsequently carried over 500 soldiers and 99 horses. Her proceedings were closely watched by a steam launch from a Japanese man-of-war. It seems, indeed, that the Japanese in Korea are keeping themselves thoroughly posted as to all the movements of the Chinese ships and troops.

According to the *North China Daily News'* Chemulpo correspondent, writing under date June 19th, the Chinese troops in Korea never numbered more than 1,500, and of that total 1,000 returned to China on the 18th. The same correspondent, writing on the 20th June, says that there were then 13 Japanese men-of-war and fourteen steamers and transports in the harbour. He adds that the Chinese residents were "flocking down to the coast and engaging junks to take them to China."

The Peiyang Squadron under Admiral Ting has reached Chemulpo. As to its strength, the *North-China Daily News* gives the following account:—

The ironclad *Ting Yuen* (flagship) and *Chen Yuen* were until recently the most powerful vessels in the East, the British flagships at the present time alone surpassing them. Built at Stettin in 1882, of 7,400 tons displacement and 6,000 horsepower, equal to a speed of 14 knots, with central armoured belt of 14 inches, their armament consists of four 30.5 centimetre (12.1 inch) Krupp guns in twin mounting *en barbette* with 12 inches of armour protection. The steel projectiles for these guns weigh 725lbs. and the charge of powder is 202lbs. of slow-burning cocoa; their perforation power at muzzle is through 23½ inches of armour, no light blow indeed. Two 15 centimetre (5.8 inches) Krupp guns are carried, one in the bows and the other at the stern, with 11-inch perforation power. There are three torpedo tubes and numerous machine guns on deck and in the tops.

Captain Law of the *Ting Yuen* and Captain

Liu of the *Chen Yuen* are both experienced and trained officers, having served under Admiral Tracey out here in training ships, in the British Navy, and more lately under Captain Lang, than whom no one has worked harder to train or been more fitted to teach and lead. Some 350 men may be the number of each ship's complement.

The *Tsi Yuen*, misnamed a torpedo cruiser, with a speed of barely 15 knots, was likewise built at Stettin in 1883, a poor ship but carrying, however, two powerful 21-centimetre (8.24-in.) Krupp guns forward, with a muzzle perforating power of 16.4 inches; one 15-centimetre Krupp and four torpedo tubes. Captain Fong, her commander, has received naval training abroad; he is a resolute and able man and would do justice to a better ship than he now commands.

The *Chih Yuen* and *Ching Yuen* are Elswick built boats; tonnage 2,300, with an entire protective steel deck, and a speed of 18 knots. These fine vessels carry three 21-centimetre Krupp guns, two forward off a platform, one aft and two 6-inch Armstrong guns, they have further four torpedo tubes each. Their commanders are respectively Captain Tang and Captain Yeh, both competent men, Captain Yeh especially so.

The *King Yuen* and *Lai Yuen* are belted (9½ inch) cruisers, built at Stettin in the same year as the Elswick boats, 1886; 2,800 tons displacement and with a speed of 16 knots; they are armed with two 21-centimetre Krupp guns *en barbette* forward; two 15-centimetre do, one on either broadside; and four torpedo discharge tubes: their commanders, Captains Liu and Kew, have both had some training in the British Navy.

The *Chao Yung* and *Yang Wei* are the well-known Elswick cruisers of which the French stood so much in awe during their operations off Formosa in 1884. They each carry two 25-ton Armstrong guns and have a speed of about 14 knots. Captain Wong commands the *Chao Yung* and Captain Liu the *Yang Wei*. These nine men-of-war represent a force of about 2,300 men.

The officers and men have both received much careful training. The former have nearly all passed through the Foochow or Tientsin Naval School. The training for the men, laid down by Captain Lang, is as complete as can be found anywhere in theory, and in practice conforms to a very efficient standard indeed. All the men pass through the capable hands of Lient. Bouchier, R.N., who has charge of the recruiting and gunnery departments on shore at Weinauiwei: in torpedo training, both at the shore school and afloat, the able services of Mr. Fleischer, I.G.N., have long been employed, and where he has worked the best results can be looked for.

As gunners the Chinese make excellent marksmen; they are fond of their guns, keep them in good order and handle them well. Three minutes per round is not an unbroken record, when prize firing with the heavy 12-inch Krupp guns; and with the better fittings of the heavier cruisers, the 8-inch and 6-inch guns can be served a round a minute. It is not uncommon to hear unfavourable comparisons drawn between the Chinese and Japanese officers to the detriment of the former; but despite the many disadvantages the Chinese officer has laboured and still labours under, disadvantages arising out of birth, habit, and system, which this is not the time nor place to dilate upon, there are many capable and energetic men amongst the officers of the squadron who will stand by their ships and serve them efficiently when need arises; an emergency, where name and country is at stake, will bring out, we are fully persuaded, much latent and unknown strength in the Chinese naval officer.

In addition to the above, we read that orders have been issued to the Nanyang fleet to assemble at Woosung and hold itself in readiness to proceed to sea at any moment. It is further stated that the three large steel cruisers of the Canton fleet, the *Kuangchia*, *Kuangping* and *Kuangyi*, which participated in the recent naval manoeuvres in the North, are immediately to join the squadron in Korean waters.

Rumour says that H.E. Liu Ming-chuan has been nominated Commander-in-Chief of the Chinese forces in Korea with full power to act independently of reference to Peking or Tientsin. Liu is regarded as one of China's greatest generals. He distinguished himself first when fighting under Li Hung-chang against the Taipings, and he afterwards gained great credit for defending Formosa against the French.

A telegram received in Shanghai from Tientsin states that the Viceroy Li's crack troops at Hsiao-chuan (15 miles from Tientsin) have been placed under orders for active service. These troops, which comprised one of the Viceroy's

(Chinese computation), or about 19,000 men and include a complete equipment of horse, foot, and artillery, are under the command of General Wei, an Anhui man much trusted by the Viceroy Li.

"It is said," we read in the *North China Daily News*, "that the Nanking Viceroy has telegraphed to the Chinese Minister in London to urge on the construction of the four torpedo-boat destroyers ordered from England and Germany last spring, and also to see if there are any ironclads and cruisers ready to be launched or lying idle in either country which can be bought for the fleet immediately. The Viceroy Li is reported to have sent a telegram to the same effect concerning the Peiyang fleet."

Foreigners who saw the landing of the Japanese troops in Korea unite in praising their organization, which is said to have been "complete in every detail, even to firewood, large quantities of which the Japanese troops took with them."

The *North China Daily News* of June 29th has following:—

The latest news that can be relied on from the North is that the Chinese have proposed to the Japanese a simultaneous evacuation of Korea, to which the Japanese will not agree. The Japanese demand a condominium in Korea, a joint occupation and joint administration of the country, with the right to introduce important reforms, and to this the Chinese will not agree; but the Viceroy Li Hung-chang and the Government are anxious that peace shall be preserved, if this can be done without loss of honour to China. Meanwhile ten thousand men have been despatched from Tientsin to Korea.

The knowledge that China does not want to fight, and that the Tsungli Yamen is in the habit, where difficulties like this arise, of turning to Sir Robert Hart for advice, was apparently the foundation for a rumour yesterday that the Inspector-General had proposed that the British and German Ministers to Peking should arbitrate between China and Japan, that the suggestion had been accepted by the Tsungli Yamen, and was under consideration by the Japanese Government. The indications at present, however, are that the Japanese Government would not accept arbitration if it were offered to them.

SHANGHAI NEWS.

Mr. G. E. Morrison has performed the journey from Shanghai to Blamo in 100 days. He speaks enthusiastically of the kindness experienced everywhere along his route. He concludes a brief account of the remarkable trip, published in the *N.C. Daily News*, thus:—

As regards the cost of a journey like this, it is perhaps the cheapest that can be made in the world. I had 263 taels when I left Shanghai and having paid liberally for everything I had 200 rupees when I arrived in Blamo, a pony which I sold about cost price for 45 rupees, and some curios which cost me 15 taels, and for which I refused in Blamo 250 rupees. The gold I bought in Yunnan with my surplus silver I sold in Blamo for 20 per cent. profit; rupees I bought for 11 pence in Tengyueh and found them worth 13 pence in Blamo.

The project of building a sanitarium on the Gulf of Pechili has had to be postponed. The people of Peitaho—the chosen site—are said to have been so startled by the price offered for their land, that they declined to part with it, suspecting the presence of mineral wealth. They are reported to be now digging in search of the hidden riches.

Mr. L. Hughes has won the lawn tennis championship tournament this year, defeating the previous holder, Mr. C. Tulloch.

The Directors of the China Merchants' S.N. Company have asked and received from the Throne leave to present a sum of 50,000 Tls. toward the expense of celebrating the Empress Dowager's 60th birthday.

As might have been expected, the *North China Daily News* has a very great deal about the Korean affair, but it is evident that folks in Shanghai are not in possession of accurate information as to what is going forward in the peninsular kingdom, and that their ideas of the motives by which Japan is inspired are not less erroneous than those of the Chinese.

THE PLAGUE IN HONGKONG.

The following are the latest returns of the plague:—

	Hygieia	Kennedy	Alice	Hospital	Cattle	City	Total	Increase	Decrease
Admissions	8	8	15	—	31	7	...		
Deaths	2	5	16	11	34	—	5

Deaths	6	4	5	10	25	—	4		
Discharges	—	—	—	—	—	—	—		
Under treatment	8	44	23	80	155	1	—		

These figures show a steady if slow decrease, and were hailed with satisfaction by public writers in the Colony.

The *Daily Press* of the 25th ult., has the following interesting notes:—

Dr. Versin, the bacteriologist commissioned by the French Government to investigate the plague in Hongkong, Canton, and Pakhoi, has, we learn, shown to a medical confrere some "beautiful specimens" of the bacillus of the disease. He has succeeded in cultivating the microbes and some have been forwarded direct to the Pasteur Institute in Paris, at which the learned Professor studied for seven years. Dr. Versin lives down at the Glass Works Hospital, now known as the Alice Memorial Hospital, and has done some splendid work in his laboratory there. He has experimented largely on rats and mice and other animals, and his energy and perseverance deserve the success by which he has been rewarded.

A story was put in circulation on Saturday (June 23rd) to the effect that the Tsungli Yamen had intimated to H.B.M. Minister at Peking that unless Chinese patients suffering from plague in Hongkong were allowed freely to leave the colony the Ministers would not hold themselves responsible for the safety of foreigners in the various parts of the Empire. On the face of it the rumour looked like a *canard*, for such a suicidal manifesto could scarcely come even from the Tsungli Yamen. The substratum of truth on which the report was erected is this. Mr. O'Connor telegraphed a few days ago to His Excellency the Governor, stating that the Tsungli Yamen were anxious respecting the state of public feeling, and the British Minister suggested that the directors of the Tung Wah Hospital should issue a notice with a view to calming anti-foreign feeling by asserting that the treatment of patients by European medical men was humane and not brutal. His Excellency at once placed the suggestion before the directors of the Tung Wah Hospital, with the result that a notice was issued and has been freely circulated throughout the colony. The following is a rough translation of the document:—

"We learn that defamatory rumours and placards have been circulated at the Capital of Kwangtung Province which are giving much anxiety to the people and are calculated to stir up riots. Now in order to allay such excitement and remove doubts we hereby inform the public that the treatment of Chinese patients in the European hospitals is quite satisfactory and humane, the arrangements being made by both foreigners and natives. All the rumours and placards in the streets are quite foundationless and false. People should not listen to them."

Rather than admitting that the rumour is current, namely that there is a plot amongst the Chinese to poison

the water in the reservoirs. A short time ago there was a similar rumour that the wells at Macao were being poisoned and the Government attached sufficient importance to it to have the wells examined. The water was found to be untaunted and a public notification to that effect was issued. No doubt the rumour as applied to Hongkong is equalled baseless, but it is causing some uneasiness amongst the more orderly and well disposed sections of the native population. It is said that hundreds are in the secret and will help to perpetrate the diabolical scheme. The persons at the bottom of the affair are said to be some well known men who have lately arrived from Canton, publishing the report that in all English hospitals a small square substance is placed to the patient's nostrils and he inhales the poison and dies at once. It is argued that the foreigners do not get the plague and so it must be through their influence that the Chinese are stricken with it.

NEWS FROM THE SOUTH.

An unfounded report was circulated in Hongkong on the 25th ult. to the effect that the King of Siam was dead. His Majesty has been ailing for some months past, and his death would not create much surprise. Latest reports received by mail, however, were that he was somewhat better. Inquiries made by the *Daily Press*, both from official and private sources, failed to establish any confirmation of the alarming rumour, and it was afterwards declared to be without foundation. The report seems to have arisen from the fact of H.M.S. *Rattler* having been ordered to Bangkok. The *Undaunted*, we hear, is also being sent from Singapore to Bangkok.

It is with regret that the *Bangkok Times* records the death of Mr. A. W. J. Carr, of the Hongkong and Shanghai Banking Corporation, which occurred on Thursday, 14th ult. Mr. Carr, who was only 24 years of age, was a native of London and had been about one year and a half in the Eastern service of the Bank, of which one year had been spent in Singapore, the balance at Bangkok.

The reason Phra Yot was not in the first instance produced when the Mixed Court sat at Bangkok to deliver judgment was that, on the previous day, the French Minister had intimated that it would be well, in prevision of the judgment which was to be given, to provide for the execution of the penalty, if any, which Phra Yot might incur. The opinion of M. Piluski was that Phra Yot might be provisionally transported on board the French gunboat stationed in the Menam and put under the custody of the French Commandant, until both Governments had agreed as to whether the penalty should be carried out in Siam or in a French colony. In reply Prince Devawongse expressed the belief that in order to avoid all misunderstanding, it would be better not to produce Phra Yot in Court on the day of the judgment, and that he thought the sentence would be equally valid in the absence of the accused. The Court met at the appointed time, and the accused not being in attendance, adjourned. It was then agreed by mutual consent that the accused should appear in Court, and that if any condemnation was pronounced against him, he should be kept in custody by the Siamese Government, who would treat him as a prisoner. Accordingly at the adjourned sitting the accused was produced, and the judgment was read by the President, the sentence being twenty years' penal servitude. The Siamese members of the Court declined to sign the judgment.

It would appear, says the *China Mail* of the 25th ult., that the murderous attack upon two female missionaries at Honam a few days ago was but the prelude of far more serious and more extensive disturbances throughout the south of China. Indications are not wanting that the ill-feeling engendered over the treatment of plague patients in Hongkong has been taken advantage of by anti-foreign agitators to incite the ignorant and illiterate classes of Chinese against all Europeans. What may be the outcome, it is hard to foretell as yet, but unless very strong measures are adopted by the Foreign Ministers at Peking and backed up by force,

action on the part of the Consuls all along the coast, it is not unlikely that many valuable lives will be lost and progress of foreign trade with China seriously interfered with.

A correspondent of the *Chinese Mail* (Wah Tsz Yat Po) writes from Tung Kun under date of the 21st ult. to the effect that on Wednesday, 20th ult., the American Presbyterian Church at Shek Lung was demolished by a mob and a person, whether a foreigner or a native is not yet ascertained, was killed in the course of the uproar. The Roman Catholic Church there was, however, well guarded by the Chinese authorities who had two disturbers arrested and sent to the Tung Kun magistrate for trial. The church at Tung Kun City is now also in danger, and exciting rumours are rife.

In connection with the apprehension of three Chinamen in Macao the other day for selling poisoned aromatic powders, another rumour was circulated that the water in the well in front of the Senate House was poisoned, as two Chinamen were observed to throw two packets of the powder into the well. Several apprehensions were made and the powder as well as the water in the well were tested and analysed, but no poisonous substance was discovered. It is believed that all these rumours were the precursors of an inflammatory placard in Chinese which was posted throughout the City on the morning of the 20th ult., insinuating that the French missionaries were conspiring with the lawyer José da Silva, the editor of the *Independente*, to poison the people and bring about desolation. The *Independente* gives the following translation of the placard:—

"For some time, the Black Plague has been raging in Hongkong and Canton, and this calamity has filled every heart with consternation. Now, another misfortune has befallen us. There are persons who have been distributing little sacks containing aromatic substances, the smell of which causes immediate death. Moreover, there are some persons who have been throwing poison into the wells, so that all those who drink of them should die. All this is done with an homicidal intent, which is most detestable. The epidemic might be attributed to fate but the spreading of aromatic substances and the throwing of poisons into the wells are the work of men who are endeavouring to increase the evil because poison can be spread everywhere. We, who are friends of the people, could not refrain from inquiring as to the cause of all this, so as to eradicate the evil. We have ascertained that all this comes from the French Missionaries, who by means of cunning design (their hearts being like those of wolves) are desirous of spreading the panic amongst the Chinese. It is they who surreptitiously spread the poison so as to do harm to the people. They have conspired with the lawyer José da Silva, who lives in Rua Central, and it is he who has been engaging agents to distribute these aromatic substances to spread poison. In truth, the French Missionaries' hearts are like those of wolves, and Silva is their perverse co-operator. He is therefore the more worthy of hatred and death. The following has been resolved amongst men of letters and the people: Those who really desire to get rid of the traitor, are invited to avail themselves of dynamite, torpedoes, and subterranean mines. In the first place, his house ought to be burnt down, and then they should discharge a pistol aimed at his heart. It is necessary to kill; and it is only then that the people will live in peace, it is only then that they will not have any more disturbances. Try hard, be steadfast, and have courage. It is for this and that the above is made public."

Published by MING-SIN-TONG. (*)

Two rebel Malay chiefs known as Si Rahman and Si Rasu entered Pahang about the middle of June last and destroyed the police station at Kuala Tembling, killing nine of the Sikh guard. One man escaped from the massacre, but he was so badly hacked about that his life is despaired of. Immediately upon the news being known in Singapore, 50 Sikhs were despatched from the Colony, and 100 were to go from Selangor to secure Kuala Lipis and the line of communication.

The *Pinang Gazette* of the 9th ult., says:—We understand that the oldest resident of this place, Mrs. Wright, celebrates her one hundred and first anniversary to-day.

(*) Good Knowing Society.

HONGKONG NEWS.

The *Daily Press* heard on the 23rd ult. that a Chinese hong, trading as general commission merchants at Wing Lok Street, had failed with liabilities of about \$80,000. Amongst the creditors are several Chinese banks with claims of over half a lakh.

Seven robbers, caught plundering various plague-stricken houses, were executed recently at Canton.

A hearty welcome was accorded to the Japanese medical investigation staff in Hongkong on the 24th ult., when Professors Kitazato and Aoyama and Drs. Miyomota, Akaha, and Kinoshita responded to an invitation to tiffin at the Mount Austin Hotel. Dr. Versin, of the Pasteur Institute at Saigon, accepted the invitation but was unfortunately unable to attend. The Hon. J. H. Stewart-Lockhart, Drs. Lawson, James, Cantlie, Gerlach, Stedman, and Molyneux, and the leading Japanese merchants were invited to meet them.

Telegraphic intelligence was received in Hongkong on the afternoon of the 24th ult. that the Danish steamer *Ask*, Revsbeck, master, was ashore on Dale Bank, four miles from Hoihow. The *Ask* was on her voyage back from Pakhoi and Hoihow with a general cargo. No news, however, has been wired as to her passengers or cargo.

Professor Kitazato has sent a donation of \$50 to the Kennedy Town Hospital, for the courtesy he has received from those connected with that model institution.

The following appears in the *China Mail* (Wah Tsz Yat Po) of June 22nd:—"We learn from authoritative sources that the 'Gambling Dens' in Kowloon City have now been entirely and effectually closed and the houses sealed up by the Chinese Government in accordance with a peremptory order of the Taung-li Yamén. To effect this purpose, we understand the British Consul at Canton had a long but confidential interview with the Viceroy Li Hung-Chang on the 21st instant, and immediately H. E. the Viceroy issued instructions to the mandarin concerned to seal up all the Gambling House at Kowloon at once. This is no doubt owing to the energetic action taken by the British Minister at Peking."

Foochow has assumed quite an air of importance this week (says the *Echo*) with such steamers as the *Victoria*, *Bombay*, and above all the Imperial German mail steamer *Bayern* lying at the Pagoda Anchorage, besides the regular Ocean steamer *Benledi* and the usual coast vessels.

From the *Amoy News* we learn that a rather sharp shock of earthquake was felt in Amoy and neighbourhood at about half past six o'clock on the morning of the 20th ult. A very small shock was felt two days previously.

ANNUAL CONFERENCE OF THE METHODIST EPISCOPAL CHURCH.

The eleventh annual session of the Japan Conference of the Methodist Episcopal Church opened at Anyama, Tokyo, on Wednesday, July 4, Bishop William X. Ninde presiding. Opening devotional exercises were conducted by the Rev. I. H. Correll, of Nagasaki, after which Bishop Ninde delivered a brief address and administered the Sacrament of the Lord's Supper. The morning session, which was brief, was mainly devoted to the organization of the Conference. When this was completed the conference adjourned, and the rest of the day was given to the usual examinations. The Rev. H. B. Johnson was elected English Secretary, and the Rev. D. S. Spencer, Statistical Secretary.

In the evening, at 7.30, the annual missionary sermon was preached by the Rev. J. G. Cleveland, Ph. D., of Yokohama.

Reports from the presiding Elders occupied the session of Thursday morning. In Kinshin the recent political agitations have reached a very high pitch and have so generally diverted the thoughts of the people from religious subjects that no increase in aggregate numerical strength is reported. But, on the whole, the reports indicated a year of growth and a substantial gain in many directions.

During the session, the Rev. F. Voegelien, President of the Conference of the Evangelical Association, and the Rev. Mr. Peel, of Nagasaki, were introduced and made brief addresses. At the evening session the Temperance Anniversary was held, the Rev. K. Miyama, presiding. Earnest addresses were made by the Rev. H. Yamada and the Hon. Taro Ando.

FOREIGNERS IN THE EMPLOY OF THE NIPPON YUSEN KAISHA.

THE *Nichi Nichi Shimbun* has the following note:—"We have heard several persons just returned from Korea speak very highly of the enthusiasm and diligence displayed by the officers of the Nippon Yusen Kaisha's ships requisitioned by the Government. At the same time, these persons inform us that the captains and other foreign officers of the ships showed no disposition to work harder than at ordinary times, so as to meet the urgent necessities of the case, and that every body was surprised at their conduct. We learn two things from this news; namely, first, that it is necessary in ordinary times to educate as many Japanese officers as possible, so as to exclude foreign officers from Japanese ships; and secondly, that the Chinese war-ships, of which the engineers are all foreigners, need not be taken account of in time of war."

We can not suffer this editorial note to pass without comment. It embodies one of those vague general accusations, so easy to formulate, so hard to refute, and so illustrative of the license into which liberty of the press is too often perverted. We have travelled time and again by the ships of the Nippon Yusen Kaisha. We have conversed with hundreds of people who have travelled many times by them. Our own observance and their unanimous testimony go to prove that the foreign captains and officers of the vessels are as zealous, hardworking, and efficient men as it would be possible to find anywhere. Were they in charge of ships flying the flags of their own nationalities, they could not take a greater pride in the steamers or bring more indefatigable and willing industry to the discharge of their duties. That is a high eulogy, but every word of it is merited. There is no question of defending our own countrymen against slanderous journalistic attacks. The foreign employes of the Nippon Yusen Kaisha belong to various nationalities—American, British, German, Danish and so forth. We speak, therefore, without race prejudice, simply in the interests of justice. The *Nichi Nichi Shimbun* lends its columns to ventilate a cruel libel. Its authority is "several persons" recently returned from Korea. Who are these persons and what opportunities did they enjoy of observing the conduct of the men they traduce? From first to last Japan has been excellently and conscientiously served by her foreign employes. No country has ever been better served. There are not two proper ways of discharging the duties that devolve upon an officer of a ship, nor is the Occidental standard of propriety in such matters one whit below the Japanese. Speaking frankly, after more than 27 years of observation, we should say that although the Japanese makes more noise than the Englishman

American when carrying out a task, he accomplishes less owing to an inferior intuition of organized method. But that, we frankly admit, is a matter of opinion. Others with equal experience may differ from us. What is certain, however, is that the quality of Occidental devotion to duty and of Occidental zeal in discharging it, is at least equal to the quality of Japanese, and that it is displayed at its best in the conduct of the foreign employes of Japan. We venture to assert, on the assurance of our own general knowledge of the foreigners in the service of the Nippon Yusen Kaisha, that the "several persons" whose report the *Nichi Nichi Shimbun* accepts so credulously, were either misinformed or mistaken, and that nothing of industry or zeal has been wanting in the conduct the Company's foreign officers. We may add that such readiness to credit and circulate an accusation against men who for years have been serving Japan faithfully and well, can only suggest to foreigners a very unfavourable inference as to Japanese fairness and Japanese gratitude. Finally, if the writer in the *Nichi Nichi Shimbun* had studied modern history with ordinary attention, he would have been saved from the silly conclusion that the Chinese men-of-war, being engineered by foreigners, need not be taken account of in time of war. The present dynasty in China owes its continued existence to the services rendered by foreign officers. But for their leadership and direction, the Taiping rebellion would have ended very differently, in all human probability. The Japanese had better make no mistake. The warlike efficiency of Chinese ships is directly proportionate to the number of foreigners assisting to navigate, direct, and fight them. So far from being a source of weakness, the European and American engineers in China's ships are an element of conspicuous strength.

We are curious to see whether the Directors of the Nippon Yusen Kaisha will take the trouble to vindicate the reputation of their foreign employes against this most unjust slander.

THE DIFFICULTY WITH NO. 198.

THE reconciliatory negotiations between No. 198 of the Settlement and the Yokohama silk merchants in consequence of the latter having declined to transact business with the former, have not ended satisfactorily. The head of the Firm sent an apology to the merchants—we quote from a vernacular journal—and asked for the renewal of transactions, but as he did not remove Mr. STRÄHLER, with whose conduct the merchants are discontented, the latter have not yet acquiesced in the offer of Mr. OTTO REIMERS. As delegates of the merchants, Messrs. WAKAO

SAKUTARO, and MATSUGI HIKOTARO called on Mr. REIMERS on the morning of the 28th ult. and represented to him that should he remove Mr. STRÄHLER from the silk department and contrive so that he should not transact business directly with the native silk merchants, they would be quite willing to resume business with the Firm as before. Mr. REIMERS replied that it was for him to decide whether to remove Mr. STRÄHLER or not, and that he could not submit to the dictation of the Committee on such a point. The Committee then declared, on their part, that if such were the case they had no choice but to continue boycotting the Firm, and the two parties separated in mutual displeasure.

This is a quarrel as to the merits of which we have no knowledge, and we therefore do not venture to express an opinion. But it appears to us that the Japanese merchants ought to appreciate the hopelessness of the situation they are creating. Whatever may have been the nature of Mr. STRÄHLER'S procedure, it is evidently extravagant to expect that Messrs. OTTO REIMERS & Co. should dismiss him at the dictation of outsiders. That is altogether unreasonable. The most that the Japanese have a right to ask for—assuming that they have a right to ask for anything at all—is that the methods pursued by Mr. STRÄHLER should be altered. They have no sort of title to dictate anything about the man himself. When they take such a line as that, we are compelled to infer one of two things—either that they do not desire a settlement, or that they do not understand where their own rights end and those of other people begin. If once the principle were admitted that a commercial firm is under an obligation to dismiss an employe at the dictation of its customers, an intolerable and unpractical situation would be created. We have said that we are unacquainted with the merits of this controversy. Had our knowledge been fuller, we might have sympathised originally with the German firm, or we might have sympathised with the Japanese. But it is impossible to sympathise with the Japanese in the face of the most recent action attributed to them. All disputes of the kind are pernicious, as helping to create a general feeling of umbrage between Japanese and foreigners. Our disposition, therefore, would be to advocate every possible concession on either side. But in the present case the best we can hope is, not that Messrs. OTTO REIMERS and Company will yield to the Japanese ultimatum—that would be to establish a most mischievous precedent—but that the Japanese will come to perceive the flagrant unreason of their demand.

THE KOREAN SITUATION.

STARTLING as some persons appear to find the present situation in Korea and the complications obviously connected with it, there is for us nothing strange or unexpected in the incident, except, perhaps, the very practical methods adopted by Japan to display her resolution. Korea has been an impossibility for the past thirteen years; a perpetual menace to the peace of the Far East. Japan is geographically forbidden to regard the fate of the peninsula with indifference. She cannot allow it to fall into the hands of a great and growing Power. Any one of three contingencies might be accepted by her: either that the little kingdom should of itself develop capacity to assert and maintain independence; or that some international device for guaranteeing its independence should be elaborated; or that it should be incorporated into the Japanese empire. The last of these solutions may be dismissed from the discussion: it has not yet entered the field of practical politics. The first is undoubtedly that which would command Japan's sober approval. It is, in fact, the result that she has long hoped for and long sought to bring about. But we may assume that her hopes are now baffled and her efforts numbed by their obvious futility. Korea is a country without government. It is administered by a system the most flagrantly corrupt in the world. In China the offices of State are farmed. The greater the emoluments accruing to their holders the heavier the correlated responsibilities. It is an automatic system, probably well adapted to the needs of an empire so huge and with so little homogeneity. In Korea the same system was originally inaugurated without the same occasion, and now its abuses alone exist without any of its advantages. Officials think everything of growing rich and nothing of preserving peace and good order. There is no national spirit; no patriotism. The family stands higher than the State. The intrigues of factions are unceasing and threaten at any moment to involve recourse to alien interference. With the development of foreign trade and foreign intercourse the spirit of independence might be educated were the shadow of Chinese dominance removed. But China always keeps her heel on the little kingdom. She interferes unscrupulously in its domestic affairs, while shrinking carefully from the international consequences of such interference. The Koreans find no escape from the incubus of this irresponsible masterfulness. They feel the weight of China's hand without experiencing its support. The only administrative privileges that they can enjoy with some measure of freedom are those of extortion and peculation. Hence for years the peninsula has been in a state of unrest. Emeute has followed emeute

with wearisome iteration. Japan can not tamely endure such anarchy. Twice her Legation in Sōul has been burned and twice her Representative has been obliged to fly for his life. Time and again the legitimate commerce of her subjects in the peninsula has been deliberately interrupted by official interference, the outcome of bribery and corruption. Diplomatic negotiation is virtually a farce. For since the one high Governmental post that can not be perverted into a channel of speculation is the Foreign Office, foreign affairs are always presided over by a man of little political weight, whose influence does not entitle him to a richer office, and whose resignation at any troublesome crisis, while effectually delaying the progress of an inconvenient negotiation, does no violence to the prestige of any great family. The situation must have been almost intolerable for Japan during several years past. Korea's fate is of not less importance to this empire than is the fate of Afghanistan or Egypt to Great Britain. The little kingdom's influence upon its own future can be safely utilized only by developing a national spirit of progress and independence. But progressive tendencies are effectually checked by Chinese conservatism, and independent aspirations are crushed by China's secretly exercised dominance. The present rebellion seems to have finally broken down Japan's patience. It is a rebellion due solely to the grossly corrupt and arbitrary administration of Korean officials. To crush it by force might be easy, but would not remove the exciting cause, and so long as no radical steps are taken to correct that cause, it is hopeless to look for tranquility in the peninsula, or for security against incidents of vital moment to Japan. We are not at all surprised that the statesmen of this Empire should have acknowledged the imperative necessity of placing Korean affairs once for all upon a basis consistent with some programme of independent development. Japan is the Oriental representative of Occidental progress. The part to which she has committed herself carries its obligations, and prominent among them is the duty of planting Korea's feet firmly on the path into which the little nation was originally led by Japanese influence. Whatever elements of sentiment attach to such a duty are eliminated by the consideration that to inaugurate a system of efficient administration and orderly development in the peninsula is a matter of the highest State interest to Japan. It may possibly be inferred from the number of troops despatched by this empire and from the celerity of the operation, that Japan entertains aggressive designs. But we have to remember that China's military activity has always been conspicuously displayed in Korea's case. Japan has simply followed Chinese precedents. We interpret her action to signify nothing more than a thorough

resolve to unravel the situation now and finally. Doubtless what she seeks is an arrangement that shall guarantee Korea—so far as any guarantee is possible—against perpetual recurrence of domestic disturbances, with their disquieting international contingencies, and shall commit the kingdom definitely to a progressive policy, calculated, on the one hand, to foster a spirit of independence, and, on the other, to develop resources that shall make it effective. Whether China can be induced to become a party to such an arrangement, imposing upon her, as it necessarily would, a certain measure of self-effacement in the peninsula, we entertain some misgivings. It is difficult to imagine Japan and the Middle Kingdom marching sincerely together along lines of liberal civilization. But our sympathies are naturally with the Power that stands arrayed against Oriental corruption, oppression, and conservatism.

AN AMBASSADOR TO CHINA.

COUNT INOUE according to his interviewers, advocates the despatch of an ambassador by Japan to China, and Count YAMAGATA, according to a similar authority, deprecates such a step. We should not have been disposed to attribute any such advice to Count OKUMA. Why should Japan send an Ambassador to China? Recognising that the Middle Kingdom is equally interested with herself in the fate of the Korean peninsula, she might, as a matter of neighbourly courtesy, go the length of despatching an envoy to discuss the situation with the statesmen in Peking. But such a step would certainly invite the gravest misconstruction. It has always been the contention of this empire that Korea is not a dependency of China, and that the latter's covert assertions of authority in the peninsula are unwarranted. Suppose now that Japan, by way of preliminary to taking in Korea steps which she deems essential to the safety of her own empire, were to formally consult China's views, could her procedure be interpreted in any sense other than an indirect acknowledgment that she considers the Middle Kingdom's consent essential? It seems to us that China would so construe it, and that she would have warrant for her construction. The precedent of Count ITO's embassy in 1885 is not in point. On that occasion an actual collision had occurred between Chinese and Japanese troops, and the Japanese Ambassador's object was to restore the good relations disturbed by the event, as well as to effect an arrangement such as might prevent any recurrence of similar incidents in the future. The case is now very different. Japan believes that she is under the imperative necessity of introducing such reforms in the Korean Administration as shall put an end to the perpetually recurring disturbances that threaten to invite

foreign interference and that fatally check the nation's healthy development. She ascribes a great part of Korea's unsatisfactory condition to China's unwarranted assumption of authority there. She holds that Korea is not a dependency of the Middle Kingdom, and that the latter has no title to interfere in the former's concerns. Would she not be practically acknowledging the very authority that she theoretically repudiates if, of her own motion, she prefaced her proceedings in Korea by sending an Ambassador to negotiate for the endorsement of the Peking Government? Should China seek a conference Japan, in the interests of peace, ought certainly to acquiesce. But that she should take the initiative by sending an Ambassador to Peking, is a step that we should expect the so-called "strong foreign policy" parties to denounce instead of advocating through their distinguished leader.

IN THE EVENT OF WAR.

IT is observable that Japanese politicians and journalists are almost uniformly inspired by a fear of Chinese procrastination in connection with the Korean affair. China, on more than one occasion in the past, thoroughly demonstrated her ability to play a waiting game. She appreciates the advantage of her bulk, and like a large man attacked by a small insect, she knows that any ordinary tormentor may be allowed to buzz and sting a great deal without inflicting any serious hurt on her huge person. On the strength of that assurance it is supposed that she will now dally with Japan, leaving this comparatively small empire to exhaust its strength in efforts of no permanent efficacy. Hence the politicians and journalists of the Opposition urge the necessity of striking a prompt blow so as to bring the issue to a settlement at once. We can not share their views. It is undoubtedly true that the expense of despatching a large force to Korea is serious, and that the cost of maintaining it there will be not less irksome. If the task of sitting down in Korea and holding herself in perpetual readiness to repel attack could be imposed upon Japan, her presence there remaining at the same time unproductive of any sensible results, China's rôle would be plain and easy. But we must remember that from the point of view of Japan's contemplated mission in Korea, every day of undisturbed occupation is a day gained. She does not purpose a state of inaction there. Her prime object, as we understand, is to place the administration of the peninsula on a sound basis, and to introduce such progressive reforms as shall conduce to the development of the country's resources, and thus foster the nation's ability to be independent. In many respects the case of England in Egypt is an

exact parallel. England, indeed, went to Egypt with Europe's mandate, and Japan has gone to Korea with no mandate except that of State exigencies. But just as England foresaw that the possession of Egypt by an unfriendly or illiberal Power would be a serious menace to the integrity of her empire, so Japan knows that the peninsular Kingdom, ill-governed, torn by factions, and in a condition of perpetual domestic ferment, invites foreign interference, and precisely to that extent constitutes a menace to her own tranquility and security. Just, too, as England went to Egypt avowedly not for purposes of aggression but only to introduce such order into its affairs as should ultimately secure the country's autonomy, so Japan goes to Korea, not to annex the peninsula, but simply to educate its capacities for independence. It is not to be supposed that Japan will defer all measures for carrying out her programme in Korea until China shall have been pleased either to arrange a scheme of friendly coöperation, or to carry the question to the arbitrament of the sword. Japan, of course, has conveyed information of her project to China, and will doubtless give the latter a reasonable time for reflection. But at the expiration of that time she will assuredly proceed with her plans whether China assent or dissent, and she will be in a position to proceed, since the peninsula Kingdom is as much under her control now as Egypt is under the control of Great Britain. It is certainly a large task that Japan has imposed upon herself, and if it is to be carried to completion in the face of Chinese hostility, Japan's ability to complete it will be sorely taxed. What we are considering here, however, is not the magnitude of the undertaking or Japan's comparative capacity, but China's means of interfering effectually. What is China to do? France would have put an end to England's occupation of Egypt, and without any direct attempt to compass that end, she finds, in her wide relations with the British empire, many opportunities to convey strong intimations of her abiding wish. But China has no such means of putting the thumb-screw on Japan. She would have to choose between one of two courses—either a resolute and direct attempt to drive Japan out of the peninsula, or a series of operations such as would render Japan's continued presence there difficult if not impossible. The statesmen of the Middle Kingdom are not at all likely to choose the former. Japan has ten thousand men already in Korea. She is steadily drafting additional forces thither, and it may be taken for certain that before China could prepare to strike an effective blow, at least twenty to thirty thousand Japanese soldiers would stand arrayed against her in the peninsula. She would have but a small chance of success under such circumstances. Her alternative course

depends upon the important fact that the sea is Japan's only base of operations. The larger the army she sends to Korea, the more important does the undisturbed possession of that base become, while, on the other hand, her ability to preserve it is represented by a virtually constant factor—the strength of her Navy. Whatever interval elapses—we speak, it will be understood, within reasonable limits—China's capacity to cut Japan's communications and Japan's capacity to prevent such a catastrophe will not be materially altered by the mere inaction of either side. China, if she keeps her Navy intact, may deliver a heavy stroke against Japan at any moment. It follows that in only one direction do Japan's interests counsel the utmost promptitude—namely, on the sea. Whichever belligerent takes the initiative successfully in naval operations will have made a considerable step toward mastery. Judging from her past history China is little likely to take the initiative. Her fleet played a wholesomely retiring rôle throughout the struggle with France nine years ago. But will she be equally diffident when Japan is her *vis-à-vis*? We dare not predict. What we are sure of, however, is that there will be no lack of dash on Japan's side, and that she will recognise the vital importance of striking a crippling blow at China's Navy. Our readers must understand that in writing thus we do not for an instant advocate hostilities, but are merely considering the situation in the event of their breaking out. We are still very sanguine that China may be persuaded to coöperate with Japan in Korea. Should Japan, however, be compelled to resort to arms her, offensive operations ought to be limited to the destruction of the Chinese Fleet. There are Japanese who talk of a dash at Peking. The idea is extravagant. It would be merely playing China's game. Japan by confining her land operations to Korea, imposes upon the Middle Kingdom the difficult if not impossible task of driving her out, whereas, by attempting to invade China, she would place the latter in the defensive position eminently suited to Chinese military capacities and proclivities, and would herself undertake an operation scarcely within the strength of any Power in the world.

THE COASTWISE CARRYING TRADE.

IT appears from intelligence published by the vernacular press that the Government contemplates purchasing ten new ships in all and handing them over to the Nippon Yusen Kaisha. The inconvenience caused to the coastwise carrying trade by detaching steamers from that service for the transport of troops to Korea is notorious. In the matter of fish-manure, which constitutes such an important staple of export from Hokkaido and is of such necessity to the agriculturists of the main

Island, the cost of carriage from Ezo to Tokyo—increased from 43 yen per 100 *koku* to 130 yen. This inconvenience is now virtually at an end. Already five steamers have been acquired and handed over to the Yusen Kaisha. In the meanwhile, however, the indirect loss to the country has been considerable. But we may be permitted to hope that the final outcome of the trouble will be to sensibly develop the resources of the Japanese mercantile marine. It is a curious fact that the merchant navy of Japan may be said to have had its origin in warlike necessities, and is now likely to receive exceptional expansion from the same cause. During the Satsuma rebellion in 1876-7, the little fleet of the Mitsu Bishi rendered invaluable service to the country by carrying troops to the disturbed regions, and at the same time reaped such profits from the operation that its own finances were placed on a permanently prosperous basis. The Government was subsequently induced to hand over to the enterprising Company several steamers on terms sufficiently favourable to render them an excellent asset, and it was thus that Japan came to possess an efficient mercantile marine. Evidently the present conjuncture will have a marked effect. In the ordinary course of events three or four years at least must have elapsed before the mercantile marine received an addition of ten large steamers, whereas the thing will now be accomplished in about as many months. There will henceforth be increased warrant for the measures contemplated by the Diet—the much talked-of “extension of navigation.” Employment will have to be found for the new steamers after they cease to be required for military purposes—and that need will soon cease, we trust. Possessing the ships Japan may properly think of opening new lines whether to Australia, or Europe, or elsewhere.

CORRESPONDENCE.

A NOTE EXPLANATORY.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—The management of the Methodist Episcopal schools at Aoyama, Tokyo, had invitations printed and even envelopes addressed, when the earthquake of last week so shook Goucher Hall that it was not thought well to hold closing exercises in it. A rough shed, large enough to accommodate the students, has been put up, and in it Bishop Niide preached the Annual Sermon last Sunday from “Quit you like men.” The graduates carried out their programme last evening, and the Annual Commencement was held to-day when Mr. Tuguchi, editor of *The Economist*, and Bishop Niide delivered addresses; but it did not afford accommodation for the many friends whom, under other circumstances, the faculties would have delighted to welcome.

The schools at Anyama consist of the Biblical Institute, with courses in both Japanese and English; the Eiwa Gakko, with a five year preparatory and four year College course; the industrial department, which carries on work in printing, (both Japanese and English), wood carving and silk embroidery; the Eiwa Jo-Gakko, which is the advanced seminary for young ladies who have graduated at No. 13, Tsukiji, and the Girls Industrial School, whose commodious buildings were opened last autumn.

In all departments the year has been one of average success.

So soon as permission is granted by the Government, within a few weeks it is hoped, the name of the schools at Aoyama will be changed from “Tokyo Eiwa Gakko” to “Aoyama Gakuin.”

Aoyama, Tokyo, June 28th, 1894.

“A GUIDE TO KORAKUEN.”

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—The *Japan Mail*, a short time ago, contained an amusing editorial note on a guide book to Korakuen, the public park of Okayama, by Kenrii Oda. Some crudities are noted, and Mr. Oda is commended for his originality in conceiving the idea of writing such a guide-book. Those who have seen neither the book, nor the park, will be inclined to think the work quite worthless, whereas the knowledge of the facts given in the book would add considerably to the pleasure of a visit to the park. There are a number of buildings of whose history and use the visitor desires to know something.

Mr. Oda deserves no praise for originality: he has simply given a free translation of a guide book which has passed through several editions. If some parts of the translation seem superfluous, it simply shows that tastes differ. I have heard of a Japanese who delivered a lecture on a visit to an American university, the greater part of which lecture referred to his journey, and his manner of leaving home, giving even the time at which his train started. He probably knew his audience, and the writer of this guide book probably considered the tastes of those to whom he was ministering. Mr. Oda did exercise some discretion in the selection of material, for he gives no translations of the numerous poems inspired by different scenes in the park and interspersed through the original work. The reviewer concludes from the words on the title-page, “Guide to Korakuen,” that the writer “has not yet penetrated the mysteries of the article in English.” This criticism is based on rather slight evidence. It would have been more to the point had the reviewer searched the body of the work for evidences of misuse of the English articles. Moreover, with regard to the only evidence of misuse quoted it may be said that good usage sanctions the omission of the article on title-pages. Thus we read in a well-known work, “Handbook of Colloquial Japanese;” or, to quote from a book printed where the mysteries of the article in English may be supposed to have been penetrated, “Handbook of the English Tongue.”

In conclusion I would recommend those visiting the park to use this guide book until a better one is prepared. It may be bought from the publisher, Kitamura, on Kanino Cho, Okayama; or, sometimes, at a stand in the park. Photographs may also be had: though poor they are better than the miserable wood-cuts in the guide book.

I am, Sir, truly yours,

FRANK MULLER.

Etajima, Hiroshima-Ken.

Yokohama, June 29th, 1894.

THE SEAMEN'S MISSION.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—Comparatively few in America know anything of the work of the Seamen's Friendly Society; it is seldom mentioned in the Churches, and people, in general, know far more of the needs of the unevangelized in foreign countries than of the needs of seamen in their own ports.

It is probably true also that many of the missionaries in the interior of Japan know little of the efforts made to ameliorate the certainly not easy lot of a seaman. Having had recently an opportunity to learn much of interest about the needs and manner of missionary work among seamen, I should like, in some measure, to share the information with others who will be glad to help forward the work in any way possible, and above all by intelligent sympathy with it.

My information, inasmuch as it is special, refers to the port of Kobe. There are generally in harbour from four to six sailing vessels, and ten to twelve steamships. The number varies much, but there are seldom fewer than this. The sailing vessels remain from three weeks to three months, and the steamers from a day to ten days.

When a new vessel comes in the missionary has the most difficult part of his work. He is by no means certain what sort of a reception he will meet with. He goes to the side of a vessel and, if he knows of a Christian man on board, he calls for him. If he knows no one he calls for the Captain, or the highest officer on board, introduces himself as being of the Seamen's Mission, and asks per-

mission to talk with the men and leave them some reading matter.

The ways of answering this request are various. Cases are known of a seaman's missionary having been thrown overboard by an irate captain. But such cases are rare. Sometimes he is ordered off the ship, or he is given to understand that he may come if he will but that he is not welcome. But often it happens that he is cordially welcomed even by captains who are not Christians, and there is mutual rejoicing when he meets a Christian captain.

Permission having been secured, he is sure of a welcome forward among the men. On most vessels there is at least one Christian, and when one Christian is shipped it generally happens that there are more than one when the voyage is over, for the temptations and ridicule are such that those who do stand are strong. Excepting the free-men, the lot of the seaman is better on a steamer than on a sailing vessel, the work not being so hard, the treatment better, and the time out shorter and less monotonous.

On most vessels English will be understood by a good proportion of the men, though there are many Swedes, Norwegians, and Germans who rejoice when they get some reading matter in their native tongues.

Informal meetings are held with the men in the fore-castle during the dinner hour, and sometimes on Sunday services are held on deck. Occasionally a Captain allows the Bethel flag to be hoisted at such times and then seamen may come from other vessels. But Captains are generally unwilling to allow their men to visit other ships. Strict discipline is maintained while in port. On English and American sailing ships only twenty-four hours ashore are allowed during the stay. On steamers and on German vessels more liberty is allowed, but it sometimes happens that men have no money to take them ashore. When services are held ashore Captains sometimes allow men to go with the missionary who use his boats to take them.

In Kobe, at present, there is no place for the holding of such services. A distinction must be made between the Seamen's Home, and the Seamen's Mission. It has been stated that the Seamen's Mission is now dispensing beer, and the work has been attacked because of this feature. Without wishing to enter into a discussion on this point, the fact is that the Seamen's Mission was separated from the Seamen's Home because those who supported the latter considered they were serving its best interest by allowing beer to be sold at meals. Mr. Harmon, who had charge of the mission work, a seaman and a total abstainer, did not think that he could carry on his work in the Home while beer was sold. Taking the averages for the six months up to May—the duller part of the year—187 ships entered the port each month, 71 visits were made, and 34 bundles of reading matter given. Each month an average of five services were held on board and six ashore, the attendance on the ships averaging 70. Besides these meetings services were held in the jail, in a seamen's boarding house, and in the missionary's home.

Mr. Harmon especially asks for old newspapers of all kinds, and other reading matter. Men who are several months on a voyage gladly read anything, and prisoners in the jail while away the weary idle hours with papers lent to them. Bundles may be sent to Mr. J. M. Harmon at his Home, 186, Kita Nagasadori, Ni-chome, Kobe.

My purpose in writing will have been accomplished if an intelligent interest is aroused in this work for the good of our fellow countrymen who have some claims upon the residents of the ports at which they touch.

I am, Sir, yours truly,

FRANK MULLER.

Etajima, Hiroshima Ken.

TRUE PATRIOTISM.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—In your paper of recent date in speaking of mission problems, the sentiment was expressed that Japanese who, in seeking foreign missionary aid, expose the faults of their countrymen, do not love their country.

While the Japanese are intensely patriotic, though perhaps no more so than the people of any other country, the patriotism which is blind to national evils, or which seeks to gloss them over is not true patriotism at all. For Christian Japanese to go to America, or any other country, and present the true condition of society in Japan while endeavouring to enlist sympathy and financial aid in overcoming the evils of this society, is not unpatriotic.

Moreover, it does not follow that a Japanese who seeks to enlist such help as the above by telling the simple unvarnished truth, is the enemy of his country, or does not love his country.

It may not be pleasant to a people to have their cherished faults exposed. There seems to be an intense fear in Japan lest the skeleton of the closet will get out. But, Mr. Editor, how are vices ever to be reformed, if they are not exposed? Again, who are likely to expose them, but those who are intensely interested in the welfare of the country?

Clement Scott wrote some unwelcome facts about some phases of Japanese Society, and Japanese attempt to answer the charges, not so much by showing the untruthfulness of the charges as by showing that the author lacked good sense. Is not this the practice of the old lawyer to one of his students. "When you do not have a good case in Court, abuse the other fellow's lawyer?"

I do not insinuate that the Japanese are all bad; but neither are they all saints, and there are giant vices in Japan that sap the moral strength of the Empire. If, therefore, there be those who understand the situation, but find a need of more efficient aid in suppressing evil, how can it indicate but the deepest love of country to state the facts, enlist the sympathy and, if possible, secure the needed aid even in foreign lands?

The Jews had no stronger friends than the truthful prophets whom they slew. Reformers are proverbially unpopular in their own day and among their own people. But after their death, the nations unite to do them honour, simply because the man who is truly the patriot of his own country, becomes a stimulus to true patriotism in every other country, and he thus becomes common property of the world.

A. D. WOODWORTH.

26, Kasumicho, Azabu, Tokyo.

[We do not believe in the patriotism of a man that tries to bring his own nationals into disrepute in a foreign country. We speak generally, of course. There may be exceptions.—Ed. J.M.]

PEERS REGULATIONS.

NOTIFICATION No. 2 (A) OF THE IMPERIAL HOUSEHOLD DEPARTMENT.

The following additions shall be made to the Peers Regulations issued on July 7th of the 27th year of Meiji (July 7th, 1894).

By Order,

VICOUNT HIJIKATA HISAMITSU.

Minister of the Imperial Household.

June 30th of the 27th year of Meiji (June 30th 1894.)

Art. XI.—With the view of determining matters connected with succession and domestic affairs, a Peer may enact his house law, within the limits of law and of the provisions established with special reference to Peers.

Art. XII.—For house law of this kind the sanction of the Minister of the Imperial Household Department should be obtained, and the same process must be followed in case the law is amended or supplemented.

Art. XIII.—The pater-familias of a Peer who has been sentenced to confinement, or police surveillance after having undergone penal servitude, shall be deprived of the appellation of Peer and shall further be made to surrender his title and honorary grade (*iki*).

Art. XIV.—When peers enjoying the special treatment provided in Articles V. and VI. (of the Peers' Regulations) fall under the preceding article, they shall be excluded from such special treatment, and shall moreover be called upon to surrender their honorary grades if they are invested with such. When the eldest son or the eldest grandson of a Peer falls under the preceding Article, he shall be debarred from succeeding to the privileges of a Peer.

Art. XV.—When the pater-familias of a Peer or a person enjoying the special treatment provided in Arts. V. and VI., shall fall under any one of the following clauses, the special treatment accorded to him shall be suspended:—

1. When sentenced to a punishment of confinement and while the sentence is in process of being undergone.
2. When, in consequence of a criminal action, detained or released on bail, or when undergoing a term of reprimand or police surveillance.
3. When undergoing sentence of liquidation or of insolvency, and not yet rehabilitated; or when having been declared bankrupt, the debts of the bankrupt have not yet been discharged.
4. When the obligations specified in Art. X are not fulfilled.
5. When the status of a Peer cannot be maintained.

Art. XVI.—When a Peer is guilty of misconduct that affects the dignity of the nobility, he shall be dealt with in accordance with Arts. XIII., XIV., and XV.

Art. XVII.—Peers that cannot maintain a status becoming their rank, may resign the privileges.

Art. XVIII.—The steps to be taken with reference to Art. XIII. and XVII., shall be enforced by the Minister of the Imperial Household with the sanction of the Sovereign. Provided that, with respect to steps relating to Clauses 4 and 5 of Art. XV., and Arts. XVI and XVII they shall be determined, subject to the sanction of the Sovereign, by a Committee of seven or more members nominated from among the Peers by the Sovereign.

THE ASIATIC SOCIETY OF JAPAN.

POPULATION OF JAPAN DURING THE TOKUGAWA PERIOD.

At the last meeting of the Asiatic Society held at No. 17, Tsukiji, Tokyo, on Wednesday, June 27th, a paper was read by Garrett Dropers, Esq., on "The Population of Japan during the Tokugawa Period."

The specific problem that the writer of the paper endeavoured to illustrate was as follows:—We know from present statistics that the Japanese are a very prolific race. For instance, the population was about 33,100,000 in 1871; 34,300,000 in 1875; 36,300,000 in 1880; 38,100,000 in 1885; 40,400,000 in 1890 and 41,000,000 in 1892. These figures show a steady, and rapid increase in the numbers of the people. During the Tokugawa period, however, from the best statistics we can get, population did not materially increase. At least, from the year 1721, when the first census of the Tokugawa government was taken, until 1846, when the last census was taken, there is only an increase of 900,000 in the official figures. As a matter of fact the whole population was not counted by the Bakufu government, the *Samurai*, nobility, and all their servants as well as the *Eta* and *Hinin* not being included. But as the omissions were uniform the census of those times may be considered approximately correct for the purpose of the paper; viz., to inquire what was the general movement of population during the time when the ports were closed and the Japanese could not emigrate from the country. The figures given in the government register are as follows: In 1721, the registered population was 26,000,000 in 1750, 25,900,000; in 1780, 26,000,000; in 1792 24,800,000, in 1816, 25,600,000; in 1846, 26,900,000. On the whole, therefore, population for a century and a quarter during the Tokugawa period was practically stationary and it is an interesting inquiry what were the causes that prevented the growth of population at that time. The first cause mentioned was famine. At present famines of a serious character may be said to be impossible in Japan. But in ancient times foreign rice could not be imported, and if crops were short people had to starve. Many severe famines are recorded. From 1790 to 1740 eight famines are recorded, of which four were terribly destructive. From 1740 to 1790 seven famines are mentioned, of which five were extremely severe. In the next half century (1790-1840) six famines are mentioned, of which two were calamitous. Besides famines there were fires, floods, and epidemics, all of which were more destructive to life and property in ancient times than at present. The writer of the paper gave accounts taken from eye witnesses of these visitations. In time of famine people frequently ate human flesh, and dogs and rats were eagerly sought after as food. Some writers estimate that 200,000 people starved to death in a single year during one of the famines. Many more must have died of anxiety, fear, and diseases arising from insufficient nourishment. The writer then went on to consider other checks to population, especially the severe punishment for crimes, sumptuary laws, abortion, infanticide, and also the effect of public opinion. Infanticide was extremely common during the feudal period of Japan, particularly in certain provinces. Provision for abortion existed in every city and town. As a matter of fact these inhuman practices, though contrary to the law, were forced upon the people because of the peculiar economic conditions. No outlet then existed as to-day exists. In some parts of Japan, even worse practices were known. The lecturer concluded as follows:—"In order to present a satisfactory account of all the causes that restrained the growth of population in the Tokugawa period we must contrast the general mental and moral atmosphere of the people at that time with that of the present day. I have already indicated that the whole temper of the people took a different turn after the downfall of feudalism. The recurrence of famines and other calamities, though at first a positive check to population, in the end resulted in giving the people a cautious disposition, of which the relics exist even to-day. The Japanese people are often charged with being a short-

sighted people in mercantile matters. They look more to an immediate than to a remote gain. They have the habit of excessive timidity in large enterprises. I do not think, however, that these are original qualities of the Japanese people, but the result of the terrible experiences of the Tokugawa period. The terrors of famine, the irremediable epidemics, the severity of the criminal laws all taught them to be satisfied with a little be it but a pittance—without incurring the risks of new enterprises. As a people they bear losses more stoically than the Europeans or Americans. By nature a spontaneously happy people they acquired the habit of submission to the inevitable. The European or American, untaught by such terrible experiences, opposes the most untoward circumstances and fights to the bitter end. Three hundred years of fairly steady expansion have given him a more resolute tone of mind. When Japan, however, was thrown open to foreign influences, the bonds which had fettered the people so long, began to yield. A freer and more enterprising temper took possession of the people. Old customs, which had restrained them, gave away. Class distinctions were abolished. Many individuals of the poorer classes saw a chance of acquiring wealth, or of gaining distinction in other ways. It is not difficult, therefore, to see that these altered circumstances influenced, to a greater or less degree, the whole temper of the people and at the same time stimulated the growth of population."

At the conclusion of the paper an interesting discussion followed. The President remarked upon the disappearance of a single cause of death prevailing in the Tokugawa era, namely, smallpox. In former times people pitted with smallpox were seen everywhere. But with the introduction of vaccination in the modern period such people are as rare as they are in Europe.

Dr. Green spoke of the prevalence of infanticide at least in some parts of Japan, in feudal times. In Satsuma, infanticide was so well recognized that it was not impolite to ask the parents at the birth of a child whether they intended to rear it. Often particular spots were noted as being places of exposure of infants.

Dr. Divers thought the chief lesson of the paper was the importance, it emphasized, in the general freedom of the people now as compared with former times. In the feudal period people were restrained by all sorts of laws and customs. Liberty has done more than everything else to encourage the people to progress and activity. Hence, he thought, expansion of the population.

The Society adjourned at 5.30 p.m.

THE FOUR-STAPLES EXCHANGE.

The opening ceremony of the Yokohama Exchange for Silk, Tea, Woven Goods, and Marine Products,—the institution being commonly referred to as the Four Staples Exchange—took place on Sunday morning with considerable *eclat*, in the new buildings at Otomachi, Sanchoime. These are of semi-Japanese and foreign style, the front office and waiting rooms being furnished, also half in foreign and half in Japanese style, while the Exchange proper is a large wooden building adjoining it in the rear, well lighted and ventilated. A large number of invitations had been issued by Mr. Hara Zenzaburo, the Chief Director, which were well responded to by leading Japanese, but it was surprising how few foreigners were present considering the importance of the establishment in matters of trade. After dedication and congratulatory speeches had been delivered by Messrs. Hara Zenzaburo, Kaneko Kentaro, of the Department of Agriculture and Commerce; Mitsuhashi, Councillor of Kanagawa Kencho; Kimura Kiyemon, Otani Kahei, Ikeda Kokei and one or two others, business commenced, the bidding and bargaining being a very interesting proceeding. After this the brokers and guests adjourned to the Machigaisho, where a cold collation in foreign style was served. The Kenrei was unavoidably absent, but among those present was the Chinese Consul. The city band was in attendance and played a selection of music during the repast, while some boys from the Nippon Ongakai contributed selections with a band of concertinas, the boys keeping very good time and playing well. In the afternoon a repast was given at the Sanomo restaurant in Japanese style to the invited guests, while the brokers themselves held high feast at the Chitose-ro, which lasted till late in the evening. During the day some fireworks were let off, but these were stopped as some sparks set fire to kindling-wood in the native town. The funds had been largely subscribed to, and altogether a very pleasant reunion was the result.

THE KYORITSU JO-GAKKO.

The presentation of diplomas to graduates of the above institution, one of the leading Christian Schools established by foreigners for the education of Japanese girls, took place on Monday night at No. 212, Bluff, Yokohama, and passed off very satisfactorily. The rooms were crowded by an audience comprising parents and friends, chiefly Japanese, who appeared greatly interested in the proceedings. Seven graduates presented themselves this year for honours. An interesting programme was given during the evening, each item being well rendered and reflecting great credit on the teachers. The following is the programme:—Piano Solo—"L'Air-gentille," Miss Tama Oyama; Salutatory (Japanese), Miss Naka Aihara; Two-Part Song—"July," Senior Division; Essay, "Epochs in Life," Miss Taka Kishi; Song—"Who has no Sunshine," Trio—"Star of Peace," Preparatory Division; Japanese Essay—"Hito no Michi," Miss Ren Sakamoto; Organ Solo—Adagio—"Moonlight Sonata," Miss Shoji Yamada; Recitation—"The Famine," Miss Eugenie Gordon; Song—"The Forget-me-not," Duet—"Soft the Quiet Evening," Preparatory Division; Japanese Essay—"Yo no Uni," Miss Hide Ichimura; Piano Solo—"Miss Nobu Yoshida; Recitation—"Wanted, a Minister's Wife," Miss Flora Hurlimann; Piano Solo—"A Rondo," Miss Eugenie Gordon; Japanese Essay—"Yu Suzumi," Miss Tsune Yamada; Anthem—"Happy is the Man," Senior Division; Valedictory, Miss Ai Inagaki; Miss Gordon's singing and recitation from Longfellow's "Song of Hiawatha" attracted the special attention of the audience, being deservedly applauded. Another performer who gave much satisfaction and delight to the guests, was Miss Yoshida, a little girl of about eleven years, who displayed charming artistic powers. The year's certificates were distributed by the Chief Instructress to the following graduates:—Misses Kishi Taka, Sakamoto Ren, Eugenie Gordon, Ichimura Hide, Flora Hurlimann, Yamada Tsune, and Inagaki Ai. A large collection of pictures, knitting and other work of the lady pupils was shown in a separate apartment and were of a high order of merit.

COMMENCEMENT AT THE DOSHISHA SCHOOLS.

The Doshisha has just completed its 19th year. The Commencement Exercises this year began with a Sermon by Acting-President Ichihara on Mt. 5, 13-16. He spoke of the growth and development of the various schools as an index of the growth of modern civilization in Japan. Many changes had taken place, but there was one thing that should not change and that was the purpose of the school to be, through its teachers and pupils, the "salt" and "light" of Society. Excepting the graduating classes, whose work had been finished the preceding week, the examinations began on Monday. On Tuesday, Wednesday, and Thursday evenings the graduates of the Science, Theological, and Economics schools read their theses.

On Wednesday the commencement of the school for nurses took place. Nine nurses having taken the two-years course, received diplomas. Addresses were made by Dr. Kono, of the Yoshida Hospital, Osaka, and by Rev. T. Koki of the same city. Dr. Kono having graduates of the School in service in his hospital, his praise of the work of the school had all the more force. The congratulatory letters from several other Japanese physicians of Kyoto and Osaka were in the same line.

On Thursday the commencement of the Girls' School was celebrated. Six young ladies finished the regular, and four the post graduate course. These young ladies would do credit to any school in any land. They were addressed in an able and impressive way by Mr. Naruse, who, after several years of study and observation in America, has become the head of the very important *Baikwa* Girls' School of Osaka.

Friday brought the final exercises, in the form of a union commencement of the College, and the schools of Theology, Science, and Economics. From the College thirty-three young men received diplomas; from the Theological School eleven; and from the Science, and Economics Schools, two each. Despite the absence of President Kozaki the year has been one of much good work.

General Oku, of the Japanese Army, has received from the French Government the honour of Commander in the Order of the Legion of Honour. Colonels Otera and Inouye have received the grade of officers in the same order.

GIRLS' HIGH SCHOOL YOKOHAMA.

Breaking-up Day, whether it comes at Midsummer or Christmas, is an event in School life of more than ordinary interest to all concerned, and more particularly to the more advanced pupils. To many of the older scholars it marks the close of an epoch in their lives which will stand out clear and distinct for many a long year to come amid the joys and pleasures, the *Sturm und Drang*, which may await them in their subsequent careers; while to the younger it brings home in a most striking manner the objects of their scholastic training, at the same time inciting them to greater endeavours in the future so that they may win the highly-prized rewards which fall only to the lot of hard-working and conscientious plodders along the rugged paths of knowledge. It is often claimed that only those who are fortunate enough to obtain an education at public girls' and boys' schools in the Home lands are really able to appreciate to the full the inestimable benefits of a breaking-up festival, but we venture to think that this conception is slightly erroneous. The ladies and gentlemen who accepted the kind invitation of Mrs. Smedley, the accomplished principal of the High School for Girls in Yokohama, to be present at that institution's breaking-up—which took place on Wednesday—had the pleasure of witnessing a scene which few public schools either in the Colonies or at Home could hope to rival on such an occasion. The bright, happy faces of the pupils, the clever programme of music and recitations given by the young ladies, and the high standard of excellence which their examination papers demonstrated, spoke volumes for the good work that Mrs. Smedley and her assistants are doing for the girls of Yokohama. Space forbids a detailed description of the function. Suffice it to say that the school room was most artistically decorated with evergreens, flowers and flags; the audience comprised the leading members of the community, while the prizes were presented by Mrs. Smedley, the head-mistress. The prize list was as follows:—

Awards for good conduct—taken by ballot—Miss Gertrude Mendelson (High School); Master George Cook (Infant School).

Highest number of marks during the year in Grammar, Analysis, Physical Geography, Physics, Chemistry, and Arithmetic—Miss Eleanor Poole.

1st Division—1st French Prize, 1st History, presented and awarded by Miss Burdett Leach, Miss Eleanor Poole.

Arithmetic and General Improvement—Miss Mabel Varnum; Science—1st Prize, Miss Jeanie Loomis; 2nd Prize, Miss Hilda Watson; 3rd Prize, Miss Annie Bunting; 2nd Division—1st Prize, Miss Anna Diack.

General Improvement—Nettie McCance, Ettie Kuhn and Eugenie Booth.

French—Junior Class, 1st Division, 1st Prize, Hilda Watson; 2nd Prize, Gladys Smedley; Awarded and presented by Miss Burdett Leach, 2nd Division, 1st Prize, Miss Gladys Howard.

Improvement in French—Misses Alice Mendelson, Edith Mendelson, Winnie Mitchell, Cassie Cook, Masters Cyril Pulford, Sydney Brinkworth, Iva, Inez, and Dulcie Smedley.

Art Class—1st Award of Merit, Miss Eleanor Poole; 2nd Award of Merit, Miss Maud Watson; 3rd Award of Merit, Miss Eugenie Jubin; 2nd Division, Highest Number of Marks in general subjects, Eugenie Jubin.

Improvement in Drawing and in French—The Misses Nellie and Mabel Rickett.

Music—Masters Alan Fraser, Harry Cook, Misses Ethel Fraser, Gwenth Smedley, and Nettie McCance.

3rd Division—For Improvement in Arithmetic and Spelling, 1st Prizes, Miss Gladys Howard; 2nd Prizes, Miss Edith Mendelson; 3rd Prizes, Winnie Mitchell; 4th Prize, Dulcie Smedley and Clarence Sargent. Awarded and presented by Miss Adelina Vincent.

4th Division—1st prize, Miss Sophie Favre Brandt, for improvement in Reading and Writing.

The following programme was given during the afternoon:—

Duet, Two pianos—"La Traviata".....
Miss Ethel and Alan Fraser, Gladys and Gwenth Smedley
Intermedio.....
"Benedict Town".....
Miss McCance.
Gavotte.....
Air, "Louis XIII.".....
Rhys.
Misses Cassie Cook and Iva Smedley.
Recitation.....
"The Voice of Spring".....
Miss Genie Booth.
Duet.....
"La Folia Reggimento".....
Misses Nettie McCance and Gladys Smedley.
Duet.....
"Bohemian Girl".....
Balfie.
Master Harry and Miss Cassie Cook.
Recitation.....
"The destruction of Sennacherib's Army".....
Miss Ettie Kuhn.
Duet.....
"Norma".....
Bellien.
Master Alan and Miss Ethel Fraser.
Woodman's Waltz.....
Master H. Cook.

A LECTURE ON THE AINU.

BY THE REV. JOHN BATCHELOR.

DELIVERED (IN JAPANESE) IN THE SAPPORO TEMPERANCE CLUB: MAY 10TH, 1894.

INTRODUCTION.

In the individual life of the members of every tribe and race of men under the sun, there are three most serious and important events which beyond all others are of the utmost moment. They are important, indeed, not only because they affect the private individual in his own person, but also because they touch society at large, and because around them centre some mighty and far-reaching issues. The first and last of these events it is not in one's own power to help; but the second many can and do avoid; the first and second again are in the power of men, but the third beyond it. I refer to those great matters of birth, marriage, and death.

There can surely be nothing in our existence here upon earth more serious than being born into life; nothing can be of higher importance in the domain of morals and towards our fellow men than uniting with another in the bonds of matrimony; nor can there be anything of greater moment to us than the fact of death itself. These three events with all that depends upon them may, when taken together, be regarded as comprehending the sum-total of human existence in so far as it has been manifested to men, the subjects of it, since the beginning of time, or in so far as we are able to trace it to-day or can predict of it for to-morrow.

Speaking only as reason unaided by revelation dictates, we must say that our animal life depends immediately upon our parents; our married life upon ourselves, upon others, and upon the conditions under which we have lived since our birth; and our death upon some power beyond either ourselves, others, or our parents. And in all these causes we must admit that there is mystery so inscrutable that our minds cannot fathom it.

I am quite aware that these remarks may appear to imply that I assent to that stupendous and miraculous article of faith in fatalism which is so subtly covered up in and really lies at the basis of your much used phrase, *Shikata ga nai*, "there is no help for it," and which appears again in that ancient saying—*Shi sei mei ari, fuki ten ni ari*, "death and life are decreed, riches and honour rest with heaven." But do not for one moment imagine that I am a fatalist in that sense. If there is any phrase I dislike in your language it is *shikata ga nai*. However, grant me the power of will and choice together with scope to exercise them (all of which experience tells me I really have at this very moment), and grant me a living agent who "decrees death and life," and also grant me a power above the heavens who can and does "dispense riches and honour," why then, I will be a thorough-going fatalist! But this by the way.

Now, in very many instances the customs connected with and ceremonies observed in those three momentous events to which I have referred, serve to a great extent as means by which the spiritual, moral, intellectual, and social status of races and nations may be gauged; they may be looked upon as instruments by which the very substratum of the secret workings of the heart and mind and the motives underlying the actions of men are often brought up from the hidden depths where secrets lie into the broad daylight for our inspection and analysis—they serve as the key—"the open sesame"—by which may be unlocked the fast closed and barred doors of the soul itself, and by which we may learn to know the degree and kind of religion possessed by peoples. Not only so, but they serve as means by which we catch glimpses of that peculiar disease of religion which we term superstition; and they go far towards inculcating those ideas into the minds of rising generations which form the mainspring for producing those peculiar habits of nature and thought which are understood by the phrase "characteristics of nations."

This evening I have to speak upon the Ainu exclusively, and in connection with them I wish to take as my theme the subjects of birth, marriage, and death. From a custom prevailing at a birth I intend to touch upon some Ainu ideas as to whence human life comes; from those which prevail at and after marriage I desire to show the moral and social status of the people; and from the customs which prevail at death and burial I wish to elicit a few of their ideas concerning their religion and whether the soul or life goes when it leaves the body. It will be evident to you that I have only time to touch but briefly upon each of these points this evening. I crave your kind indulgence while doing so.

I.—BIRTH.

(A CUSTOM CONNECTED WITH BIRTH ILLUSTRATIVE OF AINU IDEAS AS TO WHENCE HUMAN LIFE COMES).

As soon as there are unmistakable signs that a child is about to be born, the husband of the patient is called upon to leave the house and go to stay at some friend's. When there he has to be very quiet, as though forsooth he was ill, for six days. He must stay in the hut all the time and rest by the fire-side. This performance is called *yainunuke*, and that signifies simply, "comforting" or "blessing" or "resting one's self quietly."

On the morning of the seventh day he is said to *shotki chupu*, i.e. "fold up his bed." On this day he returns to his own hut. But even here he must abide quietly at home for another six days. For the first six days he must not drink wine, or worship the gods. This is said to be out of special reverence to the supreme powers. During the last six days he must not *ikutasa* i.e. "have his friends in for a drunken carouse;" nor must he *haimare*, i.e. "go fishing or hunting, though he may eat, drink, worship, make *inao* and be merry quietly by himself as he pleases."

After the child has been born the mother is fed on thin gruel, made of millet, for two days, and during that time is positively allowed to take nothing else whatever, not even water. After the second day she may eat pretty well whatever is going at the time. For six days it is considered best for her to stay upon the bed or by the fire-side; but on the seventh she must get up and go to fetch a little water, however little will do, from the river or spring, and bring it into the house and use it exclusively for cooking purposes. After this she must work as she is able, for in theory she is strong again.

This custom of drawing water on the seventh day, whatever its origin may have been, does not now appear to have any special significance or purpose beyond that of showing to society in general that the mother is now safely and happily over her trouble, and has again resumed her household duties. However, it may in ancient times have found its origin in the idea of purification, and if so may be connected with religion like the purifications of the Jews, Indians, and Persians. Purification in a Biblical sense was an act through which an individual became fit to approach the Deity, or mix freely in the community in cases where a certain bodily or other disability had kept him or her out of the pale of the latter. Child-birth rendered a woman unclean, and she was not allowed to approach God in His temple nor take part in public religious exercises until she had been purified. It is just in this way that AINU women are treated after they have had a baby. After parturition they may not properly mix in the village community until they have drawn water; and water was used in the ceremonies attached to certain kinds of purification by the Jews, Indians and Persians. As water is a cleansing element it may be regarded as a fitting symbol of purity.

So far as I can see, the only difficulty lying in the way of accepting this theory as to the origin of drawing water after child-birth, lies in the circumstance that it is used for cooking purposes and not for cleansing the body. But this need have no weight with us. The sign of purification (i.e. the water) is there. The water is drawn after the sixth day has passed (six is the religious or sacred number). It is not drawn with an ordinary tub or bucket, but with a fitting and clean lacquer-ware basin. Moreover, though the woman may not mix in the community before the water has been drawn, she may after. I must frankly warn you, however, that this is a mere theory of my own, and if you question the AINU themselves you will find that beyond giving you the fact of drawing water they can do nothing else; they know nothing of the origin or reason of the custom. The circumstances accompanying this custom—such as using not an ordinary but an extraordinary vessel with which to draw the water—its connection with the sacred number six, inasmuch as it takes place on the seventh day—and the woman being then considered well and free to mix in the community—are matters only to be obtained by careful observation and kindly questioning. And you will also find that many of the old customs are being pushed on one side now and Japanese instituted instead, so do not make the great mistake of studying the AINU immediately on the frontiers and fancy you may get the true article there, if you desire to study these matters.

Now, the special fact connected with child-birth to which I wish to draw your attention is that which I mentioned just now; viz., that the father of the child must rest in a friend's hut and take great care of himself for six days. He must also abstain from strong drink and all religious exercises. But

why, it may be asked does he abstain from all worship? The AINU answer is, out of humbleness of heart and honour to the deities. Again it is asked, "how can it be an honour to the gods to let them severely alone for six whole days?" To this question the AINU finds no answer. As for myself, I can think of only one way by which such an act can be construed into humility and honour to the deities. That is, by the AINU looking upon himself as impure in the eyes of his gods on these occasions, and so unfit to approach them. It must be taken into account that it is again for the sacred six days, for on the seventh he returns to his own home where he may pray and make his *inao*. I believe this may possibly be the true idea which originally caused this custom of abstaining from worship, though there is another reason to be found.

It would be very interesting to endeavour to trace both this custom of the father and that of the mother to their true source, and so connect the people with some other races; but that is beyond the scope of this lecture and must be passed over.

No doubt the question as to why the father should rest for six days as though he were ill and suffering has arisen in your minds. If so, it is the very question I desired to be asked, for the idea underlying the fact and causing the custom to be practised is a curious one and partly shows what the AINU think as to the origin of life in their offspring. The people appear to imagine that the bodily life—or animal life—of their children is, in great measure, if not indeed exclusively, derived from their mother, while that of the spirit comes from their father. The bodily life is imparted by the mother gradually from the time of conception until birth takes place; the spirit life comes by degrees from the father in some mysterious and secret manner during the six days immediately following birth and goes on growing and being augmented for another six days after he has returned to his own hut. At the end of the last six days the child may be looked upon as a unit in itself, but while the spirit is being derived from the father it is not yet one; therefore, unless the father is very quiet and careful during those periods of time, the life of his offspring will take harm, and in injuring his child he will himself receive harm in return. By this idea then we account for the curious custom AINU fathers have of resting twice six days at the birth of their children.

But, it may be inquired, what happens should the father be far away in the mountains? To this we can only reply that even in that case the birth is never put off! It takes place just the same. But how does the father's spirit get to the child, especially if he is far away? There is no difficulty even here, for every man is supposed to have his own private genius or guardian angel, called *Ituren-Kamuk*, who attends to all such things. Nevertheless it is best for the father to be at hand if possible; and I have several times met men returning home from hunting or fishing in order to be in time.

From what has now been said we may see how very appropriate the old name for the AINU was, for it very nicely coincided with these ideas. That name was *Aitona-rak-guru*, and that means, "Men having the essence of *Aitona*." It is indeed true that the AINU have plenty of essence, for they can be smelted a long way off; but the essence here spoken of most likely refers to the derivation of the spirit or soul of the son from the father.

After having been among a number of AINU in company with an American gentleman some years ago, my friend said to me: "The AINU must have pretty big souls for they smell strong enough!" He was referring to that curious idea some have that the soul is just equivalent to the peculiar individual smell or scent of anything and is nothing else. I have heard of this idea here in Sapporo; whether anyone in this room holds it or not I cannot tell, but I hope not. Thus the peculiar smell of a bear is its soul, that of a dog its soul, that of a man his soul. According to these ideas I suppose the American skunk has the biggest soul of all. And if this be true your *Yamato damashi* is nothing more than the aggregated smell of the nation! But enough.

Thus from a curious custom prevailing at a birth I have now touched upon some AINU ideas as to whence life comes. As to what the AINU consider life to be in its nature and essence, and to whom or what it is to be ultimately referred, are points upon which I cannot speak this evening. I will therefore pass on to my second point, viz.—Customs prevailing at and after marriage which show the moral and social status of the people.

II.—MARRIAGE.

CUSTOMS PREVAILING AT AND AFTER MARRIAGE WHICH SHOW THE MORAL AND SOCIAL STATUS OF THE PEOPLE.

The AINU consider marriage to be a social and

family arrangement or contract which affects the parties immediately concerned more than anyone else. The young people need not marry unless they choose. They may have been betrothed in childhood by their parents, but they cannot be forced to marry each other. Both the young man and his *fiancée* have a final say in the matter. However, until the age of maturity the bond entered into by the parents is held sacred, and is only made void by the parties themselves should they desire to bring the contract to an end. This appears to us Western people as a most sensible plan, for it is a very serious thing to be joined to another for good or ill whether we like it or not. No right-minded young lady in Europe or America would be joined to a man unless she chose to do so, and in this the AINU are like us. However, this is thin ice, and I will get off at once.

The marriage ceremony consists in nothing but a little feast of cakes or rice and wine, at which the mother and bride officiate. The bridegroom has a few heirlooms given to him should there be any, and the bride a few trinkets, as beads and earrings, and sometimes an old sword guard to wear as a charm. The wife never takes her husband's name, but retains her old one. When not called by her own maiden name, she is merely called so and so's wife; that is to say, so long as her husband is living. Should he die, she is always known by the name of her maidenhood, or called so and so's mother should she have a son or daughter. The social position therefore of the woman before marriage is looked upon as being equal to that of the man; but after marriage she becomes subservient to her husband and may neither take nor use his name. The husband is, and rightly so we think, the head of the wife; but this principle is carried too far when the woman is not considered good enough to take her husband's name upon her lips. In this matter, therefore, we must regard the people as somewhat low in their social status.

A CURIOUS SUPERSTITION CONNECTED WITH THE USE OF THE TERMS HUSBAND AND WIFE..

In my intercourse with the AINU people I have frequently had occasion to ask the names of their husbands, and I found that when asked they invariably blushed, and instead of answering themselves, called upon some friend present to do so. This struck me as being somewhat curious, and as I at first thought it was merely a form of shyness on their part, just as many a young lady here present would, as I suppose, be a little shy if asked to tell one the name of her sweetheart, I passed the matter over without paying any great attention to it. For many years, more than ten in fact, I had no idea that by asking the women to tell me their husband's name I was tempting them to a breach of a jealously-guarded piece of etiquette, and asking them to trample on one of their deeply rooted superstitions. I now know, however, that it is considered to be a very unlucky and most disrespectful thing in a woman to mention the name of her spouse. To do so will, it is supposed, bring misfortune to the family.

There are of course times when it is necessary for a woman to speak of her husband, but if she can by any subterfuge possibly avoid it she will not utter his name or call him her "husband." The word for "husband" is *hoku*, but it is considered to be as disrespectful and unlucky for a woman to mention her spouse by that designation as to mention her spouse by name. Others indeed may speak to a woman of her husband by his proper name, but must never call him her husband to her face, for that is also considered to be incorrect. There are therefore some more or less indirect and circuitous ways by which the women speak of their lords. Thus:—*Ku goro guru*, "my person;" *ku goro asnu*, "my man;" *En vorogeta an guru*, "my person at the upper end of the hearth;" *En hekote guru*, "the person who binds me." The term in most common use among the women is "my man;" and that used by others when speaking to a woman about her husband is "your man."

The men, indeed, may constantly be heard addressing their wives or speaking of them to others by name, though it is considered incorrect to do so. But during all the years I have been among the AINU I have but twice heard a man speak of his spouse by the term *Machi*, i.e. "wife." It is considered unlucky to do so, and that designation is therefore carefully avoided. If a man desires to be very nice and affectionate to his wife he will call her his *Kashimat*, "female door of the heart," but when speaking of her to another he calls her *Ku goro shiwende guru* or *ku goro shiwentep*, "my person who is slow of foot;" or *En usarageta an guru*, "my person at the lower side of the hearth." Many AINU who speak pigeon-Japanese call their wives by the term *Ku goro menoko* which is a very low and incorrect way of speaking, for it really means "my mongrel," and is not AINU, but a Japanese and AINU hybrid compound.

It must not be supposed that when a woman speaks of her husband as "My person at the upper end of the hearth," or the husband of his wife as "My person at the lower end of the hearth," there is any sentiment intended. These terms refer to nothing but their respective places as they sit in the hut. *Rorogeta* is "at the upper end of the hearth" and is the chief place, and *usaragetu* is "at the lower end of the hearth," and that is not an honourable place at all.

The word *Kathimat* "female door of the heart" as applied to the wife by the husband, may have originally had something of love and sentiment in it. But however that may have been, it has now come to be just an ordinary term for "wife," then "mistress," and then "house-holder." It is well when speaking to a person of his wife to call her his *Kathimat*, or when addressing the mistress of a house to call her by that term, for it always gives pleasure.

It is sometimes necessary for a man to speak of his wife or a wife of her husband after the death of either. But in no case may the name of a person deceased be pronounced. Hence a widow will speak of her departed husband as her *shopake*, i.e. "head of the floor," and the husband of his deceased wife as his *shonep* or *eshonep*, i.e. "floor" or "person of the floor."

VOLUNTARY SERVICE WITH A VIEW TO MARRIAGE.

Speaking of the Kamchatkates, Dobell wrote,* "Should a young man fall in love with a girl, and he is not rich enough to obtain her by any other means, he immediately enslaves himself to her father as a servant for three, four, five or ten years according to agreement, before he is permitted to marry her. When the term agreed on expires, he is allowed to live with the father-in-law as if he were his own son." This well known custom seems to be universal in the East and is, I believe, known to every Asiatic nation. I personally knew of a like case happening at a Japanese village called Ono near Hakodate.

The custom also prevailed in old times among the Ainu, and even at the present day some rare cases are heard of. There is, however, one great difference among the Ainu, for not only the young men but any girl also who should fall in love with a young man may enslave herself to his parents as a price for their son. The young men and maidens of this race are sensible about this matter and are not in the least ashamed for it to be known when they are smitten with Cupid's arrows.

One great reason for marriage among the Ainu is the reproduction of children. It is a well known fact that among all Asiatic races there is always to be found a very strong desire to perpetuate the family name, and a great dread of its being allowed to become extinct. In many countries the lack of male issue was, prior to the introduction of Christianity, considered fully sufficient reason to justify a husband in divorcing his wife; or even should there be female issue, men frequently added another wife to their families in the hopes of thereby obtaining a son. Concubinage may to a very great degree have arisen from this desire for male issue. What was at the foundation of this sentiment I do not here intend to enquire, excepting in so far as it is current among the Ainu.

Notwithstanding that the Ainu have no family names to perpetuate, yet it is very curious, but considering the conditions in which they live and the religious and superstitious notions prompting many of their actions, eminently natural, to find that they, both men and women alike, are most anxious to acquire children. The men wish for at least one boy and the women a girl or two. Lack of issue has been the cause of much cruelty on the part of the husband and of an infinite amount of trouble to the poor women. I heard of one man who had divorced at least six wives because they bore him no children, and he has had as many concubines in his time. He himself has at last adopted a son and his present wife two daughters.

I always find among this people that though a man's wives live in separate houses they are very seldom on speaking terms with one another, excepting to quarrel. The system does not work well among the Ainu, whatever it may do among the Mormons. In prosecuting my work among this people I have sometimes had occasion to point out the immorality of this practice to them, and although they agree with what I say they generally wind up by informing me that it is an old Ainu custom. Of course nothing remains to be said after so strong a reason.

There are three principle reasons why the men so much desire a son. The first is that he may act as family priest when the father dies. Secondly, that he may inherit, preserve, and hand down to prosperity the principal heirlooms and family treasures; poor enough these seem to us truly,

yet to them they are precious; and thirdly, that he may act as the head of the family and take the place of the father to the younger members thereof, should there be any. Not only so, but that he may keep the father in his old age.

I can assign but two reasons accounting for the fact that the women wish for girls. These are first, that they may have someone to assist in looking after the house, fetch water and wood, and work in the gardens. And secondly, that they may have someone to feed them in their old age. The principal reason for desiring male issue is that they may please their husbands and escape the disagreeables consequent on not having a son.

I have often heard travellers among the Ainu remark that many of the children are like Japanese boys and girls. This may be accounted for in two ways. In the first place there are numbers of half-breed children among them; and in the second place childless women, of whom I know many, very often adopt Japanese children. It may appear contrary to expectation that Ainu women should adopt Japanese children or that the Japanese should care to allow their babies to be adopted by them. Nevertheless, it is very often done. I know of four women who adopted children from the Japanese in the year 1893; I know of one who paid fifty *sen* for her baby two years of age. A very few days ago an Ainu woman informed me that she was going into the Japanese town to adopt a child, and in the evening she returned and told me that she would not take it because it had bad eyes and that she was going to inspect another she had heard of in a few days! Incredible though it may appear, yet the Ainu women find not the least difficulty in getting, either by means of a few *sen* or as a free gift, Japanese children from their parents!

DIVORCE.

Among the Ainu release from the matrimonial bond was very easy of accomplishment and often executed on the slightest grounds imaginable. I am of course speaking of the remote ages. We are therefore not surprised to find that divorce was consequently of frequent occurrence among them. It seems indeed that the members of this race regarded the marriage rite as very little more than a conventional union binding for so long a time only as suited the mutual convenience of the spouses. And, it should be remarked, it was just as easy and considered just as proper for a woman to cast off her husband as for a man to divorce his wife.

Some of the grounds upon which a man would release himself from his wife were as follows:—Want of love towards her or of her towards him; incompatibility of temper; general disrespect on the wife's part; idleness and failure to keep the hut supplied with fuel and vegetable food; unfaithfulness; lack of male issue. A woman might dissolve her connection with her husband for the reason of adultery; dislike to him; idleness; inability to keep the larder supplied with fish and animal food.

Divorce might take place by the simple consent of the parties, though it was very seldom that the husband would condescend to consult with his wife on the subject. When a man divorced his wife he merely made her a present and sent her back to her parents; and when a woman wished to be free from her husband she simply walked off and left him to shift for himself. In cases which have actually occurred under my own eye the subject was made more of a family affair, and the presents were sent to the parents of the women who were divorced, and were not given to the women themselves. When a separation took place the children, if any, were divided, the father taking the sons and the mother the daughters. I have also heard of cases where the father has in anger against his son-in-law sent and fetched his daughter away, thus divorcing his son-in-law and daughter!

From these facts—namely, the great ease with which divorce was accomplished, the women being looked upon as inferior to the men, and the recognition of concubinage as a lawful thing—we must place the Ainu race on quite a lower plane of moral and social status. It is for you to raise them.

III.—DRATH AND BURIAL.

CUSTOMS CONNECTED WITH DEATH AND BURIAL, SHOWING AINU IDEAS CONCERNING RELIGION AND WHETHER THE SPIRIT OR LIFE GOES AFTER IT LEAVES THE BODY.

When an Ainu dies, the body, be it that of a man, woman, or child, is dressed in its best clothes, all of which are first cut or torn a little, and laid out by the fire-side. Should the dead person be a man, his bow and arrows and quiver, his pipe and tobacco-box, a long and short knife, a sword, a cup and tray and moustache-lifters, and also a bundle of clothes, are placed by his side. All of the clothes are more or less cut or torn even should they be new garments, and every one of

the other things is broken, chipped, or bent. All are buried with the body.

Should the corpse be that of a woman, some needles and thread, some native and Japanese clothes of various colours and kinds, a set of weaving implements, spoons, ladles and cup, and her trinkets, such as beads and earrings, are placed by her side; also a bundle of clothes, also all cut or torn. Children also have a cup, a spoon, some clothes and trinkets placed by them. But the great point to be borne in mind is that all these things are buried with the corpse, and are always first cut or otherwise injured.

As soon as a death takes place friends are notified of the fact and a feast is made. This is not indeed a feast for pleasure, but for mourning, weeping, howling, and bidding farewell to the departing person, for the spirit of the dead must not be looked upon as departed until the body has been placed in the grave. Some of the food, which consists of boiled cakes made of millet, is broken and reverently placed upon the corner of the hearth to be buried with the corpse, and drops of wine are sprinkled in a circle round the head with a moustache lifter, while prayer is being devoutly offered up to the spirit of the departed and to the gods. All the people who have come together for the feast also break their cakes and bury part under the ashes by the fire, while eating the remainder. These remnants seem to be the share set apart for the goddess of fire. After the feast is over, all of these fragments, the essence having now, it is thought, been devoured by the goddess, are gathered up with the ashes and thrown away. It would not do to leave them upon the hearth as they would be constantly turned up whenever the fire was stirred, and in that way remind friends of death. This feast goes by the name of "bad eating and drinking," and "the broken eating."

This feast having been partaken of and prayers duly said, the body, together with all the things to be buried with it, is taken to the grave. A cooking pot is carried with the other things which, after having been broken, is put upon the grave by the post which answers as a tombstone. Fresh water is also carried in a wooden basin, with which, after the ceremony is over, all those who have taken direct part in the burial wash their hands. This basin is then broken, by having the bottom knocked out, and placed over the aforesaid tombstone.

When a child is buried the same customs prevail, the only difference being that the pole used in carrying the body to the grave is, as a rule, of the elder tree. The bodies of adults, however, are carried with any other wood that happens to be handy, but by no means must elder be used.

There are other customs connected with death and burial of which I might speak, but as those I have now mentioned bear directly upon the subject in hand, viz:—Ainu ideas concerning religion and whether the spirit or life goes after it leaves the body,—while the others only effect the matter indirectly, I will pass them over and confine myself to the task of showing the thoughts underlying those customs and prompting the people to perform them.

Now in the first place, I suppose the questions will be asked. Why do Ainu break and chip and bend the implements, and cut and tear the clothes, which they bury with their dead? Or, why indeed should these things be buried with them at all? Then again it will be asked, why all this ceremony of breaking up millet cakes and knocking the bottoms out of pots and basins? These questions have been asked and variously answered. They have puzzled me for years and I have, I must confess, just discovered their true meaning.

It is said by some persons that the people bury these things with their owners because their work is over and there will be no more use for them, and as a proof of this they mention the fact of their first being broken. I will dismiss this by merely informing you that it is not so according to Ainu ideas. This reason is really an imported one and is not native at all.

Again, if you ask the Ainu why they break up the implements and tear the clothes before they bury them, you will find that the general answer will be,—“to keep the Japanese from stealing them”! But this is certainly not true. We must look deeper than this for the true solution of the matter.

A third and truer and more general idea is that these things are buried with the corpse because the spirit is supposed to require them in the next world. This, as is the case with other races, is the true Ainu reason for the custom. Extinction or absorption of the spirit forms no part of the Ainu idea of death. Each person will have, it is supposed, a distinct, definite, personal life in a body beyond the grave. And, there he will

* See Dobell's Travels in Siberia, vol. 1. Page 22.

require his hunting and working and cooking utensils and paraphernalia as well as his clothes. He will have his hut, his wife, his dogs, in fact, everything as it is here, only much better.

But, it will be asked, if the clothes will be necessary for the body, why cut and tear them? If furniture and implements are required, why break them first? Or how, again, can these things get from the grave to the other world? Having been once placed in the grave, there they remain. It is just here that we begin to understand the Ainu idea of life. Life is spirit whether hidden, latent, and secret, or manifested and openly energetic. Every possible thing you can imagine as existing has its separate, individual spirit, and always will have. If we lose it in this it will be found in the next world. It can never be absolutely lost or extinguished. Thus, swords, bows, arrows, cups, moustache-lifters, pots, basins, pans, knives, spoons, needles, beads, earrings, cotton, thread, string, boots, coats, blankets, mats, every individual thing in truth is supposed to have its separate and distinct spirit and personality which can never be lost whatever happens. It will live in another world. A spoon will be a spoon, a sword a sword, a hat a hat, and a pair of shoes a pair of shoes in that world.

You will probably begin to see the real reason for breaking these things when the owners thereof die. Death itself is caused by some harm having been done to the body by the gods, demons or men. It is the body only which can be damaged, not the spirit. It is the body only which decays and dies, the spirit never. As therefore the living spirits of men will require all this furniture in the next world, the various articles are each in their separate persons or bodies damaged; their spirits are thus set free and caused to go with their owners to serve them there. Their bodies are damaged, i.e. they are killed. Hence as the human body will, when in the home beyond the grave, need clothing to wear, a quantity of clothes is first killed by being cut, and then buried; as it will require food there millet cakes are first killed by being broken and then sent off on their journey; and so with the other things. Coats, I should have remarked, are cut from the neck down the back, for the back-bone is supposed to be the seat of life. These things are very curious, deep and mysterious, but they serve as very good eye-openers by which we may learn to see the inner workings of the heart of this peculiar people.

Now death is a thing which cannot take place in a hurry. That is to say, nothing is thoroughly dead till every particle of the body in which it lived is decomposed into its elements. Hence when a body is buried life or spirit still exists in the grave in some degree till all has been decomposed. We can therefore understand how it is the people believe that ghosts exist near graves and are afraid to go near them. But I cannot now speak of superstitions connected with ghost-life and the great fear of them the Ainu have.

When the body is in the grave the spirit is there also, in part at least, gradually freeing itself from its earthly tabernacle and must be carefully left alone. No one must intrude on its domain, for it requires room and perfect freedom. In this idea therefore must be sought the reason why the Ainu bury in separate places far away in the forests and not in cemeteries.

The Ainu have, I find, a very great dread of being buried in coffins; they therefore use nothing but mats for this purpose. The idea seems to be that a coffin is too small and would interfere with the withdrawal of the spirit from the body and earth. I am told indeed that some of the Saghalien Ainu place their dead in coffins and either leave them above ground in the forests or bury in very shallow graves, leaving the tops of the coffins only exposed. But whether this is so or not I cannot say for certain. If coffins are used there they may have got the custom from the Russians. There is no such custom among the Ezo Ainu. In fact, the Ainu here have a very great dread of being shut up in a box, as they call it, and being so buried.

A few years ago a woman died in a certain village saying that she believed in Christianity and would like to be buried according to Christian rites. We were away from the village at the time but there were some Japanese Christians there who took upon themselves to make all the necessary arrangements. They told the husband and friends of the deceased that she ought to be placed in a coffin, as if forsooth that was a necessary part of Christian burial! This caused a great uproar, and the Ainu present refused to permit it. She was therefore rolled in a mat and buried as is customary among them.

I mentioned just now that water is carried to the grave at the time of burial, and that the people wash their hands with it. The custom

may have originally had connection with the idea of purification I spoke of under the second heading. But as I can say nothing on this point positively, it shall be passed over.

CONCLUSION.

I have now touched briefly on the three questions proposed, viz.:—Birth, marriage, and death. From a custom connected with birth we find that the Ainu fancy human life originates no farther back than the parents. The truth underlying this fact is that it is so immediately, though ultimately not. From customs prevailing at marriage and after we find that inasmuch as divorce is easy of accomplishment—that polygamy is allowed—and that concubinage is practised—the Ainu are not very far advanced in civilization and morals, and that they are not very high in the social scale. From those customs practiced at death and burial we find that the Ainu regard all life as being individual, personal, and everlasting.

My Friends:—The last remnant of this race of men is at your very doors. The people are poor, degraded, and helpless. They are being driven to the wall by *saké* and immigrants, and they cannot last much longer. Can you not help them? Shall it be said to the everlasting shame of Japan that she has allowed this fragment to become extinct without stretching out a helping hand? Be magnanimous and help them.

MANIFESTO CONCERNING THE DISSOLUTION OF THE HOUSE OF REPRESENTATIVES.

We herewith give a translation of a Manifesto issued over the signatures of Princes Niho and Konoyo and seventeen other members of the House of Lords, the publication of which led to the immediate suspension of the *Nippon Yomiuri Shimbun* and other metropolitan journals of note.

The prestige of Japan is free from any marring blemish, and though the land is, now and then, subject to a varying degree of fortune, yet the foundation of the State rests on a very solid basis, while the line of demarcation between Sovereign and subjects is distinctly drawn. In short, viewed from the stand-point of the felicity enjoyed by the people, there is no country in the world comparable with Japan. Nevertheless the change of the times, coming down to a recent period, has induced our nation to adopt the western system of politics; and, with the avowed intention of enabling this happy people to enjoy a still higher degree of prosperity, a constitutional form of Government has been established. The mechanism of both executive and legislature being perfectly organised, it has been expected that, by the united efforts of Ruler and ruled, both of whom do not fail to regard the State with due respect, the mechanism of administration would run very smoothly, and nothing like anxiety to the Court would ever occur. Yet this expectation has in no wise been verified. The mechanism of constitutional administration has failed to work in accordance with its proper functions, so that only a few years after the inauguration of the new system we see injurious effects in the utter confusion of State affairs, so great indeed as even to threaten to disturb the public tranquillity and impair the prestige of Japan. In consequence of this, the Sovereign is subjected to much trouble, and the people involuntarily conceive great indignation at the sight of such a deplorable state of affairs. This is in very truth a crisis in which the people should stimulate the spirit of loyalty and patriotism and exert themselves to the utmost for the welfare of their country. And how much more is this the duty of those who hold the onerous position of membership in the House of Lords! When our revered Sovereign caused the promulgation of our great Constitution, he graciously used the following words: "Whereas we make it the joy and glory of Our heart to behold the prosperity of Our country and the welfare of Our subjects, We do hereby, in virtue of the supreme power We inherit from Our Imperial Ancestors, promulgate the present immutable fundamental law, for the sake of Our present subjects and their descendants. The Imperial Founder of Our House and Our other Imperial Ancestors, by the help and support of the forefathers of Our subjects, laid the foundation of the Empire upon a basis which is to last forever. That this brilliant achievement embellishes the annals of Our country, is due to the glorious virtues of Our Sacred Imperial Ancestors, and to the loyalty and bravery of Our subjects, their love of country and their public spirit. Considering that our subjects are the descendants of the loyal and good subjects of Our Imperial Ancestors, We do not doubt that Our subjects will be guided by these views, and will sympathize with Our en-

deavours, and that harmoniously coöperating, they will share with Us Our hope of making manifest the glory of Our country, both at home and abroad, and of securing forever the stability of the work bequeathed Us by Our Imperial Ancestors."

The remote origin of the establishment of the constitutional form of our government, appeared in the early days of the present period of Meiji, when H.M. the Emperor made an oath consisting of five provisions. It is the duty of the subjects of this Empire to bear always in mind the benevolent will of the Sovereign, and to strive to assert the glory of their country both at home and abroad, and to support and aid the great work of the Restoration brought about by the Sovereign in such a manner as to make his glorious virtues descend to endless posterity. That is the meaning of loyalty to the Sovereign and the fulfilment of those proper duties assigned to his subjects. It was in truth with the view of making men still more assiduous in the discharge of their duties, that H.M. the Emperor promulgated the great Constitution and therewith imposed upon his subjects graver duties than they had borne before. And yet, although five years have already elapsed since the promulgation of the Constitution and although the Imperial Diet has sat six times, it has not always been possible to avoid a collision between the views entertained by the executive and legislative bodies, so that three of the six sessions have ended in dissolution. Should such a state of things be permitted to continue, not only will the fruits of the constitutional form of government never be truly realized, but even the national rights can hope for no extension; while the accumulation and intensification of disputes, year after year, can not fail to seriously injure the nation's prosperity. This is therefore not a time in which those who keep in their hearts the will of the Sovereign and respect the duties imposed upon them as subjects, can remain in idle ease and contentment. After pondering over the present state of affairs we have become thoroughly convinced that cordial coöperation can no longer be expected of the executive and legislative bodies. On the contrary, the incompatibility of their mutual views will only become more pronounced than ever. Compare, for instance, the Address to the Throne formulated by the House of Representatives as the outcome of their deliberations with the Memorial to the Throne presented by the Cabinet to H.M. the Emperor with the intent of encompassing the dissolution of the Lower House. The Address, embodying an impeachment of the Cabinet, sets forth that the policy pursued by the Ministry is temporizing and negative, in so far as it does not carry out any strict administrative system, nor yet effect the required reforms in the Navy, and further seeks to shroud all important affairs in obscurity by making some half-hearted retrenchment in the list of expenditures. With regard to foreign matters, the Cabinet policy is alleged to be one that seeks for momentary ease and is merely solicitous in currying the favour of foreigners, thus sacrificing the true interests of the nation and completely reversing the course of action which should be pursued towards the people of Japan and those of alien lands. As an offset to all this, the Memorial states that "public expenses and the number of officials have been reduced so far as reductions were possible; that there has been no neglect in relieving the distress of the people, while urgent measures of national defence occupy day and night the unceasing attention of the Ministry. Especially are they sensible that not so much as a day's negligence is permissible in the sphere of the Empire's international relations, the Minister directly responsible for this Department of State Affairs being perfectly cognizant of the fact that neither delay nor hesitation can be allowed." The Ministers further denounce the deliberations of the House of Representatives as "tumultuous discussions, pompous words, and grandiloquent language." It will thus be seen that the views of the two bodies are diametrically opposed to each other, so it follows that if the Memorial is indeed worthy of public confidence, the Address was a mere perversion of the truth calculated to mislead the Imperial judgment, and that those who subscribed their names to it are nothing better than criminals. On the other hand, if the Address be an expression of the actual state of affairs, then the framers of the Memorial ought not to escape denunciation at having misguided the Imperial mind. When once the conflict of opinions between the two bodies reaches such an extreme, their cordial coöperation can of course no longer be hoped for, unless the Cabinet Ministers make their submission to the deliberative body of the House, or the latter yield to the representations of the Ministry, as the case may be. If this be not done, then is the Imperial Will but as idle words,

and nothing but confusion worse confounded can attend the enforcement of the constitutional form of government. In view of the Executive and Legislature being thus as wholly irreconcilable as fire and water, it would, under the circumstances, be idle to expect the realization of any really important scheme or the true development of the people's resources. Whom shall we hold accountable for all this? On the occasion of the organization of a powerful Ministry, the public imposed great confidence in the Premier and believed that the true blessings of constitutional government would shortly be forthcoming. And yet, so soon as the fourth session of the Diet was opened, a violent difference of opinion between the Ministry and the House of Representatives at once made itself apparent. The issue of an Imperial Rescript fortunately at once effected a great change in the general condition of the moment, and upon the Cabinet Ministers publicly pledging themselves to effect great improvements in State affairs, the dispute was, for the time being, allayed on mutual compromise. Matters remained thus until the next, or fifth, session. But by the time that the sittings began it was found that, despite their public pledges, the so-called improvements effected by the Ministry were of a temporizing nature only; that, with the pretext of bringing the re-arrangement of State affairs into regular working order, no improvements of any importance whatever had been effected. This is a point which was and is sufficiently recognized by the public at large and by no means a mere arbitrary assumption of our own. Despite all this the Diet, ever keenly alive to the supreme weightiness of the Imperial desires and deeply impressed by the conviction that affairs of State might admit of no trifling, kept to a policy of cordial cooperation, and, with all diligence and sincerity, strove to fulfil the great task of according its support and aid to the administration of the country. When the Representation relating to the strict enforcement of the existing treaties was introduced to the deliberation of the House, the Ministry regarded it as a measure calculated to pervert the permanent policy of the State from its proper course as well as to impede the enlightened policy of opening up the whole country; and for this reason, before one word had been said concerning the Bill, the dissolution of the Lower House was hastily declared. Can we call this the action of a Cabinet respecting constitutional methods of procedure? It being impossible to pass over the matter in silence, Princes Nijo, Konohe, and others of like views drew up a memorial on the subject, which they submitted to the perusal of the Cabinet Ministers, so that they should weigh well what they had done. It was far from being their intention to support the House of Representatives and thus to find fault with the Ministerial course of action; the memorial was drawn up because of the signers' regret and apprehension for the future of the Constitution—seeing such a state of affairs at the very outset of the new administrative order—and this in a Cabinet made up of those men who had done meritorious service in the days of the Restoration. Upon receiving a reply from the Premier, the memorialists were struck with surprise at the excessive obstinacy and self-confidence of the Cabinet Ministers; and the signers of this present manifesto are even more convinced than formerly of the impropriety of the dissolution of the Lower House's fifth session. Imagine our surprise, therefore, when, upon the occasion of the House of Representatives, in its sixth session, passing a vote of want of confidence in the Cabinet, the Ministers, who are popularly believed to respect parliamentary procedure, once more advised their Sovereign to dissolve the Diet instead of immediately tendering their resignation! It is asserted in the Memorial submitted by the Ministers on that occasion to the Throne, that "convinced that pompous words and grandiloquent language do not conduce to the efficient management of important State affairs; that the great national policy adopted at the time of the Restoration ought not to be left half-accomplished; and that important measures aiming at the permanent good of the country can not be postponed because of tumultuous declamation on the part of the House of Representatives; and being further deeply solicitous for the prosperity of the people and the welfare of the country, they respectfully solicit the issue of an order for the dissolution of the House of Representatives." But if the actions of the House of Representatives really were just as stated in the Memorial then its members should not only be considered as having failed to obey the august will of the Emperor, but should also be declared to have forfeited the trust imposed in them as the members of a legislative body called into existence for the purposes of rendering aid to the administration. And yet the men who were thus accused of having betrayed

their trust were the chosen representatives of the people; so that if they really did stray from the path of duty and high principle, it was as if the nation as a whole had neglected to bow to the Sovereign will,—a most serious matter. At such a juncture those ambitious Ministers who "are exerting their utmost endeavours to accomplish, despite all dangers and difficulties, the great object of the Restoration and the achievement of the aims of the nation's fundamental policy," should, by instruction and remonstrance, kindly manifest their real intentions, and with frank sincerity strive to prevent the nation from falling into disloyalty and error. But far from doing anything of the kind, the Ministers have shown symptoms of wishing to seek shelter beneath the sleeve of the Sovereign. Moreover with regard to the charge of not having fulfilled their official duties in both domestic and foreign affairs, they have not taken pains to attempt a refutation or to minutely explain their conduct; they have merely striven in their Memorial to make their measures look showy, apparently wholly regardless of those unfavourable comments on their policy, albeit the defects of that policy were patent both to the eyes and ears of the people. And then, by way of capping the climax, they once again advised the dissolution of the House of Representatives. Is this, then, the style of parliamentary procedure chosen by the *Genkun Naikaku*? The Ministers have unhesitatingly had resort to a measure calculated to destroy all hope of cordial cooperation; they have tried to foist the responsibility of dispute on other shoulders; they have declared the discussions of the Lower House to be nothing more than pompous words and grandiloquent language; they have slandered and insulted the House by referring to its deliberations as "tumultuous discussions" calculated to thwart the accomplishment of important matters. And, after all this, the fact that they declared that, "being solicitous for the welfare of the people and the prosperity of the country," they deemed it advisable to petition for an order dissolving the Lower House, makes us wonder whether the Ministers are or are not aware that there are such things as the contemptuous reproach of posterity and the criticism of enlightened men.

The repeated dissolution of a Parliament is an inauspicious event but rarely noted in the history of parliamentary nations. Yet this is the very step that the Ministers have arbitrarily taken at the outset of the parliamentary career of Japan. We should like to know how far they are justified in proceeding to such a length.

The reason why provisions relating to dissolution are necessarily embodied in a Constitution, is because they are formed with the intent of providing for such a case as that in which the ideas of the Executive and Legislature of a country are unfortunately at variance with each other, when there is no other alternative, for restoring harmonious cooperation, but the resignation of the Ministry or an appeal to the people by a new election of their representatives. It follows that the attitude of a newly elected Parliament should be regarded as the sentence passed by the people on the measures taken by the Cabinet. If, therefore, the Cabinet Ministers, so soon as they find that the popular decision is averse to their proceedings, still arbitrarily re-dissolve the Diet, with the complacent remark that there is no provision in the Constitution which prohibits repeated dissolutions of the House of Representatives, then such an action is tantamount to a declaration that the Ministry will not hesitate to make one dissolution follow another until they can obtain a legislative body abjectly subject to their will. For not to hesitate to enforce a second dissolution totally heedless of the public displeasure evidenced with regard to the first, is but the beginning of the arbitrary enforcement of repeated dissolutions. But this is wholly inconsistent with the spirit of the Constitution, which provides that the Executive and Legislative Bodies shall stand side by side. The Ministers now in power have dared the enforcement of a second dissolution; yet should the seventh session of the Imperial Diet be found to have inherited the spirit and tendency of the last session, how can they possibly hope for harmonious cooperation? Public confidence depends upon private virtue; so if the Cabinet—which is but poorly off in the matter of virtue and has therefore entirely lost the confidence of the public—be suffered to still keep its place at the head of the people, the component Ministers will not only be unable to realize the true fruits of constitutional polity, but will also bring disaster upon the prosperity of the country and the welfare of the people: for when the tide turns and the moment of a crisis comes, the seething discontent of the people will burst all bounds, to the total derangement of the national administration. They may even resolve to encounter death if that alone fur-

nishes a vent for their pent-up indignation. There is no more dangerous political evil in a country than the stubborn assumption of power by a Cabinet which has become estranged from the public confidence. We need not go far to seek for precedents; the catalogue of revolutions in Modern Europe is replete with warning instances. We believe that the Ito Cabinet has well-nigh forfeited all public confidence, and that therefore it ought no longer to be entrusted with the management of the important affairs of this our country. Even though the Ministers stoutly protest that they have, in obedience to the Imperial commands, pursued an unvarying policy of State and endeavoured to accomplish the great object of the Restoration, the public regard all this as mere boastful bragging, being fully convinced that the mismanagement of the Cabinet will cause utter confusion in the constitutional administration at home and national disgrace abroad. The fate of the present Cabinet is, in fact, already sealed. We are convinced that should a Cabinet which does not scruple to conduct itself in a wholly unconstitutional manner be suffered to retain its post for a longer period, the dangers that are now darkening the future vista of our enlightened land, will entirely overwhelm it before long. Will the Cabinet Ministers still persist in sacrificing the interests of their country to their own? Are they still determined to clutch at the fading wreath of Clan Government, even though this may necessitate the shedding of innocent blood? The very thought of such a thing makes the tears start unbidden to our eyes.

Awake, ye faithful and sincere people of Japan! We here declare that we will tread the path of justice, and, hand in hand with you, keep loyal watch over the interests of this our enlightened land.

Signed: Princes Nijo and Konohe; Count SHIMAZU; Viscounts GOJO, TAKEUCHI, HITOTSUYANAGI, MATSUDAIRA (SHOJO), SATARU, ITAKURA, HONDA, NAITO, OGASAWARA, SHINJO, and UMEKOSI; Barons DATE, HONDA, SUGIMURA; Messrs. KAMIYE, SUZUKI, IGARASHI, and NOZAKI (all members of the House of Lords).

CRICKET.

A game of Cricket played on the Fourth—an all day match—resulted in a very hollow victory for the Vice-President's team. The President's eleven first went in, but the lot were dismissed for 62, only three getting into double figures, the bowling of Walford and White being very good. On the other side going in, three men were dismissed for 53, at which stage Walford and White got together, and completely mastering the bowling, which was somewhat weak, began scoring apace, until at 261 Walford was bowled by Dickinson, having contributed 107. Only eight more runs had been added when White was caught by Dickinson off E. Morris, his score being 111. The rest of the team did not put up very much. In the bowling, Dickinson's average was the best. Score and analysis:—

The group of islands which Mr. Dioso mentioned at the dinner of the Japan Society had been offered to the Society is the New Hebrides, which, as a matter of fact, are still going begging for an owner. Neither France nor Great Britain can take them, by agreement, and they will allow no one else to do so.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, June 14th.

Miss Alling, about to return to her work after a season of study in the University of Chicago, and Mrs. De Forest, on her return home for a vacation, have been speakers recently before their respective mission conferences.

The Chicago Women's Press League gave a Japanese entertainment the other evening. It was in charge of Mrs. Esther Crane Bell, whose home is in Japan a part of each year. Mr. E. S. Bell gave a talk on Japan with the aid of the stereopticon. Refreshments, tea and cake, were served by young ladies in Japanese costume. Two young Japanese, named Abe and Takanaka, acted as ushers; and Count Watanabe was among the guests. "The tea was served in a set of imperial china presented to Mrs. Bell by Princess Mori."

Mr. N. Soma, of the Yokohama Specie Bank, has been visiting prominent banks in this country, and sailed yesterday for Europe.

About forty-five members of the Japanese colony of New York and Brooklyn met on Saturday night, June 2nd, in the Japanese Mission, in Sands-street, Brooklyn. The meeting, which was held at the suggestion of Shizuo Kondo, had for its purpose the discussion of a general organization of the Japanese in this country, looking to the elevation of the members socially, intellectually and morally. A number of speeches were made, and a committee was appointed to draft a constitution. Shizuo Kondo was seen on June 3rd at No. 126 Gold-street, Brooklyn, the clubhouse of the Japanese workmen. The night school, the development of which is to be one of the objects of the new society, is also held there. Mr. Kondo said the Japanese in America were anxious to dispel the prejudices which seemed to exist against them. Even newspapers, he complained, were in the habit of commenting unfavourably upon them whenever occasion offered itself. The Japanese Consul General had approved of the scheme, and was now engaged in taking a census of the Japanese in this country. So far 200 had registered at the consulate. Mr. Kondo is a graduate of the Ohio University, has taken a course in the University of New York law school, and is now attending Columbia College.

The latest news from Hawaii brings the information, that Minister King, of the Interior Department, has hoisted the Hawaiian flag upon the highest peak of Necker Island, and has formally taken possession of the island in the name of the Provisional Government.

The Constitutional Convention assembled at Honolulu on May 30th, but after President Dole's address, adjourned in honour of Decoration Day. The *Inter-Ocean* correspondent, who "enjoys unusual opportunity to know what is transpiring and being sought to be brought about," writes that there is no longer any danger of the restoration of the Queen. President Dole, moreover, referred to annexation as "delayed not defeated." The provisions of the proposed constitution have been published at some length in the papers of this city; but need not be given here, as I have already written the outline of the same in previous letters.

After the defeat of the San Salvador Government troops under Gen. Ezeta, President Ezeta resigned "in favour of Carlos Bonilla," who is not, however, generally acceptable. The fugitive Vice-President of San Salvador is said to have found refuge on the U.S. cruiser *Bennington*.

The U.S. Senate has adopted, by small majorities, the compromise amendments to the Sugar Schedule of the tariff bill, with the following result:—As adopted to-day the schedule imposes a duty of 40 per cent. *ad valorem* on all sugars raw and refined, with a differential of one-eighth of a cent per pound on sugars above 16-Dutch standard and an additional one-tenth of a cent against sugars imported from countries paying an export bounty. It continues the Hawaiian treaty admitting sugars from the Sandwich Islands free of duty, and places a duty of 2 cents per gallon on molasses testing above 40 degrees by the polariscope. The schedule goes into effect January 1st, 1895, and the bounty is continued until that date. It is now hoped, that the whole bill will quickly get through the Senate.

The House of Representatives, by the decisive vote of 102 to 170, in which party lines were not drawn, defeated the bill to repeal the law imposing a tax of 10 per cent. upon State bank circulation. No "wild cat" currency!

The Republicans are rejoicing over their great victory in Oregon, where they carried everything in the election of State officers and of two Congressmen. The same party has nominated ex-Congressman E. N. Morrill for Governor of

Kansas; and has put up Governor Cleaves for re-election in Maine.

Geo. P. Wetmore (Rep.) has been elected U.S. Senator from Rhode Island, to succeed Dixon (Rep.).

The mortuary list this time includes two prominent persons: ex-Congressman and ex-Governor Price, of New Jersey, who was also the man who raised the Stars and Stripes on California soil and read the proclamation of occupation; and Prof. William Dwight Whitney, the famous scholar in Sanskrit and comparative philology, and one of the honorary members of the Asiatic Society of Japan.

President A. A. Kendrick, after a service of 23 years in Sheertlaff College, Upper Alton, Ill., has resigned, and enters active service in the Baptist ministry.

President Harper, of the University of Chicago, proposes to establish a chair in every modern language, and is now negotiating with the Welsh people for a chair of their language and literature. Among the new instructors at that institution are Dr. Alexander Smith, of Wabash College, in the department of chemistry, and F. L. O. Wadsworth, of Washington, D.C., in the department of physics.

William Deering, the harvest machine manufacturer, has given \$50,000 to the Medical School of the Northwestern University.

It is reported that Pittsburg is likely to have a fine observatory and a grand telescope with "the largest lens in the world;" but it is a natural query, whether "the Smokey City" is a profitable location for the observation of the heavens. Andrew Carnegie and Henry Phipps, Jr., are expected to furnish the money for this purpose.

The following clipping from the *Inter-Ocean* contains some interesting items, and, as usual, some errors:—To have a Court of All Nations in connection with the Field Columbian Museum in which the nations of the world shall be represented by pictures or paintings of their rulers, together with the exhibition of interesting articles from each country, is the idea of Mr. Henry A. Spaulding, a well-known Chicagoan, who returned yesterday afternoon from a three months' trip to Japan, Korea, and the Sandwich Islands. Mr. Spaulding speaks most highly of the great kindness and attention shown him by the various important personages with whom he was brought in contact, and has brought back with him many pleasant remembrances and interesting souvenirs. He is a life member of the Society of Fine Arts of Japan, and recently proposed and had elected to honorary membership in the society the following:—Marshall Field, E. E. Ayer, H. W. Higginbotham, Charles L. Tiffany, of New York, and Charles T. Cook, also of New York. The certificate of each one of the new members was intrusted to Mr. Spaulding to bring to America, and when seen yesterday afternoon they were found to be blocks of thick cardboard about one foot square, painted a delicate green and interspersed with white flowers. Mr. Spaulding also brought with him fifty-five copies of and the first only fine art magazine published in Japan. These editions are particularly fine, the illustrations being of the very highest character and particular pains being taken to make the pictures more than usually good. To celebrate the thirteenth century of their existence the Japanese will hold a grand exhibition in the Spring, and large crowds are expected to attend. Plans have already been prepared for the buildings, which will be built on an extensive scale. To show the interest that is being taken in the Field Columbian Museum by foreigners Mr. Spaulding cites one instance where the Viscount Sano Tsunetami, upon being told of the institution and the idea to form a Court of All Nations, immediately took from his private collection of antiquities a handsome piece of Satsuma ware and presented it to Mr. Spaulding for the purpose mentioned. Mr. Spaulding during his three months' absence travelled quite extensively through Japan, Korea, and the Sandwich Islands, and on all sides the very greatest interest was expressed in the scheme which he designs to carry out. He already has had many valuable articles given him that he will donate to the museum and many more have been promised. It would be his idea to have a rotunda, around which are placed paintings of the rulers of different countries, and in the centre of which would stand a bronze figure of Marshall Field. In speaking of the matter yesterday Mr. Spaulding was every enthusiastic, and explained that he was taking a lively interest in the matter and spending his time and money in consideration of the deep interest he had for Chicago and the Field Columbian Museum.

The trial of Prendergast upon the question of sanity has been postponed till September. The *News Record* properly suggests, that after several

months of incarceration in the county jail, he naturally would become crazy.

Reports from British Columbia, Washington, and Oregon, state that the floods have continued in the valleys of the Columbia, Fraser, and Willamette Rivers, and have caused an enormous amount of damage. Kaslo, B.C., was swept out of existence; the Canadian Pacific Railway has suffered severely; and in the Fraser valley 15,000 people are said to have been made homeless.

A fire in the lumber district of Dubuque, Iowa, destroyed about \$500,000 worth of property.

The various "commonwealth armies" are still marching slowly towards Washington; but are not exciting much attention. At least, in the newspapers, where they used to get columns, they get only a few lines. Kelly's division has reached Clair, Ill.; Randall's contingent is somewhere in Ohio; Frye's division is in West Virginia; and smaller sections *tokoro-dokoro*. Coxe, Jones, and Browne, having served their terms, are free, but find their army practically disbanded. The danger from this "movement" is much lessened.

The Pullman strike also, though it shows no signs of coming to an end, is not dangerous; but the strike of the miners continues to menace law and order, and has frequently broken out into open riot. Extra deputies and the State militia have had to be called out to quell disturbances and to keep coal trains running, or to prevent the destruction of railroad property in Illinois, Indiana, Pennsylvania, Ohio, Colorado, and West Virginia. In several cases shooting took place and blood was spilled on both sides. When the First Regiment of Illinois National Guards was returning from Pana to this city, a futile attempt was made to wreck their train. A conference at St. Louis between the miners and the operators of central and southern Illinois failed to agree upon terms; but a conference of national officials at Columbus, Ohio, reached a compromise. And yet, as their agreement must be ratified by the district unions, and has been received with indignation by the miners, it is unlikely that a real settlement has been attained.

A Labour Conference, recently held in St. Louis, declared in favour of the amalgamation of all labour bodies. Whether this can be harmoniously effected or not is a matter of great doubt; but two of the greatest labour organizations in the world have formed an alliance, offensive and defensive. These are the Knights of Labour and the American Railway Union, which together command a strength of not less than 325,000.

Governor Lewelling, of Kansas, has been nominated by the Populists for re-election.

The commencement exercises of the University of Nebraska contained somewhat of a sensational element. Prof. Geo. D. Herron delivered an oration of strong socialistic tendencies; and was publicly rebuked by Governor Crouse in a speech delivering commissions to the University cadets.

Prof. E. G. Robinson, of the Chair of Ethics, University of Chicago, died yesterday in Boston. He was for 12 years President of Rochester Theological Seminary and for about 20 years President of Brown University, Providence, R.I.

THE DROWNING OF A MARINE.

INQUEST.

An Inquiry was held in H.B.M. Consulate on Monday afternoon, July 2nd, into the circumstances attending the death of Murdoch MacKenzie, a cooper on board H.M.S. *Mercury*.

James Troup, Esq., H.B.M. Consul and Assistant Judge, acted as Coroner, while the Jury consisted of Lessey Pollard, Henry Clare, and Montague Hope Rowe Harris, and were duly sworn.

The Jury first proceeded to the Royal Naval Hospital, where they viewed the body and took the evidence of the assistant Doctor.

Thomas Bridge, Master-at-Arms of H.M.S. *Mercury*, sworn, said—"The body which I have just seen in company with the Jury is that of Murdoch Mackenzie. He was second cooper on board. The last time I saw him alive was at 1 p.m., when I sent him ashore. He was well and sober, his reason for going ashore was to get a tooth drawn, as he was suffering from toothache."

Arthur Stanley Nance, Surgeon, R. N., sworn, said—"I am a Surgeon in the Royal Navy, at present attached to the Hospital here. The body which I have just seen in the presence of the Jury was received here this morning some time before 9 o'clock. It was brought here by the Japanese police. I have made a superficial examination of it, and found no external marks of violence. I am aware that Dr. Bray of the *Mercury* has examined the body."

Howe James McCleary Todd, Staff Surgeon R.N., Yokohama, sworn, said—"The body now

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

lying in the mortuary was brought to the hospital at 8.30 this morning. There was an Inspector of police, and another police officer dressed in black with a peak cap and white bands around it. There were four carriers who were dressed in sailors' clothes.

The Coroner and Jury then adjourned to the Court where further evidence was taken.

Ernest Edward Bray, Staff Surgeon R.N., sworn, said:—I am surgeon on board H.M.S. *Mercury*. This morning I was called to examine the body of a man whom I recognised as Murdoch MacKenzie, the cooper. I went to the hospital at 11 o'clock and examined the body. I met Dr. Nance when I entered the hospital. My examination enabled me to state cause of death—from drowning and submersion. There were no marks of violence, only a slight superficial wound on the left side of the neck, skin deep, due probably to the creeper when they were drawing for him; nothing else. There was a strong odour of alcohol from the mouth and on pressing the stomach a strong-smelling liquid oozed from the mouth—like strong-smelling beer. I should say he was dead certainly more than twelve hours when I saw the body. The *rigor mortis* was well marked; he was a well developed man, broad chested and well built.

By the Jury—I don't know the time when he left the ship and with whom. I can't say whether he could swim or not as I don't know.

Henry Davey Rowe, first class petty officer H.M.S. *Mercury*, sworn said—I knew Murdoch MacKenzie, the cooper. I last saw him alive on passing the *Verona* last evening at 4 o'clock. He was in a sampan going aboard. I overtook him in the steam pinace. He was the only passenger in the sampan, but there was a Japanese sculling—only one I believe. He had his back to me and was facing the *Verona*. He had no hat on—his head was uncovered. When I got a bit ahead of him he looked all right, he was in the same position. He was not sitting fair on the seat, sitting sideways to face the steamer.

By the Jury—I cannot positively say whether he could swim or not, but have heard that he could not.

Richard Morrissey, Navigating Officer H.M.S. *Mercury*, sworn, said:—It was reported on board by the Japanese police yesterday afternoon about twenty minutes past four that a man belonging to the *Mercury* had fallen overboard from a sampan and been drowned. This was immediately reported to the commanding officer of the flagship and a boat was sent from the *Mercury* to assist some four or five sampans which were observed to be creeping for the body close under the bows of the Japanese man-of-war. The boat remained until after dark and then returned to the ship. Rowe was coxswain of the steam pinace.

Samuel Pratt, boarding-house keeper at No. 81 French Hatoba-street, sworn, said—I did not know the deceased by name, but knew him as the cooper. There is nothing by which I could connect the body found drowned and the cooper. I met a man in the uniform of the *Mercury* coming out of my place as I was going in. This was about twenty minutes or a quarter to four yesterday afternoon. The man had a beard, his hair was dark. I have seen him before and knew him as the cooper. He was sober, and said he was going aboard. I asked him to wait and I would go down with him to the hatoba, which I did and saw him get into a sampan at the French hatoba. When he shoved off he said "Good-bye old man," and the next I heard was that he was drowned. Nothing was said about his having had drink in my place.

By the Jury—If the man was perfectly sober, why did you accompany him to the hatoba?—I had a case to send to Shanghai and went down to see about it. The man was perfectly sober when he went into the boat. When I heard he was drowned—some of the boys of the *Mercury* told me they were trying to find the body—I made no enquiry whether the cooper had had drink in my house. There were others in the saloon at the same time as the cooper. I don't know how long he was in my place. I don't know his surname—they called him "Jimmy Burns." I think there were two *Sendoes* in the sampan.

By the Coroner—I went to ship a small case for a man on board the *Alacrity*. I saw Mr. MacArthur and he told me it would cost \$2.50. It was to be sent by the first steamer that left, probably the *Empress* boat. I know it was Sunday yesterday, but I went in the back way as I often do business with him. This was after the cooper went away.

James Campbell, carpenter's mate H.M.S. *Flover*, sworn, said—I knew Murdoch MacKenzie, cooper of the *Mercury*. I last saw him alive at Hongkong, and recognise the body as his. I knew him as having been a heavy drinker, although I learned he had spells of total abstinence, but when in his

drinking moods he always avoided my company. I have asked him to come and see me—by note and by messages through shipmates—but he never came. I know his friends at home. I went to the hatoba at 8.30 last night, saw a Custom House officer there who told me the man who had been drowned had come down to the hatoba with an old man with a white beard who kept the "First and Last," and that they had drink together—he called it "paddie."

Mr. Troup—Irish whisky I presume?

Witness—I don't think I could recognise the Custom House officer.

To the Jury—The name "Jimmy Burns" is applied to coopers throughout the service.

Urashima Chomatsu, a *sendo*, cautioned, said—I am a boatman plying at the French hatoba. At 3.30 yesterday afternoon I took a fare from the French hatoba. He ordered me to go to the *Mercury*. The man had a full beard; and was very drunk. He was brought to the hatoba by a restaurant keeper, the man who previously gave evidence in Court. The restaurant keeper sent me to his house with 20 *sen* for a bottle of beer, which I brought back and the man who was going off took it away with him in the boat. He drank pretty well the whole of it while going towards his ship. I warned him to be careful, but he did not seem to understand. When opposite the Japanese man-of-war the deceased, while drinking from the bottle with his head thrown back, suddenly overbalanced himself and fell overboard. I took out a boat hook to save him, but he was unable to hold himself and immediately sank. I called out for help, when a steam-launch put off from the Japanese man-of-war and other boats came to my assistance and we looked for the body, but were unable to find it. The water police also came shortly afterwards. There were two *sendoes* in the boat,—myself and another.

By the Jury—I don't think the boat was more than 8 or 9 *ken*—18 or 20 yards distant from the bows of the man-of-war. The man sank immediately; he never came up again. The man on watch on the man-of-war also saw the accident at the time it occurred, and the boats immediately put out.

By the Coroner—I did not see the two men drinking together while on the hatoba.

Kohayashi Kenkichi, a police sergeant, cautioned, said—Yesterday afternoon, shortly after 3.30, the P. & O. steamer came in. We were going off to inspect the vessel when it was reported that a sailor had fallen off a sampan which had left the French hatoba. When we arrived there we saw a steam launch of the *Tsukuba Kan*, also a steam launch and a sampan filled with officers and seamen who were searching for the body. I was present when the body was taken out of the water this morning about 7 o'clock: it was about 40 yards from the bows of the *Tsukuba Kan*. It was placed in the police boat and taken to the *Mercury* where we were ordered to take it to the Naval Hospital. We took it up to Camp Hill where it was handed over.

Dr. Bray, recalled, in answer to questions by the Jury, stated he had noticed the position of the deceased's arms, especially the right, which was raised as if in the act of drinking. The man must have been drinking whisky or something like it, and taking beer on top would make him unconscious. A man in such a comatose state, in which no doubt deceased was, would sink immediately, and if he rose at all it would not be to the surface, only a short distance and then down again.

This was all the evidence, and the Coroner in his charge to the Jury said the points they would have to determine were when, where, the place, how and by what means—and under this heading they would have to say the proximate cause of death, which from the medical evidence they would see was drowning. They were to determine whether it was accidental or the act of any other person or was by violence. He would not recapitulate the evidence.

The Jury without retiring returned the verdict that the deceased, Murdoch MacKenzie, met his death by accidental drowning in the harbour of Yokohama on Sunday, July 1st, 1894, at about 4 p.m.

The death is reported, on 23rd May, at 47, Avenue Henri Martin Paris, of William Walter Cargill, at the age of eighty years. Mr. Cargill was prominently connected with the original foundation of the Oriental Bank Corporation, and assisted at the resuscitation of the New Oriental Bank in 1884. Since the failure of this institution in 1892, he has resided in Paris, though unsuccessful attempts were made by the liquidator of the Bank to obtain his extradition on the grounds of misapplying the bank funds.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, June 30.

Constant conflicts are taking place between French and Italian workmen at Marseilles. The Indian Government will not re-open the Mints so as to give the measure a fair trial.

London, July 3.

Sir Charles Russell, lately appointed a Lord of Appeal in Ordinary, replaces Lord Coleridge, deceased, as Lord Chief Justice of England.

The strike of railway workmen in the United States is developing aggressive force and the troops are being called out.

London, July 4.

The House of Commons has adopted the increase of duty on spirits, and the Budget has passed the Committee stage by a majority of thirteen.

London, July 5.

Oxford has won the University Cricket Match by 8 wickets.

The Senate of the United States has passed the Tariff Bill by a majority of five. It will come into operation on the 1st August.

China has invoked the mediation of Russia in the Korean imbroglio, and the latter has urged both parties (China and Japan) to evacuate Korea and then to seek a settlement.

London, July 6.

Sir Ed. Grey has announced that the Government has addressed communications to China and Japan in the interests of peace, and advising them to make every effort to arrive at an amicable settlement.

[SPECIALLY TELEGRAPHED TO THE "JAPAN MAIL" FROM THE "N.C. DAILY NEWS."]

London, June 27.

A serious explosion has taken place in a coal mine at Ponty-pridd and 260 men are buried alive.

The agreement between Great Britain and Germany regarding the Congo Treaty, already cabled, has been officially confirmed. The parleying with France continues and an agreement with that Power is likely to be less easy. Meanwhile, France is sending a large force to the Ubanghi region of the Congo.

Steps have been taken at San Francisco and Vancouver to medically inspect all arrivals from China.

June 28.

The House of Commons has carried the measure increasing the duty on beer by six-pence per barrel.

[FROM JAPANESE PAPERS.]

Kobe, June 30.

Mr. Kurino, Chief of the Political Bureau in the Foreign Department, and Mr. Kim, Korean Minister, left here this morning for Hiroshima, whence they depart for Ninsu per the *Omi Maru*.

Much anxiety prevails among Chinese residents in this port.

Kumamoto, June 30.

A meeting of the promoters of a volunteer corps has been held, and a committee chosen to take charge of preliminary business connected with the organization.

Okayama, June 30.

An individual has succumbed to a disease resembling cholera.

Fukuoka, June 30.

Eight persons, who were arrested on suspicion of having manufactured gun-powder, were remanded to the Procurators' Bureau to-day.

Nagasaki, June 29.

The Chinese Consul has privately instructed Chinese residents at this port to leave for home.

Hongkong, June 30.

Professor Aoyama, one of the Government Commissioners sent here to carry out investigations into the origin, development, and history of the pest, and Surgeon Ishigami, who is also among the party, have been attacked by the plague. The other members of the party are in perfect health.

Original from

Shimonoseki, July 2.

A military transport, which left Hiroshima on the 25th ult., with a detachment of Japanese soldiers for Ninsen, returned here yesterday, and proceeded to Hiroshima this morning. Another steamer has arrived here from the east. She carried a number of soldiers.

Kobe, July 2.

Mr. Kurino, Chief of the Political Bureau in the Foreign Department, left for Korea yesterday.

Shimonoseki, July 1.

The *Onokawa Maru* put into port this morning with gun-powder.

Kyoto, July 2.

An embankment at Nangenji has been destroyed, and dwellings in the neighbourhood are inundated. Great confusion prevailed, but no life was lost.

Nagasaki, July 2.

The French man-of-war *Viper* is preparing to leave for Ninsen.

Osaka, July 2.

Mr. Omiwa Chobei, formerly a Japanese adviser to the Korean Government, left for the peninsula yesterday.

Shimonoseki, July 2.

The *Tokio Maru* reached here at 10 a.m. to-day from Ujina, and is to leave for Fusan in three hours. She shipped telegraph materials.

Osaka, July 3.

A dispatch from the Foreign Office received by the City Office states that the Russian Minister in Peking will arrive at Kobe from China on the 8th instant and will proceed to Tokyo *via* this city.

Nagasaki, July 3.

A Chinese steamer, which flew the British flag, has left Kuchinosu for an uncertain destination. She is laden with coal.

Shimonoseki, July 3.

Forty Japanese children and elderly residents have returned to Tsushima from Fusan.

Kobe, July 3.

A meeting was held at the French Consulate to-day in commemoration of the death of M. Carnot. The leading Japanese officials of Osaka and Hyogo, and various Consuls were present.

Nagasaki, July 3.

The lines between Nagasaki and Sôul are interrupted. A violent gale has visited the coasts of China.

Shimonoseki, July 3.

The Wakamatsu Guild of coal merchants has agreed not to sell coal to Chinese. A clerk of the Guild has been despatched to Moji to prevent members from committing a breach of the agreement.

Kobe, July 3.

A number of Chinese infants, elderly men, and female residents of this port are preparing to leave for home.

Shimonoseki, July 3.

A thousand coolies were embarked on board the *Takasago Maru* at Ujina between last night and this morning. She is expected here to-night.

Hongkong, July 2.

Sixty persons succumbed to the pest between the 26th and 30th ult. During the last week in June, four hundred patients were removed to Chinese Hospitals on the opposite shore.

A report has been received to the effect that cholera has broken out at Canton.

Kobe, July 4.

The French flag-ship on the Asiatic Station the *Bayard*, put into this port to-day from Nagasaki.

Osaka, July 4.

A dispatch from Nagasaki reports that telegraphic communication between Fusan and Sôul was restored yesterday afternoon.

Sôul, July 3.

Mr. Otori, Japanese Minister, presented to-day to the Korean Government Japan's proposals for administrative reforms in the peninsula.

Sôul, July 4.

The advanced section in the Peninsula Government is gaining in influence and friction.

between it and the conservatives is becoming serious.

Hongkong, July 4.

No change is to be noted in the condition of Professor Aoyama and Surgeon Ishigami.

Fusan, July 4th.

Messrs. Hayashi Yuzo, Sasa Tomofusa and Omiwa Chobei have arrived here in the *Wakamura Maru*.

London, July 4.

China has made a diplomatic failure. *The Times* and other papers are all writing of China's failure.

Osaka, July 5.

The Chinese Government in response to the request of the Chinese Resident in Sôul, says a Shanghai correspondent, will appoint General Liu, now at Taiwan, to be Commander of the Chinese troops in Korea.

Sôul, July 4.

In reply to a question put by the Japanese Minister as to Korea's independence, the Peninsula Government has replied that the peninsula is not subject to China.

Nagasaki, July 5.

The total amount of coals exported to China during last month was 16,136 tons.

Tientsin, July 4.

The Viceroy Li left for Peking last night. He is expected back here by the 8th.

Osaka, July 5.

No visitors will be admitted to Osaka Castle from to-day.

Nemuro, July 6.

The *Iwaki Kan* arrived here from Chishima to-day. Lieutenant Gunji and seven of his followers at Shumushu are quite well, but nine of the explorers who landed at Shikotan, have died. One settler at Haramushiro is also dead.

Kobe, July 6.

Thirty-one Chinese residents of Osaka and Kobe left for home to-day in the *Yokohama Maru*.

Gifu, July 6.

A serious dispute between the inhabitants of Shiratori and four other villages in Shachi District and those of Kugyo and five other villages in Ono District over the water privileges gave rise to a fight on the 4th in which about two thousand villagers took part. A large number of persons were more or less severely wounded.

Kobe, July 6.

Mr. Watanabe, of the Nagoya Telegraph Office, accompanied by nine workmen, left here by *Yokohama Maru* this morning for Korea via Nagasaki.

Shimonoseki, July 6.

A Shanghai correspondent states that a rumour is current to the effect that the Chinese Government propose conveying the King of Korea to China, and then invade the peninsula, which she intends transforming into a province of the Middle Kingdom, and further that the new province will be placed under the administration of Lord Li, formerly Chinese Minister to Japan.

Nagasaki, July 6.

A Japanese coal merchant being intimidated by *soshi* has promised not to export coal to China.

Shanghai, July 5.

The Canton Squadron, which has been ordered north, will leave here in two or three days.

Peking, July 5.

The British Government, it is said, has advised the Chinese Government to withdraw her troops from Korea.

The departure of Viceroy Li from Tientsin for the capital is in response to a summons from the Emperor of China.

Hongkong, July 6.

Professor Aoyama and Surgeon Ishigami are making slow progress towards recovery.

Sôul, July 6.

On a plea that he is desirous of an audience with the King of Korea, General Setsu, a Chinese commander, says a message from the interior, intends to enter the capital with a detachment of troops from A-san. These troops will proceed to Suigen. Some influential persons state that the Chinese soldiers will not go beyond Suigen.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The local Chess Clubs are closed until the beginning of October.

SOLUTION OF PROBLEM No. 128.

WHITE.

1—P x P (Kt 7)

2—Mates accordingly.

BLACK.

1—Any

Correct solutions received from W.H.S., Digamma ("Solutions beginning with capture certainly not good or artistic. Apart from key, problem most beautiful"), Omega, E.D., and J.D.

CHASS EDITOR *Times*.—Communication received with thanks.

PROBLEM No. 130.

By I. M. BROWN.

BLACK.

WHITE.

White to play and mate in two moves.

LADY CHESS-PLAYERS.

It has often been remarked, says the *Belfast Northern Whig*, that "ladies cannot attain any high degree of proficiency in the intellectual and scientific game of chess." The following games show that there are exceptions to the universal truth of this dictum. They were played a few weeks ago at Belfast, the ladies being two of 21 players whom Mr. Blackburne encountered simultaneously:—

GAME No. 136.

THE DANISH GAMBIT DECLINED.

WHITE:

Mr. Blackburne.

19—R to B 3 19—B to K sq.
20—Q to R K B sq. 20—B to K R 4
21—R to B 2

And White offered a draw, which offer Black accepted (n).

NOTE BY DR. LITTLE.

(a) Black stood to win White's Queen's Pawn, thus breaking up his centre game, after 27..... B takes Kt; 28—R takes B. It would take some of the best students of the sterner sex to match this fine play.

END GAME No. 8.

In the first game of the Showalter-Hodges match, Showalter had the move. He adopted the Ruy Lopez opening. Instead, however, of proceeding on regular lines, he castled on the Queen's side, and then instituted an ingenious attack on the Black King, castled on the King's side. The diagram shows the distribution of the forces after Black's twenty-fifth move:—

Showalter won as follows:—

WHITE.	BLACK.
26—P to K Kt 5	26—B to B sq. (a)
27—P takes R P	27—P takes P
28—Kt takes B ch. (b)	28—Q R takes Kt
29—Q R to Kt sq.	29—Kt to K 2
30—Q to K 3	30—Kt to Kt sq.
31—R to Kt 6	31—R to Kt 2
32—K R to Kt sq.	32—Q R to B 2
33—P to Kt 3	33—Q to K 2
34—Q to H 4	34—K to K sq.
35—K R to Kt 4	35—Q to B sq.
36—B to Q 2	

And Hodges resigns (c).

NOTE BY W. H. K. POLLOCK.

(a) A very fine move. If 26..... R P takes P, then 27—P to R 6. P takes P; 28—R takes P ch, K takes R; 29—R to R sq. ch, K to K 2; 30—Q to R 5, and mates next move. If 26..... Q P takes P, then 27—P to K 4. Q takes P; 28—Q R to B sq. Q to K 3; 29—R takes R; Q takes R; 30—P to K 6. Q to K sq.; 31—R to K B sq., followed by Q to K 4, and wins.
(b) 28—Q to Kt 4 would also have led to a win, for on 29—B to Kt 5, Kt to 4 follows, and wins.
(c) White wins the R P and the game by manoeuvring the Queen to Q B sq. Meanwhile Black's hands are hopelessly tied, and he can do absolutely nothing.

REPORTS.

The Japanese steamer *Nagato Maru*, Captain Tiptle, reports:—Left Otaru the 2nd July at 3 p.m., Hakodate the 4th at 8 a.m., and Oginohama the 5th at 8 p.m. Arrived at Yokohama the 6th July at 6.15 p.m.; experienced foggy weather in Tsugaru Straits, otherwise fine weather throughout the passage.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 30th June at 7 a.m.; anchored below Woosung on account of typhoon, bar. 29.37; on the 1st July at 8 a.m. proceeded, weather moderating. Arrived at Nagasaki the 2nd at 7 p.m. and left the 3rd at noon. Arrived at Shimonoseki the 4th at 1 a.m. and left the same day at 7 a.m. Arrived at Kobe the 5th at 4 a.m. and left the same day at 4 p.m. Arrived at Yokohama the 6th July at 6.30 p.m.; experienced light and moderate winds and smooth sea throughout the passage.

LATEST COMMERCIAL.

IMPORTS.

Market dull and apathetic. In Yarn practically nothing done. Dealers complain that interior quotations are declining and that they cannot afford to go on at present prices asked by merchants here. In Fancies there is said to be some demand for Twills, but other descriptions inactive. Woollens also stagnant with some little enquiry for Scotch fingering Yarn.

Sheet Iron	4.70 to 4.85
Galvanized Iron sheets	9.40 to 9.60
Wire Nails, assorted	6.00 to 6.50
Fin Plates, per box	5.80 to 6.00
Pig Iron, No. 3	1.60 to 1.65

KIROSENE.

Further arrivals have increased the stock, but we have not heard of any sales of importance. The holders are strong and will at present listen to no offer below quotations.

Chester	\$1.65 to 1.67½
Comet	1.62½ to 1.65
Devoe	—
Russian Anchor	1.62½ to 1.65
Russian Moon	1.60 to 1.62½

SUGAR.

This appears to have been a quiet week all round. In the interior demand seems to be improving by degrees, but dealers here will not advance their ideas, and holders are strong at late rates.

	PER PICUL.
Brown Takao	\$4.60 to 4.70
Brown Manila	5.20 to 5.60
Brown Daitong	3.30 to 3.40
Brown Canton	4.00 to 4.30
White Java and Penang	7.20 to 7.50
White Refined	7.60 to 9.90

EXPORTS.

RAW SILK.

Our last issue was of the 29th ultimo, and the additional settlements on this market up to the 30th June were 193 piculs, divided thus:—*Filatures*, 171 piculs; *Re-reels*, 22 piculs. Direct shipments were two bales, making the business done up to the close of the season about 200 piculs. The total settlements for the season closing on the 30th June were 45,700 piculs as against 47,700 piculs last year, leaving a stock of 5,350 piculs to be carried into the new season as against 500 piculs on the 30th June, 1893.

Since the first of July settlements have been about 150 piculs, which will be taken into account in our next, our statistics at foot being made up to the end of the old season.

Market has been dull until the last day or two when more business is reported in fine sized *Filatures* for Europe, and several important transactions are said to be pending, of which we will give details next week.

One feature in the trade has been the opening on the first instant of the Japanese Produce Exchange where, among other things, silk is to be used as an object of speculation. So far, this new Exchange has not had much effect upon our market in general, but there is no doubt that it may make its influence felt when occasion arises.

New Crop.—Some Japanese dealers report that the crop in *Shinshu* and in *Oshu* is not finishing so well as they anticipated, on account of the premature hot summer; but we think the damage is not important, and probably will resolve itself into small proportions ere long.

Arrivals come in freely but are nearly all of full sizes; and fine sizes of new crop are decidedly scarce for the moment.

There have been two shipping opportunities since we last wrote. The *Victoria*, 30th June, had 76 bales for the New York trade and the *Sydney*, same date, carried 397 bales for Europe. These departures bring up the total export for the season just closed to 45,440 piculs, against 47,659 piculs last year and 50,138 piculs on the 30th June, 1893.

Hanks.—There are not more than 10 native bales on the market and there is no talk of business at present.

Filatures.—Demand has again run upon fine sizes, old silk, prices having improved about \$10 per picul and ranging between \$640 and \$720. In full sizes some few purchases have been made at last quotations, but the tone for these is easier, while for fine silks we have a strong upward market.

Re-reels.—Further purchases of *Tortoise* chop at \$640, with second qualities at \$625.

Kakeda.—No business in these although we learn that *Horsehead* have been dealt in at the Produce Exchange for future delivery at about \$630.

Export Raw Silk Tables to 30th June, 1894:—

Season 1893-94.	1893-94.	1893-94.
Piculs.	Piculs.	Piculs.
Europe	24,675	19,407
America	19,342	27,448
Total	44,017	46,855
Settlements and Direct	45,700	47,200
Report from 1st July	5,350	500
Stock, 30th June	5,350	500
Available supplies to date	51,050	48,300

WASTE SILK.

Settlements since last report to the 30th ultimo were 280 piculs, divided thus: *Noshi*, 168 piculs; *Kibiso*, 10 piculs; *Neri*, 102 piculs. No direct export and the total settlements for the season were 30,000 piculs, against 46,500 piculs for the previous season, the stock carried over being 12,200 piculs as against 2,500 piculs last year.

Market continues dull and there are no regular quotations to give. All that has been done so far was old fibre and arrivals from the country have practically ceased. New Wastes will come to hand by degrees and then we shall see what is to be done.

There has only been one shipping opportunity since we last wrote, the French mail steamer *Sydney*, 30th ultimo, taking 130 hales for Europe. Her departure brings the total export for the season up to 30,119 piculs, against 44,662 piculs last year and 35,386 piculs at the same date in 1892.

Cocoons.—Nothing down as yet; and the old stock is not worth shipping.

Noshi.—Some business done in fair *Oshu* at \$125, with *Filature* at about the same price. One fair line of *Shinshu* was done at \$77. Nothing reported in *Joshu*.

Kibiso.—A very small business in *Filature* at \$95.

Sundries.—The only thing to remark is the settlement of about 100 piculs *Neri*, ordinary quality, at from \$10 to \$11 per picul, uncleaned.

A DELIGHTFUL MOUNTAIN RESORT.

THE most delightful Mountain Resort in the Hakone District is the KAIKATEI, at KOWAKI-DANI, which is admitted by the Medical Faculty of Tokyo and Yokohama to be the Sunniest, Breeziest, and most healthful spot accessible to Foreigners in the Hakone District, standing alone and delightfully situated upon the mountain side, free from every suspicion of bad drainage and malaria, with a cool and constant breeze in the hot summer weather, and a view not to be equalled in the neighbourhood for variety and extent.

The BATHS are filled with a constant and never-failing supply from the HOT MINERAL SPRINGS just above the Hotel, the medicinal virtues of which are too well-known to need recapitulation. It is sufficient to say that whereas Visitors find many of the hot springs enervating those at Kowaki-dani are distinctly invigorating.

One of the features of the Kaikatei is the detached Suites of Apartments, where perfect quiet and privacy can be secured. This arrangement for invalids and convalescents from the Tropics is a great desideratum, as being entirely removed from the Dining Room, Billiard Room, Bar, and Baths, while all are connected by covered passages.

To a Liberal Table are added an excellent Cuisine and good attendance, supplemented by a large variety of Wines, Spirits, and Malt Liquors of the very best kinds.

For the amusement of Guests, a fine English Billiard Table, by Burroughs and Watts, has been added to the Establishment, as well as Archery, Quoits, and other Games, and Ponies for riding over the hills and a Yacht for sailing on Hakone Lake can be hired.

Visitors to Kowaki-dani who bring a rod with them will be shown the haunts of the speckled Trout, a nice stream of several miles in length being within easy walking distance of the Hotel; Hakone Lake is also well stocked with a variety of fish, including salmon, and the Fishing is FREE; while Entomologists will find rare and valuable specimens in the surrounding hills, and the Flora of the district is extremely interesting to the Botanist.

Apartments may be secured by Letter or Telegram, and Special arrangements made for the conveyance of Visitors and Baggage from the Tramway Terminus at Yumoto, by addressing

Y. HOSHINO,
KAIKATEI, KOWAKI-DANI,
HAKONE.

BOARDING HOUSE

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Offices—Bishopsgate House, London, E.C.

"MONEY AND TRADE" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY AND TRADE" is THE JOURNAL for Investors, Speculators, Manufacturers, and Traders.

"MONEY AND TRADE" is a thoroughly up-to-date Weekly Record of all Monetary, Trading, and Business Matters. Bankers, Manufacturers, Merchants, Storekeepers, and Wholesale Buyers all over the world say it is indispensable.

"MONEY AND TRADE" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Shipping, Trading, Manufacturing, and Trust Companies are fearlessly and impartially criticised in "MONEY AND TRADE."

"MONEY AND TRADE" enjoys a very large circulation, not only in Great Britain and Ireland, but also in all Foreign markets where English goods are sold; and, as it goes direct into the hands of the wholesale and retail buyers, it offers unique advantages to advertisers.

THE MONTHLY FOREIGN AND COLONIAL EDITION is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

YOKOHAMA: SATURDAY, JULY 14TH, 1894.

SUMMARY OF NEWS.

THE new British Minister to Japan is the Hon. P. Le Poer Trench.

THE Kyoto Stock Exchange declares a dividend of 16 per cent. for the year.

COUNT HINO SUKEHIDE has been appointed a Chamberlain of H.I.H. Crown Prince.

THE oldest trading firm in Japan was established some seven centuries ago. A long record.

MORE deaths by lightning are reported this week, principally from the southern provinces.

THE Seventy-fourth National Bank, Yokohama, declares a dividend of 10 per cent. for the year.

DYSENTERY and typhoid fever are still very prevalent in Oita, Yamaguchi and Kochi Prefectures.

IT is now said that the Cabinet has decided to hold the next general parliamentary elections on August 15th.

SEVERAL small earthquakes have been felt in Yokohama during the week, three occurring on Tuesday morning.

THE Japanese coal-merchants are finding it rather a difficult matter to carry out their boycott against the Chinese dealers.

THE last news concerning the British squadron in Japanese waters is that the vessels anchored off Yamada on the 10th.

THE seating season is now over and most of the crews are paid off. The catches this year have

been uniformly high and above the average of some good years.

A LARGE quantity of ashes fell on the 2nd inst in the neighbourhood of Asama for about an hour commencing at 4 p.m.

PRINCESS CHIYE, wife of H.I.H. Prince Kanin, gave birth to a son on the 9th inst. The little Prince died the following day.

A dog insurance company is projected in Kyoto, the object being to insure canine pets against sudden death at the hands of dog-killers.

THE Victoria Public School broke up for the summer holidays on Friday, when the prizes were distributed by His Honour Judge Wilkinson.

A LONG-CONTINUED thunderstorm, which was accompanied by rain, visited Yokohama on Wednesday. No damage was done in the town.

THE Crown Prince left the capital for Hayama on Tuesday. Their Royal Highnesses Princesses Tsune and Kane went to Nikko the same day.

IT is stated that Mr. Ozaki, ex-Governor of Gifu, who lately became a member of the National Union, has contributed yen 10,000 to the Union funds.

AN explosion which took place at the Government Gunpowder Factory at Itabashi, Tokyo, on the 9th, caused the death of an expert and two workmen.

THE project of accelerating the railway speed between Kobe and the capital is again on the tapis. The idea is to reduce the length of the journey to twelve hours.

SOME fifty coolies set upon two of the foreign crew of the steamship *Angers*, then in Yokohama harbour, on Monday, because one of the sailors had accidentally overturned a *bento* box.

DR. TAKAGI YUSHI, Vice-President of the Infections Diseases Hospital founded by Dr. Kitazato, left the capital on the 7th inst. to assist in the work of Dr. Kitazato in Hongkong.

MR. TAKAHASHI YUICHI, one of the most prominent painters of the foreign school, died in the capital on the 7th inst. at the ripe age of sixty-seven years.

THE Rev. N. Tamura has been expelled from the priestly office by the Synod to whom he appealed, for having slandered the Japanese nation in his book "The Japanese Bride."

THE revenue of the Tokyo Rice Exchange during the past half-year was yen 88,180, of which yen 26,000 was distributed among shareholders at the rate of 52 per cent. per annum.

THE *John Y. Robbins*, a sulphur-laden ship, which was wrecked last spring near Hakodate and abandoned, has been raised and safely towed into the northern treaty port.

THE completion of the Tokyo Municipal Offices, which have been built mainly from a fund inaugurated during the palmy days of the Tokugawa régime, will be duly celebrated on the 29th inst.

THREE jinrikisha-men on the English-Iatoba-stand, upon discovering that their fares had paid then \$41 in mistake for \$5, immediately reported the matter to the police, who returned the money to the gentlemen concerned—passengers by the Empress packet.

MANY TELEGRAMS are being dispatched from the Chinese Legation in Tokyo to the Peking Government; the daily average amount of tele-

graph fees is estimated at between yen 600 and yen 700.

RURER telegraphs that the Powers have presented a joint Note to Japan and China, calling upon them to withdraw their troops from Korea. China has assented. The message is not credited. Sir Ed. Grey has officially announced that the Government has addressed communications to China and Japan, in the interests of peace, advising them to make every effort to arrive at an amicable settlement. Mr. Gladstone will retire at the close of the present session of Parliament. The conversion of the four per cent. rupee loans of 1842-1843 into three and a half per cent. bonds is announced. The Prince and Princess of Wales have opened, with great ceremonial, the Tower Bridge across the Thames. The *Britannia* has won the race in the regatta of the Royal Clyde Yacht Club, beating the *Vigilant*. During the race the *Satanita* collided with the *Valkyrie*, which latter vessel sank within five minutes. The Ottawa Conference has endorsed the project of a British-Pacific cable, and requests the Imperial Government to make a survey of the route at the joint expense of Canada, Great Britain, and Australia. President Casimir-Périer's Message to the Chambers states that he is not a party man, but belongs to France. He intends to follow the late President Carnot's example in regard to his devotion to duty, and is resolved not to seek re-election when his term of office expires. He is penetrated with a full sense of the responsibility attaching to his office and will not allow constitutional rights to be disregarded. The rioting of railway employés continues in Chicago, and the mob is sacking and burning the railway plant in that City. The remaining World's Fair buildings have been burnt. Troops are marching upon Chicago. California is in open revolt, and it is said that the militia are supplying cartridges to the strikers. An earthquake, involving loss of life has occurred at Stamboul.

THE Import trade remains without much change. Yarns of various counts have been taken, but in retail quantities only, and the Piece-goods market generally continues dull for all descriptions, buyers complaining of the tightness of the money market. The Metal trade is without animation, transactions being of the most meagre character, but holders are firm and prices are unchanged. The Kerosene market is fairly active, and a good demand for the interior has resulted in sales to a moderate extent, values for all kinds having slightly increased, with a still hardening tendency among holders. Sugar is quiet, White sorts being in less demand; but amongst Browns, while Manila brands have weakened, Formosa sorts have stiffened in prices. The Silk trade has improved, and 1,300 piculs—all told—have been settled. The new crop from Shinshu will probably be large and of good quality, but rumours to the detriment of the outturn from Oshu continue to be circulated. The strikes and consequent troubles in the States have had an effect upon the Silk market here, buyers holding aloof for happier times. The attitude of holders has also had a deterrent effect upon business, which might well have been expected to assume large proportions having regard to known requirements. The business in Waste Silk has been small, and is distinctly attributable to the high values set upon the various kinds now on offer. There has not been much done in the Tea trade. Holders of leaf have been somewhat irregular in their demands, though in actual transactions not much fluctuation in prices has obtained, but the total trade of the week has not been large. Exchange has been unusually steady and rates

EDITORIAL NOTES.

THE JAPANESE COAL MARKET.

THE coal market of Japan is now in a very unusual state, writes the *Asahi Shimbun*, owing to various reasons. The recent activity of domestic industries and the exodus of coal in consequence of the appreciation of gold, had already brought about a great rise in the price of the staple when the Korean affair came to accentuate the upward tendency. Want of shipping facilities is the manner in which the last named factor makes itself felt. Thus, in the case of Kyushiu coal, the freight of 10,000 cattie from Moji to Yokohama has now risen to 13 or 14 yen, or exactly twice as much as in ordinary times, when it is only 6 or 7 yen. The price of the coal has advanced to a corresponding degree, so that, while 1 ton could be had for 5.40 yen or 5.50 yen about April last, at present the same quantity costs 8.50 to 8.60 yen. In fact, the supply of Kyushiu coal is now virtually suspended in Tokyo and Yokohama districts, because the ships of the Mitsui Bussan Kaisha and those of the Yusen Kaisha, by which the coal of Kyushiu used to be carried, have been requisitioned for Government service, thus leaving the market to be monopolized by the Tanko Kaisha. This is indeed the most favourable season for the latter, for while the Kyushiu coal has been deprived of facilities of transportation, the Hokkaido Colliery Company has not been inconvenienced in the least, but is continuing to send the coal to Yokohama by four of its ships. It now commands a price of as much as 50 yen per 10,000 cattie. It is, however, expected that the price will fall somewhat, for, the *Hideyoshi Maru* of the Mitsui Bussan Kaisha has just been relieved from public service and is expected to arrive soon in Yokohama with a cargo of Kyushiu coal. The market may develop an uncommonly active condition so long as this Korean agitation is going on, but no one supposes that there need be any apprehension of the stock ultimately running short.

The same paper transcribes the following statement from a Nagasaki vernacular journal, showing how China is embarrassed by scarcity of coal. "The steamers plying along the coast of China and the war-vessels of that country depend on Japan for their supply of coal, and their perplexity may well be imagined when the exodus of coal is stopped here. The Chinese Navy may have a certain quantity of coal stored in its depôts, but it is impossible to rely upon that source of supply for any length of time. The vessels will therefore be greatly crippled in case the two countries come to blows. Such a point can not escape the eyes of shrewd Chinese merchants, many of whom, with a view to reaping large profits, are now endeavouring, by every conceivable means, to purchase coal. The Nagasaki paper even goes so far as to say that the Chinese Government has already commissioned several Chinese merchants to procure a large supply of coal. It gives other intelligence still more alarming, namely, that one of these Chinese merchants who was endeavouring to effect the purchase of coal at Moji, has been detected by the Japanese Government and arrested. It also says—and the statement is endorsed by the *Fiji Shimpō*—that the coal-owners of Kyushiu are all hesitating to sell coal to any Chinese and that some have altogether declined to have any transaction with persons of that nationality.

THE MONEY MARKET AND KOREAN AFFAIRS. The Nippon Ginko has still a note-issuing capacity to the extent of more than 6 million yen. Hence, although the public is greatly agitated about the Korean affair, the money market is not yet so tight as it was in the spring of this year when the Bank issued notes to the utmost limit of its capacity. At present the market in Osaka is somewhat busier than on ordinary occasions, but elsewhere no special change has been observed up to the present. Still the *Shogyo Shimpō* is inclined to think that the market will not long continue in its present state. On the contrary, many signs indicate a change for the worse. Even though

no extraordinary events were on the tapis, many causes conspire to appreciate the value of money. Among them may be enumerated the advances which Yokohama merchants are obliged to make to silk merchants in the interior; the payment of half-yearly installments by tenant farmers, by land owners in general and by *saki* brewers; the settlement of accounts at the "Bon" season, and so forth. In the management of all such monetary affairs recourse must ultimately be had to the Bank of Japan, which may possibly experience some difficulty in complying with all the demands made upon it. In addition to these normal factors, the Korean complication has occurred, agitating the country considerably. The part of the empire most immediately and disastrously effected is, of course, Hokkaido. The temporary suspension of the Yusen Kaisha's regular service between it and the main island has isolated and crippled the northern island, completely arresting the circulation of money to the extent of as much as 8 million yen. In fact, matters have become so serious in Hokkaido that the Bank has thought itself obliged to remit thither a sum of one and a half million yen. Further, the ships purchased by the Yusen Kaisha have required quite a large sum of money. The *Shogyo* does not think it necessary to state whence that money came, but from whatever quarter it was drawn, resort must ultimately be had to the Nippon Ginko. Another serious cause of disturbance to the Japanese money market is the expenditure involved in despatching a large number of troops to Korea and maintaining them there. The surplus Revenue to which so many claims had been laid by politicians is only 6 million yen or so; and it is evident that, even if the affair ends in peace, that amount will be totally exhausted or more than exhausted; while should the worse come to the worst, an inestimable outlay will be made, for all of which the Nippon Ginko will be required to render assistance. Thus, peace or war, the competency of the Bank will be exhausted before long, and it may even think it necessary to overstep the limit to a more or less extent. In short, concludes the *Shogyo*, people should be prepared for a busier state in the money market and the consequent rise of interest.

HONGKONG.

THE following note, which we take from the *China Mail* of June 22nd, conveys an idea of the generally demoralized state of business in Hongkong owing to the prevalence of the plague:—

During the past fortnight several well-known firms of compradores have ceased to do business, and the foks have left the Colony apparently without making the slightest provision for collecting bills or paying debts. In the Summary Court this morning, the Wing Wo poultry shop, Central Market, brought an action against the Wai Loong compradore shop to recover payment for poultry supplied. The Acting Puisne Judge (Mr. A. G. Wise) said this was his compradore, and Mr. C. D. Wilkinson, who was sitting in Court, informed the public that he honoured the same general dealer with his custom. His Lordship said it would be interesting to know who they were going to pay for the provisions received during the first week of the current month. He said it was also interesting to learn that their compradores obtained their poultry and beef from the market, and he propounded the problem why the customers should not deal with the poulterer and the butcher direct, instead of through a middleman who must have his 'squeeze.' The suggestion is worthy of consideration in these dull and needy times. His Lordship might pursue his inquiries a little further and ascertain for the benefit of the 'general consumer,' how it is that compradores' prices undergo so many 'ups' and so few 'downs.' Exchange is to blame for a lot, but it is surely not responsible for the alarming increase in compradores' prices during the past year. There need be no anxiety, we should imagine, on the score of who is to receive payment for the Wai Loong. His Lordship may keep his mind easy. The bill will find him out 'in due course.'

THE POOR VICTIMS IN THE KURILES.

PRECISE information about the death in Shashokotan of nine members of Lieutenant Gunji's party's and one solitary settler in Baramushiro, not of the party, has not yet been received, but in the meanwhile a brief account taken from the *Asahi* about these unhappy victims of rash precipitancy may be of interest. It was in July

of last year that 18 of the party separated themselves from the main body in Etrup and set sail to pass the winter in the deserted islands lying further north. They reached Shashokotan on the 29th of the month, and there they divided into two bodies, one of nine settlers who chose to remain on that island, while the other, consisting of seven men, including the Lieutenant himself, proceeded northward and reached the island of Shunushiri. The last intelligence about these adventurous settlers, prior to the receipt of the present sad tidings, was brought to Tokyo by the *Iwaki Kan*, which ship had left the Kuriles for the main island on the 29th of September. Subsequently the same warship proceeded to the island with letters addressed to the settlers by their anxious friends. The condition of the northern sea renders it impossible for any ship to go there before summer. When the *Amaki Kan* paid her second visit, she learned the deplorable state of affairs recorded in this note. Among the men that met with such an unhappy fate in Shashokotan, five had joined the Lieutenant's party at Nemuro after having plodded on foot a long distance from Tokyo to that town in the north-eastern extremity of Hokkaido; one was a Christian preacher; another a surveyor, and the remaining three were an ordinary student, a medical student, and a seaman. Two of the nine victims had left their families in Etrup. The solitary sufferer in Paramushiro was Mr. Wada Heikichi, a native of Tokushima, who had rather recklessly, as we had observed at the time, decided to settle alone in that uninhabited island, carrying with him a small supply of provisions.

THE IMPERIAL FISHERY COMPANY.

THE business of the Imperial Fishery Company appears to be in a very thriving condition, according to the report of the *Nichi Nichi Shimbun*. Last year the Company was entrusted by the Noshomusho with the duty of investigating the haunts of marine animals in that part of the territorial sea situate north of Awa, and was also commissioned to make experiments in hunting the animals. The company, therefore, equipped, and despatched two of its vessels in February last, and so successful were they that, by the first part of April, one of them captured more than 220 seals, and the other had fared nearly as well. The Department of Agriculture and Commerce had given a sum of 3,600 yen to the Company as aid in the prosecution of these investigations; that sum was to cover expenses incurred during the period up to 6th March, and a further appropriation of 3,200 yen was subsequently made. As might have been expected, the Company has become more zealous than ever in discharging the mission entrusted to it, so that up to May the further number of seals captured by the two ships amounted to 300 head. It is also alleged that, in consequence of the presence of these ships, the foreign poaching vessels that used to hunt off the coast of Cape Erimo in Hokkaido, were obliged to keep away from this, their favourite ground. The whaling business of the Company in Teshio as well as in Hokkaido, has been prosecuted with similar success, the hunters having succeeded thus far in capturing no less than 38 whales of varying sizes and kinds. In the cod fishery and the gathering of sea weeds the result was equally good, but, like other merchants in Hokkaido, the Company is now in much trouble owing to insufficiency of shipping facilities, and consequent inability to convey these products to places where they are wanted.

THE IMPERIAL GIFT TO THE TROOPS IN KOREA.

THE Imperial present to the soldiers now in Korea has already been referred to in these columns. It consists of cigarettes and wine. On the 2nd instant the Iwaya Co., in Ginza, Tokyo, received from the Imperial Household an order to manufacture within the space of three days no less than half a million packets of cigarettes, each packet to contain twenty-five cigarettes; the firm was also ordered by the War Department to make 1,300,000 packets of a particular brand of cigarette, each packet to

hold ten. The Imperial intention relative to these very acceptable gifts had already been communicated to Major-General Oshima, Commander-in-Chief of the troops in Korea, and to Rear-Admiral Ito, in command of the Japanese squadron in Korean waters. The replies of these two officers have since reached the Imperial Household Department, asking that their profound gratitude and respect should be conveyed to the Emperor and Empress for their Majesties' most gracious consideration for the comfort for the soldiers and sailors in Korea.

THE METAL MARKET.

MESSRS. S. W. ROYSE & Co.'s report, dated Manchester, May 26th, 1894, say:—The holidays have interfered considerably with business, especially in this district, but after making full allowance for this, the course of affairs in the Pig Iron branch is disappointing. Prices of both Scotch and Middlesbrough Iron have fallen steadily during the month, having lost altogether some 1s. 10s. 3d. per ton, and are tending further downwards. The present position and prospects are unsatisfactory; shipments from Middlesbrough are disappointing, and little fresh business is being done and that only to cover immediate requirements, as is natural when prices are steadily falling. Makers are wanting fresh business, but there is no buying forward. In the Manufactured Iron trade in the Midlands there is also only small business doing, and prices are on the easy side. In the higher-priced Metals there is a more satisfactory state of affairs. Tin is about £1 per ton dearer than it was a month ago, and is steady. Spelter also is steady at just a slight advance, and Lead is unchanged in value. Copper, however, is about 10s. per ton lower during the month.

THE LATE MR. W. W. CARGILL.

THE DEATH is announced of Mr. William Walter Cargill, at 47, Avenue Henri Martin, Paris, on the 23rd of May, at the ripe age of 80 years. Mr. Cargill had many friends in Japan. He first visited this country in 1868 in his capacity as Inspector of the Oriental Bank, and shortly afterwards he accepted an appointment under the Japanese Government in connection with the introduction of railways into this country. He had been one of the founders of the first Oriental Bank, and he played a leading part in the resuscitation of that institution after its failure. He was a man of wide experience, with an exceptional power of winning friends, and nothing is more regrettable about his end than the fact that he did not live long enough to dispel the clouds that settled upon his career after the failure of the second Oriental Bank. While serving in Japan he lived with his family on the Bluff in Yokohama, dispensing profuse hospitality with true Scottish large-heartedness. He visited Japan again in 1883, and seemed to have added nothing to his age, being as hale and hearty as ever, but probably the troubles of the last few years helped to impair his vigorous constitution.

A SHAM PRIEST.

In Sashigaya-cho, Koishikawa District, there lives a petty tradesman named Hagiwara Kanshichi, whose business is to buy the refuse paper and other waste material brought him by street scavengers. Hagiwara is of *shinoku* rank, but long-continued adverse fortune has reduced him to his present humble calling. A week or so ago he noticed that, for several days in succession, a mendicant priest, who used to go about the streets begging for alms, invariably stopped in front of his, Kanshichi's house, not going elsewhere until he had stood still muttering his prayers for quite a while, and this despite the fact that the priest never received anything in the shape of a gift from Kanshichi or his family. The other day, while Kanshichi was in the house the priest came again and began his low-voiced litany. The strong partiality of the priest for his house was not unknown to the tradesman who had heard all about it from his wife; so after the priest had finished his prayers he beckoned to him and

called him in. Kanshichi then thanked the monk for the special favour shown his household and asked the reason was of this unusual act. The priest seemed very much pleased to be questioned in this manner, and humbly taking his seat in the entry of the house, replied that it was because he had seen on a battered screen in the house a monochrome landscape sketch by the hand of the famous artist-monk Gessen Hoshi, whom, though nearly one hundred years dead, he, the mendicant priest, had resolved to revere as his master. Then he began to expatiate on the meritorious life of Gessen who, by selling the artistic master-pieces of his brush, had rebuilt the dilapidated temple consigned to his care. He, the living disciple of Gessen, had been assigned a certain half-ruined temple in Honjo—and he gave the name of the temple and the street in which it stood—so he was resolved to rebuild it as Gessen would have done, only not in this instance by selling pictures, having no artistic talent himself, but by gradually collecting sufficient funds from charitable believers. Kanshichi was moved to admiration by this pious devotion, and although the screen was the last of the many valuable heirlooms he had inherited from his ancestors—all the rest having been sold to support his family—and although Kanshichi had repeatedly refused large sums for the work of art, he tore the picture off the screen and presented it to the priest. Overjoyed at this generous gift, the monk repeatedly thanked the donor and then hurried off. The next day, at the hour when the priest usually made his appearance, the muttered litany was not to be heard; on several following days also the zealous priest failed to put in an appearance. An unpleasant suspicion of having been hoaxed arose in the heart of the honest tradesman, but it was not till some days later that his doubt was verified; for, as business called him to Honjo, he went to the street mentioned by the priest, and found not only no temple there but none in the whole vicinity. The pseudo-mendicant was only a swindler who, knowing that no money could tempt Kanshichi to part with his treasured heirloom, had employed the above successful artifice.

RAILWAY SPEED.

We learn from the vernacular press that the question of speed on railways in Japan is again on the tapis. Some time ago the idea was mooted in the Railway Department that it ought to be possible to attain an average speed of 30 miles an hour on the main trunk line, in which case the journey from Tokyo to Kobe, a distance of 370 miles, could be accomplished in a little over 12 hours, instead of taking more than 18 hours, as it does at present. Nothing more was heard of the project at the time, but the *Fiji Shimpō* says that it has now been revived, and that the Railway Authorities have come to the conclusion, that by doubling the line at a few places, this most desirable improvement could be effected. The cost of the required constructions would not exceed 600,000 yen. It is to be sincerely hoped that the necessary steps will be taken without delay. Japan may be justly congratulated and complimented upon the aptitude she has displayed in acquiring and applying the processes of railway construction and railway working. But truly she has nothing to be proud of in the fact that the average speed developed over the main trunk line of the empire, between the Eastern and the Western Capitals, is only 20 miles an hour.

HONEST JINRIKISHA-MEN.

ON Monday morning three passengers from the steamer *Empress of Japan* came ashore to look at the town, and engaged *jinrikisha* from the English hatoba-stand for the purpose. After calling at several places, they returned to the starting point where they paid the men, as they supposed, one yen each, and further, as a present, gave the *kuruma-ya* yen 2 to divide among themselves. The gentlemen then went on board and the *jinrikisha*-men strolled off to an

exchange shop to obtain small change. Only then did they discover that instead of having yen 5 they had been given a one yen note and four 10 yen notes—forty-one yen. With an honesty very rare among hatoba *jinrikisha*-men, they reported the matter to the police, who immediately went on board the "Empress" packet and interviewed the late fares. The travellers apparently did not understand the reason for the enquiries, so the police returned the money to the pursuer who gave them a receipt for it. The *jinrikisha*-men who have set such a shining example to the rest of the craft, are named Shima Mankichi, Tanaka Tojiro, and Maki Yataro.

COMPETITIVE EXAMINATION THEMES.

ON Friday the 6th instant the annual competitive examination was held for those who desire to matriculate in the Elective Course of the Imperial University. The number of aspirants was unusually large and as only ten or twelve could hope to enter, the competition was very keen. The students are required to show that they can pass a required standard, either by documents or examination both written and *videlicet*, the principal stress being laid on their acquaintance with the English tongue. The English examinations consists in written and *videlicet* translations from Japanese into English and *vice versa*; conversation; and dictation. The intimate acquaintance with the English language required of the competitors will be seen from the following five sentences, which constituted the subjects for written translation from English into Japanese.

- (1.) The earthquake of the 26th ult. did not last more than five minutes at the outside.
- (2.) Surely here in a newspaper that deserves suspension of one kind; the old-fashioned slip-knot and noose for choice.
- (3.) In the confusion that followed the taking of King Heebaw's Palace in Burmah, the mald-of-honour had their Ting and had made the most of their time.
- (4.) The criminal code of gentlemen in the South is one of appalling severity. Draco could not hold a candle to them.
- (5.) Avaricious men begin to be tempted to believe that success atones for faults; and in this they only lean on the prevalent doctrine of the market.

COPY.

It appears that an aged female, who formerly served in the household of the feudal chief of Himeji, recently visited the Tokyo residence of her quondam lord (Count Sakai), and observing that his lordship crept on all fours to enter his mosquito-net at bed-time, read him a long lecture on the impropriety of adopting such an undignified posture. The good dame's domestic canon was that the nobleman should walk erect to his couch, the danger of mosquitoes going to bed with him being averted by a proper use of fans beforehand. These are the outlines of a tale told with much elaboration by a vernacular contemporary. We reproduce it, not for its own sake, but for the sake of the wonder that it should ever have attracted journalistic attention.

NEW EDITION OF THE "STANDARD DICTIONARY."

A NEW edition has just appeared of the "Standard Dictionary of the English, Chinese and Japanese languages with *Romaji* and *Kana* transliteration. Compiled by Messrs. S. Tsuda, N. Yanagisawa and K. Oi, and revised by the late Professor K. Nakamura and Mr. F. W. Eastlake." This is a very useful book. It is one of the fullest English-Japanese dictionaries now available. The only criticism we have to offer is an expression of regret that the compilers have not endeavoured to bring their work more fully up to date. We do not, of course, profess to have examined the book exhaustively, but have merely tested its character in this respect by looking out a few modern words. Not one of them is to be found. For example—we do not find "Cabinet" (*naiikaku*); "Party Cabinet" (*seito naiikaku*); "Responsible Cabinet" (*seinin naiikaku*); "Political Party" (*seito*); "Politician" (*seijika*); "Diplomatist" (*gaiko-kwan*); "Ratify"—a treaty—(*hijin suru*); "Impeachment" (*dangai*); "Motion"—in the Diet—(*dogi*); "Bill"—parliamentary—(*hoan*); "Introduce"—in the Diet—(*teishutsu suru*); to "Pass"—in the Diet—(*tsuka suru*); to "Reject"—in the Diet—(*hiketsu suru*); "Closure" (*toron shukyo*); "ad-valorem Duty" (*jukwa-zei*);

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

"Specific Duty," (*teikwa-sai*); to "Ballot" (*tokyo suru*); "Open Ballot" (*mukimeki tokyo*); "Closed Ballot" (*akmet tokyo*); "Show of Hands" (*kiritsui*); "Fixed Capital" (*ko-tei shihon*); "Floating Capital" (*unten shihon*); "Conventional tariff" (*kyofei sei-ritsu*); "Resolution"—in the Diet—(*ketsu-gi*); "Representation"—to the Government—(*kengi-an*) and so forth. Having looked out each of the above words as they presented themselves at random, and having found them conspicuous by their absence in every case, it occurred to us that a dictionary so very far behind the date of its publication might possibly not contain even such familiar words as *Gikai* (Diet), *Shugi-in* (House of Representatives), *Kisoku-in* (House of Peers), and *Yoso-an* (Address to the Throne). In truth these words are all absent. We conclude, therefore, that the term "Standard Dictionary" is a misnomer, and that the compilers of this book have displayed singular perfunctoriness in presenting such an obsolete work to the public.

SOME ADDITIONAL NEWS ABOUT DR. KITAZATO'S DISCOVERY.

FURTHER particulars about the doings of Dr. Kitazato's party in Hongkong are given in a letter that one of the assistants has written to a friend in Tokyo. Dr. Aoyama has already examined nine corpses of plague patients and has discovered in all of them the same symptoms. This, of course, is strongly corroborative of Dr. Kitazato's discovery. One interesting question raised by the investigators refers to the popular appellation of the disease. It has been discovered that not one black spot presents itself on any of the pest-patients. The writer of the letter suggests that the term "black death" may have been suggested by the melancholy that constitutes a marked symptom of the dread malady. He further says that from experiments carried on thus far, the danger of transmission of the disease by direct contact is comparatively rare, but entry into the filthy habitations of the Chinese where patients have been, is most dangerous. The party intended to leave Hongkong at the end of June, and then to proceed to Canton, whence it is expected to start home in the early part of July. This, purpose, we surmise, must have been altered by the sudden illness of Drs. Aoyama and Ishigami.

THE TEMPERATURE THIS YEAR.

To arrive at an idea of the temperature experienced during this summer up to the present, we want something more than a comparative statement of the thermometric readings on the hottest days of recent years. Nevertheless such a statement is not without interest. We take it from the *Kokkai*:—

Year.	Hottest Day.	Temperature.
1882.....	27th July	93.6°
1883.....	13th August	93.6°
1884.....	16th September	91.7°
1885.....	21st August	89.2°
1886.....	14th July	97.9°
1887.....	26th August	97.1°
1888.....	21st August	97.0°
1889.....	3rd August	89.2°
1890.....	25th June	92.2°
1891.....	13th August	93.9°
1892.....	17th August	92.5°
1893.....	12th August	92.8°
1894.....	1st July	91.1°

Of course we may look forward to hotter days than July 1st was. The above table shows, at least, that there is still a large margin before this year rivals 1886 (the cholera year) or 1887.

THE TANKO KAISHA'S SHARES.

THE vernacular press notes a disposition among the nobility to sell their shares in the 15th National Bank and purchase instead shares in the Tanko Kaisha. Several important transactions of this nature have already been completed or are about to be completed. The explanation is simple enough. Put in a concrete form it amounts to this: 156,000 *yen* invested in shares of the 15th National Bank produces, according to the latest returns, 7,800 *yen* annually, whereas the same sum invested in shares of the Tanko Kaisha, the last dividend declared by which was 14 per cent., produces 12,782 *yen* annually.

Naturally if the nobles regard the prospects of the Tanko Kaisha with confidence their disposition to invest in its shares where the advantage is so palpable need not surprise us. Their confidence, however is not shared by everybody.

CAPTAIN BERNARD.

CAPTAIN ISAAC BERNARD, formerly of the Peninsular and Oriental Company, whose death took place on May 19th at his residence Cromwell House, Huntingdon, used to be one of the best-known men in the Far East. He was a rare combination of an excellent seaman and a thorough *bon-vivant*, and he earned the reputation of making the ship he commanded exceptionally comfortable to his friends. He had also very pronounced literary tastes, and to travel with him used to be regarded as one of the chief pleasures accessible to tourists in the East. He must have attained a considerable age, but upon this point we possess no exact information, nor is anything said in the home papers about the cause of his death. We are only told that it was sudden.

THE POISON OF THE "FUGU."

THE *Official Gazette* says that Dr. Tawara, Chief of the Sanitary Laboratory in the Department of Home Affairs, has succeeded in separating the poisonous element contained in the *fugu* (Tetraodon). Many experts had already experimented with that object, but no one succeeded further than to reach the conclusion that the poison must be contained in the ovaries of the fish. Dr. Tawara appears to have spent a very long time on his experiments. His verdict is that the fish contains two poisons, one alkaline and the other acid. To the former he has given the name "Tetradonin," and to the latter that of "Tetradonic Acid." Of the two the latter is much more deadly than the former. The *Official Gazette* gives a long account of the analytical processes by which this result was attained.

NEW BOOKS.

AMONG the new books announced for the coming Autumn are two of more than passing interest to Far Easterns. The Hon. G. N. Curzon, M.P., takes precedence with "Problems of the Far East," an octavo. Sir Edwin Arnold, having collected a series of articles contributed chiefly to American magazines and newspapers, will republish them under the title of "Wandering Words." The book will contain many illustrations from photographs and from drawings by Ben Boothby. Mr. Henry Dunning's book on "Bimetallism" is almost ready. The publishers of these volumes are Messrs. Longmans, Green & Co.

MEETING OF REPRESENTATIVES OF THE CHAMBERS OF COMMERCE.

IN the Offices of the Department of Agriculture and Commerce a meeting of directors of Chambers of Commerce in the various parts of the country was held during about a week, commencing from the 1st of the month. The subject of deliberation was certain amendments of the Regulations relating to the Organization of Chambers of Commerce, amendments proposed by the Minister of Agriculture and Commerce. More than thirty representatives of the Chambers were present, and such zeal did they bring to the discharge of their task that they concluded it in a much shorter number of days than had been at first expected by the Department. The discussion took place under the chairmanship of Mr. Wakamiya, Chief of the Board of Commerce and Industry, and many important decisions were arrived at. Among other things it was resolved that a Chamber of Commerce might be established even in a place where the income-tax system had not yet been put into operation, as, for example, Hokkaido. The provision in the old Regulations that a Chamber of Commerce must be composed of persons paying income tax is considered highly inconvenient, since it precludes the establishment of a Chamber either in Hakodate, one of the treaty ports, or in Otaru, a special port of export, simply because income tax is not yet levied in Hokkaido. On the other hand, instances of the other extreme are infrequently seen, inasmuch as, in unreason-

ing obedience to the letter of the law, Chambers have been established at places where they are of no particular use. It had been proposed by the Department to amend this provision in the sense that a Chamber of Commerce might be established in any place where the Department of Agriculture deemed such a step desirable. Another important decision, though not strictly connected with the amendment, was that views entertained by any given Chamber of Commerce on commercial affairs, or statistics connected with the latter, or other useful information of a similar character should be communicated to the public at large. This decision may appear strange to outsiders, but it marks in truth an important departure, for Japanese Chambers of Commerce have virtually confined themselves hitherto to giving replies to questions put to them by Government offices, and have neglected the equally important function of furnishing useful information to the public. For this defective method of working the organization of the Chambers was in part responsible, and as the organization was thoroughly amended at the recent meeting, it is expected that in future the Chambers will answer the true purposes for which they were established of serving as advisory bodies on commercial affairs both to the Government and to the public at large.

THE CENTRAL FUND OF THE CITY OF TOKYO.

IN Tokyo there is a Reserve Fund of considerable amount and of some historical interest. Its origin is said to date as far back as about a century ago, when the Tokugawa Shogunate was still in the height of its prosperity. Matsu-daira Yetchu-no-kami Sadanobu, the celebrated Shirakawa Shosho, being then Senior Councilor of the Shogunate, spared no pains to economize the expenditures of the Regency and to inculcate thrifty habits among both ruler and ruled. One of his admirable measures was to cause the citizens of Yedo to retrench as much as possible the common expenses of the city and to lay aside the surplus against famine or any other extraordinary incident. For more than seventy years, that is to say, up to the beginning of the *Meiji* era, this system was kept up, so that the money thus saved amounted to between a million and some six hundred thousand *yen*. When the Shogunate came to an end, this sum was transferred to the new Government, and out of it a certain amount was paid toward repairing the five great bridges of the city. In the year 1872, the late Viscount Okubo Ichio, being Governor of the City, a sum of 670,000 *yen* was entrusted out of the fund to the Chamber of Commerce, newly established at that time, with instructions that it should be devoted to repairing the streets and bridges. When Mr. Kusumoto became Governor, in succession to the late Viscount, he considered that to place the common fund of the City under the control of the Chamber of Commerce, which never in any sense could be regarded as representing the citizens, was a step by no means proper, and he therefore caused the money to be re-transferred to the Municipal Office. Thence it was subsequently handed over to the City Assembly when the organization of the *fu* and *ken* assemblies came into force in the year 1879. The building then used for the municipal office was never suitable. It had been the residence of some feudal lord, and was in every way inconvenient. Hence the erection of a proper City office was a question that frequently came up for discussion by the Authorities. The lamented Mr. Numa Shuichi was one of the most earnest advocates of constructing such an office. He took great pains to have the scheme realized, especially when he held the post of chairman of the City Assembly. His views were shared by Mr. Yoshikawa, now Minister of Justice, and then the Governor of the city. By their joint exertions the project of construction was definitely settled, the programme being that the office should be built at an expense of 320,000 *yen*, of which 220,000 should be paid out of the Reserve Fund, the remainder to be obtained by the sale of the present city office, and by other means. Thus for the con-

struction of the new municipal offices within the premise of the Castle, the Tokyo people are indebted to the prudent administration of the Lord of Shirakawa, a century ago. We take these facts from the *Hochi Shimbusu*. Our contemporary says nothing as to the exact amount of the Fund now remaining, but we presume that it is the difference between 600,000 yen and 220,000 yen, namely 380,000 yen.

A NOVEL INSURANCE COMPANY.

QUITE a new departure has been devised in Kyoto in the establishment of insurance companies. A Kyoto citizen named Ikeda Zenzaburo has projected, with the cooperation of several others, the establishment of a dog insurance company with a capital of five thousand yen. This gentleman has calculated that there are in Kyoto 3,353 native dogs, and about 4,000 foreign dogs, all kept by some one or other of the city. These domestic pets are, however, harassed in Kyoto, as in many other places, with their inveterate foes the dog-killers, who prowl about the street, and, tempting them with something to eat, despatch them with the blows of iron bludgeons while the poor victims are eating the morsels all unconscious of the wicked designs of the dog-killers. It is of course unlawful for them to kill dogs which are kept by some one, but in their eagerness to get a canine skin they do not scruple whether the dogs they are going to kill are kept or not. This indiscriminate slaughter is said to have become especially active lately in Kyoto, and the dog-owners are therefore put to much trouble for the safety of their pets. These shrewd set of men have thought that the time for making a big profit has arrived and they have consequently determined to start a dog insurance company, which professes to insure the loss or death of a dog by paying a small premium every month. Death by disease is, however, not insured, death must come by the hands of dog-killers.

HOMER NODS.

THE precise and cocksurely correct *Athenaeum* has been caught napping. The issue to hand by the last mail contains a blunder of unparalleled magnitude for a journal such as the *Athenaeum* strives to be. In Messrs. Sampson, Low, Marston, & Co.'s list of forthcoming works we find the announcement of a work by Capt. Mahan, who has so lately been wined and dined in England's metropolis, set out as follows:—"Admiral Farragut.—A biography based on family papers of the great Confederate Admiral, who attacked regardless of consequences and never turned back." And such is fame! The man who inflicted the worst whippings upon the Confederates in the Civil War is now gravely placed among their ranks by the leading literary journal of London. Well might *Punch* satirically say the other day that Englishmen move so fast to-day that the history of the day before in other lands is not worth their retaining.

FIRMS AND FACTORIES.

SOME interesting statistics are given in the *Official Gazette* concerning the number of firms and companies in existence in Japan up to the end of 1892. The total is 5,162, of which, however, 527 were rejected as being imperfect in organization or otherwise obscure. The actual number is thus reduced to 4,635. Of these, 2,258 were joint stock organizations; 2,258 were otherwise organized, while the remaining 20 were not distinct in their nature. Classified according to the amount of capital possessed by each, 2,918 had less than 10,000 yen; 1,164 had a capital of over 10,000 and less than 50,000 yen; 227 had between 50,000 and 100,000 yen; while 283 had a capital of more than 100,000 yen. Of the 40 remaining, the amount of capital was not ascertainable. The dates of their establishment presented a striking picture. The oldest firm dated seven centuries back; ten others were founded between 150 and 200 years ago; a large number were started since 1877, but the majority had then (1892), been only three or four years in existence. Industrial firms and factories numbered 2,767 in all, of which 493 employed steam, 247 water and another 247 both steam and water power;

the remaining 1,780 employed no power of this description. With regard to the nature of the business transacted by these firms and factories:—1,415 were connected with clothing and articles for personal wear; 429 were banks or dealt with monetary matters; 333 had to do with minerals; 315 with transportation; 249 with domestic furniture; 217 with agriculture; another 217 with foodstuffs; 214 with articles of daily consumption; 164 with public works and architecture; 144 with marine industries; 142 with articles of luxury; 132 with printing; 122 with technology; 166 with sericulture; 101 with metal articles; 35 with insurance; 28 with tools and machinery; and 261 miscellaneous. The following table gives the number of firms and factories classified according to the date of their establishment, the list being brought down to the end of 1893:—

Date of Origin.	No. of Firms or Factories.	Date of Origin.	No. of Firms or Factories.
700-651 years ago ...	1 ...	1873	34
400-351 years ago ...	2 ...	1874	39
350-301 years ago ...	5 ...	1875	60
300-251 years ago ...	8 ...	1876	43
250-201 years ago ...	8 ...	1877	88
200-151 years ago ...	10 ...	1878	74
150-101 years ago ...	25 ...	1879	105
100-91 years ago ...	12 ...	1880	153
90-81 years ago ...	17 ...	1881	175
80-71 years ago ...	21 ...	1882	170
70-61 years ago ...	24 ...	1883	160
60-51 years ago ...	16 ...	1884	156
50-41 years ago ...	32 ...	1885	162
40-31 years ago ...	31 ...	1886	268
30-25 years ago ...	29 ...	1887	410
1868	15 ...	1888	433
1869	8 ...	1889	505
1870	13 ...	1890	444

1872	17 ...	1892	443
Date of origin uncertain, 64.		Grand Total, 4,635.	

GUARDS FOR POWDER MAGAZINES.

BOTH the *Asahi* and *Hochi* are responsible for a statement that a Chinese, in the disguise of a Japanese, was arrested in the early days of this month, near the powder magazine under the charge of the Sasebo Admiralty. It is alleged that a sentry stationed there saw a suspicious looking personage prowling about in the vicinity of the magazine. This made the sentry still more vigilant, and his watchfulness was not unnecessary, for, toward the dead of the night, he saw, to his great alarm, a man approaching the building in which the powder was kept, and proceeding to light, with a match, a faggot that he had brought with him. A few minutes delay and the fire must have reached the powder within, when, of course, the building with everything in its immediate vicinity must have been blown into the air. The sentry stealthily approached the desperate ruffian, and caught him as he was in the act of kindling the faggot. When examined the man pretended to be a Japanese, but something seeming strange about him, he was more closely questioned by the officers, when he confessed that he was a Chinese specially despatched by the Government of Peking to spy Japan. He was subsequently transferred to the custody of the proper authorities. It is said that this incident has convinced the army of the necessity of instituting a guard over magazines, armouries, and barracks still more vigilant, and it has therefore decided to post an additional number of guards over them.

FOREIGN SEALERS IN JAPAN.

A SEALING schooner of the Imperial Fishery Company lately arrived at Hakodate, having hunted for seal in several places, from the vicinity of Kinkazan to the coasts of Hokkaido, for a considerable period of time. In the sequel of investigations the crew discovered that the spots where this marine animal is found in greatest abundance are from off the north-eastern coast of Kinkazan to the sea along the shores of Kushiro in Hokkaido. They also found that sealing operations are conducted by foreigners on a much larger scale than by Japanese. In the strait of Tugaru, that is, the narrow strip of water separating the northern extremity of the main island from Hokkaido, they saw many as fifty foreign schooners, whereas there were only three Japanese. In fact, the total

number of foreign sealers engaged in hunting along the coasts of Japan must reach more than a hundred. Moreover, their dexterity in capturing the animal is far beyond that of the Japanese, so among the sealers that put into Hakodate this year, some brought as many as two thousand skins, the lowest not being less than two hundred and fifty. The average take for one foreign schooner may thus be put at 500 skins. Estimated at 30 yen per head, this means that the foreign sealers are taking away from the coasts of Japan every year a booty worth a million and a half yen. We quote all this from the vernacular press.

A NEW ASSURANCE COMPANY.

AMONG recent registrations, says a writer in *Fairplay*, is that of the "Lombard Assurance Company, Limited," with a nominal capital of a million in £10 shares, £5 of which is to be treated as a reserve liability, available only in the event of liquidation. The new Company, is, I presume, to acquire the British business of the Hongkong, which finds it to its advantage to withdraw from this Company; and it is to be under the general management of Messrs. Matheson & Co. of 3, Lombard-street. There will, no doubt, be inquisitive people, who will ask how business which was not good enough for the Hongkong can be beneficial to its English successor; and, however influential the great house of Matheson & Co. may be, what are its qualifications for insurance management? I must confess my inability to answer these queries; but it may be assumed that, while the "general" management is vested in Messrs. Matheson, the underwriting, which is after all the main point, will be very much in the hands of officials who know something of the work. As to the personnel of these officials nothing has yet been said; but it is to be hoped it will be thoroughly practical and efficient, and that it will not make ducks-and-drakes of the premiums by gratuitously large abatements; otherwise the fate of the new Company can very easily be foreseen.

THE IRONWORKS AT HANYANG.

A CORRESPONDENT of the *Hongkong Daily Press* writes as follows:—

SIR,—In your leading article of Thursday morning's issue you comment on the supposed failure of the ironworks at Hanyang to come up to the expectations so confidently expressed by the supporters of the promoter, H. E. Chang Chih-tung. Having so lately as the 22nd of last month visited the works in question under the auspices of M. Braive, who is in charge, I trust you will allow me to dissent from your views in one or two particulars.

To begin with, the works are what may be called small and in no way pretentious as a public concern, there being in all but one hot-blast furnace and two steel (a Bessemer and a Siemens-Martin), a small-arms factory in an advanced state towards completion, and a gun factory in embryo, together with, of course, a rolling plant for rails. Everything now as regards steel-making plant is complete, and in fact two days after my visit the blast furnace was to be set in action, but unfortunately I had no time to remain behind and see its inauguration.

Your mention of there being some hitch as regards the supply of coal from the neighbourhood I have heard nothing of; but even so, that in itself would be but a slight drawback, as in the event of the local coal supply being found insufficient, sea-borne coal is always to be obtained, at what cost of course I am unable to say, but still nothing extravagant seeing that the works are enclosed on two sides by the Yangtze and the Han Rivers.

The want that is really felt is that of coke, and not coal, as apparently till everything else was in readiness it seems never to have struck those in authority that ovens for converting one into the other were indispensable, coke, of course, being the material used in smelting and not coal. I may mention that there is no indication of any such ovens being commenced, but doubtless they will be in due course.

After having erected their costly plant it is rather ludicrous that in order to start the blast furnace, 3,000 tons (I fancy I am right in the number) of coke had to be brought from Europe, as also had ordinary pig iron for conversion into steel by the Bessemer process.

What may have been H.E.'s object when first starting on this venture it is not for me to say

but as for such a Quixotic idea as that of constructing a railway to Peking ever having entered the brain of so astute a Chinaman as we are led to understand His Excellency is, I don't for one moment believe it, though no doubt he said so originally. Castings of twenty tons are not required for making ordinary rails, any more than are the hundred and one appliances to be found in various parts of the works. It is more than probable that under the cloak of patriotism he has started on private business on a comparatively large scale.

Such castings as I have spoken of are only used in the manufacture of heavy guns, such as are now being constructed in the Shanghai Arsenal, and it may be with the idea of supplying his brother Viceroy—on payment, of course—with material for guns, rifles, etc., (to obviate their purchase in Europe) that he has launched forth on this comparatively great undertaking.

Be his object what it may, it would be a thousand pities, now that the money has been spent, his own private money too, to a great extent, that the want of such a common commodity as coke should in any way prevent the fulfilment of his desires.

WATCH-TOWER REGULATIONS.

THE Naval Department has issued a set of Watch-tower Regulations over the signature of Count Saigo, Minister of State for the Navy, by Imperial Ordinance No. LXXVII. The towers are to be established at important places along the coast and are for the purpose of carrying on a signal service between war-vessels and the land, and also for other important objects connected with maritime affairs. The business to be transacted at the towers is specified as follows:—

(1.) To keep a seaward watch. (2.) To signal by telegraph. (3.) To compile reports relating to war vessels and other kinds of ships passing along the coast. (4.) To take meteorological observations. (5.) To collect information respecting shipwrecks. The towers are to be placed under the control of the respective Naval Stations in the districts, and are to be officered by one superintendent (Commander or Lieutenant), one non-commissioned officer to deal with general affairs, one tower-chief, and two assistants. For the tower-chief a salary ranging from 30 to 12 yen, and for assistants salaries varying from 25 to 10 yen are to be given.

WHY THE CHINESE SEEK TO ACCUMULATE WEALTH.

It disgusts us to think, says the *Yiji Shimpō* with fine indignation, that the ultimate object of Chinese who labour patiently for years in strange lands, is to accumulate a sum sufficient to enable them, in later life, to indulge in opium-smoking and other pleasures of the senses. There is no more lascivious people in the world than the Chinese. Their novels are notoriously immoral, their newspapers team with puffs and advertisements of aphrodisiacs, and they are proud of the number of concubines they may be able to keep. The kidnapping of little girls, so fearfully prevalent in China, is wholly due to the system of concubinage. These girls are freely sold and frequently change hands. The average market value of a girl of eight years is about forty taels. Kidnappers prowl about the country both at night and by day, and parents who are suddenly bereft of their daughters in this manner have nothing to do but submit to fate, for they can obtain no redress in all that vast land and there is no means for the recovery of their lost daughters. The only way to prevent this kidnapping of their female children is to keep them from going out of doors unless well protected. This brutal method of stealing children, known only in the most barbarous lands, is not confined to the borders of China. Kidnappers have stretched their vicious hands even to Japan, where stories of young girls having mysteriously disappeared are not infrequently seen in the newspapers. They have in reality been kidnapped by the unscrupulous agents of Chinese procurers.

THE EPIDEMIC OF DYSENTERY.

PUBLIC attention is not much directed to the epidemic of dysentery prevailing in Shikoku and elsewhere, though it has assumed dimensions worthy of notice. The *Yiji Shimpō* quotes some figures. In Hiroshima Prefecture from the commencement of the epidemic to the 30th of June there were 76 cases, of which 21 ended

fatally. In Kochi Prefecture from the commencement until the 30th of June there were 279 cases and 39 deaths. In Ehime Prefecture from the 26th to the 30th of June—an interval of five days—there were 150 cases and 22 deaths. In Oita Prefecture up to the 4th instant there were 562 cases and 110 deaths. In Wakayama Prefecture from the 1st instant to the 5th there were 93 cases and 73 deaths, an appalling rate of mortality. In Osaka also the epidemic is raging. It is a curious fact that epidemics of cholera among the Japanese have generally been preceded by epidemics of dysentery among the foreign communities, though the latter disease has never been of a type so virulent as that now prevailing in Shikoku. We trust that the dysentery among the Japanese may not be the precursor of cholera. It is too late in the season now for the dread disease to develop serious proportions even if it does break out, but cholera is an enemy against which no feeling of security is possible.

A YOUTHFUL VIOLINIST.

THERE is staying at the Central Hotel, Yokohama, a youthful violinist of some thirteen summers who has recently travelled across Siberia from St. Petersburg. The lad, who rejoices in the name of Kocma Dumcheff, is a Donkoi Cossack, whose fingers have been skilled to the uses of the violin and bow from his cradle up, and in proof of his marvellous powers he wears upon his concert-going tunic medals conferred upon him at Stockholm, Schusselburg, St. Petersburg and other musical centres; while another valued possession is a handsome gold watch, richly embossed with the Russian double eagle, a personal gift from His Majesty the Czar. Master Dumcheff's journey across Siberia occupied about eight months, and was performed in sleighs, on horseback, and occasionally in a Russian pack-cart. Should sufficient inducement offer, a violin recital will doubtless be arranged before the young performer leaves for America.

DEATH OF A TOKUGAWA PRINCESS.

THE death is announced of Princess Mika, Consort of Prince Keiki, the last of the Tokugawa Shoguns, and elder sister of H.M. the Empress-Dowager. The deceased lady was the daughter of Prince Kikutai and was adopted into the house of Prince Ichijo. In 1855 she became the wife of Prince Keiki, and after the fall of the Shogunate accompanied her husband into his retirement at Suruga. From the close of April last she fell sick and moved to the residence of Prince Tokugawa Iyesato at Sendagaya, in the suburbs of Tokyo, in order to be within reach of the best medical assistance. But the exceptional heat of last month proved too much for her debilitated constitution and at 10 a.m. on the 9th instant she expired. The Princess was in her 60th year. Her funeral will take place at 6 a.m. on the 15th instant, the place of burial being the Kwanyei Temple at Ueno.

EXPLOSION AT A GUNPOWDER FACTORY.

AN explosion, attended by the loss of three lives, occurred in the Government's Gunpowder Factory at Itabashi on the 9th instant. The powder in process of manufacture was the smokeless variety, and it had been carried to the last, or most critical, stage, when the accident happened. The room in which the explosion took place is built with a special view to such catastrophes, the walls being of brick, a foot thick, on three sides, while on the fourth there is a wooden face only, so as to constitute a point of least resistance in a safe direction. In consequence of this precaution the surrounding buildings and machinery suffered no damage whatever. The three men engaged in that particular part of the factory—Mr. Obata Shigejiro, an expert, and two workmen, Nishima and Juda—were killed on the spot. No cause has yet been assigned for the explosion.

A WASTED DAY.

REFERRING to an attempt by burglars to open a Milner's safe recently in London, the *Globe*, of May 22nd, says:—"We shall not be sup-

posed to have any undue sympathy with the enterprising burglar if we say that we cannot help feeling a certain compassion for the baffled house-breakers of Hatton Garden. Sincere and whole-hearted effort is always more or less respectable, and one has the same sort of half regret at their want of success which everybody must be conscious of feeling towards that viper who wasted his energies in trying to bite a file. These worthy fellows had intended to make a grand coup for wealth, and the treasures of a large diamond cutter in Hatton Garden were to be extracted from the safe. On Saturday evening they entered the premises provided with a regular siege-train of burglarious implements, and with a most admirable commissariat. Having thus done all in the way of preparation which could reasonably be expected, they began the siege of the safe. For something like thirty hours did these devoted burglars continue to prize and drill and prize, without apparently making the least impression on the safe. Finally they were obliged to leave with nothing done, no profits, and the painful consciousness of having completely wasted a day and a half of severest toil."

ELECTIONEERING IDEAS.

SENTIMENT always commands consideration in Japan. A story with sentimental elements is sure of appreciative reception. The *Shin Choya*, at much length and with evident marks of admiration, tells of a Mr. Nakajima Yubachi who desired to contest one of the districts of Gumma Prefecture in the next general election, but was prevented by his father under somewhat exceptional circumstances. Mr. Nakajima sat for the same district in the last Diet as a representative of the "strong-foreign-policy" party, but it seems that his return in the approaching election is very uncertain, and that the expenditure involved would be some ten thousand yen. His father argued that to incur such an outlay on account of a doubtful result would be far less patriotic than to distribute it among candidates of the same politics as Mr. Nakajima, whose return could be secured by a slight additional outlay. It was therefore decided that Mr. Nakajima should stand aside, and that the ten thousand yen should be divided among five other "strong-foreign-policy" supporters. Certainly it is only in Japan that such things happen.

SOCIAL ITEMS.

THE Vice-Minister of State for Foreign Affairs and Madame Hayashi will remove from the official residence at Kasumigaseki on the 12th instant to No. 75, Sankochō, Shirokane, Shiba district, pending the completion of the repairs necessitated at their present residence by the recent earthquake.

* * *

The Saturday receptions at the Belgian Legation are discontinued during the hot weather, the Minister and his family having left town for the hills.

PERSONAL ITEM.

THE *Nichi Nichi Shimbun* says that Madame Tokugawa Mika-ko, wife of the ex-Shogun, Tokugawa Keiki, died on the 9th inst. at the residence of Prince Tokugawa Iyesato at Sendagaya, Tokyo, where she had been lying ill for some time. The deceased was an elder sister of H.I.M. the Empress, and was sixty years of age. An Imperial message of condolence was dispatched yesterday to the family of the deceased. The funeral will take place on the 15th inst.

QUARREL ON BOARD THE "ANGERS."

A QUARREL broke out on board the steamship *Angers* on the 10th inst. between some fifty or sixty Japanese coolies and the sailors of the vessel. Shortly before noon the Japanese coolies were indulging in their noon-day meal on the upper deck, when a sailor, named Johnson, passed by. In so doing he pushed a *bento* box aside with his foot, overturning it. The whole thing was accidental, but one coolie, named Hayashi Kamejiro, at once sprang up and struck John-

son on the breast. Another sailor came up assist his comrade and pushed Hayashi away. Then the whole of the coolies rose against the sailors. On a signal being hoisted a number of water police came on board and subdued the disturbance.

A STRANGE STORY.

THE *Nippon* has, once again, fallen from the sublime in the ridiculous owing to its accustomed ill-calculated haste in praising everything Japanese and decrying all connected with foreigners. It stated a day or so ago that a strange rumour had reached the ears of the authorities to the effect that Major Mori, now pursuing his studies in Italy, had sustained serious injuries with fatal result. He was said to have fallen from a height in the barrack in which he was lodging, and to have been killed. The *Nippon* places no confidence in the report, but remarks that as the Japanese Government has taken steps to obtain precise information, the truth in the case will soon be apparent. Major Mori is—or was—an officer attached to the Koishikawa Arsenal, and no officer in the whole Japanese army was his equal in the science of projectiles. An Italian expert engaged in the Arsenal a few years ago was by no means his equal, so much so that whenever the Major put him a question he was compelled to make an evasive reply. Nay more, remarks this Chauvinist paper, the Italian actually found the place too hot for him on account of the superior attainments of Major Mori, and was compelled to throw up the situation before the expiration of his term. The Italian expert was succeeded by his younger brother, who was not a whit better than himself. The Government is greatly dissatisfied with him, but dares not dismiss him on account of international considerations. The Japanese Government has already incurred the displeasure of France because of the adoption of the German system in the army, and so it is to be apprehended that an unceremonious dismissal of the Italian would similarly affect Japan's friendship with Italy. Now, shortly after the return, in disgrace, of the elder brother, Major Mori was ordered by the Government to proceed to Italy in order to further prosecute his studies, and a rumour states that while in that country he gave great anxiety to the Italian Government owing to his indirect discovery of its military secrets while, at the same time, he drew upon himself the envious hatred of the Italian officers by reason of his superior talents and accomplishments. The *Nippon* concludes that the alarming intelligence concerning the Major may in some way be connected with these "facts."

In a subsequent issue, this remarkable paper has been obliged to perform the disgraceful task of recalling all that it had stated with such ostentatious pride and supreme contempt for foreigners. It now says that the predecessor of the present incumbent was a first-rate expert, having a European fame for his invention of an important instrument used in gun-laying; that Major Mori, whose talents the *Nippon* has vaunted to the skies, far from out rivaling him, was a sincere admirer of the excellent skill of the Italian gentleman. He was indeed held in high esteem not only by the Major but also by every officer in the Japanese army, so much so that when the gentleman was, on account of physical debility resulting from climatic conditions, released from his duties at his own urgent request, Major Mori was ordered by the Army authorities to accompany him to Italy, in order to complete the studies begun under his supervision during his brief sojourn in Japan. The *Nippon* also abjectly confesses the error in its statement concerning the younger brother at present employed in Japan.

There are those who admire the *Nippon*—we have met with such people—for what they are pleased to call its "sturdy patriotism." But really after such a painful exposé of its unreasoning rancour against foreigners, its readiness to disseminate the grossest falsehoods, and

Judged by the number of items, the subjects are far in advance of the rest, but *Kokumin's* correspondent points out, in from the nature of the matter, immoral licentious paragraphs unquestionably head list. And this is certainly not an exaggerated statement, for some of the more openly vicious *Ko Shimbunshi* use often over two-thirds of their space in retailing nasty anecdotes, and that in a manner showing that they revel in the exposure of the very worst side of human nature.

A PEER'S WAY OF DOING BUSINESS.

A TYPICAL instance of the manner in which some Japanese peers transact business, is given in the *Yomiuri Shimbun*. A certain Viscount residing in Honjo, Tokyo, has quite sufficient means to maintain his family in a manner befitting his rank; nevertheless he holds the not illogical opinion that to live without engaging in some active business, even though a peer, would mean ultimate ruin in this world where the struggle for existence is so keen and merciless. For this reason he determined, some little time ago, to find some lucrative employment for his son and heir, and was therefore greatly pleased to get for him, through the kindly offices of a relative, a clerkship in the Nobles' Bank, at a monthly salary of twelve yen. But the distance from Honjo to Shimbashi, where the Bank is, being great, the family decided that a jinrikisha-man should be specially engaged to daily convey the young gentleman to his office. This cost nine yen a month, leaving only three yen as net profit. But then the noble apprentice must needs have his tiffin at the Bank, and this could not be taken thither in a wallet or box as is the case of clerks of humbler extraction. The young clerk therefore always sent for his lunch either to a famous eel-house near Shimbashi or to the Seiyoken in Tsukiji. The result was that the monthly bill for this modest refreshment amounted to at least twenty yen. In a word, the daily attendance of the heir at the Bank occasioned the Viscount an actual loss of some seventeen yen each month, and the *karo*, or steward, deeming this a most foolish extravagance, acquainted his master with the true aspect of the case. After listening attentively to the steward's statement, the Viscount remarked that, after all, he believed it more profitable for a peer to have no particular employment, and therewith ordered his son to retire from the Bank at once.

EARTHQUAKES.

ABOUT twenty-minutes past four o'clock on Tuesday morning two sharp shocks of earthquake, following each other in quick succession, were felt, and about half-past five there was a long continued shock composed of small movements. The direction in each case seemed to be from the N.E.

JAPAN'S BIG SHIP.

THE vernacular press is praying for the speedy completion of the 12,000 ton man-of-war now in process of building at the Thames Ironworks to order of this country. It would certainly be a comfortable thing for Japan were the monster's services available at this juncture, but whatever may be the rapidity of British ship-building, we fear that the Korean embargo will have become an affair of the distant past before the new ship can reach Japan.

THE IMPERIAL COMMERCIAL BANK.

OFFICIAL permission to establish the Imperial Commercial Bank (*Teikoku Shogyo Ginko*) was granted on the 9th instant. The projectors of the scheme have hitherto been holding their meetings and transacting their business in a building attached to the Imperial Hotel, but it has now been decided that they will have their head-quarters at the building formerly occupied by the 33rd National Bank.

MR. J. CONDER.

THE *Gazette* notifies that the Queen has been pleased to give and grant unto Josiah Conder, Esq., Fellow of the Royal Institute of British Architects, Her Majesty's Royal licence and authority that he may accept and wear the insignia of the Order of the Sacred Treasure of the Third Class, which His Majesty the Emperor of Japan has been pleased to confer upon him in recognition of his services while actually and entirely employed beyond Her Majesty's dominions in the capacity of Architect in the service of the Japanese Government.

Original from

eking, a later telegram, said to have been received from Tientsin, states that the Viceroy undertook the journey in obedience to the summons of the Emperor. The *Nichi Nichi* still hesitates to accept the report.

The alleged dispute between the Japanese Minister, Mr. Otori, and Major-General Oshima is said to have been occasioned by a recent proclamation of the Chinese Commander, Shih, alluding to Korea as a Chinese dependency. On receiving this news, the Japanese Commander became highly indignant about the insult that the proclamation contained toward Korea, and insisted on instantly marching his army against the Chinese troops at A-san and demanding an apology from the Chinese General. Mr. Otori of course advocated the milder method of diplomatically asking for the revocation of the offensive allusion. After animated discussions between the General and the Minister, the latter's opinion at last prevailed, and the obnoxious words are stated to have been revoked by the Chinese Commander. We (*Japan Mail*) do not answer for the accuracy of these details.

The *Kokumun Shimbun's* Söul correspondent has sent the following telegrams:—"The tendency to rely upon Japan is steadily increasing in the Korean Court, and the pro-Japanese, or Progressive, party is daily growing more and more powerful. Yuan Shikai and Ming Eishun are now enemies. Their quarrel was occasioned by Ming's refusal to endorse Yuan's proposal to guard the four gates of the Royal Palace with Chinese troops. The Chinese Resident is said to have spat in the face of the Korean Minister. The Progressive party advocates the necessity of demanding the withdrawal of the Chinese troops; to which the opposite party replies by saying that, should the Chinese troops be withdrawn, there would be no knowing what the Japanese army might not attempt. But the opinion of the former party is said to be more powerful in the Government than that of the latter."

"Cho Giyen and An Shiju are the two most enthusiastic leaders of the Progressive party. Wing Eishun has also joined it. Even Hong Tjyong-on is said to belong to the same party."

"The Progressive party in the Korean Government is considering the advisability of asking the Tai Won-kün to assume the direction of affairs in the capacity of Prime Minister."

"A certain influential Korean is said to have recently called upon Mr. Otori. He is reported to have made the following statement:—"Availing itself of the present opportunity, our Government will introduce thorough reforms, and we therefore hope that your Government will give us all necessary assistance, and that, until the object of the reforms shall have been attained, the Japanese troops will remain in our country."

The Tokyo News Agency reports that according to the latest correspondence from Korea, the Chinese troops at A-san and in the vicinity of Nam-yang, besides levying forced contributions upon the people and even plundering them, are now compelling them to work without any wages.

As for the Japanese troops, they at first hired some Koreans as coolies, but have now given up employing native labour. There are, we believe, more than a thousand Japanese coolies in Korea.

The following telegram, dated Söul July 6, 7.10 p.m., was published by the *Yiji Shimpö* in an extra on Saturday last:—"The Chinese Commander, Shih, at A-san, is marching in the direction of Söul at the head of 2,000 troops, his pretext being to seek an interview with the King. He has reached a place about two miles from Su-wön. Our Minister has sent warning to him that the march of the Chinese troops upon Söul will be attended with a risk of collision. It is uncertain whether the warning will be heeded or not."

In the same extra, our contemporary publishes a Chinese telegram said to have been received on the 6th instant by a certain mercantile firm in Tokyo, announcing that two merchant steamers were lying off Taku, probably intended for transporting troops.

According to the *Nichi Nichi Shimbun's* Original from

two dispute of the days ago. have been been Kokyo-Shiratori-mura Yabachi. The ter for irrigation. d with reference to es. Governor Saka- cused work, but we are of the reasons that led . He caused the villagers to demolish the dam. m other side, who appear to part dependent on the reservoir on of their farms, became much that they considered a wholly un- ction on the part of the Governor. nce instituted civil proceedings against d at the same time urged him to have the re-constructed, for they held that the de- ction of the reservoir would seriously affect e yield of their farms and consequently even their very existence. But if the Kokyo villagers were eager for the re-construction, the other villagers were equally anxious for its total removal, especially in such a dry season as we have had this year, and the irreconcilable interests of the two parties ultimately led to a general skirmish. On the afternoon of the 4th inst., about five hundred farmers of the Kokyo-mura party proceeded to a place where the farmers of the villages had constructed a dam for the irrigation of their farms, levelled it, and then went home cheering vociferously, having achieved what they considered an act of retaliation. On learning of this act, the Shiratori men, highly incensed, proceeded to collect their neighbours by pealing alarm bells, and forthwith set about re-constructing the dam. Thereat the farmers of Kokyo and five other Divisions returned in full force and arming themselves with hoes, sickles, hooks, bludgeons, and such weapons hastened to the spot when the Shiratori farmers were engaged in piling up the dam. A fierce struggle ensued, more than two thousand being engaged. Intelligence of this alarming affair having been circulated, all the inspectors and constables of the neighbouring Police Offices hastened to the spot where the two parties were fighting, and tried to separate them, but though they even drew their swords, they were unsuccessful, so excited were the combatants. The police had simply to look idly on at the grievous spectacle which they were entirely powerless to terminate. At last the farmers became tired of the quarrel and gradually drew off to their quarters at about 10 in the evening, after having fought for more than two hours. It is said that many were wounded, and the place where they fought was covered with blood. The *Shin Choya* charges the Governor with being the cause of this bloodshed. But that was to be expected.

KOREAN AFFAIRS.

The *Nichi Nichi Shimbun's* Söul correspondent sent the following telegram on the morning of the 6th instant:—"It is reported that the Chinese General, under pretence of paying homage to the King, is on his way to Söul at the head of the troops hitherto stationed at A-san, and that he is about to enter Su-wön (about midway between Söul and A-san). According to another report, the Chinese troops, instead of marching on Söul, will remain for the present at Su-wön." This latter version is likely to be true, because it was stated some time ago that the road had been placed under repair between A-san and Su-wön for the passage of the Chinese troops. Should they attempt to enter Söul, a collision between them and the Japanese force can scarcely be avoided.

REV. TAMURA NAOMI EXPELLED.

THE *Tokyo Asahi* states that the Rev. Mr. Tamura was expelled by the Synod of the Nippon Kirisuto Kyokai from the priestly office, on the ground that he has slandered the Japanese nation in his work entitled the "Japanese Bride." It will be remembered that he appealed to the Synod gainst a somewhat similar decision of the Lower Assembly.

DEATH OF AN IMPERIAL PRINCE.

A NOTIFICATION of the Imperial Household Department announces that her Imperial Highness Princess Chiyeko, consort of his Imperial Highness Prince Kanin, was confined of a son on the 9th instant, and that the little Prince, to whom the name of Atsubito was given, died on the following day.

MRS. FRASER.

MRS. FRASER has decided to leave Tokyo by the 5.50 train on Monday afternoon. We hasten to publish this intelligence, knowing that many of the residents of the capital are anxious to have the opportunity of saying farewell to a lady so universally beloved and respected.

THE KING OF SIAM.

On the 19th ult. the King of Siam was suffering from fever, and had abandoned his intention of returning to Bangkok from Koh-si-chang.

THE O. & O. steamer *Gaelic* left Nagasaki for Kobe and this port at 6 o'clock a.m. on the 13th inst.

special correspondent at Tientsin, the report about the Viceroy Li's journey to Peking is entirely without foundation. Too much caution cannot be exercised in accepting news supplied by some of the News Agencies in Tokyo.

Concerning the report that the Chinese troops are now on their way to Söul under the command of General Shih, the *Nichi Nichi Shimbun* believes, with good reason, as we think, that the object of the Chinese general is not to enter the capital, at least immediately, but to remain encamped for the present at Su-wön. That place, according to our contemporary's information, being of considerable strategical importance, is well adapted as a basis of military operations. It is so situated as to command the roads to A-san, both from Söul and In-chhön. Its possession would be a source of great security to A-san, the landing-place of the Chinese troops, against possible molestations from the Japanese forces either in Söul or at In-chhön. It is not conceivable, as the *Nichi Nichi* justly remarks, that a Chinese force, hardly 2,000 strong, would be so rash as to enter a city full of Japanese troops.

The *Tokyo Asahi Shimbun* published the following telegram, dated Söul, July 1, 9 a.m., in an extra on Monday:—"Yesterday the Foreign Representatives at this Court assembled at the Foreign Office and held consultations on the subject of neutrality."

On the 27th ultimo, Mr. Otori, the Japanese Minister, accompanied by Mr. Sugimura, Secretary of the Japanese Legation, had an audience with the Korean King at the Chhang-tök Palace. The details of the conference are not known, but the *Nichi Nichi Shimbun's* correspondent states that, according to his information, the Japanese Representative is said to have declared his Government's resolve not to withdraw its troops until the independence of Korea shall have been placed on a sound footing. The *Mainichi Shimbun's* correspondent, whose report is substantially identical with the above, adds that the Japanese Minister's representations to the King subsequently led to stormy discussions at Court among the Ministers of the Crown, and that the result has been to increase the influence of the opposition against the Ming faction. The subsequent promotion of a few pro-Japanese Koreans to high posts has already been telegraphed and reproduced in these columns. According to the latest report, Kim Kaku-u, another of the noted coterie of progressive Koreans, is expecting a distinguished appointment. He is a good Japanese and Russian scholar, having spent much of his time in this country as well as in Siberia.

Some papers publish a rumour that the Korean Court has decided to send a secret mission both to Tokyo and to Peking, the Korean Government being persuaded that, by directly appealing to the Government of the two countries, there is yet hope of a speedy withdrawal of the troops. The report even goes so far as to say that the Mission to Japan has fallen to the lot of Boku Teiyo, Minister of Finance. This news sounds incredible.

According to a telegram, dated Shimonoseki, July 7th, published by the *Osaka Mainichi Shimbun*, the Korean Government has issued a proclamation throughout the Kingdom calling upon the people to afford whatever facilities they can to the Japanese troops, because the latter have been sent to protect the country. This report needs confirmation. Indeed, we are inclined to doubt its genuineness, for if such a proclamation had really been issued, the fact ought certainly to have been telegraphed to Tokyo by some at least of the correspondents of the metropolitan papers, whereas not one of them has sent any word about the matter.

The *Nichi Nichi Shimbun's* Söul correspondent—who, be it remarked, enjoys more facilities than his confrères for obtaining trustworthy information—writes as follows in his letter dated June 30th:—"Yesterday the skies though overcast and threatening still contained some indications of calm and fair weather. Today, things have become so threatening in their

aspect that the outburst of the tempest is hourly expected. The following items of news will enable the reader to form some idea as to the quarter where the danger lies at present:—It being feared that Yuan Shikai and others may attempt to take the King to China and declare the peninsula Chinese territory, a detachment of Japanese troops under the command of Major Yamaguchi, forming part of the force stationed at Yang-hwa-chin, has this morning been despatched to occupy an important point on the highway leading to Wiju.

"Last night, Lieutenant-Colonel Fukushima, having been made acquainted with some important news at the Japanese Legation, hastened to the head-quarters of the Army (about a mile outside the Western Gate on the Yong-san road). Whether his ride was connected with the changes effected to-day in the disposition of the different divisions of the Army or with other urgent matters, I cannot say.

"The Chinese troops entering Söul in the disguise of merchants, it is not easy to find out their exact strength. But their number may be roughly inferred from the arms thus far carried into the Capital by the Chinese, which is computed at more than two thousand."

The *Kokumin Shimbun's* correspondent, too, mentions a report that the Chinese Resident contemplated a plot to entice the King out of his capital, and that the plot having been discovered, the Palace is strictly guarded by troops. It is interesting to note that the case is reversed by the leading English journal at Shanghai, which imputes a similar scheme to Japan.

The sentiments of the Koreans in Söul toward the Japanese troops are said to be improving. There is a movement among them, according to rumour, to advise the Government to make a present of several hundred oxen, for beef, to the Japanese army.

The well-to-do section of the Korean population of Söul, excepting the principal officials, are said to have retired into the country. Those only remain who lead a hand-to-mouth mode of existence.

The health of the Japanese troops in Korea is said to be excellent. Only twenty soldiers have thus far been sent home on account of sickness.

Concerning the report that General Liu Ming-chuan has been appointed Commander-in-chief of the Chinese forces in Korea, there is an impression in Tokyo that his appointment is probably another of China's devices to give an appearance of earnestness to her hollow pretence of warlike policy. Doubt is expressed whether he will actually proceed to Korea.

According to some Japanese correspondents in Söul, Mr. Otori recently asked the Korean Government if its country was a dependency of China. Such a question, if it were really preferred by Mr. Otori, must have occurred in the course of the negotiations he recently held with the Korean Government on the subject of the obnoxious proclamation issued by the Chinese General at A-san. Of course the Korean Government it denied any such relationship with China, at the same time addressing a note to the latter's Representative declaring Korea's entire independence from the Middle Kingdom. On the receipt of this note, Mr. Yuan is reported to have demanded of the Korean Government the payment of the expenses incurred by China in despatching troops at Korea's request. We do not vouch for these details.

A certain personage just returned from Korea, having been interviewed by the *Nichi Nichi Shimbun's* representative, made the following observations:—"Minister Otori, in pursuance of instructions received from home, has given advice to the Korean Government about the introduction of reforms. The principal officials of the Korean Government belong to the Chinese party, and even those that stand aloof from that party are afraid of China. Moreover, the Chinese Resident is secretly engaged in thwarting the Japanese policy. Under these circumstances, it will be very difficult to carry out the friendly purpose of the Japanese Government. There are not wanting men favourably disposed toward Japan, but they

are afraid to move at the present juncture, lest, like Kim and Bok, they should be subsequently disavowed by the Japanese Government. However, Kim Kachin and Yu Kichi-ei have already received appointments, and it is expected that Li Kan-yo and Shin Kizen will also be raised to high posts. The presence of these men in the Government will materially tend to diminish the influence of the Chinese party. The so-called policy of winning Korea's goodwill by forbearance and magnanimity may be useful at some other time, but at present such a course cannot be effectively pursued. What is absolutely necessary is that China's influence in the peninsula should be entirely destroyed. In order to effect that object, the shortest and most practical way is to fight with China. A shower hardens the ground, as the saying goes. So a war between Japan and China at the present juncture would lead to the inauguration of a new epoch in the history of Korea. As I left Söul on the 3rd instant, I cannot say anything about the alleged march of the Chinese troops from A-san toward the capital. But I am inclined to believe that Söul is not their objective point. I understand that Li Hung-chang had ordered the Chinese Commander at A-san to march into the rebel districts by way of inspection. As to the report about disputes between Mr. Otori and Major-General Oshima, I have seen the rumour circulated in the papers. When war breaks out, there may be a chance of some disputes between them, but at present the minute instructions of which each is the recipient prevents him from intruding into the sphere of the other. We in Korea were surprised to see such absurd reports published by the Tokyo papers. Our troops are in the best of health and spirits. The rigorous discipline maintained among them has evoked the admiration of both Koreans and Chinese. The Chinese residents in Korea are fast going home. The true reason of their hurried departure is that they fear being robbed by the troops of their own country. In their eyes, the depredations committed by their soldiers in the vicinity of A-san are nothing compared with what would be practised on the Chinese residents themselves should the troops come among them. As to the *Togaku-to*, a few days previous to my departure reports had arrived from several places announcing a revival of their activity.

On the 4th instant a Chinaman is said to have been killed by a Japanese soldier. The former, it is said, jostled against the latter and snatched away his hat.

The *Nichi Nichi Shimbun* states that the Peking Government is said to have solicited, a few days ago, the aid of a certain foreign Minister for inducing Japan to withdraw her troops. The Chinese Government is reported to have declared that it is not unwilling to coöperate with Japan for the reform of the Korean Administration, but that, as the presence of such a large force in the peninsula may lead to the despatch of troops by European Powers, China cannot treat with Japan unless the latter first recalls her troops. In that event, the Chinese Government is said to have promised that it will gladly confer with Japan in a frank and friendly manner. Commenting on this news, our contemporary observes that, since Japan has despatched troops in pursuance of a right secured to her by treaty, she will not withdraw them at the request of any other Power, so long as she deems their presence in the peninsula necessary for her purpose. Should China persist in making senseless demands upon Japan for the withdrawal of the latter's troops, this empire, says the *Nichi Nichi*, will not hesitate, in the interests of the general peace of the Orient, to drive the Chinese forces from the Korean peninsula.

The *Yiji Shimpō's* Söul correspondent's ambiguous telegram relating to an alleged change of the situation, has found an explanation in a rumour published yesterday by some papers, that the Korean problem would be discussed at a conference of delegates from Korea, Japan, China, England, Russia, and the United States. This rumour was supplied to the papers by the

Imperial News Agency. According to that authority, it was to the Russian Minister in Peking that Li Hung-chang applied for mediation between China and Japan. But the Viceroy subsequently made a similar request to the British Representative, whereupon the Russian Minister grew angry and expostulated against the Viceroy's discourteous procedure. The matter was satisfactorily explained, and the Russian and British Ministers agreed to mediate in concert. The two officials then communicated with the Japanese Government. Nothing is stated as to the purport of the communication made by the Russian Minister. But the English *Chargé d'Affaires* is said to have asked the Japanese Government about its intention in Korea. On learning that Japan had no aggressive designs on Korea and that her object was simply to promote Korea's development, England is said to have expressed profound sympathy with Japan's purpose and to have offered her co-operation. Meanwhile, the United States of America also expressed willingness to mediate. The diplomatists of these three Powers, after repeated communications with both China and Japan, are reported to have elaborated a scheme for an international congress to be composed of six delegates from Korea, three each from Japan and China, and one each from Russia, England, and the United States. The object of the Congress is to discuss the question of administrative reforms in Korea and the relative positions of Japan and China there. The Japanese Cabinet, says rumour, received the proposal a few days ago, but has not yet made any reply to it. Such in brief is the substance of the report published by some of the Tokyo papers with an air of assurance. We reproduce it for what it may be worth.

According to the Tokyo News Agency, the Korean Government issued a proclamation on the 2nd instant, calling upon its people, on pain of severe punishment, not to demand exorbitant prices for commodities required of them by foreigners. The issue of this proclamation was due to complications caused by attempts on the part of some Korean merchants to levy monstrous prices from Japanese customers.

According to a telegram dated Shanghai, July 10th, General Liu Min-chuan is reported to have declined to go to Korea — Commander-in-Chief of the Chinese army. He is said to have excused himself on the ground of eye disease.

The *Tokyo Asahi Shimbun* yesterday published the following telegram, dated Seoul, July 10th, 8.15 p.m.:—"His Majesty the King has issued an edict blaming himself for the recent disturbance and calling upon his subjects to offer plans of reform."

Our contemporary also announces that the cable between Fu-san and Tsushima has been interrupted since 11 a.m. on the 10th instant.

The report about the killing of a Chinese by a Japanese soldier at Fu-san seems to be without foundation.

The report about an alleged proposal for opening an international congress to consider the situation in Korea, has been ascertained to be entirely groundless. How the Imperial News Agency came by the story is not known, but probably it was imposed upon by some unscrupulous persons.

The *Chu-o Shimbun's* extra of Thursday contained the following telegram, dated Seoul July 11th, 1 p.m.:—"The Korean Government has accepted the proposals made by Minister Otori, and has already appointed a Committee for elaborating a scheme of reform." We cannot vouch for the truth of this telegram. Yet there seems to be little doubt that the Korean Government is being gradually brought to recognize the necessity of thoroughly reorganizing every department of the administration.

The doings of the Tai Won-kün now attract more than the usual share of attention. Originally he was reckoned as the most conservative and anti-Japanese statesman of the peninsular kingdom. But either that opinion was ill-founded, or he has since changed his rôle, for he is now believed to be an ardent advocate

of progress and reform and not ill-disposed to the Japanese. In fact, he counts among the Japanese a number of friends and admirers. Every Japanese of note or aspiration, be he journalist, official, or member of the Diet, visiting Seoul in the past few years, has not failed to knock at the old statesman's gate, and most of them seem to concur in believing that he alone is equal to the difficult task of national regeneration that Korea is now called upon to undertake, whether she wills it or not. On the 30th ultimo, he is reported to have visited the King at the Hê-dôk Palace, and advised him to avail himself of the present unique opportunity to introduce reforms in the Government and, as a preliminary step toward the attainment of that object, to punish Ming Eishuku.

Various untrustworthy reports are circulated about the demands made to the Korean Government by the Japanese Minister, Mr. Otori. But no programme of so-called demands hitherto published by the metropolitan press is—we are assured—worthy of trust.

Another baseless rumour circulated in Tokyo is that China has sent an Ambassador to Seoul to negotiate with the Japanese Minister there.

Meanwhile, the Chinese Resident at Seoul seems to be indefatigable in secretly obstructing Japan's policy. Recently a communication was received or alleged to have been received, from China by the Korean Government, advising the latter to deal with Japan for the present as the exigencies of the moment might require, but at the same time, conveying an assurance that ultimately China would not suffer a single Japanese soldier to remain in Korea. If such a document be really in existence, it is believed that it must have been manufactured by somebody in Seoul.

That the Chinese Resident's plot to entice the Korean King out of Seoul was discovered, and that the Royal Palace was in consequence strongly guarded by Japanese troops, are rumours already noticed in these columns. According to a later report, it is stated that, on the same occasion, some Chinese instigated the Koreans to set fire to the Japanese settlement, and that certain Koreans were arrested in the act.

On the 2nd instant, about thirty Chinese and Koreans are said to have attempted at midnight to cut the military telegraph line at Nam-san. They were detected by the Japanese military engineers. After a brisk fight, in the course of which one of the soldiers was wounded, a Korean was made captive. Some Koreans are further said to have recently thrown mud into a well newly dug by the Japanese troops. The Japanese are naturally inclined to ascribe these actions to Chinese instigation.

The *Omi Maru*, which arrived at In-chhôn on the 5th instant, had a party of Japanese soldiers on board. It was originally rumoured that these troops would be landed at either A-san or Nam-yang.

The *Nichi Nichi Shimbun's* correspondent states that a certain Japanese, who was in the habit of visiting the Russian Legation at Seoul, fell under suspicion of being a Russian spy, and was severely handled by a few of his incensed countrymen.

The removal of the Chinese troops to Su-wôn is now believed to have been necessitated by a scarcity of provisions in the vicinity of A-wan. The Chinese had laid their hands on everything found in the country round about, and were compelled to seek new victims for their plunder. A telegram to the Tokyo News Agency states that they have already commenced their pillaging operations in Su-wôn.

There is a rumour that the Peking Government decided, on the 2nd instant, to adopt a warlike policy against Japan, but the report is received with suspicion.

The Kyushu Railway is being brought into conformity with strategical purposes.

The Nippon Yusen Kaisha have stopped running steamers between Newchwang and Tientsin. The periodical steamers between Japanese ports and Ninsen will be stopped in a few days.

Telegraphic communication between Fusan and Tsushima, which was interrupted since the 10th, has now resumed.

SHANGHAI NEWS.

What, we wonder, is the proper part to be played by an English newspaper published in the East. The *North China Daily News* is an English newspaper. It is published in Shanghai, that it to say in a settlement with immense commercial interests. Under such circumstances its object ought to be to prevent a war between Japan and China. But apparently it desires to bring about that unhappy conjuncture. Referring to a rumour that as this is the 60th anniversary of the Empress-Dowager's birthday China will do everything in her power to avert war, our Shanghai contemporary says that the result of such action on China's part would be to engender "a very strong feeling of disgust with the dynasty and to make the people ripe for an insurrection against their present rulers." That is an announcement certainly not calculated to promote a pacific feeling among the Chinese, and, as if it were not enough, the Shanghai journal adds the following:—"The people expect to see the Japanese ejected from Korea by China, and if this is not done without much delay there will be a very bitter feeling in the country." We are not aware by what process an English journal published in Shanghai becomes endowed with the faculty of expounding the sentiments of the 300 millions of people scattered over the huge Chinese Empire. But if the "bitter feeling" diagnosed by our contemporary does not exist, its absence cannot be attributed to any failure on the part of the *North-China Daily News* to incite it.

In the immediate context of the above declaration as to China's obligation to fight, we find the following significant paragraph:—

Meanwhile an impression is gaining ground that the Chinese will avoid fighting if they possibly can. As to their troops, there is no commissariat, and there are no stores of ammunition or other necessities. As to their ships, they could only fight one battle, for no reserves of coal have been provided, or of gunpowder, or other stores. The officers and men are good enough, and they are quite ready to fight, but in their unprovided condition it would be grossly unfair to pit them against such a thoroughly organised and well-provided navy as that of Japan. It is to be hoped for China's sake that the writers at home who have dwelt of late years on China's military power, will not now see that power practically tested by Japan.

Since we have re-produced our Shanghai contemporary's somewhat incendiary comments, we are in justice bound to note the following paragraph, which appears in a leading article inspired by our explanations of the situation in Korea:—

In a word, Japan has determined to ask China to efface herself from Korea, and hand the country over to Japan; and the greatest friend of China must admit that the change, if it can be peaceably carried out, will be of untold advantage to Korea and to the world. It means the substitution of a government inspired by western ideas of enlightenment for one of the most debased despotisms in the world.

It will interest our Japanese readers to know what a Chinese journal has to say about Chinese preparations for war in Korea:—

According to information received by the *Hupao* from the North, 7,650 troops, including 750 cavalry and seven batteries of foot artillery, have so far been transported to Korea by the Peiyang authorities. These troops now occupy Yashan (Tooth Hill) and Massampo, not far from Seoul. In addition there is the Peiyang fleet of eleven vessels, containing a force of 3,800 odd sailors and marines. Something like 14,000 men are reported to have crossed the Yaloo river into Korean territory, and it is also intended if war be declared to send the "Shêng" army corps of 17,000 odd, men of all branches of the service, now quartered at Hsiao-chian, Tientsin, to the front *vis-à-vis* Shanhaikuan, Kirin, and thence across the Yaloo river. This accounts for the activity now displayed by the railroad authorities in extending the Shanhaikuan railroad eastwards with all possible haste. As for the Japanese, the *Hupao* states that a correspondent at Nagasaki has sent the following:—"From the 6th of June up to the present Japan has sent to Korea 9,700 odd, men of all arms. In addition they have a fleet of seventeen men-of-war, having over 5,000 sailors

and marines on board. There are also nearly 10,000 men in two divisions on the Japanese sea-coast now waiting the signal to cross the channel into Korea. Thus within two days of war being declared Japan will have nearly 20,000 land troops and a strong fleet to fight against half the number of Chinese, whose reserves might as well be 10,000 miles away for the good they will be able to do at the beginning of active operations. But with the news of Chinese High Commissioners going to Korea to meet the Japanese Minister there, it would seem that peace is at hand, did not the discouraging fact of the Commissioners not having yet started on their proposed mission, look as though affairs are at a delicate tension and may snap at any moment and plunge the two countries of China and Japan into a disastrous war.

This account, it will be seen, makes out that China has 7,650 troops already encamped in the neighbourhood of Söul, and that a further force of 14,000 has marched into the peninsula from the north. We do not believe it. Seven thousand men cannot hide themselves. If such a force were in the vicinity of Söul, the Japanese would know all about it. There has been a marked difference between the procedure of China and Japan at this crisis. Japan has worked hard but in silence. She has breathed no word as to her preparations or as to the number of men despatched by her. Only by minute inquiry here and there has it been possible to discover that she has transported a force of about 10,000 men to the peninsula, and that she has occupied all the positions of vantage in and about Söul. But from China we have been constantly hearing of big drafts going forward to Korea, and generally there has been much noise of preparation. Where are these troops, however, and what are the substantial evidences of preparation? It does not look as though China were in earnest.

The *North-China Daily News* of the 6th instant publishes the following telegram from a native correspondent in Peking:—

At a Cabinet conclave of the Ministers of the Tsungli Yamén, at Peking, on the 2nd instant, assembled in obedience to a decree of the Emperor to report upon the course to be pursued by China in the Korean Peninsula, the following Ministers of the Yamén were present:—Prince of Ch'ing, 1st Order, President of the Yamén; the Grand Secretary and Imperial Councillor Fu K'un, Vice-President; Sün Yü-wün, President of the Board of War and Grand Councillor; Hsü Yung-yi, Senior Vice-President of the Board of Civil Appointments and Associate Grand Councillor; Liao Shou-heng, Junior Vice-President of the same Board; and Ch'ung Li, President of the Mongolian Superintendency, the first two and the last named being Manchus and the rest Chinese. The seventh member (Chinese) of the Yamén, Chang Ying-huan (formerly Minister to the United States, etc.), Junior Vice-President of the Board of Revenue, was absent, as he had already started for Tientsin en route for Korea to confer with Mr. Otori, the Japanese Minister at Söul. A rather heated debate is reported to have taken place at the time, the only member openly advocating peace, "at any price" being the Prince of Ch'ing. The rest of the Ministers of the Yamén strongly denounced what they termed the "perfidious audacity of the Japanese government," and decided, with the above-named exception, to counsel His Majesty the Emperor, not to give way one iota, or else China would become more than ever the laughing-stock of the world. Had Japan, it was argued, refrained from sending so many troops, and waited to confer with China first, there would have been no trouble for a complete understanding about Korea; and China would have given up a great deal to satisfy Japanese ambition; but Japan's action denoted contempt of China, and this China could not submit to. The Prince of Ch'ing, it might be stated, was not the only one for peace in this conclave, having a secret supporter—the Grand Secretary Fu K'un. But this officer seeing the enthusiasm of his colleagues prudently refrained from joining the minority. The consequence was that His Majesty has recalled H.E. Chang Ying-huan, the selected envoy to Korea, and a Grand Council special courier was immediately despatched to transmit the edict of recall.

In Tientsin a rumour is said to prevail among the Chinese that the troops sent by Japan to Korea are Russians in disguise.

The present Emperor of China seems to be

emphatically a man of character. We related recently how he took it into his head to read the papers of candidates for examination and how the result of reading was to totally upset the verdict of the august examiners. He has now given another evidence of independent judgment in the case of a son of the Viceroy Li of Canton, who had been appointed to the high office of Salt Commissioner of Hupeh. The appointment was made on the recommendation of Liu, the Viceroy at Nanking, who declared the candidate to be possessed of great knowledge of foreign affairs and government, and therefore fitted to be a Taotai of the first importance. The new Salt Commissioner, before proceeding to his post, went to Peking to have the usual audience, whereupon the Emperor took the opportunity of testing his "great knowledge of foreign affairs" and found it conspicuous by its absence. The appointment was therefore cancelled with vicarious loss of face to the great Viceroy Li Hung-chang, whose nephew the degraded commissioner was.

There has been much complaint in Japan about the difficulty of communicating telegraphically with Söul. They sometimes suffer similarly in China, as witness the following paragraph in the *North China Daily News*:—

The wanderings to which a poor telegram may be condemned are long and devious. A message from Söul to Tientsin at the present time has to go from Söul to Hunchun on the Tumen river, from Hunchun to Vladivostok, from Vladivostok to Nagasaki by cable, from Nagasaki to Shanghai by cable, and from Shanghai to Tientsin by land line. The distance as the crow flies from Söul to Tientsin is only about 500 miles.

The *Hupao* states that Admiral Kuo Pao-chang, one of the so-called Taiping fire-eaters, has been appointed to the chief command of the Nanyang Fleet.

It is alleged in Shanghai that the Empress-Dowager, being consulted about the Korean affair, replied that there must be no question about Birthday Celebrations when China's honour is at stake; that a large army must be at once sent to protect China's tributary and that the Celebration fund might be used for war purposes if necessary.

A typhoon made its appearance to the north of Formosa on the 29th of June, went on land near Wenchow toward noon on the following day, passed round Shanghai at a distance of 150 miles, and then travelled toward the N.E.

HONGKONG NEWS.

The Danish steamer *Active*, Storm, master, which arrived in Hongkong on the 27th ult. from Hoihow, reported having sighted outside the Ladrões a full-rigged ship lying at anchor. She had lost several of her yards, but no signal for assistance was observable on her. This full-rigged ship turned out to be the American ship *A. G. Ropes*, D. H. Rivers, master, which left Hongkong on the 21st inst. for Kobe. The *A. G. Ropes* put back to Hongkong, arriving on the 28th June, and reported that on Sunday the 24th she encountered a heavy typhoon in which she lost her sails and yards were carried away. The crew then became insubordinate.

The Danish steamer *Ask*, which went ashore at Dale Bay, steamed into Hongkong harbour on the morning of the 27th ult. apparently none the worse for her mishap.

Says the *Singapore Free Press*:—An unprecedented thing happened on Sunday. The Executive Council met on Saturday, and had to adjourn, under the urgency of the matter in hand—the Plague Prevention measures—until Sunday at 10.30, sitting until 1 p.m. That course does the Council credit in this emergency.

An official telegram from Sombor to the Lieut.-Governor, at Saigon, dated 15th June, states that Ensign Levay, in command of the gunboat *Massie*, on the 31st May succeeded in taking his vessel up the Kengsa rapid, above Komarat, the most dangerous and difficult of

all the obstacles on the Meikong, and above which there are 500 kilometres of stream presenting no difficulty to navigation.

On Saturday morning, June 30th, about a quarter to eight, Mr. H. V. Cox, an assistant in the employ of Messrs. A. S. Watson and Co., Limited, was discovered dead in his bed. By his side was an empty ounce bottle that had contained prussic acid and one full one. Death had evidently resulted from this poison. On the previous night the deceased after having had a stroll, retired to his room on the premises shortly before midnight apparently in good health and spirits. He was, however, of a very sensitive disposition, and occasionally displayed hypochondriacal tendencies. He was subject to fits of melancholy, though when not so suffering he was a capital companion and was very much liked by those acquainted with him. He was, moreover, a very talented young man and had been in the Colony but three years. His untimely end will be regretted. An inquest will be held.

The "English as she is spoke" in the illustrated catalogues of the Paris Exhibition is this year neither very copious nor particularly funny, says "Atlas" in the *World*. "The Game Store room" would be perplexing without the picture; but that shows "game" to be a misprint for "game." Things begin to "gyre and gimble in the wabe" when we chance upon "Steavy Weather" ("Tamps Gris"), and "Beyond the Stries" is bothersome. "Shevering" ("Frisson"), and "Gardner" for "gardener," may be set down as mere caprices in spelling. "Sterd en Route" is a description of a herd of cattle, and "Evasion" relates to a mounted gentleman who is pursued by a group of horsemen, and who turns in the saddle to fire a parting shot. Now "evasion" is good. The titles of the pictures in the illustrated catalogue of the Society of the Fine Arts are remarkable for the light they shed on the subject. For example, we have 'Ships,' 'Winding Apparatus,' 'Pasture,' 'In the Garden,' 'Open Sea,' 'Woman arranging her Hair,' and 'Lady with a Large Hat taking a Walk.' We can add to this, says the *China Mail*, a very funny example of 'English as she is wrote,' which the last French mail brought to us. It is the production of a 'newspaper collecting fiend,' who is, if anything, a degree worse than his first cousin the stamp collector, or, to give him his more fashionable name, 'the philatelist. The specimen is dated 'Orleans (France), 26th May, 1894,' and is as follows:—'Mister the Editor to the *China Mail*, Hongkong: Sir, You would be very amiable if you could send me one or two copies of your newspaper wrote in English, also another wrote in Chinese letters, wishing have a collection of all newspapers. By the same occasion as you don't most keep probably the cancelled stamps, I take the liberty, asking to you for my son collecting a great deal of cancelled stamps of all kinds: you could enclose them in the newspaper and in exchange if you wish my little son could send you French for yours. Please excuse, sir, my liberty and beforehand thanking you, I remain very truly yours.'

With reference to the anti-missionary riot in the Tung Kun district, the correspondent of the *Chinese Mail* (*Wah Tsai Fat Po*) at that place further writes that Viceroy Li has sent communications to the various Consuls in Canton requesting them to instruct the missionaries within that district to cease preaching in the meantime. The hospital in Tung Kun City has already been closed temporarily, and a rumour is in circulation that the 29th instant is the day appointed for the destruction of the Roman Catholic Church and the Protestant Church and Hospital at Tung Kun. Whether or not this will be an accomplished fact (concludes the correspondent of our contemporary) remains to be seen.

In connection with the outbreak in Pabang it is stated that the Selangor Railway Department have received orders to make preparations for the immediate construction of a light line of railway from Kuba to Raub, along the Pabang Road.

ENGLISH NEWS.

Sir Edward Reed has made a discovery about the *Majestic*, *Magnificent*, and other first class battle-ships, for the construction of which money was recently voted by Parliament. The House of Commons, he claims, was led to believe that all these vessels would be of the *Royal Sovereign* type, that is to say, would have side armour 18 inches in thickness, barbettes of 17 inches, and bulkheads of 16 inches. From this programme, however, a radical departure has been made, and Sir Edward asserts that whether the change be advisable or not, its secret adoption by the Admiralty and the expenditure of many millions sterling on ships so different from those voted by Parliament, are matters calling for prompt and strict inquiry. He contemplates moving the adjournment of the House of Commons for the purpose of drawing attention to these facts.

Mr. John Dillon, M.P., in a speech recently delivered in Ireland, was kind enough to condone the offences of the Irish landlords on the ground that "they came into the country originally as strangers and as enemies of the people, and enemies of the people they had always remained. If they were indifferent to the welfare of the people and put their own pockets and interests before the pockets and interests of the country, it was not to be wondered at, because Ireland was not their country and they never had acknowledged it as such, and never showed the slightest interest in the welfare and honour of Ireland." That is Mr. John Dillon's way of preparing the Irish for the happy union and perfect harmony with England that is to follow upon the granting of Home Rule.

Specifications for the steamships to be used for the new mail service between England and Canada in connection with the Imperial route to Australia have been completed. We take the following particulars from *The Times* :—

The specifications relate to five large steamships, four of which will be for service on the Atlantic, and one for service on the Pacific; but it may be found necessary to order three more for the Pacific, instead of one, so as to allow of a fortnightly service there, should the Ottawa Conference resolve to recommend the Australian Governments to subsidize the Canadian-Australian Company, and should such recommendation be duly carried into effect.

The dimensions of the four vessels for the Atlantic will be—length over all, 572ft.; breadth, 62ft.; depth moulded, 42ft., with a load draught of 30ft. In regard to the last-mentioned figure, they will be the deepest steamships afloat, being two feet deeper than either the *Lucania* or the *Campania*, the reason being that whereas steamers of this depth of 30ft. can enter both Canadian and English harbours and docks, the New York liners are limited by the bar at New York to 28ft. at high water. The Canadian service thus offers a practical advantage which the nautical designer has duly taken into account. He has also been able, by reason of this greater depth, to stipulate for a hull which will at once be stronger and give better results in a sea way, as well as assist in the development of speed. Then, again, owing to the shorter voyage from England to Quebec or Halifax, as compared with that to New York, the new steamships will require to carry 900 tons less coal than the *Lucania* and the *Campania*, so that there will be increased space for cargo, their carrying power in this respect being fixed at 3,500 tons, in addition to nearly 3,000 tons of coal. Provision is made for 300 saloon passengers, principally in two or three berth state-rooms, and 200 second saloon. Special attention will be paid to the accommodation provided for about 1,000 steerage passengers, the belief being entertained that third-class traffic on ocean-going steamships is becoming as valuable, from a monetary point of view, as third-class traffic on the railway, and equally well worth catering for. The Board of Trade officials have therefore been consulted from time to time by Mr. Saxton White on all details respecting the third-class arrangements, and it is believed that in this respect the new steamers will open quite a new era in ocean travel.

With regard to speed, the specifications provide for machinery indicating 21,000 horse power, and the steamships will have twin-screw quadruple expansion engines with four cranks, and boilers of ample power to secure the maintenance of 20 knots at sea in ordinary Atlantic weather.

Huddart has not yet decided whether the steamships shall be fitted with natural, forced, or induced draught, but careful investigations are being made on this point. Profiting by all the experience hitherto gained by shipbuilders, and taking full advantage of the latest improvements in regard to machinery, &c., the designer aims at producing steamships which, apart from size and speed, shall be "a distinct advance over any that are now afloat."

Agitation against the Welsh Disestablishment Bill seems to be growing in England. The English Church Union sums up the provisions of the Bill in the following forcible and succinct form :—

It dissolves every cathedral and ecclesiastical corporation in Wales and Monmouthshire. It deprives the Church of the custody of her cathedrals, episcopal residences, and other ecclesiastical buildings, declaring them to be national property, and only permitting the Church the use of them under certain conditions. It takes possession of the Church's consecrated burying grounds, and vests them in some secular body. It alters the boundaries of dioceses. It transfers parishes and incumbents from the jurisdiction of one Bishop to that of another, without the consent of the ecclesiastical authority, and it presumes to interfere with the constitution of the Synod of the Southern Province, and the rights of the Metropolitan, by attempting to prohibit the Bishops and proctors of the dioceses of St. Davids, Llandaff, St. Asaph, and Bangor from sitting in the Convocation of Canterbury. It secularizes all property devoted to the service of God and the maintenance of religion previous to the year 1703. It lays hands on the funds which the piety of Queen Anne had restored to the Church, commonly called Queen Anne's Bounty, and it vests all that the devotion of Churchmen in former generations had intrusted to the Church for the purposes of religion, and the maintenance of the Catholic faith, in three Commissioners, who are to be paid out of the plunder of the Church—a proceeding which has no parallel in the history of England since the dissolution of the monasteries and the persecution of religion in the days of the Commonwealth. And it applies the funds so acquired, with the exception of such remnants of her property as the Church is to be allowed to retain, to secular purposes, such as the endowment of undenominational education, parish halls and institutes, museums, libraries, an academy of art, or any public purpose of local or general utility for which provision has not been made by statute out of public rates.

Mr. Gladstone, having retired from political life because of a cataract in his right eye, has devoted the leisure thus procured to writing a translation of the Odes of Horace. A specimen of the work has appeared in the *Nineteenth Century*. It shows that the Grand Old Man's fancy is as fine and his literary touch as light as they were fifty years ago. We may note here that an operation for cataract was performed on the 24th of May and that its results were entirely successful.

The South African eleven played their first match in England on the 23rd and 24th of May at Sheffield Park against the Earl of Sheffield's eleven and were defeated by ten wickets.

The part played by Mr. John Burns, M.P., is certainly characteristic of the freedom of the time. Mr. Burns is a member of Parliament, a man of considerable erudition and of good standing. Yet wherever and whenever labour arrays itself in organized resistance to capital, Mr. Burns is to be found cheering on the contest in the interest of labour. We imagined that he would stand aloof from the Cab Strike. But no: its second demonstration in Hyde Park was distinguished by his presence. The speech he made on that occasion is thus epitomized by *The Times* :—

He said that for 14 days the cab-drivers of London had inconvenienced the public, deprived themselves, their wives and children of a few shillings, and had inflicted a loss of £10,000 upon the cabmasters, who were trying to enforce an unfair rate of payment. The cabmen were now organized as they had never been before, and 7,000 of them were dependent upon the strike fund, which he was glad to say was able to give £1,000, or three shillings a man, to the members of the union. The masters, on the other hand, were more disorganized than they had ever been, and were already squabbling amongst themselves. The strike of 1891 did a great deal for the benefit of a small number of the cabmen, who had then neglected the union, and allowed the masters to bully, under-

pay, and illuse them. Now the cabmen must stick and strive and starve until they had got what they were asking for. He admitted that the cab market was overstocked, and said that one result of the strike must be to abolish some of the "butterfly" cabs. In the interests of the public, the horses, and the railway companies too, the privileged trade must be abolished, and he personally was prepared to block the Bills of every railway company which asked permission to come into London or to extend its system unless that company was prepared to do as it did with omnibuses—i.e., to make cabs, omnibuses, and private carriages free and their yards open for ingress and egress.

It is said that Mr. John Burns was twice invited to take office under the Radical Government. Perhaps to make an official of him would be the surest way of imparting to him a sense of responsibility.

The opening days of the cricket season have been characterized by some heavy scoring. Abel, playing for Surrey against Middlesex, scored 136, not out, in the first innings, and Maurice Read 75, not out, in the second innings, while Mr. R. S. Lucas on the Middlesex side scored 97 in the second innings. The score of the season, however, has been that of Mr. L. C. H. Palaret, who, playing for Somerset against Oxford University, scored 181 in the second innings. This match was remarkable for the fact that three innings and three wickets produced a total of 1,060 runs. Barnes has opened well, scoring 95 in his second innings for the M.C.C. against Leicestershire, and it is pleasant to see the veteran, Dr. W. G. Grace, re-crowning himself with laurels in the M.C.C. and Ground against Cambridge University, when he scored 139 in his first innings. This was Grace's hundredth hundred in a first-class match. The great batsman was correspondingly unfortunate, however, playing for his county against Middlesex, when he scored only one run in two innings. Other batsmen who have distinguished themselves thus far are Mr. G. J. Mordaunt, who scored 99 for Oxford University against Somerset; Tomlin, who scored 140 for Leicestershire against the M.C.C. and Ground; Chatterton who scored 113 for the M.C.C. and Ground against Cambridge University, and Mr. A. J. L. Hill, who scored 109 for Hampshire against South Africa. Not so many years ago it was considered a very notable achievement to pile up a century in a first-class match, but the feat is now quite common, and we may observe, in parenthesis, that Yokohama has developed the same faculty, for more than one of our local experts have recently got into three figures. The South African eleven is apparently beginning to feel the ground under its feet. It made the very respectable score of 275 in the first innings of its second match, namely, that against Hampshire. The home team, however, proved much too strong for the visitors; it scored 408 in its first innings, and want of time alone saved the South Africans from another crushing defeat. We do not believe, judging from their form hitherto, that they will achieve any signal success in England.

This is certainly the age of political bladderism—if we may be pardoned the expression. Mr. Gladstone is perhaps the greatest master of high-falutin oratory that England has ever possessed, and much as we admire his talents as a speaker, we strongly suspect that his example has helped to demoralize the public platform. Hitherto it has been a great comfort to recognize that the Radical Party enjoyed almost a monopoly of blarney and bunkum, though not, we regret to say, of abuse. So long as this distinction existed, so long as the Conservatives refrained from playing maudlin tunes on sentimental penny trumpets, one felt that the English gentleman remained true to his straightforward traditions. But alas! the Radical virus is spreading. We find even Mr. Balfour perorating a speech at the Junior Constitutional Club by telling his hearers that the time is at hand "when your services and those of every man devoted to the cause will be required in order to bring to a triumphant issue the great trial which will then take place before the great tribunal of the democracy of this country;" a

piece of fervidness which elicited "loud and prolonged cheers." Has Mr. Balfour, we wonder, developed the pulpit art of rolling his "r's."

Mr. C. Stuart Leckie read an interesting paper on the commerce of Siam at the last meeting of the Indian Section of the Society of Arts. *The Times* summarizes the paper as follows:—

In opening his paper Mr. Leckie briefly sketched the history of English trade with Siam from 1826, when the East India Company concluded a treaty with the Siamese authorities, and said that between 1850 and 1852 the late King, Phra Chom Klao, became anxious to open the country to foreign trade, and invited some British merchants of Singapore to open branch houses in Bangkok. This led to the treaties of 1855-56 with the Western Powers, the conclusion of which was immediately followed by the establishment of five firms directly connected with London, Hongkong, and Singapore. Steam rice mills and "go-downs" soon began to appear in the European quarter, and were the sign of European trading enterprise in the same way that the factories of 200 years before marked the foreign enterprise of that time. The lecturer proceeded to sketch the geographical position of Siam as affecting the trading conditions of the country, and said that the importance of Siam to the British trader lay, first, in the large surplus production of rice from the rich alluvial plains of lower Siam, which, with the introduction of fresh enterprise, would be increased by irrigation works and facilities of carriage; secondly, in the teak forests of northern Siam; and, thirdly, in the pepper cultivation of Chantaboon, while the products of the eastern provinces of Battambang and Siemreap and the great plain of the Mekong awaited development by the extension of the system of railways which the Siamese Government had planned. The lecturer gave interesting details of the rice and teak trades, and said that other exports from Siam of importance were cattle, hides, and horns, sapan-wood, rosewood, ebony, &c. The great customer of Siam was the British Empire. Every British trader in Bangkok and British traders connected with Siam at home or in India, Hongkong, or Singapore, had established their trade relations with the country under the security of the treaty their Governments made with Siam. They had, therefore, a right to require that Great Britain should maintain her part in the treaty with due consideration to the interests she had herself fostered.

Mr. H. S. Maxim, the celebrated gun-maker, has written a remarkable letter to *The Times*. In it Mr. Maxim says that on reading an account of the experiments conducted at the Alhambra to test Herr Dowe's bullet-proof cuirass, his patriotic jealousy was somewhat aroused, for he felt that while all this praise was being bestowed on the German inventor, an equally good, if not better, cuirass could be constructed in England. Accordingly he set himself at 11 o'clock one forenoon to conduct experiments. In an hour and a half these experiments were satisfactorily terminated, and after four and a half hours more a cuirass had been constructed, the whole process of invention and manufacture thus occupying only six hours. The German cuirass is three inches thick and weighs 114 lbs. The English cuirass, affording similar protection, is 1½ inches thick and weighs 6 lbs. Bullets striking near the edge of the German cuirass are apt to inflict dangerous wounds. If constructed so as to obviate this defect, Maxim's cuirass weighs 10 lbs. The price at which the German invention is offered to the British Government is £200,000. Maxim offers his cuirass for 7s. 6d. We know from accounts published in the American press that Maxim's cuirass on trial fulfilled all his declarations about it and that Mr. Dowe has had to take a back seat.

The swift, beautiful *Valkyrie*, the sinking of which has just been announced by telegram, showed herself a magnificent sea-boat on her recent trip across the Atlantic. She ran 246 miles on one day under jury rig. Her commander said that had she sailed like that when racing for the America Cup no yacht afloat would have kept pace with her.

The *St. James's Budget* has the following comments on the recent match for the chess championship:—

Regarding the play, it may fairly be said that it has produced almost nothing that was new.

Steinitz entirely failed with his defence to the Ruy Lopez, and in this he has surprised no one. But we, for all that, would not condemn the P to Q 3 defence unconditionally. We think that it is good enough, provided a player started with the idea of drawing the games. Then, of course, he must play in that sense only. In the Queen's-side opening Steinitz has only resorted to methods which he has often tried before, and with success. That he failed this time may be less the fault of his play than people imagine. In this opening also we think that his tactics should produce a drawn game. Formerly he invariably won simply because he was the stronger player and had safely secured a draw. Now he lost simply because he wanted to win by a line of play which only leads to a draw. His opponent was too strong for that. Moreover, Lasker himself adopted the same strategy, with this important difference, however—he cheerfully marched towards the draw, content to accept it if it came, and content to win if he could get a chance; and the chance was invariably supplied by his opponent's efforts to win with a close and cramped development.

A new use for tattooing is suggested. The idea comes from a lady, who thinks that if it were carried into practice it would save many a broken heart and put an end to bigamy. The plan is that every married man and woman should have a circle tattooed round the finger in place of a wedding-ring. Repeated marriages would be indicated by stars added to the ring. *The Pall Mall Budget*, commenting on the suggestion, says that it would be particularly nice for two reasons: first, because the pain and inflammation of the tattooed fingers would provide a topic of mutual interest and conversation to a bride and bridegroom; and secondly because the unhealed wounds would at once proclaim to the world that a couple was newly married, which is precisely what newly-married couples like!

THE PLAGUE IN HONGKONG.

The following are the latest returns of the plague:—

JUNE 27TH.									
	Bygia.	Kennedy Town.	Alice M. Hospital.	Cattle Depot.	City.	Total.	Increase.	Decrease.	
Admissions	1	2	3	2	—	8	—	9	
Deaths	—	3	2	8	—	13	—	12	
Discharges	—	—	—	—	—	—	—	—	
Under treatment ...	9	43	24	74	—	150	—	5	
JUNE 28TH.									
Admissions	—	4	2	2	—	8	—	—

Deaths	—	4	4	8	4	20	9	—	
Discharges	—	3	—	—	—	3	—	—	
Under treatment ...	11	38	20	78	—	147	—	3	

The following are the returns at the Cattle Depot for the twenty-four hours to noon on July 1st:—

Admissions	16*
Deaths	13
Under treatment	90

* 5 were girls who had been detained in the Po Leung Kuk.

The belief is now generally entertained that the official returns are not a reliable criterion of the progress of the plague. That a considerable number of the actually sick, and a large number of those who are passing through the period of incubation, daily leave the Colony in sampans and by launch there can be little doubt. These passengers would in all probability, if they remained in Hongkong, be new admissions to the various hospitals.

JULY 2ND.

The *N.-C. Daily News* correspondent at Hongkong writes that he has ceased sending plague returns by wire, "as they are now, owing to the establishment of a hospital at Lai-chi-kok, on Chinese territory, close to our borders, quite unreliable as an index of the progress of the plague, large numbers of patients being taken there surreptitiously. Besides, we find," he adds, "that the burials even on the Island considerably exceed the number of deaths reported. At the same time there can be no doubt that the pest is dying out fairly rapidly."

Mr. H. E. Allen was slightly better on July 3rd. Mr. H. F. Benning, a clerk in the employ of Messrs. Jardine, Matheson, and Co., has been attacked. A little Jewish girl has also developed symptoms, as has also an Indian assistant of Messrs. Patell and Co.

The following note is from the *Daily Press*:

The paralysed condition of the trade of the colony consequent upon the depletion of its population and the restrictions imposed in every neighbouring port, is becoming daily a matter of greater gravity, and should not this long lane soon disclose a turning it will not be improbable that the community will have to place its affairs in the hands of the commercial undertaker—the Official Receiver in Bankruptcy. The great inconvenience experienced now for weeks past of obtaining an adequate supply of ordinary coolie labour wherewith to meet the needs of the incoming and outgoing vessels was in itself a serious matter, but latterly graver developments have occurred. The large middle class of Chinese, the bone and sinew of the import trade, have practically shut up their shops and left the colony. Their obligations remain unfulfilled, and their indents are thrown upon the hands of the unlucky importer. Vast stocks of goods consigned to Chinese who are not now in the colony are accumulating everywhere and some difficulty is being experienced in storing the stock as it is unloaded. The colony is full of millions of dollars worth of valuable imports awaiting delivery to buyers who have been literally driven by the fear of death from our shores, and unless they speedily return and commence to move the accumulating heap it is difficult to say what will have to be done. One firm we know has on hand £70,000 worth of kerosine awaiting delivery, and another agent is at his wits end to get rid of an enormous supply of flour. Meantime, steamers arriving continue to augment the trouble, while the exodus of the very people who could, and ought to, relieve the strain continues. In Jervois Street, one of the busiest of the Chinese thoroughfares, seventy houses are closed, and in Wellington Street many shutters are being put up. It seems that one of the reasons for this is a not unnatural resentment of the rather high-handed proceedings of the authorities in connection with the disinfection. The worst part of this useful and necessary work has been accomplished, the foul and horrible dens of the worst districts have been more or less cleansed, and now the whitewashers are tackling places where, though it is desirable the cleansing brush should sweep, there is no immediate hurry and certainly no necessity for rough treatment. In the majority of cases the small Chinese shopkeepers will not object to paying a few dollars to do the work themselves, if they understand that it must be done, and in that case the very effective but not gentle attentions of the soldiers would not be required. We learn that this has been represented to the Governor, and it has been suggested that a few days' notice might be given by the Permanent Committee before the work is done. As it is well to conciliate, as far as is consistent with public safety, this worthy and important class of the native community, His Excellency will probably give the matter his careful consideration.

THE KOREAN INSURRECTION.

IT will doubtless have been observed by our readers that the Governments of both China and Korea are making every possible effort to minimize the dimensions of the *Togaku-to* insurrection, and to persuade the public that the rebels have been completely subjugated and that all traces of disorder have been removed. The motive of these representations is so obvious that we are bound to receive them with the utmost reserve. It is in China's evident interests to foster the belief that the events of the immediate past in Korea were insignificant; that the normal resources of the Korean Government were amply sufficient to deal with the *Togaku-to* disturbance, and that Japan's action in the matter has been exaggerated and precipitate. But there is strong reason to think that the statements circulated by the Chinese Government, and by the Korean Authorities at their instigation, are emphatically misleading. The captains of the *Togaku-to* of course understood perfectly well that whatever chance of ultimate success they might have against the forces of their own rulers, scarcely better equipped or better disciplined than themselves, they could not hope to hold their ground for a moment against a Chinese army, or to effect an entry to the capital after its occupation by Japanese soldiers. That they should quietly disperse, therefore, when Chinese and Japanese troops appeared upon the field, was a foregone conclusion. Besides, it may be said that they have temporarily attained their purpose, since they have secured from the Government a promise that the abuses goading them to insurrection shall be remedied. But are they really quelled? Is there the smallest assurance that were the troops of China withdrawn, the *Togaku-to* would remain quiescent? Is there, finally, any substantial hope that the promises by which they are said to have been momentarily placated will be fulfilled? To answer this last question in the affirmative, we must assume that the corruption and extortion now disfiguring Korean officialdom will be corrected. But no one surely can be so sanguine as to anticipate such a radical change if Korean officials, wedded as they are by every dictate of self-interest to the present evil system, be left a free hand. Let the Japanese and Chinese troops be once withdrawn, without any thorough re-organization of the Korean Administration, and nothing can be more certain than that the old abuses will be repeated and the old disturbances renewed. The *Togaku-to* leaders have at least learned that they can dictate terms to their Government, and that is a dangerous lesson for turbulently disposed men to be taught. For the rest, the Chinese and Korean Governments show a failure to comprehend the situation when they seek to give so much prominence to

the *Togaku-to*'s supposed defeat. The *Togaku-to* are only a symptom of the situation that Japan has made up her mind to correct. Their rising is only one among the many *emeutes* that have disquieted the country ever since 1881. Even their complete extermination would not indicate any radical cure of the gross misgovernment that must, if left unreformed, cripple the kingdom's capacity to be independent and effectually check the development of its resources. It has taken fourteen years to spur Japan to action, and looking at the nature of her present procedure, there is no reason to suppose that the fate of a solitary insurrection will turn her from her purpose. She means to put an end for all time to a state of affairs that renders the peninsular kingdom a menace to her own national safety. The *Togaku-to* are an inconsiderable element in the problem. Moreover, the *Togaku-to* are not quelled.

ENCOURAGING WAR.

IF it were in the interest of Great Britain that Japan and China should come to blows, we could understand the tone adopted by the leading Shanghai journal in discussing the present complication. But since England has every possible reason to desire that peace should be preserved between the two empires, it is at least least ill-judged on the part of an English journal to use language calculated merely to accentuate the situation. The *North China Daily News*, writing on June 28th, says:—

Those in Japan who watch what is going on have no doubt whatever that only force will now induce the Japanese troops to withdraw from Korea. If China accepts the situation, if she is content to be wiped out of the peninsula, to see the King taken to Tokyo, and Korea administered as a dependency of Japan there will be no war between the two Powers; if China is not prepared to back down entirely, and supports the King of Korea in his demand that the Japanese troops shall withdraw, the breaking out of war between China and Japan is only a question of days, perhaps of hours.

It can not be too emphatically pointed out that Japan has no intention whatever of reducing Korea to a dependency or carrying the King to Tokyo. Such misrepresentations of her purpose are calculated merely to excite China's alarm and place difficulties in the way of an agreement between the two Powers. The information already in its possession ought to have saved our Shanghai contemporary from erring so palpably. It knew that Japan had invited China to coöperate in a scheme for radically reforming the administration of the peninsula, and it should have easily perceived that such an invitation was altogether incompatible with the "wiping out" process of which it professes to consider China the intended victim. Japan is not prepared to regard Korea as a dependency of the Middle Kingdom. Her treaty relations with the peninsula place it distinctly on an independent footing. From time immemorial it has been China's policy to interpose between herself and the outer

world a number of buffer States over which the shadow of her suzerainty is thrown as an impalpable guarantee against foreign aggression. But never in any single instance has that suzerainty served as a practical shield. One by one these petty States have found that her protection could not be relied on, and that confidence placed in it proved merely an injury by preventing them from developing independent resources. Korea's case belongs plainly to the same category. China's system of irresponsible meddling paralyses the country's nationalism without offering any tangible protection. Japan can not afford to see Korea overtaken by the fate hitherto common to so many of China's so-called dependencies or tributories. She can not afford to wait until some Western Power finds, in the misgovernment and disorder of the peninsula, a convenient pretext for aggressive interference. But she does not seek to "oust" China or to deny her neighbour's claim to a voice in the destiny of Korea. On the contrary, she has frankly invited China to coöperate with her for the regeneration of the little Kingdom, and the fact of her having given such an invitation should suffice to establish the integrity of her purpose. Our Shanghai contemporary asserts again and again that Japan's statesmen deliberately seek a war with China, preferring that alternative to a rebellion at home. No choice of the kind has had to be made. It must, of course, be admitted that pressure of public opinion in Japan has contributed to determine the Government's action. But the Korean question had to be settled sooner or later, and if the Japanese Cabinet has found an opportunity to carry the problem to a practical solution at the very moment when the whole nation clamours for a strong foreign policy, that must be counted an evidence of the Japanese Cabinet's good guiding or of its good fortune. There could be no greater mistake than to suppose that Japan desires war with China. She has no wish of the kind. We are persuaded that the issue most pleasing to her would be China's frank and equal coöperation in such a scheme of reform as would deprive foreign Powers of any pretext to interfere in Korea's affairs, and would develop in the little Kingdom a genuine spirit of independence together with resources to give effect to that spirit.

THE "HOCHI SHIMBUN" ON THE AMBASSADOR QUESTION.

THE *Hochi Shimbun*, in its issue of Saturday last, is good enough to read us a lesson on the subject of the proposed Ambassador to China. This exhibition of benevolence on the part of our contemporary is not spontaneous. It has its origin in comments that we ventured to make about Count OKUMA's alleged views

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

on the subject. The Progressionist organ writes as follows:—"The *Mail*, one of the semi-official organs, has commented sarcastically upon Count OKUMA'S views concerning the despatch of an Ambassador to China, as if the course proposed by him were extremely ill-advised. If the object of sending 10,000 soldiers to Korea were simply to deal with that country, we should agree with the *Mail* in disapproving the proposed despatch of an Ambassador to China. Our Government's purpose in despatching a large force to the peninsular kingdom being a diplomatic secret, we have no means of knowing it. The fact, however, that no less than ten thousand troops have been sent, whereas, had Korea been the only party to deal with, a single battalion would have sufficed, seems to indicate that the step has been taken against China. China has not only been secretly interfering with the internal affairs of Korea, but has also trampled upon the Tientsin Treaty and even dared to declare the peninsular kingdom, her own 'eastern dependency.' These are certainly facts which Japan cannot and ought not to pass without remonstrance. It may, therefore, be inferred that the large force despatched to Korea by this Government is a means of facilitating the correction of the irregularities above alluded to. We would heartily wish to avoid if possible the sending of an Ambassador to China; but now that the Middle Kingdom has been suffered to act in such an irregular manner, and that, deceived by the hollow threats of the Viceroy Li, this country has thoughtlessly assumed an attitude necessitating the expenditure of a vast amount of money as well as labour, there is no alternative but to bring the affair to a speedy conclusion by sending an Ambassador to the Court of Peking. It seems that our diplomatists despatched a large force without any clear idea as to the enemy to be dealt with, and, consequently, these troops are growing weary, having no foes to encounter. Judging from these circumstances, the object of our Government seems to have been not to fight but merely to make a demonstration, in which case, of course, the Cabinet does not think it necessary to send an Ambassador to China. But in point of fact the despatch of an Ambassador is a measure of absolute necessity. It might be perhaps too severe to accuse the *Mail* of want of insight into the trend of current events, but we cannot help feeling some displeasure at the blind criticism of our contemporary."

We may be blunt of perception, but we fail to discover in the above article so much as a shadow of valid reason for despatching an Ambassador. The *Hochi*'s contention apparently is, first that the Government does not send an Ambassador because it does not want to fight and has no intention of fighting; and secondly, that since China has been interfering unduly in Korean affairs, Japan ought to

negotiate ambassadorially for the cessation of such interference. As to the former point, we are unable to see how the despatch of an Ambassador would be any evidence of a resolve to fight. It would, on the contrary, be evidence of a wish to avoid fighting. As to the latter point, the diplomatic channels ordinarily available having sufficed to convey Japan's purpose and intentions to China, there is no occasion to magnify that empire's position by the very exceptional and signal step of sending an Ambassador. China has always arrogated the right to be approached ambassadorially with reference to the affairs of the small States upon her borders, and has invariably construed the coming of ambassadors for such a purpose as an indirect acknowledgment of her title to be consulted about everything that vitally concerns those States. Such a construction is precisely the thing to be avoided in Korea's case. Japan had nothing to do but to announce her views and invite Chinese co-operation with her programme. Her prime purpose is to radically reform the systems prevailing in Korea and to educate the peninsular kingdom's ability to be independent. She is quite willing to work hand in hand with China for the consummation of those ends, but she does not, as we understand, regard China's consent as essential, and consequently she is not prepared to negotiate for it. We know very well that the Party of which the *Hochi* is an official organ, deems itself under an imperative obligation to denounce and disagree with every step taken by the Government. But the exigencies of an attitude of wholesale opposition become very trying when they require that men habitually clamouring for a "strong foreign policy," and habitually denying China's right to interfere in any way in Korea's domestic affairs, should advocate the sending of an Ambassador to consult China's wishes about reforming the Korean administration. It is a pity that the *Hochi Shimbun* is not in a position to denounce the course it now recommends. That would be a much more congenial and congruous rôle. We can well imagine out contemporary's scathing criticisms of statesmen that stultified their own strong policy by sending an Ambassador to consult with the very Government whose right to be consulted they deny, about the very matter which, they allege, should be settled independently. How the *Kaishin-to* organ would delight to proclaim the weakness of such statesmen. But, unfortunately, the statesmen in power have not furnished any such pleasant opportunity, and so the *Hochi*, enslaved by the necessity of unvarying condemnation, finds itself constrained to advocate the very policy that it would be the first to condemn if adopted by the Government.

WAR EXPENDITURE.

THERE has been a good deal of writing in the vernacular press about the means available for obtaining funds to meet any extraordinary expenditure incurred on account of the Korean affair. The *Keisai Zasshi*—an authority always worthy of attention when financial matters are concerned—discusses the subject in a recent issue, and follows the general lines already indicated in these columns. The surplus lying in the Treasury is 8½ million *yen*, approximately, and this will be increased by about 6 million *yen* at the close of the current fiscal year. A further sum of over 2 million *yen* is available from the Famine Relief Fund. Another source is the Bank of Japan: by increasing its note-issuing power to the extent of 25 million *yen* it may fairly be required to lend 30 millions to the Government at a nominal rate of interest or even without interest. Finally, the State has a good deal of property by disposing of which a considerable sum could be raised. Notable in this category are the railways, which could be sold for fully 60 million *yen*. Thus, without recourse to loans, the Government could easily get together fully 100 million *yen*. It is, of course, impossible to estimate the outlay that may be incurred. The *Keisai Zasshi* refers to the Satsuma Rebellion, when the Government was obliged to keep over 60,000 troops in the field for more than a year. The total expense then incurred was 41 million *yen*. The *Keisai Zasshi* thinks that the country can easily afford to spend twice or even three times that amount on the luxury of a good square fight, and with delightful frankness it urges the Government to declare war, since the sinews are forthcoming. This is not the sort of advice we should expect from a sober journal whose columns are devoted for the most part to financial and commercial topics, but probably our contemporary means nothing more than that, so far as money is concerned, there need be no reluctance to fight. We do not for our own part believe that the Government will have to face any serious financial problem. The indications at present are decidedly in favour of a peaceful issue. It is, of course, possible that Japanese troops will have to remain in Korea for a considerable time, but to keep Japanese troops in Korea is not nearly as costly a business as it would be to keep English or French troops there. The estimate formed by the authorities, we believe, is that if the force now in the peninsula has to remain there until the end of the year, the total expense incurred by Japan will be about 10 million *yen*. It seems absurd to talk of shipping 10,000 troops to a foreign country and maintaining them there for six months for such a paltry outlay as a million pounds sterling, but Japan manages her military affairs with wonderful economy, being

happily saved by the habits of her people from many expenses that would be inevitable were an Occidental people concerned. At all events, it may be accepted as a fact that the financial outcome of the course upon which Japan has now embarked is not nearly so serious for her as some critics would have us suppose. The present Minister of Finance is quoted as saying that he could easily provide 70 million *yen* for military purposes, and he is not a man that talks "off the book."

ROMANES AND THE THEORY OF EVOLUTION.

TO those interested in the progress of science, the news of the sudden death of Mr. G. J. ROMANES, at the early age of forty-six, comes with a sense of personal loss. Few men of his age have ever had so wide and so well-deserved a reputation. In an article published nearly a year ago we alluded to certain aspects of his work. We need not now, therefore, do more than give a brief summary of his achievements.

Mr. G. J. ROMANES was born in Canada. He was the son of a clergyman. In boyhood he was educated in London, Germany, France, and Italy. He then studied at the University of Cambridge, devoting his attention chiefly to biological science. While at this University he made the acquaintance of Mr. CHARLES DARWIN, and began a firm friendship that lasted to the close of the great naturalist's life, and that probably had considerable influence in directing the course of Mr. ROMANES' studies. In 1875, he was appointed Croonian lecturer to the Royal Society. For the next few years he was engaged in researches on the conduction of nervous impulses in some of the simpler organisms, especially of medusæ. These studies, which throw considerable light on the method of evolution of the nervous system, were subsequently incorporated in the volume of the International Scientific series, entitled "Jelly-Fish, Star-Fish, and Sea-Urchins." In 1879, he was elected a Fellow of the Royal Society. Some years later, he became Rosebery lecturer to the University of Edinburgh, and recently he became connected with the University of Oxford—for this august institution has in some degree awakened from the scholastic slumber that endured for two or three centuries after the rest of the world had opened its eyes, and has begun to become aware of the existence of natural science. Mr. ROMANES also delivered many lectures to popular audiences at the Royal Institution, the London Institution, and elsewhere.

The name ROMANES suggests a gipsy origin, and we have been informed that the personal appearance of the biologist showed evidence of gipsy blood. In WILKIE COLLINS' novel, "Heart and Science," a clever and amusing but ill-natured and

unjust piece of anti-vivisection polemic, the appearance and character of BENJULIA, the blood-thirsty gipsy experimentalist, were, we believe, those of ROMANES as seen through the mists of anti-scientific prejudice. We recommend "Heart and Science" to our readers, not as calculated to give them a true idea of ROMANES, but as undoubtedly the cleverest novel WILKIE COLLINS ever wrote. The other side of the vivisection question may be studied in other works. ROMANES himself was unquestionably free from the scientific arrogance and unscrupulousness that characterise BENJULIA; the tone that pervades all his work is one of humility—"the first step in the education of the judgment and the last;" and his vivisection was of a very mild character, being almost entirely confined to experiments on animals so low in the scale as to have only the very rudiments of a nervous system, and therefore, presumably susceptible only to the very rudiments of pain. In the preface to his work on "Jelly-Fish, Star-Fish, and Sea-Urchins," he says, with legitimate sarcasm, that those who on moral grounds object to his experiments may with equal right complain of the horrible cruelty of skinning a potato and boiling it alive. What the leaders of the anti-vivisection movement fail in most cases to see is that there is vivisection and vivisection, and that we cannot in any reasonable manner class the experiments of a ROMANES or a PASTEUR with those of a MAGENDIE or a MANTEGAZZA. That it is difficult to define the point at which lawful experiment becomes detestable cruelty is true; but the difficulty of such definition is not peculiar to vivisection: it is found in every department of practical ethics. But this by the way. We have said enough to clear the character of ROMANES from the imputations cast on him in the person of BENJULIA, and we will turn to consider the magnificent results he achieved in a few rich years of active work.

We hear much talk in these days of the specializing tendency of the age. We are told that no man can be an expert in a science or an art; he has to confine his energies to a limited branch of the science or the art; and even then he will not excel unless he concentrates his attention on a single point of view. At first sight it might appear as if the work of ROMANES were an exemplification of this principle: as a biologist he devoted his attention chiefly to the elucidation of the evolution theory; as an evolutionist he was occupied mainly in studying the origin of the mental powers of our race. But the "tendency to specialism" is only a half truth—the affiliation of all the sciences is no less characteristic of our age; and it is difficult for a man to be supreme in one department of science without being eminent in two or three others, and tolerably well-informed in almost all. So ROMANES, after the death of DARWIN,

undoubtedly the first of English evolutionists, was profoundly versed in psychology, and an earnest student of all the branches of science that combine to constitute anthropology. To one who tells us that in these days no great work is done except by specialists, we may answer with the paradox, "It is true, and it is equally true that in these days, more than ever before, no great work is done by a man that is nothing more than a specialist."

The work of ROMANES on the subject of mental evolution occupies three volumes, published at considerable intervals. The first, "Animal Intelligence," published in the International Scientific Series, contains the data of investigation. What makes this volume interesting above all other collections of anecdotes about animals is this; the stories are collected without bias, they are subjected to searching criticism, and they are arranged in accordance with a definite plan. The work is however a mere prelude to the volumes on mental evolution; "Mental Evolution in Animals," and "Mental Evolution in Man" (also called "The Origin of Human Faculty"). The conclusions arrived at in these works are at variance with those of certain distinguished English evolutionists, notably WALLACE and MIVERT. These writers, the former of whom has an almost equal claim with DARWIN to the honour of the discovery of the principle of natural selection, while holding the organic continuity of man with lower species to be definitely established, consider that in the mental sphere there is a gap between man and other animals which science cannot bridge over. In plain language, they invoke, to account for human psychogenesis, the supernatural causes that have in general been swept aside by modern science to share the fate of the other cobwebs of the past. This view, as a result of long and careful investigation, ROMANES temperately but firmly rejects. At the conclusion of his work on the Origin of Human Faculty, after considering the latest objections to the theory of mental evolution put forward by MAX MÜLLER from the philological camp, ROMANES writes: "I cannot help feeling that there is actually better evidence of a psychological transition from the brute to the man than there is of a morphological transition from one organic form to another in any of the still numerous instances where the intermediate links do not happen to have been preserved. Thus, for example, in my opinion an evolutionist of to-day who seeks to constitute the human mind a great exception to the otherwise uniform principle of genetic continuity, has an even more hopeless case than he would have were he to argue that a similar exception ought to be made with regard to the structure of the worm-like creature *Balanoglossus*." Again: "If, as Bishop BUTLER says, 'Probability is the guide of life,' as-

surely no less is it the guide of science; and here, I submit, we are in the presence of a probability so irresistible that to withhold from it the embrace of conviction would be no longer indicative of scientific caution, but of scientific incapacity."

ROMANES' other great work, an expository, critical, and historical account of the evolution theory, remains unfinished. The first volume, "The Darwinian Theory," has been already reviewed in these columns. We may hope that the author has at least left behind him sufficient materials for the publication of the second volume, "Darwin and after Darwin," which was to contain ROMANES' own views on the factors of organic evolution. What these views were is, indeed, sufficiently well known; but he has nowhere given full expression to them with all the force he was able to command. The great question that divides evolutionists into two schools, "Is natural selection the sole and sufficient cause of organic evolution?" is answered by one school, that of WALLACE in England, of WEISMANN in Germany, in the affirmative. These men are more Darwinian than DARWIN himself, for the founder of the theory of natural selection never committed himself to the view that organic evolution was independent of all factors other than that which his masterly induction brought to light. The other school of biologists, however, as influential in weight though not in numbers, holds that natural selection is not the sole, perhaps not even the chief, cause of organic evolution. To mention a few names only: in England, SPENCER, one of the founders of the modern theory of evolution; in Germany EIMER, who is the leading continental opponent of Weismannism; we may add SAMUEL BUTLER, the ingenious author of "Erewhon" and "The Fair Haven," who in his later life has, as a scientific amateur, sustained the doctrine of LAMARCK that the evolution of an organ depends on a conscious desire of the organism for its possession, and who complains pathetically that as the author of two satires no one will believe that he is serious in his belief that a chicken could grow hair instead of feathers if it wished to do so. HUXLEY, also, holds that the Weismannites are premature in endeavouring to close the investigation of the causes of organic evolution, and it was with reference to their dogmatism that he said, when unveiling the statue of DARWIN at South Kensington, "Science commits suicide when it adopts a creed." But perhaps the most influential of all the biologists that have opposed the conclusions of WEISMANN was the gifted man whose work has just been prematurely cut short; and we may venture to hope that a posthumous volume will enable us to study his mature views on this interesting biological problem.

SOME ANTHROPOLOGICAL FACTS ABOUT THE JAPANESE.

RESULTS of the medical examination of Japanese adults eligible for conscription are embodied in annual reports issued by the War Department. The figures given throw light on the anthropology of the Japanese people. It is evident, of course, that the bases of these figures are not exhaustive, but for the moment we are not in possession of any investigations equally extended and trustworthy. Life-insurance companies might be able to supplement the War Office's statistics, but they have not as yet published anything of value.

The average figures obtained from five years' examination of recruits enrolled at the age of 20 are as follow:—

Height	5.423 shaku	= 5 ft. 4 1/2 inches.
Weight	15.324 kwanme	= 126.57 lbs.
Chest Measure- ment	3.273 shaku	= 32.99 inches.
Difference of chest circum- ference at res- piration and inspiration ...	2.11 shaku	= 25.1 inches.
Cubic capacity of lungs	3,530.88	centimeters.

These figures show the physique of a healthy Japanese adult qualified to serve with the colours. Some allowance has to be made of course for development after the age of 20. Turning to the record of youths rejected on account of deformity or other physical debility, we find that more than one half suffer from defective vision, hernia, or weak joints. The average rejections per 1,000 are only 41.83, from which we infer that the examination is by no means strict, seeing that the average rejections in the case of recruits for the British army in 1890 amounted to no less than 397.43 per 1,000.

An interesting fact brought out by these statistics is the marked difference that exists in the relative physical development of the people of different localities. The Japanese minimum height for an infantry recruit is 5 shaku, or 59.5 inches, against 64 inches in England, 61.6 inches in Germany, and 60.06 inches in France. The age is 20. Out of every thousand adult males in the empire only 10.46 attain this standard of height. Speaking broadly, there are three regions whose inhabitants are conspicuous for not coming up to the standard. They are, first, the provinces surrounding Tokyo, namely, Musashi, Sagami, Kai, Shimosuke, Shimosa, and Hitachi; secondly, the provinces encircling Osaka Bay, namely, Kawachi, Izumi, Settsu, Harima, Sanuki, and the island of Awaji; and thirdly, the provinces forming the Hokurikudo, with the exception of Wakasa. In the opposite category we find, at the head, Kyushu, with the single exception of Buzen, and a long belt of inland provinces, from Yamato, Yamashiro, Omi, Iga, Hida, and Mino, northward to Mutsu, Ugo alone being excluded. Considered more in detail, the island of Tsushima stands on a much higher level than any

other part of the empire, the province of Ugo and the island of Awaji being at the opposite extreme. Thus the average of youths coming up to the standard in Tsushima is 15.40 per thousand, whereas in Ugo and Awaji it is 7.14 and 7.61 respectively. A classification according to the scale of stature shows even more strikingly in favour of Tsushima, especially when we come to the height of 5.6 shaku (66.64 inches) and upwards. The average number of males attaining that stature throughout the empire is 7.19 per 1,000, whereas in Tsushima the average is 45.30 per 1,000. Next to Tsushima comes Iki, an island not far distant. Iki's ratio, however, is very much inferior, being only 19.54 per 1,000. The provinces of Wakasa, Izu, Sanuki, and so forth lie at the opposite extremity of the scale, their ratio being from 2.55 to a little over 3 per 1,000. It may be briefly stated that the people of Tsushima are about an inch taller than those living in other parts of Japan, for whereas in other districts the ratio of men available for service increases steadily in every 1,000 down to a height of 60.59 inches, it begins to diminish in Tsushima after the height of 61.88 inches is reached in a descending scale.

How to explain the differences of physical development exhibited by these statistics is a problem that must be left to specialists. We know that the people of Japan do not come from the same stock throughout, and thus a factor of perhaps very powerful influence presents itself on the very threshold of our speculations. Possibly in the case of Tsushima an admixture of Korean blood may account for the greater stature of the people, the Koreans being undoubtedly of superior height to the Japanese. We may note in conclusion that although only 20,000 conscripts are enrolled each year for service with the colours, fully 200,000 are physically qualified, so that not more than 1 in every ten is taken. Under such circumstances the army ought to contain the flower of the population. The agricultural districts furnish more than one half of the conscripts.

CORRESPONDENCE.

AN AFTERNOON'S AMUSEMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I cannot be sure that what entertained me yesterday afternoon would amuse many readers of the *Mail*—needs and tastes differ so much—but I am confident that all readers of the *Mail* are interested in the source of my entertainment, namely, the weather. Possibly that deeply engrossing fact will make a record of my experience in these columns bearable. I came from Tokyo to this place, Kanazawa, yesterday. Wishing to know a thing or two about Kanazawa weather, I had put a thermometer and an aneroid barometer into my satchel. I had not intended to use either, on my journey. But at Ageo, a station not far north of Akabane, the heat was so oppressive that I took a look at the thermometer to find out what was really the trouble. The mercury registered 89°+, so near 90° that there was no unexplained residuum to bother over concerning my discomfort. I then bethought me it might be diverting to make a meteorological record of the trip. Kanazawa is famous for delightful summer temperature. Let us see how

the transition to it from tropical Tokyo is made. I turned the railway carriage, forthwith, into a meteorological observatory, with this result:—at Ageo, 1.20 p.m. 90° Fahr., Bar. 757.7, fair sky. The records then made, as follows, from Ageo to Karuizawa, might not stand a scientist's tests, but they are good enough for a summer tourist's practical conclusions. The barometer was added to the thermometer to show the extent and rate of the climb from the Musashi plain to the mountain height—for it is a big climb. The figures for the barometer denote millimetres; the thermometer is in Fahrenheit's notation; a "fair" sky is between a "clear" and a "cloudy" sky; the wind during the trip varied from south-east to north. Here is the further record:—

	Time.	Ther.	Bar.	Sky.
Okegawa	1.30 p.m.	88°	757.5	Fair.
Kohsue	1.45 "	88°	757.4	"
Fukaya	2.00 "	86°	757.5	"
Kumagaya	2.10 "	86°	757.3	Cloudy.
Fukaya	2.35 "	86°	756.8	"
Honjo	2.57 "	87°	754.8	"
Shimachi	3.10 "	87°	754.3	"
Kuzugao	3.30 "	87°	752.8	"
Takasaki	3.30 "	87°	752.8	"
Annaka	4.00 "	85°	748.8	"
Isobe	4.15 "	85°	748.5	Raining.
Matsuda	4.35 "	85°	739.8	"
Yokogawa	4.50 "	85°	730.8	Cloudy.
Kumamoto	5.30 "	75°	698.8	"
Karuizawa	6.00 "	69°	678.8	Overcast.

Of course, in this record, which shows a drop in temperature from the neighbourhood of Tokyo to the station at Karuizawa of more than twenty degrees, the change of time from noon to six o'clock in the evening is to be considered; yet this morning the temperature just outside my room was 63°, and is now, at eleven o'clock, only 67°, wind east, and a "Scotch mist" in the air. Of course, too, in the record which shows a reduction in barometric reading from 759 at Tokyo, or 757 at Ageo to 689 (seventy millimetres), no account could be made of whatever meteorologic change in pressure took place in the six hours of travel, but that was probably none of any great importance. The barometer registers now in Karuizawa village 687 millimetres. To such coolness and to such height did the afternoon's ride bring me. Of special interest was the actual mountain climb. Takasaki is not much above Tokyo's level and its heat is about as great as that of the capital city. From Takasaki, however, the railway goes rapidly up hill and the heat down, and from Yokogawa where the real mountain railway starts, in an hour's time, the air pressure went down thirty-one millimetres and the temperature twelve degrees. Probably some of your readers will see no fun whatever in these figures. But, sir, to me it was one of the most entertaining experiences of the year, for each millimetre down on the barometer meant so many feet up into a cooler, purer, more healthful and more invigorating air, and into more welcome surroundings in every way than Tokyo can show on any July day. That is why I have named yesterday's amateur science "an afternoon's amusement."

Yours, &c.,
Karuizawa, July 7th, 1894.

THE MOTOMACHI FIRE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I beg to acknowledge receipt of your note containing *yen* 60, being amount of a subscription raised in the *Japan Mail* office for the relief of the sufferers from the disastrous fire at the Motomachi on the 17th ultimo.

In reply, I am directed by the Governor to inform you that the above sum was transmitted to the proper quarter in order to be applied according to the wishes of the donors, and to take this opportunity to express to you, and through you to the benevolent subscribers, the Governor's warmest thanks for this kind and charitable act on the part of Foreign Residents in Yokohama.

I am, Sir, your obedient servant,

N. MITSUHASHI,
Secretary of Kanagawa Ken.

Kanagawa Kencho, July 7th, 1894.

THE ANNUAL DINNER OF THE JAPAN SOCIETY.

We have received the full text of the speech delivered by Sir Edwin Arnold at the last annual dinner of the Japan Society, the M.S.S. of which has been kindly forwarded to us. Sir Edwin said:—

Your Excellency, Ladies, and Gentlemen.—I am charged with the great and responsible honour of proposing to you the Toast of the Evening, "Success to the Japan Society." On many a festive occasion, when similar duties have fallen to me, I have secretly regretted the distinction which so often interfered with digestion, and generally

found me having very little that was useful to say. But to night I rejoice at the happy fortune that enables me to bear my testimony, however humble, to the good and enlightened work which is being performed by the Japan Society; while instead of lacking materials, I must be rather careful not to exceed the limits of your indulgence in expressing even a few of the countless thoughts and hopes which arise within me as I survey this distinguished assembly; and am reminded—especially by the friendly presence of his Excellency, your Chairman,—of my pleasant days in Japan.

It is only from healthy roots that strong trees are developed, and I think the rapid growth of the Japan Society proves that a noble and natural idea inspired your Founder, Mr. Arthur Dioso, when he planted the germ of this Society. The object is defined in its statutes to be "the encouragement of the study of the Japanese language, literature, history, and folk-lore—of Japanese Art, Science, and Industries; of the social life and economic condition of the Japanese people past and present, and of all Japanese matters." That definition has received large interpretation in the proceedings of the Society, as may be plainly seen by a study of the admirable "First Volume of Transactions," published last year—a volume which, by its variety, brilliancy, and solidity would do credit to any old-established learned association, and is nothing less than a marvel of worthy record in one now celebrating only its third year of existence. You will see the interests of the Society lightly and airily ranging, as some one has said, "from Athletics to Artist's signatures, from Chronology to Chrysanthemum-salad; from Demonology to Dwarf trees, from War-Fans to Wedding ceremonies." But neither your large-hearted founder, Mr. Dioso, nor the distinguished members of the Council surrounding him, nor your Excellency, who represents so illustriously to-night the good-will towards us of His Imperial Majesty the Emperor of Japan; nor you, gentlemen of Japan present among us; nor we, some of whom love Japan almost as much as yourselves—none of us would rest satisfied if the Society were merely an Institution for the encouragement, dissemination, and stimulation of research. It has beyond all these a wider and a deeper purpose, which I have found nowhere better alluded to than in certain words of Mr. Dioso himself, running thus: "It helps to bind closer in bonds of amity the millions who inhabit the Islands in which the sun rises, with the millions who dwell in the Empire on which the sun never sets." That also is why I am a faithful friend of the Japan Society, and a firm believer in its progress and usefulness. I am full of hope that year by year it will increase the mutual knowledge between Japan and England; will cherish the flame of friendship which has grown up so bright between them, and will provide here in London an easy gateway by which Japanese visitors and residents can enter into our home-life as some of us have entered into theirs.

In proof of what I have said, that a great and good idea like this is sure to grow, permit me to cite to you a few facts about the recent advance of the Japan Society, founded so lately as September, 1891. It already numbers 545 members, including the most eminent English authorities on Japanese matters, and friends of Japan from all countries of the world. Fourteen meetings have been held, with an average attendance of 220, at which Papers were read covering a wide field of Japanese subjects—and properly illustrated. Special Exhibitions have been organized extending over several days. The handsome volume, already spoken of, has been produced by the indefatigable labours of Mr. Dioso, and his excellent colleague Mr. Daigoro Goh; and in every respect the Society manifests strength, progress, and stability. I liken it in my own mind to a bamboo clump in my garden at Azabu, which grew so fast that my *ayekya*, the gardener, said, if you hang a hat upon it at night, Danna sama, you would need a ladder to get the hat down in the morning.

Nor let it be supposed that we English imagine ourselves to be the teachers only, and you of Japan merely the learners in this happy and increasing friendship of the two Empires. There can be no countrymen of mine present here this evening, knowing that beautiful Land of the Rising Sun, who will not agree with me that Japan can instruct us in much. We admire, without hoping ever to surpass, the secret of that delicate artistic gift which is almost universal in your nation, and which makes you the Greeks of Asia. Our less supple western fingers will never sweep these subtle curves of life and instantaneous lines of motion with a moistened brush like Okyo or Hakusai; nor turn the tiny ivories into exquisite laughing netsukes; nor mould and chisel bronze and copper eagles which will nigh flutter their wings and flash their eyes at the sunlight. But teach us if you can more of those simple and gracious manners which render exist-

ence in Japan for all alike a dignity and a delight. Implant in us some of that noble reverence for age, that gratitude to parents, that honourable respect for the past which make grey hairs in Japan a natural diadem, and which, by accustoming children to render back to their parents the debts of love and duty, have banished from Japanese homes avarice, acquisitiveness, and domestic anxiety. Instruct us in the arts by which, while we here expend 20 millions sterling a year upon our paupers, you have no poor law, no unions, and yet no mendicants in your streets. Tell us how we can cause our population to delight in cleanliness as yours does, so that your commonest *kuruma-ya* keeps a skin like a Lady of the Court, and feet and hands as fair and seemly. Impart not your religions, for we have plenty of our own, but the gentle and glad some spirit of them which in Japan so beautifies piety, and takes away from life its idle worries, and from death its needless terrors. I sadly think that the Japanese people experience more natural joy in one year of their earthly existence than the English or American communities in their entire span.

It is impossible that a splendid future should not lie before the Empire of the Rising Sun. History foresees it in the wonderful adaptiveness with which Japan has passed through the *o-fishin*—the "great earthquake"—of her Revolution; in the homogeneity of her 40 millions of people; in their loyalty, patriotism, courage, simplicity, endurance, artistic and industrial gifts. History foresees it in that happy fortune which gave her, at the crisis of destiny, an Emperor so enlightened, and resolved and wise imperial advisers, of whom you behold in the Chair, a most worthy example, to assist his Councils. As to her Army and Navy, I had the honour to be present at the military manoeuvres near Nagoya two or three years ago, and saw in the field 30,000 troops which for marching and fighting powers thoroughly pleased the eyes of the best military critics on the field. And once, when I asked of Captain Ingles, the chief Naval Adviser of the Imperial Admiralty, what he privately thought of the Japanese blue-jackets, his reply was, "I do not know how to find fault with them, slow or aloft." But, well nigh most of all, I found my hopes of the future greatness and happiness of Japan upon her women. We are honoured by the presence here to-night of Japanese ladies, and I will suffer that gentle presence to encourage me to repeat what I formerly said before an assembly of "The Noble Ladies of Tokyo." I had received a command from them to speak upon Western Education and Science, in regard to women—but I commenced by these words, "Whatever else we of the West may wish to teach you, neither I nor anybody else must pretend to instruct you how to be better daughters, better sisters, better wives, or better mothers than you are here, and to-day."

I give you, then, Ladies and Gentlemen, the toast of "Success to the Japan Society," well convinced that the unworthiness of him who proposes it will not be allowed to diminish the ardour and cordiality with which you will drink the Toast. And I will couple with it the honoured name of Mr. Arthur Dioso—in praise of whose abilities no words of mine could be adequate. The principle which has guided your founder and his self-imposed labour of love has been the greater glory of beautiful Japan, and the desire to foster amity between her people and ours. In pursuing these objects he has considered no detail insignificant, no toil excessive. His work has been incessant, its responsibilities interminable. He has had to sacrifice time, health, and money, but we may salute him to-day as a veritable conqueror, and make up our minds—one and all—henceforward to assist him in every possible way to carry his work to its large and legitimate consummation.

Ladies and Gentlemen, I give you the Toast, "Success to the Japan Society," with health and prosperity to Mr. Arthur Dioso.

THE IMPERIAL UNIVERSITY GRADUATES.

The following is a list of the graduates of the Imperial Japanese University, Tokyo, for this year:—

COLLEGE OF LAW.

Section of English Law:—Okamatsu Santaro, Kumamoto; Kurachi Tetsukichi, Ishikawa; Kajiwara Kishin, Fukuoka; Fujisaki Tomonobu, Kochi; Kobai Guntaro, Hyogo; Ogawa Kizo, Niigata; Kobayashi Genzo, Yamagata; Takata Tomizo, Hyogo; Miyamoto Rikizo, Ibaraki; Yamana Shotaro, Aichi; Tamaji Tamesaburo, Kyoto; Haruki Ichiro, Nara; Usami Keizaburo, Chiba; Shida Katsuo, Tokyo; Haneu Kei, Nagano; Sato Tomogunaru, Kagoshima; Takase Yasutaro,

Saga; Mizutsu Shikoro, Yamaguchi; Hattori Kosaku, Osaka; Nakayama Miyozo, Okayama; Hikida Origoro, Tokushima; Wani Sadakichi, Tokyo; Fujise Yaichi, Saga; Sada Iyetoshi, Miyazaki; Shishido Shozo, Yamaguchi; Ito Suke-tada, Miye; Emura Tadanosuke, Yamagata; Kusakabe Sankuro, Miye.

Section of French Law:—Shimizu Chin, Hokkaido; Matsuda Komao, Tokyo; Nakamura Shojiro, Ishikawa; Abe Tadakichi, Fukuoka.

Section of German Law:—Nakamura Shingo, Niigata; Tatsuno Muneyoshi, Hokkaido; Seta Tadashi, Miye; Matsuda Ren, Okayama; Maruyama Saichiro, Niigata; Shimme Shingoro, Gumma; Soyejima Yoshikazu, Saga; Miyata Shihachi, Okayama.

Section of Political Economy:—Takahashi Sakuyei, Nagano; Iseki Tomochiro, Ehime; Takenouchi Chokusai, Toyama; Tamura Sohei, Niigata; Ura Taro, Wakayama; Iwasa Teizo, Ehime; Matsumura Mosuke, Shizuoka; Umeno Heishiro, Fukui; Ikeda Torao, Tokyo; Fujii Uhei, Shizuoka; Tsutsumi Kiyokichi, Fukuoka; Tajima Kiiji, Tokyo; Nishikawa Jiro, Osaka; Kurisu Seiryō, Kyoto; Nagai Naoyoshi, Tokyo; Yano Ryoichi, Ehime; Shirasaka Eihi, Kumamoto; Inui Chojiro, Osaka; Yoshikawa Koshu, Tokyo; Fukushima Junichi, Ishikawa; Goda Tama, Ehime; Suda Tsunama, Okinawa; Akuzawa Chokusai, Tokyo; Shimozuka Taro, Fukuoka; Kawamura Utao, Nagano; Kobayashi Ushisaburo, Gumma; Yoshida Kin-saku, Niigata; Murashige Shuntetsu, Yamaguchi; Nishinohara Yunosuke, Kagoshima; Yazaka Kan, Tochigi; Matski Shigotoshi, Ehime; Okabe Chin-jiro, Kagawa; Katsura Kentaro, Hyogo.

COLLEGE OF MEDICINE.

Section of Medicine:—Morishima Kurata, Gifu; Kihara Iwataro, Yamaguchi; Yekuni Yasutaro, Saga; Adachi Buntaro, Shizuoka; Yonekawa Torakichi, Iwaki; Kimura Tatsusai, Kyoto; Moriya Chikakuni, Nagano; Shishida Toshiharu, Aichi; Kashida Kiichiro, Tokyo; Azuma Katsukata, Tokyo; Kawanishi Kenji, Nagano; Fukuoka Saijiro, Hiroshima; Matsuo Chimei, Saga; Takamura Edjiro, Osaka; Kawai Kiyoshi, Gifu; Goto Motonosuke, Gifu; Nishi Hirokichi, Hyogo; Ito Motoharu, Aichi; Takai Miyagoro, Gifu; Miyoshi Shutarō, Yamaguchi.

Section of Pharmacy:—Otsuki En, Osaka.

COLLEGE OF ENGINEERING.

Section of Civil Engineering:—Ofuji Takahiko, Osaka; Tajiro Shokichi, Nagano; Iwata Takijiro, Ehime; Nansai Kokichi, Yamagata; Nakane Kanesaburo, Yamaguchi; Sugura Sozaburo, Tokyo; Aoki Ryozaaburo, Tochigi; Shima Takejiro, Osaka; Mikami Ren, Fukui; Kato Yosakichi, Saitama; Tomita Heichiro, Ehime; Furukawa Taketaro, Shizuoka; Fujii Kumazo, Kochi; Sugeta Usaku, Adachi Tatsutaro, Ishikawa.

Section of Mechanical Engineering:—Matsumura Tsuruzo, Osaka; Shima Yasutaro, Wakayama; Shiba Chiuzaburo, Ishikawa; Kaneko Noboru, Ehime; Hikube Kenzo, Gumma; Tabuchi Seichiro, Hyogo; Kawakami Kunihiko, Yamaguchi.

Section of Naval Architecture:—Fujishima Hampei, Miye; Noguchi Magoichi, Hyogo; Ozawa Sannosuke, Tokyo; Yabashi Kenkichi, Gifu; Endo Oto, Nagano.

Section of Electrical Engineering:—Okamoto Kenjiro, Ishikawa; Shiyo Masujiro, Ishikawa.

Section of Applied Chemistry:—Emori Joki-chiro, Osaka; Kamoi Takechi, Kagawa; Amemiya Wataru, Nagano; Yamanouchi Otokichi, Ishikawa; Yamaoka Shigematsu, Hiroshima; Fujiyoshi Totaro, Kyoto; Ikeo Genkichi, Osaka; Yamao Tomitaro, Yamaguchi.

Section of Mining and Metallurgy:—Noken Aitaro, Hyogo; Yokobori Chisaburo, Chiba; Iijima Junsuke, Yamaguchi; Shimamura Kinjiro, Niigata; Yoneyama Yoshiteru, Ishikawa.

COLLEGE OF LITERATURE.

Section of Philosophy:—Oshima Giiku, Tokyo; Kodani Omosen, Hyogo; Iwamoto Tei, Kagoshima; Kusaba Toshihiko, Saga; Sawamaki Yoshitatsu, Niigata.

Section of Japanese Literature:—Fujioka Sakutarō, Ishikawa; Fujii Otoo, Hyogo; Kusano Kiyotami, Ishikawa.

Section of Chinese Literature:—Miyamoto Seikan, Hiroshima; Nishidani Toraji, Tottori; Nakano Jutarō, Ehime.

Section of Japanese History:—Omori Kingoro, Chiba; Fujita Seichi, Kyoto; Oda Nobunao, Ehime; Kamidani Shiro, Tokyo; Takiguchi Ryo-shin, Hiroshima.

Section of General History:—Yoshikawa Taro-kichi, Yamaguchi; Fuwa Shinichiro, Ehime; Yoshimura Katsuharu, Gifu; Matsuda Sokichi, Ishikawa; Satake Genji, Gifu.

COLLEGE OF SCIENCE.

Section of Physics:—Kato Yoshijiro, Tokyo; Tanishita Ushinosuke, Kagoshima; Nakamura

Tomokichi, Ishikawa; Kawai Yoshibumi, Toyama; Shinowara Masuzo, Nagano; Amanuma Meiko, Kagoshima; Oshima Eisuke, Yamagata.

Section of Chemistry:—Omori Tozo, Fukuoka; Kondo Mazumi, Kochi.

Section of Zoology:—Takakura Usamaro, Kyoto; Omori Senzo, Fukuoka.

Section of Geology:—Hiki Chiu, Fukui.

COLLEGE OF AGRICULTURE.

Section of Botany:—Inagaki Otsuhei, Nagano; Takashima Yoki, Shizuoka; Ukozaka Kisaburo, Shiga; Konuki Shintaro, Tokyo; Kido Tatsusaburo, Hokkaido; Satowara Iwataro, Shimane; Kishi Hidetsugu, Hokkaido; Kurano Setsuji, Fukuoka; Kageyama Minosuke, Chiba; Yokoyama Kyoshiro, Tokyo; Ofuchi Toraji, Tokyo; Obubo Toshikuma, Tokyo; Kazama Chiujiro, Niigata; Nishigaki Kichizo, Hyogo; Yoshida Hideo, Tokyo; Ishiyama Totaro, Tokyo.

Section of Agricultural Chemistry:—Yabe Ki-koji, Gumma; Okumura Junshiro, Fukui; Yagi Kantaro, Hokkaido; Daikubara Guntaro, Nagano; Yamashita Wakito, Ishikawa; Fukamoto Matsaki, Fukuoka; Ishii Junjiro, Hokkaido; Ishizaka Kitsu-ju, Saitama; Tsuji Chotaro, Kagawa; Mitsushima Guntaro, Ishikawa.

Section of Veterinary Science:—Kaji Iwaki-chi, Gifu; Nemoto Bunya, Chiba; Hosoya Katsuo, Ibaraki; Ota Shintaro, Niigata; Imai Ren, Kochi; Noguchi Jirozo, Aichi; Takao Kakujiro, Shizuoka; Oka Genjiro, Ehime.

VICTORIA PUBLIC SCHOOL.

PRIZE DISTRIBUTION.

On Friday afternoon His Honour Judge Wilkin-son distributed the prizes to the successful scholars of the Victoria Public School, the occasion being the annual Prize Day of that institution. Among those present were Mr. C. D. Moss, Mr. J. P. Mollison, Dr. Ritter, Rev. E. S. Booth, Mr. J. Mendelson, Mr. A. J. Wilkin (hon. sec.), Rev. W. T. Austen, Mr. F. Herb, Capt. Hardy, Mr. H. L. Fardel (Head Master), Miss Aebersold, (Head of the Junior School), and many ladies. The walls of the principal school-room, in which the function took place, were tastefully draped with bunting of various nations, while over the dais at the far end was suspended a portrait of Her gracious Majesty Queen Victoria.

The CHAIRMAN, who on rising was greeted with a loud outbreak of applause, said—We have now met together at the end of the seventh working year of the Victoria Public School to hear the report of its progress as an educational institution and to distribute the prizes which have been awarded to its most successful scholars. I wish to thank the Committee for the invitation which they have given me to preside on this occasion and to express the pleasure with which I have accepted it. It is a very great pleasure to me, coming back here, to find an institution of this sort in its seventh year carrying on a work of great usefulness, and it is a great pleasure to me also to see old friends and acquaintances here—friends whom I left leading a very pleasant life and who are now renewing the pleasures of that life in their children.

I am glad to know that this institution, although it was British in its inception, has received from and conferred benefits upon those belonging to other nations. It is right, I think, in the case of an institution which had its origin in the Jubilee of Her Majesty's accession to the Throne, to refer to the pleasure with which we have all learnt of what is to Her Majesty a great source of joy in seeing in the birth of a great grandson an heir to the heir to the heir to the Throne. I wish we had nothing but pleasant subjects to refer too, but such is not the way of life. Not long ago this chair was occupied by one of Her Majesty's representatives, whose death we have all to deplore; and I think I am only expressing the sense of this meeting when I say that we are deeply sensible of the loss which has been sustained in Mr. Fraser's death, and that we deeply sympathise with those to whom his death brought especial grief. (Applause.) I will not detain you further by any introductory words, but will call upon Mr. Fardel to read his report.

Mr. FARDEL then spoke as follows:—Mr. Chairman, Ladies and Gentlemen—This is the seventh time that the friends of the School meet here for the distribution of prizes. We are told that in seven years all the molecules that make up a living body are renewed; during the last seven years the Victoria Public School has undergone no less a change. Not one of the members of the original Committee is here; my genial friend and learned former head, Mr. Hinton, has gone where he could find more scope for his talents and is now a Professor in Princeton; better chances of advance-

ment than Yokohama can offer to school-masters have lured him away. A lady has taken his place in whose praise as a teacher it is unnecessary to speak, and of whom I shall only repeat what a friend of the school told me when she joined the staff of the school: "Miss Aebersold is as good as a man." Of the actors in the first distribution of prizes only two are here to-day, myself and one boy, now in the 1st class of the school. Of the old boys the majority are now in offices in Kobe and Yokohama, and people can judge of the school by them; a good many left the school when the French School was started; a few have gone home to complete their studies in higher institutions. I am proud to say the school had no reason to be ashamed of any of these; none of them were found below the level of boys entirely educated at home and several have done their old school great credit. I shall only name one, the first to leave, young Sarda, who crowned five years of steady work by coming out laureate in the Grand Concours of the French Colleges, and is now about to enter the Polytechnic School; and the last that went home, Wheeler mi., who has taken a very good place in a class of boys one year older than he. During these seven years the school has had many ups and downs, mostly downs. Two years after its foundation it lost a very energetic and enthusiastic friend, Mr. Flint Kilby, now about to return, and it had to face an almost fatal competition in the Tokyo School, a competition which would have probably ruined it several years ago, but for the fact that the Tokyo School cannot prepare boys for commercial life in the East. It had several times confidently been announced that the School would close, but still the closing is only a wish of a small part of this community. That with the disadvantages it labours under, the losses it has sustained, and the formidable competition it has had to encounter, the school still exists is abundant proof that its existence is a necessity for Yokohama. In the career of the old boys, and in the boys now in the school, there is a test of the value of the work the School is doing and by that test it is good. Yokohama might make a better school it is true, but it is not by scattering its resources that it will succeed. It is a loyal support of the school, and putting up with necessary imperfections in the working of it until they can be remedied, that will do it. It has often been advanced that boys educated out here do not acquire the same self-respect and sturdy self-reliance as boys acquire in the home schools, self-respect and self-reliance caused by contact with stronger ones and fostered by the public school spirit. These acquainted with the boys in this school know it is not so; boys everywhere are the same, and they become attached to a small school as well as to a big one. Size after all is only a matter of relativity, and an actually small school may be a big one in a small community. There is no lack of spirit in our boys; I could tell stories, but this is not the proper place and time to tell them. Most of you are acquainted with our system of mark books. Miss Aebersold tells me that it has had a very stimulating effect in the lower division. In the 1st division, where the boys are older, and ought, I thought, to be able to do their best without such mercenary incentive, I tried during the latter part of the term to do without inscribing in double the marks in the boys' own books, and to let them put them in themselves. As I had expected the 1st Class and three boys of the 2nd: Moss ma., Moss mi., and Smith worked as well; but with the others there was a gradual falling off. Next term I shall come back to the old system and look after the mark books myself, although it entails a great deal of extra work. The prizes to-day are awarded according to the work done during the term and the examination just ended, at least for the majority. Only one class was left unchanged at Easter, the 1st one. It would be difficult to find a set of more hardworking, hard-playing, and self-reliant boys than Ozawa, Austen, Booth, Mendelson, Pohl, and Kulin, although the latter has not always come up to what I expected of him. Booth was very helpful in the last part of the term, and took charge of a class while I was left alone. I should like to give them all prizes, but they belong only to the best among the best. I regret especially to have to leave out Booth, as he has not come up 1st in any branch, although his marks give him a good average all round. In the 2nd class Moss ma. and Moss mi. have worked well in all branches, Van Smith in Arithmetic and Latin, Charlesworth and Carst in Arithmetic and Grammar. Cleveland made a fine spurt, but did not keep it unfortunately. No class has suffered more severely from the facility with which parents allow boys to keep away from school on the most futile pretexts. Two have been absent half of last term; five of them kept away on the Race days; all but Moss ma. and Moss mi. have been frequently absent. That, coupled with the

fact that most of them had perforce been shifted up from the lower division at the beginning of this term, had greatly hampered them in their work. As to the unnecessary absences, I hope the parents will co-operate with the School in preventing them. The evil is felt all through the School. Miss Aebersold suffered much from it in the Lower Division. It results in negligence and laxity. A boy cannot think much of his School if he be allowed to keep away from it for a feigned headache, a party, or because he has not done his work. A whole class cannot be kept back for absentees and every hour wasted is a link dropped in the examination of a boy, and means a loss in self-respect, and respect for the law, without which a boy cannot become a good citizen. In the Minor Division, Miss Aebersold reports, the pupils seemed throughout to take a great interest in their lessons stimulated by the marks they got regularly for each branch, and by their desire to please their parents and their teachers. All tried very hard to do their best. Only 3 out of 24 showed a lack of earnestness in their work, and gave trouble during school hours by distraction and want of self-restraint. The best behaved boy in and out of school was Thorleif Jensen, at the same time very conscientious in his home-work; good behaviour and diligence naturally go together. Another boy merits to be mentioned for good behaviour and application: Georgie Woodruff. As to the different branches M. Mollison excelled in Arithmetic, Science, History, and Latin; Robbie Roth in Latin, calligraphy, and general neatness. Harry Cook takes a very good standard in grammar and science. Several pupils, especially C. de Jongh and F. Luther are good at Arithmetic. Others know English History and Geography always perfectly; among them are Teddie Moss, F. Herb, W. Graham, etc. For general success in all branches Jack Chope could be noted, I hope, but unfortunately he was away more than half of last term. In Miss Vincent's small class, one pupil distinguished himself especially among the 9 pupils in it by his perfect behaviour and great success in all branches, notably at the oral examinations. Leonard Graham, that is his name, deserves great praise. In the German Course given by Miss Aebersold to the pupils of all three divisions, those that did their work best and were most attentive during school hours are M. Mendelson, A. Austen, F. Booth, and G. Moss. In the 2nd French class, under Miss Aebersold, the best pupils were those mentioned already in the 2nd division, and W. Johnstone and Charlesworth of the 1st division. If some parents take little interest in the progress made by their children, others expect sometimes too much of their boys 9 and 10 years old, forgetting what they know and were able to do at this age; but our boys, I think, have done their best to fulfil expectations.—(Loud Applause.)

The following programme of recitations was then admirably gone through by the boys:—

- 1.—The Teacher and the Sick Scholar.....Ch. Dickens.
- 2.—"Twelve boys of Miss Aebersold's division."
- 3.—"The Pipes at Lucknow".....H. Lee.
- 3.—Scene from Schiller's "Wilhelm Tell."
- 4.—Brutus and Cassius.....M. Mollison and R. Roth.
- 5.—Scene from "The Bourgeois Gentleman".....M. Mendelson and G. Moss.
- 6.—"The Jackdaw".....F. Booth.

At the close of the recitations the CHAIRMAN rose and said—Now a very pleasant duty devolves upon me, to distribute the prizes. I want to express to all you boys the pleasure with which I have heard the statement made by Mr. Fardel that you are all hard workers, hard players, and self-reliant. It shows that you have followed the advice, perhaps the best advice that the best preacher which this world has seen ever gave: "Whatsoever thine hand findeth to do, do it with thy might." I have to congratulate you boys who have won, and would like to say a word to those who have not won. I am glad to think that where such a spirit pervades a school; those who have not won will make it more difficult next time for those who have won this time to again succeed.—(Applause.) I am sure those who have lost hear no grudge to those who have succeeded, and I hope you will all work together in unity, and one and all of you will now and henceforth be able to bear without abuse the grand old name of gentleman.—(Loud Applause.)

The prizes were then distributed as follows:—

1ST DIVISION.

- ARITHMETIC.—1st class—Ozawa, "Cricket," and class—Charlesworth, "Through Magic Glasses."
GRAMMAR.—1st class—Mendelson, "Senses of Animals," and class—Carst, "Glimpses of Europe."
GEOGRAPHY.—1st and 2nd classes—Ozawa, "Beauties of Nature."
HISTORY AND FRENCH.—1st and 2nd classes—Austen, "Half Hours."
SCIENCE.—1st and 2nd classes—Austen, "Historical Sketches."

GERMAN.—Mendelson, "Frondes Agrates."
COMPOSITION AND LATIN.—Moss, m., "English Literature."
DRAWING.—M. Sakamoto, "Studies in Relief."

JUNIOR DIVISION. (MISS AEBERSOLD'S CLASS.)

- HISTORY.—1st prize, Murray Mollison.
LATIN.—1st prize, Murray Mollison.
PUNCTUALITY AND NEATNESS.—Robbie Roth.
GRAMMAR.—1st prize, Harry Cook.
SCIENCE.—1st prize, Harry Cook.
ARITHMETIC.—1st prize, Cornelius de Jongh; and prize, Frankie Luther.
GENERAL APPLICATION.—1st prize, Freddie Woodruff.
COMPOSITION.—1st prize, Franzli Herb.
HISTORY AND GEOGRAPHY.—1st prize, Willie Graham.
ENGLISH HISTORY.—1st prize, Teddie Moss.
GENERAL SUCCESS IN ALL BRANCHES.—1st prize, Jack Chope.
READING.—1st prize, Pen. Moss.

MISS VINCENT'S CLASS.

- ARITHMETIC.—1st prize, J. Callaco.
READING.—1st prize, Arthur Hearne.
GENERAL APPLICATION.—James Hardy.

MISS AEBERSOLD'S SPECIAL PRIZES.

- GOOD CONDUCT.—(2nd Class).—1st prize, Thorleif Jensen; 2nd prize, Georgie Woodruff.
GOOD CONDUCT AND APPLICATION.—(3rd Class).—Willie Graham.

The last three prizes were presented personally by Miss Aebersold, who, in awarding them, said that a long scholastic experience had taught her that a good boy developed into a good man.

The CHAIRMAN—I wish to congratulate every one connected with the school upon its success and the pleasure it has given me to see how well the efforts of Mr. Fardel and Miss Aebersold have succeeded. I hope they will succeed more and more.—(Loud applause.)

Three hearty cheers were then given for Mr. Fardel, the Head-master, and then one more. Upon quiet being restored,

Mr. WILKIN (hon. sec.) rose and proposed a vote of thanks to Mr. Wilkinson for presiding that day, and for the able manner in which he had conducted the proceedings.—(Applause.) He thought that the genius boy had gone far along the road of evolution towards better manners and behaviour since that day when an old country squire had given it as his dictum that whenever one met a boy one should give that boy a licking, for if he did not require the licking at that moment, he would be sure to warrant it within a half hour.—(Laughter.) He (the speaker) thought that the opportunity should be taken to record a hearty vote of thanks to their good friend, Mr. Poole, who had so kindly taken certain steps last year to help the school prize fund.—(Applause.)

The boys responded to the call with hearty cheers for Mr. Wilkinson and Mr. Poole.

The CHAIRMAN briefly thanked Mr. Wilkin for his kindness in proposing the vote of thanks, and the boys for according it so heartily, and again expressed the pleasure he had experienced at being present that afternoon.

Three rousing cheers for Miss Aebersold brought the proceedings to a close.

LETTER FROM PHILADELPHIA.

(FROM OUR OWN CORRESPONDENT.)

Philadelphia, June 12th.

I am but just returned from a business trip, which carried me out and about in the district affected by the strikes among the miners of soft coal. Idle men abound everywhere. Both the facial appearance and the words one chances to overhear indicate that the miners are, in large part at least, foreigners, Hungarians and Poles principally. All Western Pennsylvania, Ohio, Indiana, and Eastern Illinois are affected by the strike. The miners want more money than the operators are willing to pay. Small establishments are not affected by the strike, as they can easily raise sufficient steam by using the anthracite instead of the bituminous coal. But the railroads and the great iron industries are badly affected. The distress from the hard times, which are still upon us, is augmented by this extensive strike. There is a deal of bad blood in the strike, and, as I went about the streets of some of towns in the region, I noticed how carefully every stranger was scrutinized to see if he was a worker seeking employment, a deputy of the sheriff, or a newspaper reporter. Woe betide the man who is suspected of being one of the three! He has short shift. The military has been called out in places, where there has been much destruction of property, but the mobs vanish before their appearance, only to come together somewhere else. At this time of writing, conferences between the leaders of the strike and the operators' committee

have been held, and compromises agreed upon, but both miners and individual operators repudiate the action of their representatives, and things are worse than ever.

My journey also took me through the region flooded a few weeks ago. On the 21st of May and for several weeks thereafter, tremendous floods poured in on Williamsport, up in the heart of Pennsylvania, and all that section. I saw places where the water had lain in the streets ten feet deep or more. Great "booms" of logs were swept away, heavy bridges were demolished. Riding back in the country, off the railroad lines, I was impressed—I went over some fifty miles of country-roads along the mountains—with the fact that the hills are being stripped of timber, and I have no doubt that this occasions the floods. The trees being removed, the heavy rains run instantly, without let, into the streams, and swell too rapidly to be carried off. Besides this, the building of railroad bridges, log "booms," etc., undoubtedly adds to the obstruction of the water's passage.

If all they tell us, who have recently come home from Japan, is true, there is a deal of sympathy among the Japanese Christians with the advanced views held by some of the best thinkers in America. I sat in the gallery looking down on the Presbyterian General Assembly during the trial of the Rev. Henry Preserved Smith, whose appeal was being entertained. He had been suspended from the ministry of the Presbyterian Church for supposed sympathy with the views of Dr. Briggs, and now he sought redress from the highest court of appeal. When I saw that the great majority of the Assembly were men with grey hair or bald heads, I felt instinctively that it must go against Dr. Smith, for he had taken a position antagonistic to conservative theology. Let me say that, during all the debate, Dr. Smith was gentle and courteous, neither posing as a martyr nor yet exhibiting the belligerent spirit of Dr. Briggs. His argument was simply splendid. I have not a doubt that in ten years at longest the General Assembly will revise its findings. It may not accept Dr. Smith's views of inspiration, but it will certainly allow a man of his character and ability and Scriptural views to remain in its ministry. In the meanwhile, every Presbyterian minister or missionary must needs guard his utterances lest he be suspected of heresy.

Dr. C. H. Parkhurst is off on his summer vacation. He has gone, as he has done for six or seven years past, to make the ascent of some of the higher Alps, and so to forget all his vexatious labours of the past year. He can go with an easy mind, however. He has started a ball rolling that will not stay until it has knocked something over. Our Eastern papers are full of details which go to prove that the Lexow Investigating Committee of the New York Legislature will find out, and the public will surely see, that Tammany and the general official body of New York city has been receiving thousands of dollars for protecting vice. Richard Croker, late Tammany chief, is off for Europe very suddenly. Hardly any one doubts that he has gone to get out of the way, lest he be brought before the Committee. So the New York papers boldly assert. All this goes to show what one determined man, be he minister or layman, can bring about, even in a big city like New York, in the way of reforms.

Any one who has not been in the States within a dozen years will find one great change that must surprise him if he were to come among us now. A little while ago, in the Churches and in politics, everything was in the hands of the older people. Now the young people are coming to the front. Perhaps there is a deal of sophomoric freshness about some of their doings, perhaps their conclusions are rather immature, but the enthusiasm of their gatherings, the manner in which they accomplish things, is surprising. Early in July there will gather in the city of Cleveland, Ohio, some 20,000 young people, members of the Young People's Societies of Christian Endeavour. These societies are of all denominations almost. I have had the privilege of scanning an advance copy of the programme, and a most interesting series of meetings is planned and eminent men are to speak. Then, by and by, the Epworth Leaguers of the Methodist Episcopal Church will meet. A little later comes the great Baptist Young People's gathering in Toioto, to which from ten to twelve thousand delegates will go. Special trains are engaged for these Convention parties, and with steamers flying and bands of young people singing, and generally exuberant joy on every hand, they make their way from the different corners of the land. It is a symptom of something new in our American life, and whereunto it shall grow, or whether it may be but a passing enthusiasm, one may not tell, but at present it is a tremendous force.

PROCEEDINGS OF THE ANNUAL CONFERENCE OF THE METHODIST EPISCOPAL CHURCH.

THIRD DAY.

The Rev. J. Soper, the Presiding Elder of the Hokkaido District, read his report. The work here is improving, advancement has been made at every church. Dr. Soper reported that he had preached and lectured 200 times, and had travelled nearly two thousand five hundred miles in the administration of his district.

The East Tokyo District was reported on by the Rev. S. Ogata. This District contains eight churches and thirteen preaching places. The Ginza Church of Tokyo, under the pastorate of the Rev. K. Miyama, leads the District with forty-four baptisms and thirty-eight accessions. A very interesting work was reported from Kadzusa, where a number of baptisms have occurred. Some advancement has been made in almost every appointment.

The Presiding Elder of the Shinshu District, the Rev. S. F. Draper, being in the United States on leave, his report was read by the Rev. J. G. Cleveland, the acting Presiding Elder, who also made a supplementary report.

The report of the Yokohama District was read by the Rev. J. G. Cleveland.

An interesting letter was read from the Rev. M. C. Harris, a former member of the Japan Conference, now Superintendent of the Japanese Mission on the Pacific Coast of America, which was organized in 1886. After a fraternal greeting to the Conference, he stated that the mission had now been formed into a district, with five churches organized, and nine branches, and nineteen pastors and evangelists. Since that time over eight hundred persons had been baptized and more than fifty preachers sent out to work in Japan and on the Pacific Coast. The conversions for the year 1893, were more than eleven hundred. In the afternoon, at 2.30, the Anniversary of the Woman's Foreign Missionary Society was held. Mrs. C. W. Van Petten, presiding. A general report of the year's work was read, in English, by Miss M. A. Spencer, and in Japanese by Miss Iida.

A new industrial school building has been opened at Aoyama during the year, making seven boarding schools carried on by the society. The society has eleven day schools, two night schools and between thirty-five and forty Sunday-schools. Four missionaries have gone home on furlough during the year. Three new missionaries, Misses Heaton, Singer, and Alling, have come out, and Mrs. Van Petten has returned to the work.

Mrs. Mary C. Nind, of Detroit, one of the secretaries of the society, made the address of the afternoon. She traced the growth of the society from a thought in the mind of a single Christian woman, twenty-five years ago, until it now numbered more than a hundred and fifty thousand members. Twenty-five years ago the society employed but a single Bible woman; now it has more than three hundred, and enrolls twenty-five thousand women and girls in the schools under its care. The total contributions of the society aggregate more than \$3,000,000, gold, and it is hoped that by the end of the present year that they would amount to four millions.

In the evening the Conference Home Missionary Society held its anniversary. The work of this society is in the Riu Kiu Islands and its missionary, the Rev. C. Nagano, presented a very interesting report.

FOURTH DAY.

On Saturday morning, a class of fifteen young men, who had completed the two years of the course of study requisite to admission into full membership in the Conference, was called up, and Bishop Nind gave them an earnest address on the work of the Ministry. After the reports of their examinations, ten of them were elected to receive ordination.

The Secretary of the Japan Scripture Union, in a brief address, presented the work of that society. The Conference by a rising vote expressed their confidence in the work of the Scripture Union and pledged themselves to its support.

SUNDAY SERVICES.

At nine o'clock on Sunday morning an experience meeting was held, in which many took part, after which the Rev. Eber Crumphy, of the Canadian Methodist Mission, led in prayer, and a sermon was delivered by Bishop Nind—the Rev. T. H. Correll of Nagasaki interpreted it into Japanese. The Bishop's text was Romans vi. 22. The following is a brief abstract of the sermon:—

"There is a tone of exhortation in these words, and rightly so, for it is a great thing to be made free from sin and to have fruit unto holiness and in the end everlasting life. The apostle in this

epistle has much to say about sin. Sin is the bane of the universe. No doubt if sin were entirely eliminated there would still evil enough remain to make this a "vale of tears," but were sin removed this would be a very tolerable place. As it is, sin is in the world. To a pure mind it is abominable, to every one it is hurtful. To allude only to the great evils; intemperance wrecks the peace of homes; impurity, perhaps, brings the swiftest destruction to those who indulge it; and war, the scourge of the ages; what scandal it is that in the last part of the nineteenth century nations are keeping up their standing armies and formidable armament, and only waiting for some pretext to fly at each other.

It seems strange that the world does not rise up and put away sin as the giant nuisance of the earth. There are several reasons why we do not.

We are born in sin. The natural man can not enjoy spiritual pleasures. He understands only such as come through the appetites and senses, and he clings to sin for the pleasure he finds in it.

A partial explanation may be found in the habit we have fallen into of making light of sin, in the pet names by which we call it.

A further explanation may be found in false teaching in regard to man's responsibility. Which makes sin a necessity and regards the evil-doer as deserving pity not punishment, and the well-doer as a subject of envy not of praise.

A bad theology is also partly responsible. Any theology is bad that finds a legitimate place for sin in the heart of a believer. It makes the act of dissolution able to do what the grace of Christ cannot accomplish. As long as we live we shall be subject to the assaults of temptation, but we may be able to be triumphant through Christ.

Let me now refer to the instruments of righteousness. The first of these is the conscience. No man is born without one, and no sinful retreat is so hidden that a man will not carry his conscience with him thither. A great deal of the unrest in the world to-day is due to a disturbed and tormenting conscience. God made the soul of man for Himself, and it can find no rest until it rests in Him.

The second of these instruments is the Word of God. It is the friend of righteousness and the stalwart and uncompromising enemy of sin. Good people read the word of God, and the more they read it the better they become. Thieves have no use for the Bible.

The Word of God is powerfully enforced by the Spirit of God. There is a sense in which they are right who say that the Spirit of God is never given to an unregenerate man, as the witness and seal of adoption into the Divine family it is confined to believers, but the enlightening and persuading influence of the spirit are given to all men. Here is the ground of hope for certain who have never heard of Christ. The late Dr. Whedon used to say, "God does not damn men by continents." They who live up to the light they have will be saved by that light.

Fourth, the agencies of the Christian Church are all favourable to righteousness. The chief of these agencies is preaching. Not by a mere liturgical service of prayers but "By the foolishness of preaching it pleased God to save them that believe." It is said that the power of the pulpit is gone, that people do not go to church as they once did. The power of a preacher, however, cannot be estimated by counting his hearers; a hundred hearers may so translate the sermon into Christian living that it may be preached again and multiplied a thousand times. Every preacher has his hearers, people who are especially helped by what he has to say, people to whom he has an especial message. We are not all constituted alike. Some of the people in Corinth did not like the Apostle Paul's style, but there will always be some whom we can benefit. Do not try to be "star" preachers. Preach the simple truths of God's Word with a burning zeal and the motion of the Holy Ghost, and people will be saved and freed from sin by it.

For by these instrumentalities a great multitude has been raised up and been freed from sin. With this freedom comes a difference in the man's relation to God. They become so servants to God. Every man has some service, and there is nothing dishonourable in the service of God. God will require nothing shameful. He is a considerate master, He never overtaxes His servants. He helps them to bear the cross. Indeed, servant is not God's favourite word. "I have called you friends."

The immediate outcome of all this is, we have our fruit unto holiness. The human tree is always a fruit-bearing tree, but if we want fruit unto holiness we must make the heart holy. The graces of character must not be merely pinned on, we must be branches of the true vine.

The fruit of our lips must be a fruit unto holiness. How wonderful is this gift of speech! how responsible we are for its use. Yet the conversa-

tion of some people will lower your whole tone of spirit in five minutes!

In our conduct we can glorify God and exhibit the fruits of holiness. There is a strange notion afloat that the ideal saint is always absorbed in devotion. Prayer should be the preparation for work. The world wants busy feet, tireless hands, and strong shoulders who will help to carry the burdens of life.

Everything that a good man does in the spirit of prayer and faith becomes Christian work.

Lastly, the final outcome. The end is everlasting life. The end is coming, it is coming to all. Only the Christian religion offers any consolation. It offers everlasting life. Mere immortality if that is all. But God has not left us with that. Eternity will be a constant progress, growing in everything. This is a beautiful world, and yet when God shall open the first door into heaven this world seem like an Aztec hovel with its dirt floor and mud walls, and God will go on opening door after door into larger and larger rooms forever and ever.

THE KOREAN ASSASSINATION CASE.

We give herewith the judgment of the Tokyo Local Court in the case brought against Li Ishoku and his associate, Kawakubo Tsunekichi, the charge being non-consummated murder and murderous instigation.

The defendant, Li Ishoku, believed that the existence of Boku Yeiko, Kim Ok-kyun, Ri Keikwan, Tei Ran-kyo, Ryu Kakuo, Ri Gisho, and others, all of whom had taken refuge in Japan after their unsuccessful revolutionary émeute in Korea in 1884, was prejudicial to the public tranquillity of that country. With the intention of encompassing their destruction, in consequence of which he would obtain promotion and rich reward, the defendant came to Japan in April (O.S.) of 1892, pretending certain business transactions in hand. Shortly after this he formed a close intimacy with Boku and Kim, secretly waiting for an opportunity when he might carry his intention into effect. He was convinced that it would be utterly impossible for him to cope single-handed with the task, so he resolved to take some associates in his scheme. In the meanwhile, Hong Tjyong-ou, who had gone to France some years before, reached Japan on his way to Korea. This was in December of 1893. Li Ishoku called on him, and pretending that the destruction of Boku, Kim, and their fellow refugees was the will of the Korean King, finally won him over to his side and obtained his consent to act in harmony. Kwakubo Tsunekichi had been Li's intimate acquaintance while in Korea, and he, too, was persuaded to join the undertaking. Li further won over, in the same manner, two Koreans named Ken Toju and Ken Zaizu. They were about starting from Japan to Korea in consequence of instructions received from their Government, but Li craftily assured them that it would be madness to obey this behest, for the Home Government must, said he, already suspect them of having made common cause with Boku and Kim, so that they might certainly expect capital punishment so soon as their feet landed on Korean soil. In short, Li succeeded in terrifying them and winning them over to his own plans. Li then began to devise measures for the encompassing of the death of Boku and Kim. To murder both while in Japan, he thought quite impracticable. So at last he managed to lure Kim over to Shanghai, there to meet his death at the hands of Hong, while he found means to destroy Boku in Japan. In pursuance of this design, Li got Kim to go to Shanghai, for which place he was made to leave on March 10th of the present year, in company with Hong Tjyong-ou, Gu Hojin, and Wada Yenjiro, the last named being Kim's Japanese attendant. Li accompanied the party to Kobe, but on staying one night at Osaka (the 11th) Li made Hong lodge at his (Li's) mistress's house at Sonezaki-mura, near Osaka, and there arranged with Hong the manner in which his plot was to be carried out and Kim assassinated. It was agreed that the party should put up at the Oriental Hotel in Shanghai, and that if the steamer conveying them to Shanghai should reach that port at night, then Hong should shoot Kim on his way from the landing-place to the hotel; but if the arrival should take place in the day-time, then the deed should be perpetrated in the third story of the hotel, where rooms should be taken, and that in this case also Hong should use a pistol; but finally that if they were compelled to take rooms on the second, or ground floor, Hong should use a dagger to despatch Kim. Li then gave Hong a dagger, a pistol, and a suit of Korean clothes, to which a pouch was attached wherein the weapons were to be kept. The party left Kobe on March 23rd,

reaching their destination at 5 p.m. on the 27th of the same month. They proceeded at once to the Oriental Hotel and took rooms on the second floor. At 3 p.m. on the following day, Hong, dressed in the Korean costume and carrying the weapons given him by Li, stole into Kim's room, and taking advantage of the temporary absence of Kim's Japanese attendant, Wada, who had just gone downstairs, shot at and killed Kim.

The foregoing facts are clearly established, but in order to prove the existence of the offence of murderous instigation, the instigator must be shown to have incited to the commission of an act which, according to the law of Japan, is either a major or minor offence. In the present case, the defendant Li did incite Hong Tjong-ou, a Korean subject, to assassinate Kim Ok-kyun in Shanghai, or on Chinese soil, a territory therefore beyond the pale of Japanese jurisdiction; as such, the action of the assassin cannot be regarded as a criminal offence against the law of Japan. The defendant, Li, therefore instigated the perpetration of a deed not criminal under Japanese law, so he cannot be regarded as guilty of a criminal offence. In the same way of reasoning, we find that Kawakubo Tsunekichi abetted a non-criminal act and cannot therefore be considered legally guilty.

After Li Ishoku had seen Kim and his party off at Kobe, he returned to Osaka and repaired to the house of his mistress in Sonezaki-mura. While there he cut short his hair and donned foreign clothing, in order to facilitate his escape from Japan to Korea after the consummation of his plot to kill Boku Yeiko with the aid of Ken Tojin and Ken Zaiju. He came up to Tokyo again on the 25th of the same month and joined the defendant Kawakubo at the Murai Kan, a hotel in Sakurada, Hongo District, when both had for some time been in the habit of lodging. It was Li's intention to decoy Boku, Tei, and Ri Keikwan to this hotel and there effect his schemes against them; yet repeated efforts to bring them thither proved unsuccessful. In the meantime, the period in which Hong was to assassinate Kim Ok-kyun at Shanghai drew nigh, and Li was greatly troubled with the thought that so soon as the intelligence of Hong's success reached Japan, Boku and his fellow-refugees would immediately be on the alert and all the time and labour spent in the perfection of his schemes would then be of no avail. Just at this juncture Ryu Kakuro called on Li, and told him that Boku had discovered evidences of some evil design on the part of Li against himself and friends; Li was therefore required to go to the Shinrin-gijuku (a sort of school which certain Japanese sympathizers had established for Korean refugees) in Ichibancho, Kojimachi District, on the 28th of that month and explain and clear himself from the doubt which Boku and others entertained against him. Ryu Kakuro strongly urged Li to go to this house on the date fixed, as Boku intended starting on a journey into the interior on the morning of the 29th. A message of similar purport also reached Li from Kim Taigen, whom he had caused to reside in that school. Baffled in this manner, Li determined to have recourse to a desperate measure. He believed that if he should go to the boarding-school Boku and his friends would tie him hand and foot and then, gathering round him in numbers, put urgent questions to him; this moment of excitement he might, so he thought, make use of by getting Ken Toju and Ken Zaiju to rush into the house and then, with pistols and daggers, put an end to his intended victims. So, early next morning, Li told his confederate, Karakubo, to give a brace of pistols and two daggers to the Kens; he was further to tell them to come to the school at the appointed hour and then do as he had ordered them. Li left his hotel at about eight o'clock on the day in question, and reached the Shinrin-gijuku at nearly eleven. Ri Keikwan and Tei Rankyo came out to meet him and then, after putting a few questions to him, bound him hand and foot as he had expected. About half an hour later, Boku himself came in, whereupon all three began to question Li very closely. To all interrogations he replied by falsehoods, secretly longing all the while for the promised sudden onslaught of the two Kens. The latter were, however, not so desperate as their leader, and did not venture to carry out his behest. It is true that they did at first decide to obey Li's injunctions, but their heart failed them at the thought of the extraordinary rashness of the deed required of them. While they were thus hesitating, Tei Rankyo and Boku Heikichi suddenly made their appearance, saying that they had come to fetch Li's trunk, who had told them to do so. This disconcerted the Kens entirely, and as they did not go to the school, Li's desperate plot completely failed.

The foregoing facts have been clearly established, but being acts leading up to, without consummating, murder, they cannot be regarded as con-

stituting a legal offence. The defendants Li Ishoku and Kawakubo Tsunekichi are therefore adjudged not guilty, in accordance with the provisions of Arts. CCXXXVI. and CCXXIV. of the Law of Criminal Procedure.

The judgment passed on Boku Yeiko, Ri Keikwan, Tei Rankyo, Boku Heikichi, Jio Ryojin and Ryo Shomai, charged with forcible confinement, battery, and examination with torture, is as follows:—

The defendants, Ri Keikwan and Tei Rankyo, had obtained a knowledge of the fact that Li Ishoku was engaged in a plot against the lives of Boku, Kim, and others. Ri Keikwan told Boku of this, and upon conferring with other friends, it was determined to summon Li Ishoku to the boarding-school in Bancho and there interrogate him. In spite of repeated invitations, Li did not come, so, after consulting with Boku, Ri Keikwan got Kim Taigen to write a letter to Li, in which the latter was requested to appear at the school by ten o'clock in the morning of the 28th, as Boku had something he wished to tell him before setting out on a county-tour on the following day. When Li came to the boarding-school on the morning in question and ascended to the second floor of the house, he was met by Ri Keikwan and Tei Rankyo, who, after putting a few questions, seized and bound him hand and foot with hempen cords. Ri Keikwan further struck Li in the face with a iron fire-tongs (*hibashi*), inflicting a wound on the nose, the injury however not being so severe as to prevent him from pursuing his business or to confine him to his bed. Tei Rankyo produced a sword-stick with which he endeavoured to intimidate Li and thus cause him to disclose his secret. Boku returned to the school shortly after this and proceeded to examine Li as to the facts in the case; he, moreover, sent for Li's trunk to his lodgings and examined the contents. Between two and three p.m. of the same day, Li was loosened from his bonds, but was kept a prisoner in one of the rooms on the second floor of the house until two o'clock in the afternoon of the next day.

The foregoing facts have been clearly established by the examination of the witnesses Kim Taigen, Ryu Kakuro, Shiba Shinro, Itogawa Kinji, and referee Matsuda Jinjiro; by the affidavits made by Li Ishoku, Kawakubo Tsunekichi, and six other defendants at the preliminary examination; and finally by the producing of the hempen cords and fire-tongs found on the spot where they had been used. We find, therefore, that Li Ishoku, having murderous intentions against Boku Yeiko, Ri Keikwan, and Tei Rankyo, went to the Shinrin-gijuku on the day specified; and that while their lives were not in imminent danger, the defendants, Ri Keikwan and Tei Rankyo, illegally bound Li Ishoku, and subjected him to examination under torture, the former going so far as to commit an assault upon his person and inflict a slight wound. The defendants subsequently released Li from his bonds in accordance with the instructions of Boku Yeiko, yet kept him in custody in a room. Referred to law, the actions of the two defendants correspond with the provisions specified in Arts. CCXXXIII. and CIV. of the Penal Code, while the assault made by Ri Keikwan and the infliction of a wound fall under Art. CCCXXIV. and the last clause of Art. CCCI. of the same Code. There being, however, certain palliative circumstances connected with their case, their punishment shall be lessened by two degrees in accordance with Arts. LXXXIX. and XC. of the same Code.

The charge preferred against Boku Yeiko, Boku Heikichi, and Jio Ryojin, of having bound Li Ishoku and subjected him to examination under torture, as well as the charge preferred against Ryu Shomai of having abetted the illegal detention of Li, are not proven; these three are therefore declared not guilty in accordance with the provision of Arts. CCXXXVI. and CCXXIV. of the Law of Criminal Procedure.

The defendants Ri Keikwan and Tei Rankyo are sentenced to major confinement for the period of one month and ten days, and are further to pay a fine of two yen. The defendants Boku Yeiko, Boku Heikichi, and Jio Ryojin shall be liberated, as being not guilty.

The Public Prosecutor in attendance on this case declared himself dissatisfied with the judgment passed on Li and Kawakubo, and appealed to the Supreme Court on the day on which the decision of the Court was announced. Ri Keikwan and Tei Rankyo were also dissatisfied with their sentences, and immediately appealed to the Tokyo Court of Appeal.

INSULT TO THE BUDDHISTS OF JAPAN.

THE MAHANT OF BUDDHA-GAYA REFUSES TO ALLOW THE IMAGE OF LORD BUDDHA TO BE PLACED IN THE TEMPLE.

We have received the following advanced proofs:—

The following article is reprinted from the *Indian Mirror* (Calcutta) and will, with the correspondence following, fully explain itself; and we trust, with this effect, that all Buddhists will protest against the high-handed action of the Mahant, and not rest until full reparation is accorded to them. We also expect that the British Government will give us that protection which is justly due to us, by enforcing the Mahant to compliance with the wishes and rights of the Buddhists.

THE BUDDHISTS AND THE HINDU MAHANT OF THE MAHA-BODHI TEMPLE AT BUDDHA-GAYA.

Very bad news has reached us from Buddha-Gaya. It appears that Mr. Dharmapala, Secretary to the Maha-Bodhi Society, accompanied by the High Priest of Japan, went recently to Buddha-Gaya for the purpose of setting up a sacred image of Lord Buddha, said to be seven hundred years old, in the historic Maha-Bodhi temple there. Mr. Dharmapala had previously communicated with the Collector of the District, and obtained through him the consent of the Hindu Mahant, who is in possession of the temple, for the enshrining of the image. The ceremony was to have taken place on the 19th instant, a day considered to be very sacred by the Buddhists, but at the eleventh hour, the Mahant changed his mind, and refused permission to have the image set up in the Maha-Bodhi temple. If the Buddhists had insisted upon their rights there would have been a sanguinary riot, for, we are told, several thousand men had been got together by the Mahant to enforce his churlish refusal. A detailed account of the occurrence has been sent to us by Mr. Dharmapala, and we have given it a prominent place in another column, so that Government may know exactly its duty in the matter. Let it be known that the image was the gift of all Japan to the holiest of Buddhist shrines, and that the Buddhist Archbishop of Japan came all the way to India to set it up with befitting pomp and ceremony in the Maha-Bodhi temple at Buddha-Gaya. We can, then, well conceive the magnitude of the insult, given by the Mahant in the name of the Hindu nation to not only the Japanese, but also to all the Buddhist races in the world. The duty of the Hindus is clear, they must repudiate both the Mahant and his utterly unjustifiable attitude towards the Buddhists of late. Several comparatively unimportant images have been set up before now by the Burmese Buddhists in the temple at Buddha-Gaya and the Mahant did not once object. Buddhists have always worshipped in that temple, and brought rich gifts, and the Mahant has thriven fat, and this is the sort of gratitude with which he has repaid them! The present insult to Japan is such that whatever reparation the man may be compelled to make, cannot be considered too much. The Buddhists have hitherto dealt much too indulgently with him, so that there seems to be no limit now to his sauciness. The Maha-Bodhi temple is not a Hindu temple, though it has passed into the possession of a Hindu Mahant. The temple by right belongs to the Buddhists; it is their holiest shrine, and when they are ready and willing to make adequate recompense to the Mahant to forego his possession, why should they not get back their own? Are Hindus so intolerant and rapacious as to encourage the Mahant in his unjust and violent acts? We think not, and we are sure all enlightened Hindus deeply sympathise with the Buddhists in their pious attempt to re-obtain by all lawful means the possession of their holiest shrine. But the armed resistance of the Mahant to the setting up of an image of Buddha in the Maha-Bodhi temple, and that after he had once definitely consented, is an event from which very serious complications are likely to arise. It cannot be that Japan will quietly bear the gross insult offered by this Hindu priest, and not only the Japanese, but every Buddhist, will consider the insult as given to Gautama's entire flock. When the news of the outrage reaches Japan, her indignation will be something which we would not like to picture to ourselves. The insult will be considered as given not only by a Hindu priest or the Hindu people, but also by the British Government of India. If the Government takes no immediate action in the matter it will at once alienate the sympathy of Japan, China, and Siam, and political consequences may ensue for which it is not prepared. After the recent occurrence at Buddha-Gaya, the continued possession of the

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

Maha-Bodhi temple by a Hindu Mahant will lead to dreadful results. Let the Mahant have whatever compensation is just under the circumstances, but he must go. The Maha-Bodhi Society was established by Buddhists to get back their temple. We understand that the Government at one time sympathized with the principal object of that Society. But the cow riots have apparently unnerved it, and the Buddhists are left to the mercy of the Mahant. That priest has now taken the law into his own hands. But let the Government of India reflect what it all means. We assure it that the number of Hindus would be very small who would not be glad to see the restoration of the Maha-Bodhi temple to the Buddhists. Let the Government ascertain the fact for itself and it can easily satisfy itself. But the Government must know that this last act of the Mahant is no less a disgrace to itself than it is to him, or to the Hindus on whose behalf he pretends to speak.

THE BUDDHISTS AND THE HINDU MAHANT AT BUDDHA-GAYA.

(TO THE EDITOR OF THE "INDIAN MIRROR.")

SIR,—Things have come to a crisis. The Mahant did not allow the Buddhists to set up the image in the Maha-Bodhi temple, brought from Japan, as had been previously arranged. Several months' notice was given to the Collector that a holy image would have to be placed there; and a month ago, the Collector, after having consulted with the Mahant, wrote to me to say that the image could be enshrined in the temple on the 10th instant, the full-moon day, being the anniversary of the birth and of enlightenment of Lord Buddha. Every preparation was made, and a lot of expenses incurred to celebrate the festival, as it was the first of the kind after the expulsion of the Buddhists, 700 years ago. Two days previously, the Mahant became aggressive, and refused to let us have the image set up in the temple. His arguments were that the temple is Hindu, and that unless he consulted the Hindus, he could not allow us to set the image up, and that if they consented thereto, then a *pranpratishtha* ceremony should be performed. Nearly a dozen of images have been set up by the Burmese in the temple, but no objection was ever raised; and, for the first time, this aggressiveness is shown by the Mahant. The Mahant, after having organized his people to attack us, came to Gaya, and then went to Patna to see the Commissioner. As the District Magistrate, Mr Macpherson, feared a riot, I had to put off the ceremony of placing the image, sent by the great Japanese nation; an image, 700 years old, full of historic interest, and presented by the nation to be enshrined in the Central Temple of the Buddhists. And when the Buddhists, according to precedent, go to set it up, nearly 5,000 men, armed with *lathis*, &c., are prepared to resist this benevolent action! A great nation is insulted, and the Buddhists who have the right and freedom to perform worship in their own temple, are coerced by an aggressive mob, and yet the British Government takes no action. The image could not be placed in the temple; and I am at a loss to know what to do with it. If I return it to Japan, it will be an insult to the nation, and it is so historic that I cannot keep it here to decay.

On account of the selfishness of one man, several millions of Buddhists are put in pain.

Yours, &c.,
H. DHARMAPALA.

Gaya, the 21st May, 1894.

TENTOKUJI, KWOMYOSAN,
TOKIO, JAPAN.

November 27th, 26th of Meiji (1893).

To Mr. H. DHARMAPALA, Genl. Secy. Maha-Bodhi Society, India.

Most reverently I present herewith the sacred Image of Buddha Amitabha, in sitting attitude, to the great temple in Buddha-Gaya, India. [The old Sanskrit reads "Buddha Amitabha."]

"The True Reality of all beings is great and grand; and those whose positions are in either of the five vehicles do not know how it is so great and grand; and the real nature of all things is great and profound; and those holy men who are in either of the ten degrees, do not know how it is so great and profound. The quality and quantity of the True Reality of all things is not different even from those of the mind of trembling animals (when seen from the spiritual point of view). The real nature of all things is infinite; that infiniteness and quality is, from eternity, in the state of unmovableness and free from all impurities. The state of things is always same and perfect, though there appears (to the spiritually ignorant men) the difference of holy and unholy; pure and impure: It silently comprises all souls and all the virtues of all things and beings. But covered by the temporal veil of impurities, the virtues contained in it are not apparent. Hence, the Buddha has, out of his great and

infinite compassion, appeared upon this planet, and dropped the sweet heavenly dews upon the thirsty lips of living beings; His great light and wisdom illumined or chased the darkness of long, long, weary night: well and completely the Three Secrets were comprised in Himself, and the Four Days of conversion, too. He opened and showed to us the cause of our long, long, sufferings from eternity, and made us ready to enter the Infinite Bliss and Eternal Life."

Deeply and heartily believing in the statement above mentioned, Minamoto Yoritomo (1200 A.D.) highly revered the Buddhist Triple Gem. He had enshrined the Image of Buddha Amitabha, which was made by the famous Buddhist sculptor Sadatomo of Nanto, now Nara, in the province of Yamato. The Court of Kamakura was changed afterwards, and then this sacred Image was removed into a far-away mountain valley, after which event this was again transmitted into the hand of the chief priest of Kwomyogi, in which temple this was enshrined.

In the third year of Meiji, period (1877), this Image was placed in the new-built temple, Kai-ko-ji, Furosan, Miura-gori, in the province of Sagami, and from this time this was made the chief Holy Image of Buddha Amitabha of that temple.

Now, in the twenty-sixth year of Meiji (1893) our Ceylonese Brother, Mr. H. Dharmapala came to this Empire, on his way home from America and addressed us concerning the work of Restoration of the Buddha-Gaya Temple. We have been deeply impressed by our learned and good brother's earnest address, and feel very sorry to learn that there is, at present, no Buddhism in India; much less the perfect Image of our Lord, the Buddha. Hereupon I determined to present this Holy Image of Buddha Amitabha to be enshrined in the second story of the Buddha-Gaya Temple. This was encouraged by those who have heard my determination. Mr. Niemon Asaha, an ardent lay adherent who belongs to this temple, has also assisted me very much. Here we have performed the sacred ceremony of "Presenting the Holy Image of Buddha Amitabha to India." Buddha-Gaya is the holy place where our Lord Buddha Sakyamuni attained the perfect state of Enlightenment, while there is at present, not one Image in perfect form, but mostly debased, for which we Buddhists feel very sorry. Now, the Holy Image of the Buddha which I present here is the good sign of the future prosperity of Buddhism, Northern and Southern, in perfect harmony, and for the success of the Restoration of the Buddha-Gaya temple. Full of respect and reverence, I herewith present the Holy Image of Buddha Amitabha, heartily wishing and praying for eternal prosperity of our great Doctrine of Buddha in India and Japan, and in all other countries in the world.

May the Holy Triple Gem and all the good devas guard this Holy Image, rejecting every evil which come near, and arrive safely to the Holy Place, Buddha-Gaya.

Again, may this Holy Image be reverently enshrined in that Holy place, and diffuse abroad the ray of Infinite compassion and save every being that remember the Amitabha's name from sinfulness.

May blessings abide with us, the Buddhists.

May the seed of the Good Law grow and increase gradually, in the field of worlds, present and coming; and may the Buddha stretch out His all-merciful hands to all living beings, and be born again in the Buddha's Holy Land."

Faternally yours,

BIKSHU SHUKO ASAMI,
High Priest Tentokuji, Tokyo.

JAPANESE HISTORY AND CIVILIZATION.*

No intelligent person can, in these days, afford to be ignorant of the history of Japan, and of the manner in which the unique civilization of that country has been developed. The Japanese are our neighbours across the Pacific, which is not an *Oceanus dissociabilis* to "separate" Japan from America, as it is expressed in geography, but is a connecting link to bind the two peoples in the closest ties. Japan was "opened" by the United States; has been materially, politically, socially, educationally, and morally assisted by American influences in her wonderful career of progress; and appreciates the kindness and friendliness of our people. We, in turn, ought to know more of our rapidly developing *protégé*; and undoubtedly we learned much

* THE STORY OF JAPAN. By David Murray, Ph. D., LL.D. ("The Story of the Nations" Series.) New York G. P. Putnam's Sons.

HISTORY OF THE EMPIRE OF JAPAN (official). Yokohama: Japan Mail Office.

during the World's Columbian Exposition, in which the completeness and the beauty of the Japanese exhibits elicited almost universal surprise and admiration. These object lessons may also have aroused a desire to know still more about Japan and the Japanese.

A book has just been published which satisfies this laudable desire. It comes in clear type from the Knickerbocker Press, and is the thirty-eighth volume in that admirable series, "The Story of the Nations." There has also been issued recently from the press of the *Japan Mail*, of Yokohama, an official history, compiled under the direction of the Department of Education, and translated into English by the scholarly editor (Captain Brinkley) of the *Mail*. It is a good-sized book of more than four hundred pages, in large type; it has a neat Japanese cover, and contains reproductions of pure Japanese illustrations, as well as numerous collotypes. It is a valuable work; but as it is not easily procurable in this country, and is comparatively expensive, its circulation on this side of the Pacific will probably be limited.

True it is, "and pity 'tis 'tis true," with reference to Japan, that "of making many books there is no end"; but "The Story of Japan" clearly has a *raison d'être*. It cannot, of course, take the place of larger and more detailed treatises, like those of Griffiths, Rein, and others, but it fills a long-felt want of an interesting and accurate connected history of Japan, of moderate size and price. The book contains some typographical errors, even slips in sentence-structure, and a few statements of doubtful accuracy; but as the faults are comparatively insignificant and superficial, while the merits are numerous and profound, the work stands as a trustworthy guide for the reader. The author acted for several years as Adviser to the Japanese Minister of Education, and rendered excellent service in remodelling the system of education along modern lines. Very appropriately, he puts this residence in Japan as "most important," among the sources of his material. And it is very evident, not only from the perusal of his own work, but also from comparison with the above-mentioned official history, that he made use of the best native (as well as foreign) authorities. Thirty-five appropriate illustrations, including two maps, add instruction and interest to the fifteen chapters of text; and four appendices are inserted to give such valuable material as the "list of Emperors," "list of year-periods," "list of Shoguns," and "laws of Shōtoku Taishi," a great reformer of the seventh century A.D. The index can be improved; but the titles of the chapters are, in the main, well-chosen, and make a suggestive table of contents. The object of the book is "to trace the story of Japan from its beginnings to the establishment of constitutional government;" and that story is well told.

But the writer of Japanese history is confronted, at the outset, with a serious difficulty. In ancient times the Japanese had no literary script, so that all events had to be handed down from generation to generation by oral tradition. The art of writing was introduced into Japan, from China probably, in the latter part of the third century A.D.; but it was not used for recording events until the beginning of the fifth century. All these early records, moreover, were destroyed by fire; so that the only "reliance for information about . . . antiquity" has to be placed in the *Kojiki*, or "Records of Ancient Matters," and the *Nihongi*, or "Chronicles of Japan." The former, completed in 711 A.D., is written in a purer Japanese style; the latter, finished in 720 A.D., is "much more tinged with Chinese philosophy"; though differing in some details, they are practically concordant, and supply the data upon which the Japanese have constructed their "history." It is thus evident that the accounts of the B.C. period must be largely mythological, and the records of the first four centuries of the Christian era must be a thorough mixture of fact and fiction, which it is difficult carefully to separate. According to Japanese chronology, the Empire of Japan was founded by Jimmu Tenno in 660 B.C.; according to foreign scholars, who have sifted the material at hand, the first absolutely authentic date in Japanese history is 416 A.D. If, therefore, the Japanese are given the benefit of more than a century, there yet remains a millennium which falls under the sacrificial knife of the historical critic. But, while we cannot accept unchallenged the details of about a thousand years, and cannot withhold surprise that even the constitution of New Japan maintains the "exploded religious fiction" of the foundation of the Empire, we must acknowledge that the imperial family of Japan has formed the oldest continuous dynasty in the world, and can probably boast an "unbroken line" of eighteen or twenty centuries.

Dr. Murray, in "The Story of Japan," following

the illustrious example of Arnold in Roman history, treats this mythological period in a reasonable way. He says: "Yet the events of the earlier period . . . are capable, with due care and inspection, of furnishing important lessons and disclosing many facts in regard to the lives and characteristics of the primitive Japanese." These facts concerning "native culture" pertain to the mode of government, which was feudal; to food, clothing, houses, arms, and implements; to plants and domestic and wild animals, to modes of travel; to reading and writing, which were unknown; to various manners and customs; to superstitions; and to "religious notions," which found expression in Shinto, itself not strictly a "religion," but only a cult without a moral code. "Morals were invented by the Chinese because they were an immoral people; but in Japan there was no necessity for any system of morals, as every Japanese acted rightly if he only consulted his own heart"! So asserts a Shinto apologist. And from the fact that so many myths cluster around Izumo, it is a natural inference that one migration of the ancestors of the Japanese from Korea landed in that province, while the legends relating to Izanagi and Izanami, the first male and female deities, since they find local habitation in Kyushu, seem to indicate another migration (Korean or Malay?) to that locality. These different migrations are also supposed to account for the two distinct types of Japanese.

The continental influences form an important factor in the equation of Japan civilization, and are emphasized by Dr. Murray. The Japanese "have been from the beginning of their history a receptive people," and are indebted to Korea and China for the beginnings of language, literature, education, art, mental and moral philosophy (Confucianism), religion (Buddhism), and many social ideas. At first the government of Japan was an absolute monarchy, not only in name, but also in fact; for the authority of the Emperor was recognized and maintained, comparatively unimpaired, throughout the realm. But the decay of the imperial power began quite early in "The Middle Ages of Japan," as Dr. Murray calls the period from about 700 to 1184 A.D. The emperors themselves, wearied with the restrained and dignified life which, as "descendants of the gods," they were obliged by etiquette to endure, preferred to abdicate; and in retirement "often wielded a greater influence and exerted a more active part in the administration of affairs." This practice of abdication frequently brought a youth, or even an infant (of two years, for instance), to the throne, and naturally transferred the real power to the subordinate administrative officers. This was the way in which *gradatim* the "diarchy," as it is sometimes called, was developed, and in which *seriatim* families and even individuals became prominent.

First came the Fujiwara family, which for about 400 years "monopolized nearly all the important offices in the government," but was finally deposed by the so-called "military families." The first of these was the Taira, who, after only a short period of power (1156-1184), were utterly overthrown and practically annihilated. Next came the Minamoto, represented by Yoritomo, whose authority was further enhanced when the Emperor bestowed on him the highest military title, *sei-i-tai-sho-gun* (barbarian-expelling-great-general). And from this time (1191) till 1868 the emperors are practically nonentities, and great generals actually govern the empire. The Japanese Merovingians, however, are never deprived of their titular honour by the "Mayors of the Palace."

But the successors of Yoritomo in the office of Shogun were young and sensual, and gladly relinquished the executive duties to their guardians of the Hojo family, who ruled "with resistless authority" and "unexampled cruelty and rapacity," but yet deserve credit for defeating an invading army of Tartars sent by Kublai Khan. The great patriots, Kusunoki and Nitta, with the aid of Ashikaga, finally overthrew the Hojo domination in 1333; but the Ashikaga rule succeeded and continued till 1573. It was, however, an Ashikaga Shogun who encouraged the quaint tea-ceremonial, called *cha-no-yu*; it was "in almost the worst period of the Ashikaga anarchy" that, in 1542, "the Portuguese made their first appearance in Japan"; and it was only five years later when Francis Xavier arrived there to begin his missionary labours.

The next few decades of Japanese history are crowded with civil strife, and include the three great men, Nobunaga, Hideyoshi, and Iyeyasu, each of whom in turn seized the supreme power. The first named was favourable to Christianity; the other two interdicted it. Hideyoshi, who "rose from obscurity solely by his own talents,"

is regarded by Dr. Murray as "the greatest soldier, if not the greatest man, whom Japan has produced." If this statement can be successfully challenged, the palm will certainly be awarded to Iyeyasu, who became the virtual ruler of the Empire in 1600. He founded a dynasty (Tokugawa) of Shoguns, who, for more than two hundred and fifty years, ruled at Yedo, surrounded by faithful vassals, and who at least gave the empire a long period of peace. His successors destroyed Christianity by means of a fearful persecution; prohibited commercial intercourse, except with the Chinese and the Dutch, and allowed it with these only to a limited extent; and thus crystallized Japanese civilization and institutions. It may be true that "Japan reached the acme of her ancient greatness during the Tokugawa dynasty"; but it is also true that by this policy of insulation and seclusion she was put back two and a half centuries in the matter of progress in civilization.

It was in July, 1853, that Commodore Perry entered Yedo Bay for the purpose of delivering to the Tokugawa Shogun (then supposed to be the Emperor) President Fillmore's letter asking for a few trade privileges; and on the last day of this present month of March it will be just forty years since the first treaty between the United States and Japan was signed at Kanagawa by the representatives of the two nations. This, of course, brought about, in a short time, the utter ruin of the policy of seclusion; for the negotiation of similar treaties with many other nations followed. This was also the occasion of the overthrow of the Shogun ("Tycoon") in 1868, and of the centralization of more of the actual power in the hands of the Emperor. The real causes, however, of the revolution were internal, and consisted partly of jealousy, and partly of a genuine impulse toward imperialism. This impulse had been fostered by a study of Japanese history, which revealed the fact that the Shogun, originally only the *imperator*, had usurped most if not all of the governmental functions. Thus the old Japanese spirit of intense loyalty to their "divinely-descended" ruler once more triumphed in the restoration of the imperial authority.

But the revolution of 1868 did not mean the restoration of the absolute despotism and the oppressive feudalism of the past. The latter institution, and with the consent of almost all the feudal lords themselves, was abolished by an imperial edict in 1869; and twenty years later (February 11, 1889) the Emperor promulgated a constitution by which he voluntarily relinquished to his people many of his hereditary and time-honoured powers. With this gracious act of His Imperial Majesty, Mutsuhito, the 122nd Emperor "in unbroken line" from Jimmu Tenno, not inappropriately closes "The Story of Japan." For with this ends the old Oriental absolute monarchy and begins the new constitutional and representative government. "The King is dead; long live the King!"—ERNEST WILSON CLERMENT in *The Dial*.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, June 30.

Constant conflicts are taking place between French and Italian workmen at Marseilles.

The Indian Government will not re-open the Mints so as to give the measure a fair trial.

London, July 3.

Sir Charles Russell, lately appointed a Lord of Appeal in Ordinary, replaces Lord Coleridge, deceased, as Lord Chief Justice of England.

The strike of railway workmen in the United States is developing aggressive force and the troops are being called out.

London, July 4.

The House of Commons has adopted the increase of duty on spirits, and the Budget has passed the Committee stage by a majority of thirteen.

London, July 5.

Oxford has won the University Cricket Match by 8 wickets.

The Senate of the United States has passed the Tariff Bill by a majority of five. It will come into operation on the 1st August.

China has invoked the mediation of Russia in the Korean imbroglio, and the latter has urged both parties (China and Japan) to evacuate Korea and then to seek a settlement.

London, July 6.

Sir Ed. Grey has announced that the Government has addressed communications to China

and Japan in the interests of peace, and advising them to make every effort to arrive at an amicable settlement.

London, July 10.

The Powers have presented a joint Note to Japan and China, calling upon them to withdraw their troops from Korea. China has assented.

[We doubt the correctness of this telegram.—Ed. 7. M.]

London, July 11.

The Hon. P. Le Poer Trench has been appointed Her Majesty's Minister to Japan.

A severe earthquake has occurred in Turkey, and at Stamboul 150 persons have been killed, but the public buildings in that city were not damaged.

[SPECIALLY TELEGRAPHED TO THE "JAPAN MAIL" FROM THE "N.C. DAILY NEWS."]

London, June 30.

Mr. Gladstone's retirement from Parliament at the end of the present session is officially announced.

The British and German Press applaud the election of M. Casimir-Périer as President of the French Republic. They say that he is a strong and competent man. The French Radicals denounce the election as being in defiance of Democracy.

July 1.

The remains of M. Carnot are lying in state at the Palace Elysée.

The conversion of the four per cent. rupee loans of 1842-1843 into three and a half per cent. bonds is announced.

During a discussion in the House of Lords having reference to the closing of the Indian Mints, it was stated that statistics proved that the Indian trade was benefited, and that a further experience was required to show its permanent effect.

July 2.

One hundred and fifty Anarchists have been arrested in Rome.

The Prince and Princess of Wales have opened the Tower Bridge in State. The ceremony was of a most brilliant nature. The Lord Mayor of London, the Right Honourable Alderman Tyler, has been made a baronet, while upon the Sheriffs, Alderman J. Voce Moore and Alderman J. C. Dimsdale, has been conferred the honour of knighthood.

July 3.

The remains of M. Carnot, late President of the French Republic, have been interred in the Pantheon, Paris. The ceremony was most imposing.

The Emperor William, upon the occasion of the late President Carnot's funeral, pardoned the two French officers who were arrested at Kiel last August on a charge of espionage and condemned to imprisonment.

July 4.

President Casimir-Périer's Message to the Chambers states that he is not a party man but belongs to France. He intends to follow the late President Carnot's example in regard to his devotion to duty, and is resolved not to seek re-election when his term of office expires. He is penetrated with a full sense of the responsibility attaching to his office and will not allow constitutional rights to be disregarded.

July 6.

The *Britannia* has won the race in the regatta of the Royal Clyde Yacht Club, beating the *Vigilant*. During the race the *Satanita* collided with the *Valkyrie*, which latter vessel sank within five minutes.

The Ottawa Conference has endorsed the project of a British-Pacific cable, and requests the Imperial Government to make a survey of the route at the joint expense of Canada, Great Britain, and Australia.

[FROM TOKYO NEWS AGENCY.]

Washington, July 11.

Prince Krapotkin, the leader of the Russian Nihilists, was arrested here to-day.

* "A general has no [worthy] offspring," says a Japanese proverb.

[FROM JAPANESE PAPERS.]

Hongkong, July 12.

Professor Aoyama is improving rapidly, and Surgeon Ishigami is also making progress towards recovery. Mr. Kinoshita left here for home yesterday.

Shimonoseki, July 12.

The *Totomi Maru* put into this port at 6 p.m. yesterday, and left for Ninsen early this morning. She was loaded with provisions. The *Tsukushi Maru* left for Saseho last night with a cargo of coal.

Sōul, July 12.

The Korean Government will reply to the proposals of the Japanese Minister on the 15th. No further instructions from the Japanese Government have yet been received by the Japanese Minister in connection with final proposals. A conference of the various Powers will take place on the 14th. The party of Japanese workmen, who proceeded to Fusan the other day to conduct a telegraph wire between the capital and that port, have not yet commenced work.

Ninsen, July 11.

Only one Chinese ship is at anchor in this port, but other vessels are appearing in the neighbourhood Ihai-yet and Tairen-wan.

Tientsin, July 11.

According to circumstances the Chinese Government will employ foreigners in time of war with Japan, as in the case of the war with France some years ago. China intends to use Britishers in the Navy and German officers in the Army, and her intention has already been communicated to the Representatives of Germany and England in Peking.

[This message is greatly mistrusted in Tokyo.]

CHESS.

(All Communications to be addressed to the Chess Editor.)

The local Chess Clubs are closed until the beginning of October.

SOLUTION OF PROBLEM No. 129.

- | WHITE. | BLACK. |
|----------------------|--------------------------------|
| 1—Q to KR 8 | 1—R x Q |
| 2—R x P | 2—K x R |
| 3—B to Kt 4, mate | if 2—B to B 5 |
| 3—Kt to Kt sq., mate | if 2—Any other move |
| 3—R to K 3, mate | if 1—P x R = Q, or B to B 5 |
| 2—Q to Q R 8 ch. | 2—Interposes Q or interposes R |
| 3—Q x Q (or R), mate | if 1—Kt to K 3 |
| 2—R x P | 2—R to K 3 |
| 3—Q x R (R 4) mate | if 2—R x Q or B x R |
| 3—R to K 3, mate. | |

Correct solutions received from Omega, W.H.S., and J.D.

PROBLEM No. 131.

By G. C. HAYWOOD.

BLACK.

White to play and mate in three moves.

We are glad to notice that Chess is making headway in the Southern Hemisphere. The *British Chess Magazine* for June contains No. 1 of "Letters from Australia," giving a description of the Sydney Chess Club. Our friend and confrère, Mr. Balk, should by this time have arrived in the capital of New South Wales, and we hope soon to

hear of his prowess there. Our games this week are all from antipodean sources and are interesting examples of what is being done by our cousins in the Greater Britain beyond the line.

MELBOURNE CHESS CLUB.

The following is a game in the championship tourney which Mr. Hodgson won from Mr. Lilly:—

GAME No. 138.

ENGLISH OPENING.

- | WHITE. | BLACK. |
|--------------------|-------------------|
| Mr. Lilly. | Mr. Hodgson. |
| 1—P to Q B 4 | 1—P to K 4 |
| 2—Kt to Q B 3 | 2—Kt to K B 3 |
| 3—P to K 3 | 3—P to Q 4 |
| 4—Kt to K B 3 (a) | 4—P to Q 5 |
| 5—P takes P | 5—P takes P |
| 6—Kt to Q Kt 5 (b) | 6—Kt to Q B 3 |
| 7—Q to K 2 ch. (c) | 7—B to K 2 |
| 8—Kt to K 5 (d) | 8—Castles |
| 9—P to K B 4 | 9—P to Q R 3 |
| 10—Kt to R 3 | 10—H to Q 3 |
| 11—Kt takes Kt | 11—P takes Kt |
| 12—Q to B 3 | 12—R to K sq. ch. |
| 13—K to B 2 | 13—Kt to Kt 5 ch. |
| 14—K to Kt sq. (e) | 14—P to Q 6 (f) |
| 15—P to K Kt 3 (g) | 15—B to B 4 ch. |
| 16—K to Kt 2 | 16—Kt to B 7 (h) |
| 17—P to K R 4 | 17—K takes R |
| 18—K takes Kt | 18—Q to Q 5 |
| 19—Q to Kt 2 | 19—B to R 6 |
| 20—Q to R 2 | 20—R to K 8 |

And Mr. Lilly resigns.

Notes.

- (a) Inferior to 4—P to Q 4.
 (b) Practically compulsory. If instead 6—Kt to K 2, Black wins a piece by 6..... P to Q 6; and if 6—Kt to R 4, White would soon find himself with a very bad game.
 (c) This is not good. It shuts in the player's Bishop, and develops his opponent's game.
 (d) This is premature and only further complicates his game.
 (e) 14—K to Kt 3, then Black wins easily by 14..... P to K Kt 4.
 (f) A very strong move, threatening White either with mate or with the loss of his Queen.
 (g) He has nothing else to do.
 (h) Again threatening White with mate or with the loss of his Queen.

SOUTH AUSTRALIAN CHAMPIONSHIP.

The following is a good specimen of the new South Australian champion's skill:—

GAME No. 139.

PHILIDOR'S DEFENCE.

- | WHITE. | BLACK. |
|----------------------|--------------------|
| Mr. Hilton. | Mr. Belcher. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—P to Q 3 |
| 3—B to B 4 | 3—B to Kt 5 (a) |
| 4—P to Q 3 | 4—Kt to Q B 3 |
| 5—P to B 3 | 5—B takes Kt |
| 6—Q takes B | 6—Q to B 3 (b) |
| 7—Q to K 2 | 7—Kt to K 2 (c) |
| 8—B to K 3 | 8—Kt to Kt 3 |
| 9—Kt to Q 2 (d) | 9—B to K 2 |
| 10—Kt to K B 3 (e) | 10—Kt to K B 5 |
| 11—Q to B sq. | 11—Kt to Q R 4 (f) |
| 12—B to Kt 5 ch. | 12—P to B 3 |
| 13—B to R 4 | 13—P to Q Kt 4 |
| 14—B to B 2 | 14—Castles K R |
| 15—Kt to Q 2 | 15—P to Q R 3 |
| 16—P to K Kt 3 | 16—Kt to K 3 |
| 17—Q to Kt 2 | 17—Q to Kt 3 |
| 18—Castles (K R) | 18—Kt to Kt 2 (g) |
| 19—Q R to B sq. | 19—Q R to B sq. |
| 20—P to Q 4 (h) | 20—B to Kt 4 |
| 21—Kt to B 3 (i) | 21—B takes ■ |
| 22—P takes B | 22—Q to R 3 |
| 23—Q to B 2 | 23—P to K B 3 |
| 24—Kt to R 4 | 24—P to K Kt 3 |
| 25—B to Kt 3 | 25—Q Kt to Q sq. |
| 26—Q R to Q sq. | 26—K to R sq. |
| 27—Kt to B 3 | 27—R to Q B 2 |
| 28—P takes P | 28—B P takes P |
| 29—R takes P (j) | 29—Kt to Kt 4 |
| 30—Kt takes Kt (k) | 30—R takes Q |
| 31—R takes Kt ch. | 31—K to Kt 2 |
| 32—Kt to K 6 ch. (l) | 32—K to B 3 |
| 33—R takes R ch. | 33—K to K 2 |
| 34—R (Q 8) to K B 8 | 34—K to Q 3 |
| 35—Kt takes R | 35—K takes Kt |
| 36—Q R to B 7 ch. | 36—K to Kt 3 |
| 37—Q R to B 6 | 37—Q takes K P |
| 38—B to Q 5 | 38—P to K R 4 |
| 39—R takes P ch. | |

Black resigns.

(Notes from the Leader.)

- (a) Inferior to B to K 2.
 (b) This ally of the queen is premature.
 (c) Also bad, as it obstructs the development of his game; ■ to Kt R 3 now seems the best course to get his pieces into play.
 (d) Here White could have cramped his opponent's game seriously, and commenced at once a dangerous attack by P to K Kt 3, followed by castling and P to K B 4. Black's pieces are very badly posted.
 (e) Again ■ to Kt 3 would have been even more effective, preventing the advance of the Kt and threatening an irresistible attack.
 (f) This and the subsequent moves are also bad, as the Kt is taken out of play and the adverse bishop is driven to where he wants to go.

(g) It is evident that Black has lost much valuable time by the abortive movements of this Kt.

(h) A good move, which increases the advantage acquired by White.

(i) This enables Black to relieve the pressure somewhat; he would have done better by taking off the bishop, and whether Black retakes with Q or Kt, he must get a very bad game.

(j) White now wins easily.

(k) Finely played, forcing the game.

(l) This wins, but R to Kt 8 is more decisive, e.g. 1—

32—R to Kt 8 ch. 32—K to B 3

33—R takes R ch. 33—K to K 7, best

If K takes Kt, then 34—P to R 4 ch., K to Kt 5; 35—K to K 2, mating next move with bishop.

34—R to B 7 ch. 34—K to Q 3

35—P to K R 4! 35—R to K 7, best

36—R to K R 8, and wins.

Because Black cannot now prevent the loss of his queen by R takes R ch., followed by R takes P ch.

CHESS IN HOBART.

Mr. G. D'Emden, the Hon. Secretary of the Hobart Chess Club, gives the following pretty ending of a game lost by him to Mr. W. Humphries, to whom he had conceded the odds of the exchange and move.

The diagram shows the distribution of the forces, White (Mr. Humphries) having the move:—

END GAME No. 9.

BLACK.—(D'EMDEN).

WHITE.—(HUMPHRIES).

White won as follows:—

- | WHITE. | BLACK. |
|------------------|------------------|
| 1—B takes Kt | 1—Q to K 4 (a) |
| 2—B takes P ch. | 2—K to R sq. (b) |
| 3—R to Q 8 ch. | 3—B takes K |
| 4—R to B 8 mate. | |

Notes.

- (a) Quite overlooking the pretty mate which White has in his mind.
 (b) It is immaterial whether Black play 2..... Q takes B, or 2..... K to R sq., as in the actual game.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

Tokai Maru, Japanese steamer, 634, Y. Arai, 14th July, Yokkaichi, General.—Nippon Yusen Kaisha.

PASSENGERS.

ARRIVED.

Per British steamer *Empress of Japan*, from Vancouver, B.C.:—Mr. Frank Adams, Mrs. Anton, Misses Anton, Mr. Anton, Mr. Armond, Mrs. L. C. Case, Master B. Case, Master R. Case, Mr. W. W. Dickinson, Mr. A. W. Hunt, Mr. Milne, Mr. J. W. Thomas, Mr. J. R. Tweed, and Mr. Alfred Shaw in cabin; 7 passengers in second class, and 164 passengers in Asiatic steerage. Disembarked at Yokohama:—Mr. R. Blankenburg, Mr. B. E. Brackenbury, Mrs. J. M. Farrar, Mr. F. Siras, Mr. Greig, Mr. K. Harasawa, Mr. P. S. Keller, Mr. Harry E. Keller, Mr. D. W. Lawrence, Mr. H. Magdeburg, Mr. M. Matsugata, Mr. C. W. Palmie, Mr. R. W. Riddle, Mr. H. Vogel, Chevalier Chas. de Waepemaert, Mr. and Mrs. G. H. Winn, and Master Winn in cabin.
 Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Mr. H. Symons, Miss J. D. Lee, Mr. Alex. Price, Mr. A. Burnan, Mrs. A. J. Little, Mr. F. J. Marshall, Mr. J. McKie, Mr. F. Gool, Rev. R. B. Perry, Mrs. Jansen and 3 daughters, Mr. W. C. Eaton, Mr. and Mrs. McDonald, Rev. G. E. Albrecht, Rev. H. B. Newell, Miss M. Woodworth, Rev. and Mrs. W. K. Curtis, Miss Benedict, Mr. H. E. Reynell, Mr. M. Kawakami, Mr. McIver, Mrs. Nunome and child, Mrs. MacKenzie, Mrs. De Ath, Mrs. Fisher, Mr. K. Fukuma, Mr. A. Cabeldu, and Mr. A. Michie in cabin; Messrs. A. B. Lawice, Lefcadino Hearn, A. W. Skoghand, O. A. Sealohm, B. Otatsume, Captain Brownell, and Mr. Y. Ito in second class, and 37 passengers in steerage.

DEPARTED.

Per British steamer *Empress of Japan*, for Hongkong via ports:—Captain Pitt, Mr. Campbell, Lieut. Whitehead, Mr. J. Bodell, Mr. and Mrs. Hillier, Mr. Capell, Lieut. Stevenson, Mr. and Mrs. Hixon, Captain B. F. Day, Mrs. Simpson, Mrs. Walker and family, Mr. Toulmin, Mr. Lalacca, Miss Vincent, and Miss Vincent in cabin; Mr. W. D. Greetham, Mr. J. P. Crawford, Mr. M. A. Culpepper, Mr. H. J. Briggs, Mr. G. A. Muirs, and Mr. J. Petersen in second class, and Ah Tung and children in Asiatic steerage.
 Per Japanese steamer *Saikio Maru*, for Shanghai and ports:—Mr. and Mrs. Delorme, General and Mrs. Solomko, Messrs. Harneus, Thomas, Ko Kai Sang, J. J. Heeling, A. S. Gairist, A. D. Hail, W. Cabeldu, and T. B. Glover, Master Ebdale, Thompson (2), Alton, and Dawn in cabin; Mr. Takaki Yuzuricha in second class, and 102 passengers in steerage.

REPORTS.

The Japanese steamer *Fushiki Maru*, Captain J. Wilson, reports:—Left Sakata the 7th July at 5.18 p.m.; had light variable winds to Tsugara Straits, when rainy and thick weather set in, continuing so till Shiraya-saki was passed; thence to port gentle to moderate S.S.W. winds, with fine and clear weather. Arrived at Yokohama the 10th July at 3.30 p.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 7th July

at 2.30 p.m. and arrived at Nagasaki the 9th at 4.30 a.m.; experienced fine weather throughout the passage. Left Nagasaki the 9th at 5 p.m. and arrived at Shimonoseki the 10th at 5 a.m. Left the same day at 11 a.m. and arrived at Kobe the 11th at 7 a.m. Left Kobe the 12th at noon and arrived at Yokohama the 13th July at 3.30 p.m. Passed the *Wm. H. Macey*, 8 miles south of Sagami. Signalled, wanted a pilot.

LATEST COMMERCIAL.

IMPORTS.

A poor week. Various retail sales from day to day at about former prices. Shirts and Piece Goods dull and very little life in any department. In fact the market generally is comatose.

COTTON PICKER GOODS.

	PER POUND.
Grey Shirts—8 1/2 yds. 39 inches	\$2.40 to 3.00
Grey Shirts—6 1/2 yds. 45 inches	2.60 to 3.40
T. Cloth—7 1/2 yds. 35 inches	1.60 to 1.90
Indigo Shirts—12 yds. 45 inches	1.70 to 2.35
Prints—Assorted, 24 yards, 30 inches	1.75 to 2.75
Cotton—Italians and Saltans Black, 39 inches	0.16 to 0.21
Velvets—Black, 35 yards, 22 inches	0.85 to 0.95
Victoria Lawns, 12 yards, 42-3 inches	0.85 to 1.00
Turkey Reds—2.0 to 2.4 yds, 24 1/2 yards, 30 inches	1.60 to 1.75
Turkey Reds—2.8 to 3 yds, 24 1/2 yards, 30 inches	1.80 to 2.10
Turkey Reds—3.8 to 4 yds, 24 1/2 yards, 32 inches	2.35 to 2.75
Turkey Reds—4.8 to 5 yds, 24 1/2 yards, 32 inches	2.95 to 3.15

WOOLLENS.

	PER YARD.
Flannel	\$0.27 1/2 to 0.45
Italian Cloth, 30 yards, 32 inches best	0.35 to 0.40

No. 42, Two-fold	46.00 to 47.00

No. 202, Bombay	1.60 to 1.65
No. 102, Bombay	1.60 to 1.65

METALS.

Dull and drooping market. The dealers appear supine and complain that a tight money market interferes with business. Prices nominally unchanged and holders fairly strong.

	PER POUND.
Flat Bars, 1 inch	\$3.45 to 3.50
Flat Bars, 1 inch	3.55 to 3.60
Round and square up to 1 inch	3.50 to 3.60
Iron Plates, assorted	3.60 to 3.75
Sheet Iron	4.70 to 4.85
Galvanized iron sheets	9.40 to 9.60
Wire Nails, assorted	6.00 to 6.50
Tin Plates, per box	5.80 to 6.00
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

Fair sales and apparently a good demand for interior disposal. Prices are up something all round, and the market looks healthy both in Tokyo and Osaka.

Chester	\$1.70 to 1.72 1/2
Comet	1.67 1/2 to 1.70
Devoe	1.67 1/2 to 1.70
Russian Anchor	1.67 1/2 to 1.70
Russian Moon	1.65 to 1.67 1/2

SUGAR.

Again we have to record a quiet week. Browns—Manila weaker but Formosa strong. Whites—Inactive at last quotations.

	PER POUND.
Brown Takan	\$4.60 to 4.70
Brown Manila	5.30 to 5.60
Brown Daitong	3.30 to 3.40
Brown Canton	4.00 to 4.30
White Java and Penang	7.40 to 7.50
White Refined	7.60 to 9.90

EXPORTS.

RAW SILK.

Our last issue was of the 6th instant, with statistics up to the 30th June. Since that date settlements have been 1,098 piculs, divided thus: *Filatures*, 903 piculs; *Re-reels*, 187 piculs; *Kakeda*,

8 piculs. Direct shipments have been 211 bales, making the total business for the season to date 1,300 piculs.

There has been something doing each day and at the beginning of the week business had assumed large proportions. There is not so much doing at the close, for various reasons; in the first place, news from foreign markets is not quite so good; the labour troubles in the States again exercise a deleterious influence, and holders here are too strong in their ideas to allow of shippers operating freely.

The Japanese direct shipping companies seem to be very active this present season and are exporting freely both to America and Europe.

New Crop.—Rumours still come in that the outlook in *Oshu* is not of the best; but it will be two or three weeks yet before we can say whether any or much damage will result. In the meantime, the new crop in *Shinshu* appears to be finishing fairly well, and from all appearances there will be no lack of silk to meet the requirements of exporters during the present season.

Arrivals come in freely as before, but continue to be mostly full sizes, fine descriptions being remarkable for their scarcity.

There have been two shipping opportunities since we last wrote, the *City of Rio de Janeiro*, on the 1st instant, taking 134 bales for the United States, and the *Verona*, 7th instant, 321 bales for Europe. These departures make the present export 473 piculs, against 202 piculs last year, and 716 piculs at the same date in 1892. A few unimportant supplies have come to hand, but there is no business done as yet.

Filatures.—Fine sizes are in demand, both for old and new silk, at previous quotations. In full sizes, considerable purchases have been made at a slight reduction on last quotation, but holders generally are firm at current prices, refusing further concessions. Among the most recent sales are *Shojokan*, *Roku-mon-sen* at \$690; *Choshinsha*, \$685; *Yajima*, \$675; *Kusanagkha*, \$670; *Tokosha* and *Shunmeisha*, \$665.

Re-reels.—These appear to be in good demand and high prices are being paid. *Tengensha*, \$655; *Five Girls*, \$650; *Tortoise*, \$642. These latter are now held for \$650 and it looks as though holders will get what they ask.

Kibiso.—Nothing done for several days. There are no arrivals of new silk at present.

QUOTATIONS.—(NEW SILK.)

Export from 1st July	6,000	1,420	2,150
Stock, 13th July	7,300	1,800	3,050

WASTE SILK.

Since the first instant settlements amount to 450 piculs, divided thus:—*Noshi*, 211 piculs; *Kibiso*, 232 piculs; *Neri*, 17 piculs. No direct shipments. Trade is very dull and seems principally con-

fined to operations for price. Medium qualities are most in demand.

None of the steamers during the present month have taken any Waste, so the export figures to date are nil, against 34 piculs last year and 739 piculs at the same date in 1892.

Pierced Cocoons.—No arrivals beyond a few small musters and there is no talk of business so far.

Noshi.—The sales comprise one parcel of new *Foshu*, ordinary quality, at \$65, and rather a large line of old staple at \$58. A fragment of *Mino* has been done at \$90.

Kibiso.—A small business in *Filature*, price ranging from \$85 to \$95, while a long line of refuse has been done at \$6.

Sundries.—Only one transaction, that being in very common *Neri* at about \$5 for the uncleaned stock.

A DELIGHTFUL MOUNTAIN RESORT.

THE most delightful Mountain Resort in the Hakone District is the KAIKATEI, at KOWAKI-DANI, which is admitted by the Medical Faculty of Tokyo and Yokohama to be the Sunniest, Breeziest, and most healthful spot accessible to Foreigners in the Hakone District, standing alone and delightfully situated upon the mountain side, free from every suspicion of bad drainage and malaria, with a cool and constant breeze in the hot summer weather, and a view not to be equalled in the neighbourhood for variety and extent.

The BATHS are filled with a constant and never-failing supply from the HOT MINERAL SPRINGS just above the Hotel, the medicinal virtues of which are too well-known to need recapitulation. It is sufficient to say that whereas Visitors find many of the hot springs enervating those at Kowaki-dani are distinctly invigorating.

One of the features of the Kaikatei is the detached Suites of Apartments, where perfect quiet and privacy can be secured. This arrangement for invalids and convalescents from the Tropics is a great desideratum, as being entirely removed from the Dining Room; Billiard Room, Bar, and Baths, while all are connected by covered passages.

To a Liberal Table are added an excellent Cuisine and good attendance, supplemented by a large variety of Wines, Spirits, and Malt Liquors of the very best kinds.

For the amusement of Guests, a fine English Billiard Table, by Burroughs and Watts, has been added to the Establishment; as well as Archery, Quoits, and other Games, and Ponies for riding over the hills and a Yacht for sailing on Hakone Lake can be hired.

Visitors to Kowaki-dani who bring a rod with them will be shown the haunts of the speckled Trout, a nice stream of several miles in length being within easy walking distance of the Hotel; Hakone Lake is also well stocked with a variety of fish, including salmon, and the Fishing is ~~xxxx~~; while Entomologists will find rare and valuable specimens in the surrounding hills, and the Flora of the district is extremely interesting to the Botanist.

Apartments may be secured by Letter or Telegram, and Special arrangements made for the conveyance of Visitors and Baggage from the Tramway Terminus at Yumoto, by addressing

Y. HOSHINO,

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1890.

MONEY & TRADE,

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

"MONEY AND TRADE" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY AND TRADE" is THE JOURNAL for Investors, Speculators, Manufacturers, and Traders.

"MONEY AND TRADE" is a thoroughly up-to-date Weekly Record of all Monetary, Trading, and Business Matters. Bankers, Manufacturers, Merchants, Storekeepers, and Wholesale Buyers all over the world say it is indispensable.

"MONEY AND TRADE" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Shipping, Trading, Manufacturing, and Trust Companies are fearlessly and impartially criticised in "MONEY AND TRADE."

"MONEY AND TRADE" enjoys a very large circulation, not only in Great Britain and Ireland, but also in all Foreign markets where English goods are sold; and, as it goes direct into the hands of the wholesale and retail buyers, it offers unique advantages to advertisers.

THE MONTHLY FOREIGN AND COLONIAL EDITION is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 21ST, 1894.

SUMMARY OF NEWS.

MR. YUAN, the Chinese Resident, has left Sōul for home.

THIRTY-FIVE rice brokers were arrested by the police on the 12th inst. at Kōfu.

TWENTY youths graduated this year at the Tokyo Fine Art Academy, Ueyo.

TWO foreign houses on Bluff Lot 103 were totally consumed by fire on Sunday evening.

MRS. HUGH FRASER left Japan on Tuesday per the Oriental and Occidental Company's steamship *Gallic*.

H.B.M.'s COURT for Japan has risen for the summer vacation, which lasts till the 15th September.

THE resignation by Mr. Sekiguchi Yago of his seat in the House of Peers was accepted on the 12th inst.

By a fire which broke out at Hamamatsu on the 12th inst. forty-seven houses and three godowns were destroyed.

A PROMENADE concert was given in the Bluff Gardens on Friday evening, the Town Band being in attendance.

THE heat of the last few days has been somewhat trying, the thermometer registering over 94 degrees in the shade.

A BRITISH sailor feeling slightly indisposed asked the hatoba-police to take care of him.

the night. Upon their refusing, he broke two panes of glass in the police-box and the following morning received two days' imprisonment.

THE *Kokumin Shimbun* was suspended on the 18th inst.

RICE and coal are gradually increasing in price, though the stocks of the latter are still large in the open ports.

THE funeral of the Madame Miko, wife of the ex-Shōgun, took place on Sunday, amid widespread manifestations of regret.

HEAVY rain fell in Saitama Prefecture on the 15th inst., causing the Oyagi-gawa to overflow and do much damage to roads and bridges.

THE French Residents' Fourteenth of July Cup has been won again by *Daisy*, of the II division—this makes the second year in succession.

A STRONG shock of earthquake lasting for nearly three minutes and a half was experienced in Yokohama on Tuesday evening. No damage was done.

DR. KITAZATO may be expected home in the course of next week. Prof. Aoyama and Surgeon Ishigami are both progressing steadily towards recovery.

COSTI DOMTSHOFF, a thirteen-year old Donskoi Cossack, gave a marvellous violin-recital at the Public Hall on Wednesday. His powers are phenomenal.

EARLY on the morning of the 13th instant, a burglar broke into the store of Mr. Takashima at Kanagawa and carried off a large quantity of valuable dress-goods.

COMMANDER DEWA, Surgeon Hara, and a party of naval officers, who have been ordered to proceed to England to bring home the gunboat *Tatsuta*, left Japan on the 13th inst.

THE epidemic of dysentery is far from being stamped out in the South-Western provinces, an average of 30 deaths per week being reported from Ehime, Kochi, Okayama, and Osaka.

A SUBSTANTIAL improvement is to be noticed in the plague returns of Hongkong. The coolies are flocking back to the place again, but trade will require a long time yet ere it recovers.

THE net profits of the Nippon Beer Brewery Co., Tokyo, during the past half-year amounted to yen 16,035, of which yen 9,000 was declared as a dividend at the rate of 10 per cent. per annum.

THE twelve China ponies imported from Shanghai were sold by auction to members of the Nippon Race Club on Tuesday afternoon. They fetched an average of \$230 apiece—they were laid down here at \$145.

THE King of Cambodia has conferred decorations on General Count Oyama, Minister of War, and Colonel Tamura, of the Infantry, through the French Legation in Tokyo. The decorations reached them on the 12th inst.

THE trade of Japan during last month amounted to yen 19,075,052.90, of which yen 8,798,573.40 were exports, and yen 10,276,486.50 imports, showing an excess of yen 1,477,913.10 on the import side. The total amount of Custom duties collected at various ports during the same period was yen 508,597.27.

THE Miye Cotton Spinning Co. received yen

120,727 in round numbers during the past half year, including yen 2,000, a sum brought over from last account. Yen 30,182 was added to the reserve fund, yen 18,109 put aside as a special reserve, and yen 52,220 declared as a dividend at the rate of 16 per cent. per annum, yen 10,865 being distributed as rewards to officers and workmen. The remainder was applied to miscellaneous expenses, and a portion carried forward to the next account.

AN incident of a painful nature occurred at a banquet given by a resident of Matsumoto, Nagano Prefecture, on the 11th inst. in honour of the birth of a grandson. All the family, relatives, and friends who had been invited to the entertainment were attacked with sudden pains in the stomach, evidently caused by the food they had taken. A man and two women died in a day or two, and two or three others are in a perilous condition, while more than twenty are under medical treatment.

Telegraphic news from Europe is to the effect that Earl Kimberley has offered to mediate between China and Japan; and that both countries have accepted the offer. The report appears unauthentic. The *Norve Vreyma* publishes a statement that Russia must uphold the autonomy of Korea, and if Japan attempts to assert her supremacy in the Peninsula, Russia must establish a Russo-Chinese protectorate. Shocks of earthquake continue in Turkey; in Stambul the damage done exceeds six millions of Turkish pounds. Cholera is increasing in Russia, and some anxiety is entertained in St. Petersburg, for the deaths in the stricken district average 300 per day. M. Casimir-Perier was elected President of the French Republic by 451 votes, against 195 given for M. Brisson, 97 for M. Dupuy, 59 for General Février, and 27 for M. Arago. A train on the way to San Francisco was derailed by strikers, the fireman shot, and the cars thrown into a river. Troops armed with Gatling guns have arrived at Sacramento. The strikers are now quiescent. At Chicago the trouble is almost over. The British Budget has passed through its third stage by a majority of 20. A republic has been proclaimed in Hawaii.

THE Import trade, which continues small, has been further diminished in volume by the advent of the *Bon* festival, added to which buyers still complain of tight money. Consequently Yarns and Piece-goods have been in but little request, and all kinds of Cottons and Woollens have been very much neglected. Though prices are unchanged in the Metal market, very little has been done, and no revival in this branch can be expected for some time. Kerosene is quiet, and arrivals have far exceeded sales, the interior being apparently fairly well supplied for a time. There has not been much done in Sugar of any kind, and the stocks are large, but prices are steady and without alteration. The Silk trade has not been extensive, the total amounting to only 1,000 piculs, but fully one-third of this quantity has been direct export. Prices have hardened somewhat in face of free arrivals and a large stock on offer. In Waste Silk little has been done, and the market is extremely quiet, though some heavy business is said to be on the verge of settlement. The Tea trade is quiet, the rush being over, and the total settlements to date are slightly under those of the same period last year. The principal demand at present is for Medium grade leaf, but nothing of note has transpired during the week. Rates of exchange have seen another week of steadiness without showing much improvement, but there may be called steady at the close.

URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Korean question engrosses public attention more than ever, scarcely any other subject being discussed by the vernacular press. The news that the Korean Government has consented to effect reforms in accordance with Japan's advice has been received with different sentiments by different sections of the press. To mention a few representative instances:—The *Yiji Shimpō* is highly sceptical about the earnestness of Korea in her profession of readiness to introduce reforms, and believes that the appointment of a Commission is perhaps a mere device to procure a temporary respite from the harassing demands of Japan. The *Nichi Nichi Shimbun*, though to a certain extent still doubting the earnestness of the Korean Government, is disposed to regard the appointment of a Commission in accordance with Japan's demand as a distinct step toward the attainment of this Empire's object. The *Yomiuri Shimbun* and the *Mainichi Shimbun* write in a similar strain, and go further than the *Nichi Nichi* in welcoming the news of Korea's agreement to introduce reforms. The *Hochi Shimbun* supposes that the appointment of a Commission by the Korean Government will probably be utilized by the Japanese Cabinet as a pretext for withdrawing the troops from the peninsula. Various as are the modes in which the news has been received by the Tokyo papers, they are unanimously agreed in thinking that the real task is yet to be commenced, and in advising the Japanese Government never to withdraw the troops from Korea until the work of reform shall have been satisfactorily accomplished, many of them also urging the Government to demand the withdrawal of the Chinese troops, and if the demand is unheeded to drive them out of the peninsula by force. We proceed to notice some of these articles at greater length.

The *Yomiuri Shimbun* does not know the particulars of the demands made by Japan, but understands that, for the purpose of reforming Korea's administration and securing her independence, the Japanese Government has gone further than most persons seem to suppose. Under such circumstances, our contemporary thinks that there is reason to congratulate the Empire upon having secured the consent of the Korean Government. The *Yomiuri* also thinks that Minister Otori is entitled to much praise for having brought the matter to the present situation. Our contemporary observes, however, that it is easier to obtain Korea's consent to the Japanese scheme of reforms than to carry out such reforms. Possibly it will be necessary to fight with China, or at least to afford sufficient armed protection to Korea to prevent the pernicious interference of her big neighbour. Such being the case, our contemporary does not place the slightest confidence in the rumour that the Japanese Government will withdraw the troops from Korea. As to the Chinese troops, their presence in the peninsula is no longer necessary, and their withdrawal should be demanded of the Peking Ministry.

The *Mainichi Shimbun* writes in a similar strain. Why is it, asks our contemporary, that the Japanese, notwithstanding their opposition to the Government on political subjects, are now united in giving powerful support to those in power? Because they are determined to settle the Eastern question by taking broad and impartial views, and also because in this instance the Government seems willing to shape its course in accordance with the wishes of the people. No better opportunity could present itself for carrying out the national policy on the Eastern question. Japan invited China's co-operation on the matter out of pure courtesy. China, having foolishly declined to accept the invitation, has forfeited all right to meddle with Korean affairs, Japan being thus left free to help Korea in the reform of her administration and the maintenance of her independence. Our contemporary urges the Government not to

slacken its efforts until the national policy shall have been completely carried out.

A report, since proved to be without foundation, that, at the recommendation of England, Russia, and the United States, the Korean question was to be submitted to an international congress including the above mentioned three Powers, as well as Japan, China, and Korea, caused momentary excitement in Tokyo. Several of our contemporaries there seemed inclined to believe the rumour, and even those that received it with suspicion discussed it in such a manner as to show that they, too, were evidently not quite free from misgivings lest such a proposal, if really made by some of the Western Powers, might be accepted by the Japanese Cabinet. All the papers, with a single exception, were united in declaring strong disapproval of the rumoured course. Some of them claim that the Korean problem is a sort of family feud between Japan and China, and that, consequently, none of the occidental Powers has any right to interfere with its settlement. To consent to an international congress of the kind under consideration, they argue, would be to admit that Western Powers have an equal right with Japan and China to discuss the settlement of Korean affairs. Hence the Government is strongly urged never to consent to any project of the kind.

The exception alluded to above is the *Niroku Shimpō*. It thinks that the shortest and surest road to the goal kept in view by Japan—namely the independence of Korea—is to convene an international congress. Such a congress would afford Japan a unique opportunity to explain to the world at large the disinterested and just views that she entertains on the Korean question, and thus to secure the sympathy of all civilized Powers with the policy she is now carrying out in the peninsular kingdom. Should the Congress refuse to approve Japan's course, she would be at perfect liberty to withdraw, and continue her work without regard to what foreign Powers might say. On the other hand, should her policy be approved by the Powers represented at the Congress, she would have gained an additional right to help Korea in the work of reform and internal development. The *Niroku* maintains, however, that before consenting to take part in an international congress, Japan ought to extort from China a positive promise never to interfere with Korea's internal affairs. Without such a guarantee from the Middle Kingdom, our contemporary thinks that no good could come out of a congress. The *Niroku* only confirms its reputation for impracticality by this failure to perceive the superfluity of demanding any such declaration from the Peking Government.

The *Kokkai* and the *Hochi Shimbun* bitterly comment upon the Viceroy Li's conduct in soliciting the mediation of European Powers. If he had the good of the East in general at heart, he ought, say these papers, to have gladly accepted Japan's invitation to coöperate for the reform of the Korean Administration; and if that course were distasteful to him, he ought at least to have induced his Government to settle by war the question of ascendancy in the peninsular kingdom. He has adopted neither of these alternatives, but seems bent on inviting the interference of European Powers by soliciting their mediation. Should the much dreaded evil of Occidental interference in Korea affairs become an accomplished fact, the blame will be on the Viceroy's head.

The *Nichi Nichi Shimbun* appreciates the public spirit and patriotism displayed by its countrymen at the present juncture in making offers of money and personal service for warlike purposes. Laudable as their efforts and motives are, our contemporary recommends them to devote their energies to their own occupations. The country has little need of aid such as they offer; it can command the services of a large number

of trained soldiers. As to money, the Treasury has enough to meet all the requirements of the case. Consequently, private persons will serve the country best by engaging with redoubled industry in their respective occupations.

During the week under review, not a single paper has written editorially upon the subject of the general elections; so intense is the excitement occasioned by the Korean question. There seems to be now entire accord between the Cabinet and the people with regard to that question.

It now looks as though war is inevitable. China has so far succeeded in her policy of obstruction that she has compelled the Korean Government virtually to reject the proposal of reforms which it had expressed its willingness to adopt and carry out under the guidance of the Japanese Minister. Moreover, China is sending large reinforcements to the peninsula; and little room is left for doubt about her intentions. Such being the case, Japan, it may be expected, will not suffer herself to be forestalled by her antagonist. The *Nichi Nichi Shimbun* writes as follows on this subject:—"Japan does not love war, but she is forced to fight. In despatching troops to Korea and advising that country to effect administrative reforms, Japan was not actuated by any sinister motives. It was her original object, in concert with China, to place Korea's independence and peaceful progress on a secure footing. Japan's disinterested motive has met with the sympathy of the Powers of the world. But China not only rejected Japan's offer of coöperation but she has attempted to thwart the latter's plans in Korea. All milder efforts having proved inadequate to prevent the Korean Government from expressing its willingness to adopt Japan's suggestions of reform, China has at last taken off the mask, and by means of intimidation has induced the Sōn Government to alter its mind. Korea is helpless, and therefore free from blame. China's high-handed endeavours to impede Japan's generous efforts for the preservation of the general peace in the Orient call forth the just indignation of our people. We do not seek war; it is forced upon us. Japan has thus far patiently borne with China's dilatory and capricious policy now attempting hollow intimidation and then resorting to cunning and artifice; for Japan is profoundly impressed with the importance of maintaining peace in this part of the world. But she cannot endure China's conduct in intimidating the Korean Government by force, for such a line of action on the part of the Middle Kingdom is not only incompatible with Japan's policy of upholding Korean independence, but evinces unmistakable hostility to this Empire. It is but just that such an attitude on China's part should have evoked the wrath of our August Sovereign and his loyal subjects. Now is the time for you, the brave defenders of the country, to go forth and discharge your duties."

The other journals all unite in urging the Government to declare war against China, as they have, indeed, been urging it from the very commencement of the present complication. During the present week, they have devoted much space for the discussion of the advisability, nay, the necessity of demanding the recall of the Chinese Resident, Yuan, and the withdrawal of the Chinese troops from Korea. It will be sufficient to reproduce here the articles which have appeared on this subject in the *Yiji Shimpō*. Our contemporary acknowledges the importance of having the Chinese Resident recalled by his Government, for he is understood to be secretly intriguing in opposition to Japan's policy in the peninsula. But our contemporary seems to think that a better course for bringing the matter to a speedy issue is to demand the withdrawal of the Chinese troops at present stationed at A-san. Simultaneously with preferring such a demand to the Government in Peking, the Japanese troops in the neighbourhood of Seoul, says the *Yiji*, ought to be marched to A-san, in order thus to enforce the demand. If the Chinese Government show any disinclination to leave

for home, they are to be driven out of the peninsula at the point of the bayonet. In dealing with a nation like the Chinese, the *Jiji* does not think it at all necessary to observe the formalities prescribed for intercourse between enlightened states. It is customary with the Japanese to make a poor estimate of the fighting capacity of the Chinese soldiers. The journal does not entertain any high opinion of their efficiency, but it warns its countrymen against the danger of underestimating their enemy's strength.

Some of the metropolitan papers seem to feel some anxiety that, even at this late hour, the Japanese Government may accept the mediation of a third Power. The *Hochi Shimbun* is one of the papers. Our contemporary's anxiety seems to have been excited by the report about the entrance of English and American marines into Sôul and the mobilization of Russian troops at Vladivostok. In the *Hochi's* opinion, the object of these Western Powers is perhaps to claim a right to meddle with the Korean question. Were the protection of Legations their real object, they ought not to feel much anxiety on that score, for having undertaken on her sole responsibility the regeneration of Korea, Japan is now bound to afford and capable of affording sufficient protection to all foreigners in the peninsula. The Korean question, says the *Hochi*, is preëminently one that lies between this country and China. That these two Empires possess particular connections with the Korean peninsula, and that this fact is tacitly acknowledged by the other Powers, are evident from the circumstance that the Tientsin treaty, which virtually places Korea under the double protection of China and Japan has not been called in question by any of those Powers. Under such circumstances, the *Hochi* maintains that Japan and China may be said to have the exclusive right to settle the Korean question between them. The Japanese Government is, therefore, advised to suffer no other Power to intervene between it and the Government of Peking.

Whatever good results may be produced in Japan by the present complication in Korea, one of the most important is that the necessity of increasing the strength of the Navy has been vividly brought before the minds of the Japanese people. The question has been occupying the public attention for the past several years, and men of all parties having long since been agreed in advocating a large increase of the Navy. But the Diet has hitherto been disposed to reject the measures proposed by the Government for this purpose, because, though theoretically agreed on the subject, the members of certain political factions have had their party interests more at heart than the general welfare of the country. Moreover, there was a general tendency to think that the danger was remote and uncertain. But since the outbreak of the present complication, the attitude of the public on this subject has completely changed. The *Hochi Shimbun*, one of those papers which under one pretext or another have always opposed the Government's measures for the augmentation of the Navy, now writes as though dissatisfied with the standard of increase hitherto proposed by the authorities. The Yamagata Cabinet once declared, states our contemporary, that the object of the Government was to increase the Navy to 120,000 tons. Is it wise to stick to such a paltry scheme? In an age like the present, when all nations are trying to outstrip each other in their fighting capacity on the sea, it is impossible for Japan, observes the *Hochi*, to fix any limit to the extent of her naval development. What is most necessary is that the diplomatic policy of the Empire should be fixed once for all. Japan, thinks the *Hochi*, ought to decide with whom she will be allied, whether with England and China or with Russia and France. That question once settled, it would be easy enough to make an estimate of the Naval strength necessary for Japan. At the present juncture, it is idle to talk of increasing the Navy. But after defeating the Chinese—the *Hochi* has no doubt that war will break out and that Japan will be the victor—the question

of Naval development should be taken up in earnest; and the nation, says our contemporary, will not grudge any expense necessary for this purpose.

The *Nichi Nichi Shimbun*, writing on the same subject, remarks that the Government's policy on the subject of Naval augmentation having long since been fixed, there is no necessity to determine it anew. It is true that Viscount Kabayama, then Minister of the Navy, once declared in the Diet that the Government's purpose was for the present to increase the strength of the Navy to 120,000 tons, that estimate having been obtained by taking into consideration the Chinese Navy and half of the British Fleet on the China Station. But the Viscount stated further that the Government aimed at increasing the strength of the Navy to 200,000 tons ultimately. It must not, of course, be understood that these figures denote fixed limits of development. It is scarcely necessary to say that an increase in the Naval force of possible enemies demands corresponding increase in the Japanese Navy. Subject to this condition, the Japanese Government's scheme of Naval increase has long since been determined, and it is silly to advocate, as the *Hochi* does, that the plan ought to be drawn up anew.

More or less complaint is made by the Tokyo papers against the Government about the delay in fixing the date of the general election. It was at first supposed that the date would be fixed for some time in the middle of August, but no Imperial Order has as yet been issued. (It is now stated that the elections are to be held on August 19th.) The *Kokkai* surmises that the reason why the Government delays the election is that it is afraid of the return in an overwhelming majority of the advocates of a strong foreign policy should the election take place while the people are excited over the Korean question. Turning to the electors themselves, our contemporary complains of their indifference about the election, their attention being engrossed with the Korean question. They are advised to pay more attention to the subject of elections and to take measures for the return of men of proper qualifications.

The *Nichi Nichi Shimbun* advises its contemporaries to be at ease about the question of the election. At the furthest, the date can not be later than the first days of September. There is no hurry about it. The Government is unwilling to have the nation agitated by party passions when an important question is pending abroad. This is the only reason why the date has not yet been fixed. Some people complain that the delay subjects the people to unnecessary expense. The *Nichi Nichi* observes that those who complain thus are politicians anxious to obtain votes by bribery. As to the contention that at a juncture like the present it is the Government's duty to take steps for an early convocation of the new Diet, our contemporary remarks that ample provision having been made in the Constitution for a case like the present, there is no inconvenience in the fact that the Diet is not sitting. Moreover, in questions of war and diplomacy, the counsels of a Diet will be far from conducive to the expeditious conduct of affairs.

EDITORIAL NOTES.

THE BOYCOTT AFFAIR AT NO. 198, YOKOHAMA.

ON the failure of the contemplated reconciliation between the foreign firm, No. 198, Yokohama, and the native silk merchants who have been boycotting the former for some while, three leading foreign merchants stepped into the breach and tried to bring this disagreeable and disadvantageous affair to an end. The Japanese silk merchants held an extraordinary meeting on the 11th inst. and deliberated about the answer to be made to the three mediators. After having carried on the discussion for some hours, they decided at last that should Messrs. Otto Reimers & Co. consent to give them a definite engagement, they would be ready to

renew business with the firm as before. The engagement says that when it is intended to buy silk a contract shall be made definitely fixing the quantity to be purchased; that after the conclusion of the contract no unreasonable alteration of the price shall be sought, especially in the case of goods having certain fixed names or marks (commercial); that when the goods have been taken into the would-be purchaser's warehouse, their inspection and the conclusion of the transaction shall be speedily effected, all delay being avoided as much as possible; that Mr. Strähler shall be made to radically reform his methods toward native silk merchants, and to be civil and kind in transacting business with them; and lastly, that the head of the firm and the sureties (the three foreign merchants who undertook to bring about the reconciliation) shall hold themselves responsible for the acts of Mr. Strähler. The *Mainichi*, from which we take these particulars, says that should Messrs. Otto Reimers & Co., and the others consent to the terms of the contract, the native merchants may congratulate themselves on having won a complete victory over their antagonists in the present affair, and that it may be said, in such an event, that the evils usually incidental to transactions in silk have been totally removed, and that a long step has been taken toward the recovery of the Japanese merchants' commercial rights.

JAPAN'S FINANCES AND THE KOREAN AFFAIR.

THE *Kokumin Shimbun* gives an elaborate argument to show that now is the best time for Japan to begin hostilities with China. The surplus revenue in the keeping of the Treasury amounts to 8,795,739 yen, to which must be added another sum of 5,023,355 yen accruing in the 27th fiscal year from the surplus for various expenditures. As there is not any pressing urgency for the local disbursement of these sums, they may be utilized as a war-fund, the two together representing the amount of 13,819,094 yen, all of which the Government can employ by issuing a word of command. This would, however, be enough to defray the army expenses for a short time only, so when the war actually begins some measure must be instituted by which the necessary outlay can be raised. According to the *Kokumin*, the plan is to increase the note-issuing power of the Bank of Japan. The *Kokumin* repudiates the idea that it has suggested this measure without due deliberation; it has arrived at its conclusion after thorough study of the subject. A table is given showing the amount of paper money in circulation during the last ten years, which proves that the total number of bank-notes in circulation fell in no year below one hundred and twenty million yen. The Bank of Japan may thus issue notes to that amount without in the least affecting the national currency. We must therefore regard the decision of the Treasury limiting the note-issuing capacity of the Bank of Japan to eighty-five million yen as quite inexplicable. On what basis did the Treasury assume this amount as a limit? It may have been owing to the prudent consideration not to allow the Bank to issue more than two-thirds of the total amount of paper money—120-130 million yen—necessitated by the economy of Japan. If that was the case, the consideration erred rather on this side of caution, for every nation's sum total of paper currency should be proportionate to the nation's actual requirements. But the requirements of Japan have recently greatly increased in consequence of the development of industries and the growth of commercial enterprise: these facts are amply attested by the tightness in the money market and the issue of notes up to the full limit this Spring, when a slight activity in trade became manifest and signs of development in industrial enterprises were seen. If with the present note-issuing power of the Bank of Japan a slight variation in industry and commerce at once is productive of such unusual features in the national money market, how much greater would be the effect in case of an outbreak of war. There are those who may claim that an increase in the bank-notes in circulation would result in the exodus of

specie from this country, the credit of the fiat currency being thereby invalidated, but the *Kokumin* is equally prepared to meet this objection. It falls back on statistics again, and says that the total specie in reserve is an off-set to nearly 120 million *yen* of notes, at the end of June, 1885, when the Bank of Japan was called into existence, was only some 42 million *yen*, or, in other words, the reserve of bullion was in proportion to the notes in circulation as 3.41 to 10. One *yen* in silver was then worth fully 1.152 in paper. The difference grew speedily less and less pronounced, so that at the end of 1885, after the system of convertible notes had already been in force for several months, bank-notes stood at par, and this although the ratio borne by specie to the fiat currency did not exceed 3.66. Suppose now that specie leave the country to an amount exactly equivalent to that resulting from the qualification of the Bank of Japan to issue notes up to 120 million *yen*, i.e., 35 million *yen*; the specie in reserve would even then correspond with the ratio of 3.52. It cannot therefore be justly concluded that the issue of more bank-notes would injuriously affect the credit of the national currency and thereby derange the economy of the Empire. Moreover, as the amount of circulating currency should in every country correspond with its actual economic requirements, and as therefore the currency requisite in one nation would be too much or too little in another, so may the amount sufficient ten years ago be insufficient to-day in one and the same country. That is the present case with Japan. The economic condition of the nation is vastly different from what it was a decade ago, and the amount of the circulating medium should be made to conform with the new order of things. In this connection the rate of interest is the surest indication. When money is abundant the rate invariably decreases, while the contrary is the case when funds are scarce. The *Kokumin* does not state whether ruling rates are any higher now than on ordinary occasions, but says that the rate of interest is sure to rise rapidly when Japan and China come to blows. That is taken as a new argument in favour of increasing the amount of paper currency, in which case, the actual circumstances necessitating an absolute increase, there would be no fear of specie leaving the country. The *Kokumin* concludes by saying that the enlargement of the note-issuing capacity of the Bank of Japan is the best and only easy method of raising the funds required in the coming campaign; that this step should be promptly taken; that the immediate condition of Japanese finances is specially adapted to enable the nation to engage in a foreign war. No such opportunity may ever again occur. With regard to the settlement of financial matters incidental to the war, it will be time enough to talk about that when Japan dictates terms of peace to her enemy, says our exulting contemporary.

AGITATION IN THE TAMA DISTRICT.

CHOFU Division in the Tama District of the Tokyo Municipality was the scene of considerable agitation lately, according to a report published by the *Mainichi Shimbun*. It would appear that ever since 1891 the office of that Division has neglected to report the settled accounts of the local finances. The Division politicians consequently became greatly excited against the Headman, and in April last, when they were asked to deliberate on the budget for the coming fiscal year, more than four hundred of them urged the Headman by letter to report the accounts, even threatening that so long as they were not shown the settled accounts of the past few years, they would not consent to discuss the budget. The Divisional Headman, however, paid no attention to this remonstrance, and the memorialists therefore waited on the Headman of the District and urged him to instruct his subordinate to comply with what they considered their just demand. The District Headman told them that steps had already been taken to write up the settled accounts, and they withdrew satisfied. Observing, how-

ever, that the District Headman showed no alacrity in carrying out his promise, no sign of the settlement of the accounts being visible after two months had elapsed, they grew impatient, and several delegates once more presented themselves in the District office. The Headman being absent, they interviewed the chief clerk. After setting forth their grievance, they declared that they did not like to pay their national or local taxes through the medium of the Divisional office in which they could no longer place any confidence, and that they therefore desired to pay the taxes direct to the District Office. The clerk told them that the District Office was not competent to receive taxes paid in such an irregular manner, and that if they persisted in not transmitting the money through the Divisional Office the District Office could do nothing but declare them defaulters. The people then concluded that no way of getting their grievance redressed was available except to organise demonstrations and to appeal to the public. They called in the aid of an orator from Hachioji, and began a series of demonstrations from the 5th instant. During four days meetings were held, both by day and by night. The meetings were not unobstructed. The opposition party freely employed the aid of *Soshi* and even of gamblers, all of whom endeavoured to prevent the successful holding of the meetings. Collisions, of a more or less resolute character, occurred between the rival partisans on each occasion a meeting was held, and they culminated at the last meeting, when amid much din and confusion a *Soshi* inflicted a deep wound with a sharp knife on the head of one of the divisional agitators. The meeting was then declared closed by the police on duty. That evening the agitators held a friendly meeting at a restaurant in the town of Aoume. But while they were making merry, more than a hundred *Soshi* suddenly rushed into the house and forced their way into the room where the convives were enjoying themselves. A scene of riot ensued, the *Soshi* throwing dishes, plates, and other utensils at the agitators, and some of them even flourishing drawn swords. The police soon arrived and made the intruders take to their heels, but not till the latter had inflicted wounds on several people and considerably damaged the utensils and the house.

THE ILLNESS OF DRs. AOYAMA AND ISHIGAMI.

In a letter which Mr. Okada, a physician attached to the Sanitary Bureau of the Department of Home Affairs, has written from Hongkong to Mr. Takata, Chief of the Sanitary Bureau, the following account is given of the illness of Dr. Aoyama and Ishigami, who, by the way, are gradually progressing toward recovery, according to the bulletin which is daily sent from Hongkong to the Home Office. It appears that Dr. Aoyama began to feel some fever. He took antipyretic remedies, expecting that all would be right by the next morning. This anticipation proved false, for next morning he complained of more pain in the armpits. He made some local application and went as usual to the Hospital. But after he returned to his lodging in the afternoon of that day, he found the fever rising. He went to bed earlier than usual, but woke up worse next morning. Dr. Kitazato was greatly alarmed, and called Dr. Cantlie in during the afternoon of the day, to ask him to come and examine the cases of Drs. Aoyama and Ishigami, for by that time the latter had also begun to develop similar symptoms to those of Dr. Aoyama. Dr. Ishigami complained at first of cold, this was about the 27th, but in the evening of the day the glands in the armpits began to swell and to cause him some pain. Dr. Cantlie examined the two patients very carefully, but he was not yet sure that they were suffering from the plague, and this coincided with the opinion of Dr. Kitazato, who could find no trace of the bacillus in the blood of either patients. Dr. Cantlie has his own hospital at the Peak, and thought it better for the two to enter it. Surgeon Ishigami was thought able to endure the removal, but Dr. Aoyama's case was far worse than his, and the conveyance to the hos-

pital along a hilly and rough road was apprehended to be too trying to his condition. In the afternoon of the 28th instant Drs. Lowson and Hartigan examined Drs. Aoyama and Ishigami, and they concluded that the first was undoubtedly suffering from the plague, and urgently advised his colleagues to send him to the *Hygeia*. It was decided to adopt the advice, it being considered easier to send the patient to that hospital than to the other. Surgeon Ishigami's case was still uncertain, but it was resolved to send him too. So they were carefully placed on board a small steamer, and transported to the floating hospital. This was at half-past four in the afternoon of the 29th. Though the special kindness of Dr. Lowson, two sisters from the hospital were sent to nurse the two patients, male nurses alone being employed on ordinary occasions; while Drs. Miyamoto and Kinoshita, assistants of Dr. Kitazato and Aoyama, stayed in the Hospital. The treatment was left to the care of Dr. Lowson, who, in consultation with other physicians and with Dr. Kitazato, gave all possible attention to the patients. On the first day of the entry into the hospital the symptoms of the two patients changed considerably for the worse, to the great anxiety of their colleagues and of Dr. Lowson. It was apprehended that their cases might prove fatal and so, after communicating with the Japanese Consul in Hongkong, a telegram was despatched by Dr. Kitazato to the Home Office giving the news of this attack and the condition the patients were in at that time. Since then up to the time the letter was written, about the 4th instant, great fluctuation was observed in the condition of the patients, the fever of Dr. Aoyama rising as high as 105° F. in the afternoon of the 3rd. The fever of the other had not risen so high, it fluctuated above and below 101° F. His pulse had become more steady, especially in the morning, and it was thought he was on the road towards recovery. Dr. Aoyama's case is, however, still very serious, and great anxiety is felt about him.

THE MORNING-GLORIES AT IRIYA.

OWING to the long-continued dry weather, the morning-glories are very late in flowering this year; yet it is reported that the annual exhibit at Iriya, one of the Tokyo suburbs, will be unusually fine. Several remarkable varieties will make a first appearance. Among these we hear of one bearing perfect flowers in clusters, each flower being less than half an inch in diameter; another shaped something like the butterfly-orchid; a third bearing flowers of somewhat less than the ordinary size, but with the tiniest leaves, the whole plant standing less than four inches high and the stem thinner than pack-thread. A private gentleman of means, who has devoted nearly thirty years to the culture of strange varieties of the convolvulus, claims to have succeeded in producing a blue-black flower with white markings running parallel to the pistils. Iriya is a sight well worth a pilgrimage, although one should reach the place before six in the morning, better still at five o'clock, in order to see the flowers at their best. The gardens will be most attractive between the 25th of the present month and the 10th of next.

OBITUARY.

Mrs. KAWAZU, ex vice-Minister of State for Communications, died of consumption on the 12th instant, at his residence in Tamachi, Shiba, Tokyo. He was the son of a petty retainer of one of the principal *Halamoto*, or bannerets, under the Tokugawa Shoguns. Even in youth he gave proof of unusual ability, so that at the age of sixteen he was appointed by the Regency assistant instructor of English in the *Kaisei-gakko* (subsequently the Imperial University). Such an appointment was a thing of very rare occurrence in those days, when the rigid system of feudalism did not allow the son of a rear-vassal to hold office directly under the Shogunate. Soon afterwards, he was adopted by another *Halamoto*, who subsequently became Governor of Nagasaki. To this adoption the young Professor owed his family name of Kawazu. Soon after the restoration of the Imperial administration he was appointed a

Professor in the University. In these early days of the *Meiji* era only a few persons understood French, and Mr. Kawazu's knowledge of that language as well as of English won him a reputation second only to that of Mr. Mitsukuri Rinsho, recently Vice-Minister of Justice. Being still very young he was ordered by the Government to proceed to France for further study, still, however holding his appointment as Professor in the University. He remained in Paris for several years, studying law, and when he returned home he was promoted to a high office in the Compilation Bureau of the Department of Education. Shortly afterwards he became a Secretary of the Second Grade in the Department of Justice and Chief of the Compilation Bureau in that Department. When Mr. Boissonade had drafted the Commercial Code and a Committee to revise it was appointed in the Senate, Mr. Kawazu was one of the members. Subsequently he was promoted to be Chief in the Appeal Court of Nagoya, and was transferred thence to be Chief of the Bureau of Criminal Affairs in the Department of Justice, and then to be Chief Public Prosecutor in the Appeal Court of Hakodate. Before proceeding to the last named post, he was promoted to the vice-ministership of the Department of Communications. But he held that office for a short while only. Disease of the lungs, from which he had been suffering for some time, interfered with the discharge of his official functions, and he resigned in March of last year. His career was not limited to Government services. About 1876, in company with the late Mr. Numa Shuichi and others, he organized a political society called the *Omei-sha*, and during the interval between his resignation of judicial functions in Nagoya and his re-entry into the Department of Justice, he practised as a barrister in Osaka and also edited a new political journal started there at that time. He was only forty-six at the time of his death, and his premature decease is widely lamented.

ANOTHER OGAWA ALBUM.

MR. OGAWA has carried into effect another happy idea: he has published an "Illustrated Companion to Murray's Japan Guide-Book." It is a little volume containing collotypes in Mr. Ogawa's best style—which is saying a great deal. The photographs are in many cases old friends, but the use to which Mr. Ogawa has now put them is as novel as it is happy. He has chosen pictures illustrating the well-known "Hand-book" of Chamberlain and Mason and has placed at the bottom of each picture the page of the "Hand-book" to which it refers. Thus the "Illustrated Companion" and the "Hand-book" constitute a compendium of information both textual and visual that ought to be of the greatest service to anyone desiring to know Japan. Messrs. Kelly and Walsh are the Yokohama agents for the "Illustrated Companion." The price is not indicated in the volume.

THE PENINSULAR AND ORIENTAL COMPANY AND THE YUSEN KAISHA.

THE *Hochi Shimbun* says that a telegram from Bombay has reached Tokyo to the effect that the Peninsular and Oriental Company has raised the rate of freight between Bombay and Japan almost to the original level. It adds that the competition between the P. and O. Company and the Yusen Kaisha is still very keen with regard to the transport of goods to the East, but at present the discrepancy of rates between the two is not so great as it was at the beginning of the contest. The rates of the P. and O. Company are somewhat higher than those now offered by the Yusen Kaisha. Lately a rumour was circulated to the effect that the P. and O. Company has defeated its rival in the competition, but this, says the Bombay telegram, is entirely unfounded. On the contrary, the Japanese ships are steadily gaining public confidence and the shippers who want to have their cargo conveyed by them are very numerous—so numerous indeed that though five new steamers have been chartered by the Japanese

company, it is impossible to transport all the goods consigned to their care within the stipulated period. It is not the P. and O. Company alone that has raised the rate of freight, the German Lloyds and one other Company have done the same. Commenting on the above, the *Hochi* advises the Yusen Kaisha to fight more boldly now that it has gained an advantage in the competition.

The *Shogyo Shimpo* is of opinion, in connection with this telegram, that the freight of the Yusen Kaisha being at present 12 rupees, the Peninsular and Oriental Company must find it impossible to raise its rates to the former level of 17 rupees. Even if there were no difference in rates between the two Companies, the advantage would be on the side of the Japanese steamers, which are cargo ships, while those of the other company are mail steamers. At any rate, concludes the *Shogyo*, the latter must have found it very hard to keep up the contest.

We do not attach the slightest importance to all this talk. Unless we are greatly mistaken, the Japanese Company is sacrificing large sums to keep up the service. It is to be hoped that it may find its account sooner or later.

A NOVEL DRAMATIC PERFORMANCE.

THE Tokyo papers say that the project to get up a play of which the caste shall include the Russian actress now in Tokyo and Ichikawa Danjuro, has matured at last, and that they have decided to represent a comical piece of hybrid character at the Kabukiza for two days from about the 23rd of this month. Messrs. Fukuchi and Nagata, the latter of whom enjoys the reputation of being an accomplished French scholar, are already engaged writing a play. When the manuscript is complete, it will be revised by Prof. Revon, of the Imperial University, who will give it the finishing polish. It is to be published in three languages, Japanese, English, and French; the first by Mr. Fukuchi, the second by Prof. Wadazaki or Mr. Inouye, and the last by Mr. Nagata. Of the Japanese actors who are to take part in this novel play, Danjuro and Fukusuke are to have the leading rôles. They are to speak in Japanese and the Russian actress in French. This is assuredly a novel project. The idea, of course, is to give the Japanese theatre-going public an opportunity of seeing a foreign actress of skill. But was ever so clumsy a method conceived? Had one of the well-known historical dramas of old Japan been chosen for the occasion, so as to show a foreign artist's conception of a character familiar to Japanese play-goers, there might have been some excuse for the hybrid performance. But we are to have a new piece composed by three men, of whom one only has given any evidence of capacity to write plays, and it will of course be a piece modelled on foreign lines and redolent of foreign ideas. Moreover, the leading actor and the leading actress will use different languages, and will be totally unintelligible to one another. The whole thing belongs to the domain of nursery charades, and we are sincerely sorry to see that it commands the co-operation of a really great Japanese actor, a foreign actress of established reputation, and a Frenchman of high literary ability.

A NOVELIST'S ADVERTISEMENT.

MR. YAMADA BIMYOSAI, one of the rising novelists of Japan, has returned to Tokyo from travels in the north-eastern part of the main island. He has brought with him a queer story and told it to the *Yomiuri Shimbun*. It is of the kind that would be welcomed by "spiritualists." During his journey he put up one day at an unpretentious inn in a little town remote from the public highway. Tired by his journey, he went to bed somewhat earlier than usual and soon fell asleep. He had a strange dream. He thought that the sliding door of his room was slowly drawn open and that a lean ghastly looking youth stepped in, assuming a deferential posture as he advanced. Bimyosai, thoroughly frightened by the aspect of this uncanny visitor, inquired his name and the cause to which he owed the honour of being thus visited. The

youth answered respectfully in a sorrowful tone of voice that he himself was an author, though of a very humble sort, that he had once conceived the idea of writing a novel but had been obliged to leave it uncompleted, having fallen ill and died before the last pages were transcribed. The idea that he could not complete the work continually haunted him even after death and he had resolved to solicit some famous writer to finish the work. Thus Mr. Yamada had the satisfaction of learning that his fame had already preceded him to the other world, and that he had been singled out from among many authors to undertake the completion of the dead man's task. He consented to do what his visitor required, but when he was about to receive the manuscripts, the morning cock crew, the ghost hurried away in alarm, and the author awoke, filled with astonishment at his curious dream. A few days subsequently he reached the town of Aizu, where he met a local writer of some fame, to whom in the course of conversation, he recounted his strange dream. Then came the striking sequel. As that local author listened to Mr. Yamada's mysterious story he grew more and more moved and finally breaking down altogether, said that that ghost must have been his younger brother, who had been an earnest student and had begun to write a novel, which had been interrupted by his illness and subsequent death. Mr. Yamada then received from the local author the manuscript of the ill-fated youth, and on examining it found it excellent both as to plot and style. He carried the manuscript to Tokyo, and is now engaged in completing it with his own hand. This is a romantic and ingenious fashion of advertisement, quite in character with the business of novel-writing.

SPECIAL GENERAL MEETING OF THE EDUCATIONAL SOCIETY OF JAPAN.

THE Educational Society of Japan held a special general meeting on the afternoon of the 10th instant at its offices in Kanda, Hitotsubashi. More than two hundred and forty members attended the meeting, a number quite in excess of the usual attendance in recent years. The chair was taken by Mr. Nishimura Tei, a manager of the Society. The first purpose of this extraordinary meeting was to hear the report of an answer given by the Minister of State for Education to a delegate of the Society on the question whether or not the Society is justified in discussing the bill introduced in the form of an urgency motion by a small section of the members at the last meeting; the second, to elect a President, that office having been vacated by the resignation of Mr. Tsuji. The meeting having been opened, Mr. Kano Jigoro rose and stated that he had waited on the Minister of State for Education about the business entrusted to him by the Society, and that the Minister had replied that he deemed it *ultra vires* on the part of the Society to deliberate on the matters in question, the teachers and instructors of whom the Society is mainly composed being forbidden by the Department to discuss politics. The small faction irreconcilably opposed to the view embodied in this ruling, proved as disorderly on the present occasion as on the last. One member declared that an oral reply from the Minister was not binding; that, moreover, it was merely a reply given to one individual who happened to be a member of the Society. Several members disputed this contention. Such confusion ensued and so hotly did the partisans of the two opinions debate the issue, that the Chairman had to call the members to order repeatedly. Ultimately the number of those that supported the opinion of the fractious member proved to be so small that when the Chairman asked whether the sense of the meeting should be taken, an overwhelming majority objected, and thus the attempted protest came to naught. However, the obstruction by the little faction did not stop there. For when the Chairman was about to proceed to the next subject on the order of the day, another of the section sprang up, and, following the tactics pursued at the previous meeting, asked leave to introduce an urgency motion. The Chairman, of course, could not

withhold permission. The recalcitrant member then ascended the platform and spoke for about an hour, the substance of his windy oration being that the election of a President should not be proceeded with at a time when the members were divided into rival parties. This argument also was set aside by a great majority, and the election commenced at once, the result being that 169 members voted for Mr. Tsuji the former President, 4 for Mr. Kano, and 3 for Mr. Izawa. When Mr. Tsuji was asked to become once more President of the Society he willingly gave his consent, now that the cause of his resignation had been removed.

SOCIALISTIC COLONIES.

COLONISING on socialistic principles is not half so attractive in reality as it looks on paper. The difficulties in the way of ordinary colonisation, even where great resources and much experience are the command of the promoters, are certainly immense; but where these elements of success are lacking and where the perplexities surrounding enterprises of such a nature are yet increased by the application of new and untried principles in far away corners of the earth, a safe issue can but rarely be predicted. In this connection we chiefly think of the proposed Freeland Colony to be established at the foot of Mount Kenia in Eastern Africa, and of the recently founded "New Australia," a settlement conducted on a kind of socialistic trades-unionism. Last June, in a fertile and salubrious region about 36 miles from Villa Rica in Paraguay, a settlement of several hundred people, mostly from New South Wales and Queensland, holding 230,000 acres and owning 2,500 head of cattle, was formed under the guidance of a Mr. Lane, a labour leader and journalist, who had in this undertaking the hearty support of the enlightened government of Paraguay. Nobody could have dreamed that the first serious question arising among the settlers would be one connected with teetotalism, still less that it would result in rupture and secession. Such, however, according to a Mr. Whelan, a delegate of the colony sent to Sydney to explain matters, was really the case. The unexpected, as is so often the case, had happened once more. The settlers, shortly after their arrival, had passed a teetotal rule, and when some of their number were found drinking intoxicating liquors their leaders were expelled from the colony owing to their attitude towards the authorities, in this case, the president, Mr. Lane, and the board for directing operations in each branch of industry. In consequence of this action 27 men and 51 women and children, a large percentage of the colonists, seceded and decided to petition the government of Paraguay for land on which to establish a settlement of their own where no sumptuary laws were to hold sway. Failing in this, they intended to apply to the British Consul for assistance in leaving the country. According to later advices Sir George Dibbs has authorized the payment of their return passage to all settlers desiring to come back to Sydney, while the government of Paraguay, anxious to retain these people in its own sparsely inhabited country, has given them the colony of Gonzalez. The members of the rival settlements are said to be perfectly satisfied with the results of recent developments and look to the future with confidence and hope.

JOURNALISTIC METHODS.

IN view of the frequent suspensions of the Tokyo dailies in consequence of their Korean items, terrorist paragraphs, and divulgence—real or imaginary—of official secrets, most of the metropolitan papers have come to arrangements by which when one journal comes under the ban of suspension another at once takes its place and is sent to the subscribers of the offending sheet so long as the ban remains in force. Thus when the *Nichi Nichi Shimbun* was in trouble, some weeks ago, the *Yomiuri* nobly entered the breach; the *Sho Nippon* and *Nippon* frequently waltz round a common centre, and the subscriber who fails to get his morning dish of "patriotism" in the one rarely misses a *rechauffé* of the other in the evening.

other, except indeed when the cruel powers that be astutely forbid the publication of both at the same time; and finally the *Tokyo Asahi Shimbun* appears to have come to an understanding with the *Kokkai*, for on the 14th inst., when the *Asahi* was doing penance, the *Kokkai* was sent to the former journal's *clientèle*, the first advertisement in its columns relating to the momentary eclipse of the *Asahi*.

One of the prevalent journalistic fads is the almost daily insertion of often execrable woodcuts, satirical and otherwise. The *Kokumin Shimbun* was, we believe, the first to give these little sketches, all of which were originally landscapes or views of notable places and famous men. The system rapidly degenerated. The *Sho Nippon* regularly publishes cuts of the roughest description, nearly all of them relating to political matters. On the occasion of Mr. Tanaka Shozo's virulent attack on Mr. Mochizuki Unai, member for Kii, in the last session of the Diet, the *Sho Nippon* published a barbarous illustration, representing Mr. Tanaka as tearing the skin off the face of Mr. Mochizuki. It was, besides the wretched execution, a most painful sketch. Yet some of these low-grade cuts are amusing and point a clever idea. In a recent issue of the *Kokkai* we find a double-headed Chinaman, one head having a haughty, bellicose expression, a conch being applied to the lips, as if summoning troops, which are no where to be seen. The other head, faintly resembling Li Hung-chang, wears an abject smile and is bowing with folded palms to a group of four foreigners, in whom it is easy to recognize England, the United States, Germany, and France, all of whom appear to be hugely amused by the attitude assumed by the Chinaman. In the distant background the imperial standard of Japan is to be seen, with horse and foot-soldiers in serried ranks. The engraving needs no comment. We may, however, remark that "to blow the conch" (*hara wo fuku*) means to "boast" or "vaunt" in Japanese idiomatic phrase. The engravers of all these sketches have considerable difficulty in representing a European type of countenance. The eyes and general contour of the face are invariably Japanese, the only landmark, but an infallible one, being a greatly exaggerated and arched nose.

THE NATIONAL BANKS.

THE question relating to the reconstruction of the national banks after the expiration of their charters, referred to more than once in these columns, is still unsettled. The Government and the *Nippon Ginko* intend as before to have the banks reorganized as private banks, while the National Banks themselves demand that their charters should be prolonged for another term of ten years. Both parties contemplate the introduction of their respective bills in the next session of the Diet. The state of affairs is regards with great concern by those who are interested in the national economy for, we quote here from the *Jiji Shimpō*, in the eagerness of the rival parties to secure the successful passage of their respective bills, each will naturally be led to offer obstruction to the other, thus bringing about, perhaps, the total discomfiture of both. The most important point to be considered in connection with this not improbable issue of the matter, is what course the Government is likely to pursue in that case. The *Jiji* has learnt that, should the affair take that turn, the Treasury will not permit any national bank, under any circumstances whatever, to continue its business in the new capacity of a private concern, unless it has secured the unanimous consent of its shareholders. It follows therefore that any bank that has failed to secure this unanimous consent of its shareholders to the intended alteration will be obliged to wind up its affairs on the expiration of its term. But unanimous consent on the part of the shareholders will be extremely difficult to obtain, for even where no rational objection to the proposed transformation exists, some few may still block the measure on one pretext or another simply for the mercenary object of forcing those

shareholders eager for the change to buy their shares at a fictitious value. These considerations induce the *Jiji* to take a gloomy view of the situation.

Mr. Taguchi, the editor of the *Keisai Zasshi*, has communicated an article on the subject to all the leading papers of Tokyo. In his opinion both those that desire to transform the present national banks into private banks and those that wish to prolong the existing charters for ten years, misconceive the situation, and exaggerate the importance of the question. They err in their attempt to apply a single rigid scheme to 150 odd banks differing very much in their nature. Nothing is more misleading, according to Mr. Taguchi, than such a way of treating this question. If the rival schemes are applied to individual banks, instead of to the whole class, the right course in each case may be established beyond the possibility of dispute. Suppose there is a bank which started with a capital of a million yen. According to the original mode of redeeming the notes issued by it, there ought to remain at the end of its term a sum of 800,000 yen reserved for the redemption of notes; but owing to the subsequent redemption of bonds at high interest on the part of the Treasury, the reserve laid by for the redemption of notes will amount to only 500,000 yen, 300,000 yen less than the original reserve. This means that the Bank must supply the deficiency in one way or another, and the plans devised by the re-organization party and the prolongation party for raising that amount of the fund, though apparently different, are substantially identical. The only point of difference that really exists between the two programmes is that whereas if the prolongation measure be adopted the Government bonds which the Bank is obliged to keep against the notes issued by it will have to be deposited in the Treasury and a certain amount of specie will also have to be kept by the Bank for a similar purpose at the Bank of Japan; on the other hand, those bonds and that specie will be handed back to the Bank should the re-organization programme come to be adopted. In other words, should the Bank be re-organized in the capacity of a private concern it may enjoy the important advantage of disposing of a large sum of money in any way it deem profitable. To add to this benefit a private bank is required to pay a far smaller amount of taxes than a national bank. Mr. Taguchi considers the withdrawal of diverse kinds of bank-notes now in circulation and the unification of currency as a point of great importance to State finance, and this is indeed the object at which the Authorities have steadily been driving since 1883. Any attempt to thwart the attainment of this project at the eve of its completion must be regarded with great disfavour by all enlightened economists. Thus, according to Mr. Taguchi, the whole thing lies in a nut-shell, and he concludes his article by warning the prolongation party not to be led into a position which is injurious at once to the interests of the State and to the banks themselves.

MURDEROUS POLITICIANS.

ONE of the instinctive traits of the Japanese people is that, while ever grateful for a kindness, they have a tenacious memory for a wrong done them and do not fail to try to wreak vengeance on their supposed foe, be they in the right or not. The Nationalist and Constitutional Reform parties have now become very good friends and are trying, in unison, to do what they can in a humble way to embitter the lives of the Cabinet Ministers. Yet the local adherents of these factions in Nishi-oso gun, Kagoshima Prefecture, still eye each other with the same intense hatred that they had when the Nationalists were lending their efficient support to the Ministry. Mr. Yasuragi Tesshi, of Kokubu-mura, was a partisan of the Reform sectarians, and between him and Higo Kazaemon, a resident of a neighbouring village and a member of the Nationalist League, the old party spirit of feud and hatred burned as fiercely as ever. It was in consequence of this embittered feeling that a bloody scene recently took place, in which Yasuragi was killed and several other people

badly wounded. It appears that the murdered man and his father had been invited to an entertainment given by a relative of the family residing at a little distance. After spending a very enjoyable evening, father and son set out for home, but on their way back they met with Higo and a hot quarrel ensued between the two old antagonists. They were with some difficulty parted by several people who fortunately happened to come along the road, but not until after blows had been freely exchanged. The next day Higo sent a letter to Yasuragi, requesting him to come to his house, as he had something he wished to say to him. Of course it could not be expected that Yasuragi would walk into such a trap, so he replied that if Higo had anything to say to him, he, Higo, had better come to the Yasuragi residence. Shortly after this Higo made his appearance, accompanied by his father and two brothers. Leaving his father and one brother at the gate, Higo entered his enemy's house with the other brother, and was shown into a waiting room, where were Yasuragi, his father, and one other friend, sitting quite calmly. Higo was asked by Yasuragi, with conspicuous coolness, to what he was indebted for the honour of the visit? At this Higo broke out into an angry complaint of the alleged maltreatment of which he had been the victim the previous day, and then, without even waiting for so much as a reply, drew a dirk which he had kept concealed beneath his coat and plunged it into Yasuragi's side. Higo's brother also produced a dagger and made an onslaught on Yasuragi's friend. A scene of the greatest confusion and bloodshed followed, the father of the victim grappling resolutely with the murderer while the other two combatants were locked in a deadly embrace. Though unarmed, the elder Yasuragi at last succeeded in overpowering his antagonist, and in so doing received several wounds. Higo then threw his dagger aside and ran off like a coward. Yasuragi's friend was more successful with his opponent, for he disarmed and then bound him hand and foot with the aid of certain neighbours who, hearing the unusual uproar, had hastened to the rescue. Higo's father and other brother, whom he had left at the gate, did not enter, but contented themselves with inflicting several slight wounds on a younger brother of the murdered man, who, all unconscious of what was taking place, happened to return at that moment. After doing this they also ran off. Yasuragi died almost immediately from the deep stab he had received. The captive was handed over to the police, who subsequently arrested the other three miscreants.

THE NIPPON YUSEN KAISHA.

It appears, according to the information of the *Tokyo Asahi*, that certain ship-owners in Tokyo or those connected with them are dissatisfied with the Government in consequence of what they consider an unusual patronage on the part of the Government toward the Yusen Kaisha. The men who are taking the leading part in this affair are said to be Mr. Asano Soichiro and Mr. Inouye Kakugoro. They think that the Government has advanced out of the Revenue Surplus a sum of about two million yen to the Yusen Kaisha and has enabled the latter to purchase a number of ships, the money to be paid back in thirty annual installments and free from interest. This is regarded by those gentlemen as not quite fair, and they have therefore dispatched a manifesto on the subject to all the principal ship-owners in Japan, and have invited them to a conference in Tokyo at the earliest possible date. With regard to this point the *Asahi* is informed that the Government was obliged to take that measure out of consideration to the Yusen Kaisha, which, in consequence of the requisition of ten of its ships to the Government service, was seriously inconvenienced in the transaction of its shipping business. The Government decided to purchase about ten other steamers and to lend them to the Company; eight have already been purchased by the agents of the Company, thus leaving only two more ships to be bought. For the purchase of these two ships the Govern-

ment granted out of the Treasury a sum of about 2,400,000 yen. The purchase being necessitated by the immediate stress of circumstances, the Government has made an arrangement with the Company that when the present affair is over all the ships bought in that way shall be purchased by the Company at the original cost, and that the price shall be paid by the Company in thirty annual installments free from interest, seeing that the Government was at first obliged to purchase the ships through stress of circumstances. And in allowing the Company to charter all those ships the Government has fixed a certain rate of charges; said to be 4½ yen a month per ton for a ship of above 1,500 tons. The malcontents object to this explanation, and say that should the ships be really owned by the Government but now chartered to the Yusen Kaisha, there was no reason why the Government should pay the Yusen Kaisha for the use of ships that are really its own property, and they maintain that the Government must have advanced a sum of above two million yen to the Company at ridiculously easy terms, and thus enabled the company to purchase many ships for its own advantage. We are somewhat puzzled to know why such shrewd men as Messrs. Asano and Inouye have failed to see the plain point that when a man lends a certain thing to another at a certain rate of hire the ownership temporarily passes to the hands of that other man, and even the proprietor himself is forced to pay the hire when he wishes to use it for his own purposes. Perhaps these are things not dreamt of in the philosophy of the *Asahi*.

THE YUSEN KAISHA'S SERVICE TO TIENTSIN.

The *Fiji's* statement that the Yusen Kaisha has given up its regular service between Kobe and Tientsin is contradicted by the Company. In fact the service is obligatory on the Company in consequence of its enjoying a subsidy from the Government. The Company is incurring a heavy loss in connection with the service, however, according to the *Hochi*, and may therefore at any time ask the Government to release it from fulfilling this part of its charter. The *Genhai Maru* is now on the line, which means about one voyage in three weeks. The ship lately returned to Shimonoseki with virtually no cargo at all, evidently because of the apprehensions existing among the Chinese merchants in connection with the Korean difficulty. It is said that the Chinese in Japan have telegraphed home that until the present difficulty be settled, no cargo should be sent to Japan. Thus the Yusen Kaisha is placed in an irksome position with respect to this service. It may be that the Government will consent to grant a special subsidy as a temporary measure, for, should the service be given up, communication between Japan and Tientsin will be virtually suspended, a conjuncture to be strongly deprecated in view of the fact that a number of Japanese reside in Tientsin.

The Yusen Kaisha, says the vernacular press, has already purchased nine ships, and contracted for two more. The addition of eleven new ships is said to be insufficient to meet the requirements of the coast trade. There are, for instance, no ships regularly laid on the Kobe-Otani line. Still it is expected that the arrival of the two new ships will give substantial satisfaction to merchants and shippers.

H.M.S. "UNDAUNTED."

The new cruiser *Undaunted*, which replaces the *Pallas* on the China Station, was commissioned at Devonport on April 17, her full complement of officers and men being 484; she sailed for the East on May 3, and after passing Malta had to put back with her port engine disabled. By the time she reached the Suez Canal, the recent disturbances among the Arab coolies had broken out at Port Said, and the *Undaunted* had to wait in case of emergency, which, however, did not occur. After leaving Aden (June 9) she encountered a very strong monsoon and heavy sea, with terrific rain squalls. The rest of the voyage was fine throughout. The *Undaunted*

is a splendid-looking vessel, officially described as an armoured cruiser, first-class, twin screw; her tonnage is 5,600, horse-power 8,500, speed 17 knots; she carries twelve 6-in. broadside guns, two 9-in. bow and stern chasers, fifteen machine guns, and four torpedo tubes. Her last commission was in the Mediterranean, under command of Captain Lord Charles Beraford. The following are the present officers of the *Undaunted*:—Captain John S. Hallifax, Commander Thomas H. Fisher, Lieuts. F. W. Loane, C. J. Eyres, Paul Hewet, G. Douglas, R. M. Lambert, Royal Naval Reserve Lieut. Wm. Hazell, Chaplain, Rev. E. Barthwick, B.A., Staff-Surgeon Thos. Pickthorn, Fleet Paymaster Edwin R. Brown, Staff Engineer Alfred Rayner, Sub-Lieut. L. C. Mansergh, Surgeon D. McNabb, Assistant Paymaster H. B. Pearson, Engineer John A. Vaughan, Assistant Engineer C. L. Denkin, Assistant Engineer H. W. Kilching, Torpedo Gunner H. Fitzmaurice, Gunner Wm. Parsons, Boatswain J. Ready, Boatswain F. Beer, Carpenter John S. Broad, Midshipmen—Alfred Pound, Herft Edwards, L. Willan, H. Reinold, H. Sadlier.

JUDICIAL AND POLICE AFFAIRS IN HOKKAIDO.

MR. YOKOTA, Chief of the Bureau of Criminal and Civil Affairs of the Department of Justice, has returned from his inspection tour through the north-eastern part of the main island and Hokkaido. The result of his inspection has convinced him of the relative inferiority in civil administration and criminal procedure of those regions as compared with Chugoku and Kyushu. In Morioka, Aomori, &c., placed under the jurisdiction of the Miyagi Appeal Court, the majority of criminal cases deal with the fraudulent appropriation of money. It is not the native inhabitants of these districts that are guilty of the offence; on the contrary, they are victims of the shrewd knaves that visit those regions from the southern parts of the empire. When Mr. Yokota travelled through Hokkaido, he was specially struck with the comparative inefficiency of the Police. The inhabitants of Hokkaido differ very much in their general disposition from those inhabiting the main island. It is there that ruined men and adventurers resort from the main island, and so quarrels, murders, and such offences are far more frequent in Hokkaido than elsewhere. And yet the number of police is comparatively small, and moreover they are far inferior in ability to those in the main island. This state of affairs is a very serious one to the people of Hokkaido, for they are often harassed by the desperate ruffians and adventurers already described. Many of these men are escaped convicts. Mr. Yokota is of opinion that in Hokkaido a reorganization of the police force must be undertaken first, and that subsequently an improvement in the judicial system should be undertaken. His experience has further attempted him that Hokkaido and the northern part of Hondo require separate attention.

THE NOBLES' FEMALE SCHOOL.

The graduation ceremony of the Nobles' Female School took place on the 18th instant. Precisely at 9 o'clock in the morning, the spacious hall on the second storey was filled by the members of the faculty, the graduates, the students, and spectators. A short time after they were all seated, H.I.H. Princess Komatsu, Junior, was led to the seat of honour by Mr. Hosokawa, the Director of the school. Her Imperial Highness was attended by Baron Takasaki. After those present had made a profound obeisance to the Princess, the students sang verses composed by Her Imperial Majesty the Empress. This was followed by several exercises in music, national as well as foreign. Next came the principal business of the day, namely, the distribution of diplomas and prizes. After this part of the ceremony was over, Mr. Hosokawa addressed a few words of congratulation and advice to the graduates. Valedictory addresses were then delivered by the Hon. Miss Mibu Ito-ko and Miss Nishimura Yoshiye. A few exercises in music completed the programme. Among the

spectators, we noticed Viscount and Viscountess Hijikata, Marquis and Marchioness Nabeshima, Viscount Sugi, Mr. Iwamura Sadatoshi, Mr. Kuki Hynichi, and a large number of other notable ladies and gentlemen.

SUMMER SCHOOLS.

VARIOUS schools of note as well as learned societies have this summer made elaborate preparations for courses of instruction during the months of July and August, particularly the latter month. The Educational Society of Japan has engaged the services of a number of eminent scholars, to hold lectures in the University Hall at Hitotsubashi; the Dai Nippon Chugak'kwai has also arranged for a series of scholarly addresses, to be given in the fine building of the Shibungak'kwai in Nishiki-cho; the Buddhists have sent their most learned men to Mikawa, near Nagoya, where priests of note will lecture on various subjects until the end of August; and finally, not to speak of a large number of other ventures, that well-known book-firm, the Sansendo, opens a summer school at Hakone on August 1st, where a number of the best-reputed professors in the capital are engaged to teach English and Mathematics. But probably in consequence of the condition of affairs in Korea, most of these summer schools have a very bad time in the store for them, as students have so far failed to enroll themselves in the lists. So far not even one student has signified a desire to attend the course of lectures inaugurated by the Educational Society, and the same fate will probably befall the Chugak'kwai (Chatauguan Association). With regard to the Buddhist school at Mikawa, it is expected that some three hundred will attend, one-half being laymen. The Hakone school, where preparations have been made for the reception and accommodation of at least five hundred pupils, will very possibly have less than one-fifth of that number. Until some definite settlement is arrived at in Korea the schools in Tokyo and elsewhere will have to be resigned to empty benches.

HE WOULD BE A SOLDIER.

THE warlike spirit so conspicuous at the present moment is, it would appear, not confined to the *Nippon* and the troops in Korea, for we find in the vernacular press a number of instances of mere boys running away from home to enter on what they fondly believe will be a soldier's career. The metropolitan *Ko-shim-bun* love to cite cases of this kind, which they dwell on with a patriotic pride which is as amusing as it is childish. One of these journals relates that Shokichi, the son of a well-to-do *shisaku* in Ushigome District, Tokyo, "is a very brave boy and remarkable for his presence of mind, though only sixteen years old." It has been his habit to say that every man should die on the field of battle, not nursed by a woman. His natural bravery has greatly increased, we quote *verbatim*, since the misunderstanding arose between China and Japan, and he set about organizing a volunteer corps of boys of his own age. This notable scheme was, however, a failure as he could find no one willing to enter the corps. But—his bravery still increasing, we suppose—he was not to be balked, and secretly set out alone for Korea the other day, incidentally taking with him some fifteen *yen* which he had "found" in the paternal purse, and his father's short sword. He left an explanatory letter in which he stated that he had left for the wars. This was however, deemed an unsatisfactory excuse for having left the parental roof, the police were notified and an active search instituted, but nothing has so far been learned of his whereabouts.

A FALSE REPORT.

ONE of the Tokyo journals of lesser rank caused considerable alarm the other day by stating that the twenty-seven year old daughter of a merchant residing in Koishikawa District, had died of the "Black Death." The report spread at once, carrying consternation with it, until the district police announced that the rumour was without foundation. The following day the

alarmist paper came out with a quaint apology. It was a sin of omission only, claimed the editor, the compositor having neglected to insert the two words "in Hongkong." It was quite true that the young lady had died, but the sad event had taken place in the pest-ridden British colony and not in the metropolis of Japan.

THE OPENING OF THE SUMIDA RIVER.

THE *Kawa-biraki*, or ceremony of opening the Sumida River, which is usually held twice annually is to be observed only once this year, today being selected for the purpose. The display of fire-works is to be on an unusually magnificent scale, and every room in the vicinity of the Ryogoku Bridge has been engaged days in advance, all the tea-houses being hired for the occasion by noblemen and wealthy merchants. The best time to go is about seven in the evening. Pedestrians are warned against pickpockets, for the crowd is always enormous on these occasions and the light-fingered gentry invariably reap a rich harvest.

PRINCE KRAPOTKIN.

THE telegram that Prince Krapotkin had been arrested in Washington is now contradicted. He was apprehended in St. Petersburg. For what reason or under what circumstances he trusted himself into a city where such a fate was almost inevitable, we do not know. Prince Krapotkin is well known to the British public by his writings in the magazines, and of course much sympathy will be felt for him in his misfortunes. But, for our own part, we think that "reformers" of his type deserve little commiseration when they suffer the consequence of their own lawlessness.

THE FRENCH HOLIDAY.

THE French National Fête was observed on Saturday by the French community generally. Flags of various nations were hung out in the Settlement, and the French business houses held holiday throughout the day. The representatives of Count Ito, Counts Yamagata, Saigo and Oyama, Mr. Mutsu and the Representatives of the United States, Italy, and Holland visited the French Legation on the 14th inst., and congratulated the French *Chargé d'Affaires* upon the occasion.

NEWS FROM KOREA.

THE latest and most interesting news from Korea is published by the *New York Herald* of June 14th. It appears that the European Edition of this paper received the following telegram: "Shanghai, June 13, 1894.—Soul, the capital of Korea, has been captured by the rebels. The King is a refugee and foreign troops have been landed." These things happened more than a month ago, and we have only just heard of them! News travels slowly in this part of the world.

SWIMMING RACES.

EIGHT swimming and diving competitions have been arranged to take place off the Bathing Barge on the 25th instant, at 5 p.m. They comprise the following events:—Quarter mile (Handicap); Long Dive; Running Headers off the spring board; Running Headers off the top of the Barge (lengthway); Standing Headers off the top of the Barge; 100 yards for Boy members (Handicap); 100 yards (open); and 100 yards (for non-winners in Japan only).

A NEW DEPARTMENT IN JOURNALISM.

THE *Yiji Shimpō* has commenced to issue a monthly supplement in the form of a chromolithograph from a picture specially painted by some celebrated artist. It is a very pleasing but unfamiliar view of Fuji-yama seen from the west, with a boat full of pilgrims in the foreground. The painter is the well-known Mr. Watanabe Seiei. We congratulate the *Yiji Shimpō* upon this display of enterprise.

THE BRITISH COURT.

H.B.M.'s COURT FOR JAPAN, Kanagawa, rose for the summer vacation on the 16th July. The holidays last till the 15th September, the Court resuming sittings on the 17th of that

month. Summary, police, bankruptcy, and Admiralty cases will be heard as usual, the Registry being opened for that purpose between the hours of 10 and 12.

GOVERNMENT RAILWAYS.

THE receipts upon the State Railways showed a considerable increase last year as compared with the preceding. The following figures are given in the *Hochi Shimbum*:—

	Goods and Passengers 1892. Yen.	Goods and Passengers 1893. Yen.
Tokyo-Kobe Line.....	4,239,578.40	4,744,742.28
Yokogawa-Nagayatsu....	495,792.63	601,520.49
Total	4,735,371.03	5,346,262.77

These returns show a total increase of goods and passenger traffic to the extent of nearly 13 per cent.

INTERNATIONAL SCIENTIFIC AMITY.

A DISTINGUISHED French botanist having recently been elected a Fellow of the Royal Society, one of the most important Parisian daily papers comments on the election in the following pleasant terms:—"Grand succès pour la science française! La Société Royale de Londres, le premier corps savant de l'univers, avait à choisir un membre parmi les botanistes des deux mondes. Elle a élu, à l'unanimité, notre compatriote, le Professeur H. Baillon, de la Faculté de Médecine de Paris. C'est, croyons-nous, le seul botaniste français qui fasse partie de l'illustre Académie de Harvey et de Newton."

RAILWAY ACCIDENT.

THE last train from Takasaki, which was expected to arrive at Utsunomiya on the night of the 13th inst., was derailed at Akabane. Four trains arrived from various directions before the derailed train could be reinstated, and traffic was resumed some five hours later.

NAVAL APPOINTMENTS.

COMMANDER SAKURAI has been appointed Captain of the *Hiyei Kan* and Captain Hidaka to the *Hashidate Kan*. Captain Arai, Commander-in-chief of the Reserve at the Yokosuka Admiralty Station, and Master of Yokosuka Harbour, has been transferred to the *Fuso Kan*.

BOILER EXPLOSION.

A BOILER explosion took place on the 8th inst. at the coal mine in Honami-gun, Fukuoka Prefecture. Two workmen were seriously and eight slightly injured.

JAPAN AND CHINA ON THE KOREAN QUESTION.

The metropolitan papers circulate various rumours concerning the situation between Japan and China. Some state that the Japanese Government has sent an ultimatum to Peking and that war may be expected at any moment. It is also mentioned that the Chinese Government having rejected the joint advice of England, Russia, and the United States, to the effect that she should co-operate with Japan for the regeneration of Korea, the three Powers have decided to suspend all mediatory efforts.

The *Nichi Nichi Shimbum* points out that none of these rumours is founded on fact. As to the joint mediation of England, Russia, and the United States, no such thing has taken place. It is true that a certain Power inquired Japan's object in despatching troops to Korea, and immediately received full explanations as to the motives of the step, whereupon that Power expressed its conviction that Japan's anxiety for the independence and improvement of Korea would command the sympathy of the civilised States of Europe and America. It would be nearer the truth to say that the Western Powers declined to mediate between Japan and China at the importunate solicitation of the latter, than that China refused to accept advice tendered by three of those Powers. At all events, so far as Japan is concerned, she has not re-

ceived any joint offer of mediation from Western Powers. Even should such Powers hereafter offer to mediate between the two countries, the Japanese—we still quote the *Nichi Nichi*—will not, under any circumstance, deviate from the course it has decided to pursue.

With regard to the alleged ultimatum, the *Nichi* explains that no necessity exists to adopt any such course toward China. Japan is carrying out her policy in Korea and has nothing to do with China. It is for China, if she be dissatisfied with Japan's procedure in the peninsula, to declare war against her. An opportunity for China to take such a step has already presented itself four times but has been, in each instance, neglected. These opportunities were, first, when the Japanese troops entered Sôul; secondly, when, in consequence of China's refusal to coöperate with her, Japan approached the Korean Government on the subject of internal reform; thirdly, when China's solicitations to the foreign Representatives to mediate between her and Japan proved fruitless; and fourthly, when, bearing of the proposed march of Chinese troops upon Sôul, Mr. Otori, the Japanese Minister in the Korean capital, warned the Chinese commander that his entrance to that city would be resisted by the Japanese army. Even at present China has a sufficient pretext to commence hostile operations against this country, for the latter's negotiations with the Korean Government on the subject of reform are making rapid progress. Thus it may justly be said that, from the very beginning of the complication, Japan has pursued a course tantamount to an ultimatum, and consequently, there is no necessity to address any such communication now to the Chinese Government.

Probably the rumour about an ultimatum originated in the fact that recently the Japanese Cabinet addressed a note to the Chinese Government in reply to the latter's request for an official document stating the reasons why Japan refuses to withdraw her troops from Korea. According to the *Nichi Nichi Shimbun*, the Japanese *Chargé d'Affaires* in Peking received, on the evening of the 12th instant, a note from the Tsung-li Yamén, saying that, although the reasons for Japan's refusal to withdraw her troops had been personally explained by him, the Chinese Government requested a written statement of the facts. On receipt of a telegram from the *Chargé d'Affaires* to that effect, the Japanese Government, though deeming it unnecessary to make the same reply over and over again, agreed out of courtesy to despatch a note as requested by the Peking Cabinet. The note stated that Japan had sent troops to Korea in pursuance of a distinct right to do so, and in accordance with imperative necessity, and that, China having unreasonably rejected an offer of concerted action made by Japan out of courtesy and friendship, the Peking Government must be held responsible for whatever consequences might ensue from its rejection of Japan's friendly proposal. No other diplomatic correspondence has of late passed between the Governments of the two empires.

VIOLIN RECITAL AT THE PUBLIC HALL.

Sweet memories of Sivori, and yet dearer reminiscences of Sarasate, the Spanish wizard of the violin in these latter days, were constantly evoked and steadily refused to be stilled during the recital given by Costi Dornthoff at the Public Hall on Wednesday evening. Yet great as were and are these past and present masters, the thirteen-year old Russian lad is their equal in many respects and their superior in a no less inconsiderable degree. Without indulging in hyperbole or exaggeration it can honestly be said that the boy virtuoso who made his first appearance before a Yokohama audience last evening is one of those rare individuals who are geniuses born, not made. His splendid technique and mastery of the instrument is only surpassed by the knowledge he possesses of all its varying tones and possibili-

ties—as witness his downward *staccato* movements. It was a great pity that Yokohama folk were so ill-acquainted with the sterling merits of the young player, for a large majority of our music-loving community lost an unrivalled treat by not patronizing the entertainment. No doubt full amends will be made on Saturday evening when Costi Dornthoff gives another performance. At any rate it will be Yokohama's loss if that opportunity is not freely availed of. But to go back to Wednesday's performance. The programme comprised eight items in all, and notwithstanding the enthusiastic ovations showered upon the performer, this list was but once supplemented, when the last number was repeated in response to a tremendous encore. Lovers of Sarasate well remember the enthusiasm evoked when the *maestro* gave Hauser's "Les Oiseaux sur l'arbe" some years ago in St. James's Hall. Without trespassing on the bounds of veracity it can be said that last night this memorable performance was surpassed. It was the same with Paganini's world-famous Fantaisie de l'Opera "Moïse," played on the G string. Thousands are the clever violinists, amateur and professional, who have sought to emulate the renowned artist in his mute suggestion of a faint yet distinct harmonic, but none have attained to any appreciable accomplishment of their desire. Costi, however, performed the difficult feat with ease. One of the most pleasing traits in the boy's disposition is his natural unaffectedness; this, combined with his wonderful memory, lends an additional charm to his accurate and deeply sympathetic playing. The programme below gives some slight indication of the violinist's powers. We might add that his accompaniments were admirably rendered by Mrs. Miller.

PART I.	
1.—Concerto No. 1.....	Beriot.
2.—"Berceuse".....	Costi Dornthoff.
3.—Fantaisie de l'Opera "Mozgulla".....	Ascidowa.
4.—"Les Oiseaux sur l'arbe".....	Hauser.
PART II.	
1.—"Le Rossignol".....	Vieuxtemps.
2.—"Obertas".....	Wieniawsky.
3.—Fantaisie de l'Opera "Moïse".....	Paganini.
4.—Bohemian Dance.....	Nachet.

KOREAN AFFAIRS.

Just at present intelligence from Korea is very meagre. The *Kokkai's* Sôul correspondent telegraphed as follows on the 13th instant at 9.25 p.m.:—"The King is very anxious to introduce reforms, but the undertaking is attended with serious difficulties as the Government is full of pro-Chinese politicians."

Several papers state that the Korean Government's final answer to Japan about the reforms suggested by the latter was to have been given on Sunday last. This report is incorrect, for the Korean Government has already signified its willingness to do as advised by Japan.

It is also mentioned that one of the most important points contained in the demands preferred to Korea by the Japanese Government relates to the abolition of the annual tributary ambassador sent to China by the Korean Court. Another report states that the Japanese Government has decided to demand the withdrawal of the Chinese troops and the recall of Resident Yuan. We reproduce these rumours but do not endorse them.

The report that the Chinese troops at A-san had been removed to Su-wôn seems to have been premature. According to the *Nichi Nichi Shimbun's* Sôul correspondent, whose telegram is dated July 13th, 9.05 a.m., although the troops make occasional excursions in the vicinity of A-san, they are still quartered at that place. It thus seems that the Japanese Minister's warning to the Chinese commander had the desired effect of preventing him from moving toward the capital. Another correspondent telegraphs that General Shieh will probably enter Sôul without any armed escort, on the pretext of seeing the King but really for the purpose of inspecting the Japanese troops.

According to trustworthy authority, the Japanese Government has decided to build barracks (wooden) in the neighbourhood of Sôul and In-chhon in view of certain events necessitat-

ing the lengthy stay of Japanese troops in the peninsula.

Lieutenant-Colonel Fukushima and Mr. Motono of the Foreign Office, who recently returned from Korea, left again for that country by the train departing from Shimbashi at 9.50 p.m. on the 13th instant. Eighty coolies of stout physique have been engaged in Tokyo for shipment to Korea.

The *Tokyo Asahi Shimbun* received the following telegram on the 15th instant:—"One of the most important points contained in the demand which Minister Otori preferred to the Korean Government simultaneously with the proposal for internal reforms, has been rejected by that Government on the ground that it interferes with the sovereign right of Korea." From this telegram it is impossible to form any idea of the nature of the particular point that has met with such an unexpected rebuff on the part of the Korean Government. It is, however, surmised by many persons that the matter is related to the abolition of the annual tribute to China. But no definite information can be obtained, and after all the *Asahi's* telegram may turn out to be entirely premature.

A report supplied by the Domestic and Foreign News Agency states that, in spite of the vigilant care with which the Chinese troops at A-san prevent all Japanese from entering their military lines, a certain Japanese in the disguise of an itinerant merchant recently succeeded in making his way into the Chinese camp and brought back an important report about the condition of things there.

It is stated that the Chinese troops at A-san brought with them three large field-pieces. Korea being a mountainous country, it is very inconvenient to carry them about. In the event of a march upon Sôul, they will have to be left behind at A-san.

The public presentation of the Imperial gift of wine and tobacco to the soldiers in Korea took place at Sôul on the 6th instant. All the troops in Sôul were assembled at Nam-san, and in the presence of Major-General Oshizawa and Minister Otori, Major Ichinobe addressed a few words to the troops, calling upon them to offer their lives for the maintenance of the prestige of the Imperial family. At the conclusion of the address, the troops sang the national anthem *Kimi-ga-ya*, and gave three cheers for their Majesties the Emperor and the Empress.

General Le Gendre is said to be very influential in the Korean Government. Some time ago Mr. Otori visited the Korean Foreign Minister at the Foreign Office and asked him to transmit to the King a certain document relating to internal reforms. The official at first declined to accept the document, but on the matter's being resolutely pressed by the Japanese Minister, he is said to have at last consented to forward the paper to His Majesty. During this interview the Korean Minister is stated to have repeatedly withdrawn to an adjoining room to consult with General Le Gendre.

The *Nippon's* correspondent on his way home from Korea despatched the following telegram from Nagasaki on the 15th instant:—"On the 8th instant, the Korean King issued an edict on the subject of reforms, the principal topics alluded to by His Majesty being: first, official discipline; secondly, rewards and punishments; thirdly, financial reform; fourthly, the appointment of men of capacity to official positions; and fifthly, the convening of councils of military and civil officials to carry out these reforms. On the same day three Reform Commissioners were appointed."

It is stated that the Korean Government has created a new Bureau of Reform, three officials being appointed members, namely Shin Seiki, Minister of Home Affairs; Kim Sokan, Councilor of the Department of Ceremonies; and another person whose name has not yet transpired. Probably these three persons are identical with the three Reform Commissioners alluded to in a foregoing paragraph.

The names of the three Reform Commissioners have at last been ascertained. They are Shin Seiki, Minister of Home Affairs, Kim

Sokan, and So Ensho, Assistant Ministers of Home Affairs. So far as our scanty knowledge about these persons and their character goes, the selection, we should think, has not been altogether ill-advised, for they seem to belong to a small coterie of politicians who hold a sort of neutral ground between the two factions now contending for ascendancy in the peninsular kingdom. But it is doubtful whether they have ability or influence enough to cope with the immense difficulties of the situation. We, however, reserve any further comment until the receipt of fuller information.

The *Tokyo Asahi Shimbun* issued on Monday last an extract containing the following telegram, dated Söul, July 16th, 5 p.m.:—"The Queen, acting in concert with the Ming faction, has applied for Russia's protection in case of an emergency, and her request has received the assent of the Russian Minister." The plain meaning of this message, as it stands, is that, terrified with the turn events are taking in the kingdom and fearing some catastrophe, the Queen and her party have asked the Russian Representative to afford protection for their personal safety in case of danger. But our contemporary is disposed to interpret the telegram in a different way and to understand the term "protection" in a political sense. Viewing the news in that evidently overstrained light, the *Asahi* naturally attaches great importance to it. After all, the telegram itself may prove unfounded.

The *Nichi Nichi Shimbun's* Söul correspondent states in a telegram received on the 16th instant at 6 p.m., that the British Consul-General and his wife, while taking a walk in the park, had an altercation with some Japanese soldiers, but that it was discovered to have been caused by a misunderstanding. The *Tokyo Asahi's* telegram assigns the cause of the trouble to the British Consul-General's unwitting attempt to cross the military cordon. The matter seems to have been satisfactorily settled.

The *Nichi Nichi's* Fusan correspondent, writing under date of July 11, describes in full the much talked of robbery of powder and dynamite at the Yong-tam mine. "I have," says he, "thus far kept silence on this subject in compliance with the wish of the party sustaining damage. But the affair having already been made public, it is advisable to publish trustworthy information. On the evening of the 30th of June, eleven Japanese attended by two Koreans visited Mr. Maki Tatsujiro and two other Japanese at the gold mine of Yong-tam. One of the visitors, Tanaka Jiro, a discharged Captain of the Japanese Army, was personally known to Mr. Maki, who had made his acquaintance at Söul when he, Mr. Maki, was taking measures to resume mining operations. Tanaka asked for support for himself and his comrades, and his request was willingly granted. After the feast, one of the visitors turned conversation to the subject of the *Togaku-to* disturbance, and stated that he and his party were on their way to the troubled district to aid the Korean authorities to put down the insurrection. But they were sadly in want of the necessary arms and ammunition, and so he begged the host kindly to supply them with the dynamite and powder he was well known to possess. Mr. Maki denied that he had in his possession either dynamite or powder, and even if he had them he would not, he said, comply with his guests' request. The adventurers then seized him and another Japanese, and presenting pistols to their breasts, demanded to be shown to the place where the agents of destruction were stored. This threat availing nothing, the ruffians succeeded in finding the powder store and took away ten pounds of dynamite and a quantity of ammunition. Of the eleven Japanese desperadoes, the names of two are known. They are the above mentioned Tanaka and Suzuki Tsutomu, a talented writer on the staff of the *Nitoku Shimpö*."

Late in the afternoon of the 17th instant, the streets of Tokyo rung with the cries of *Gogai! Gogai!* From these Extras, it seems that late the preceding night very important telegrams

arrived at the General Staff Office from China and Korea. On the morning of the 17th, a War Council was held at the Palace, attended by T.I.H. Prince Arisugawa and Komatsu, General Count Yamagata, General Count Oyama, Vice-Admiral Count Saigo, Vice-Admiral Viscount Kabayama, Vice-Admiral Viscount Enomoto, Lieutenant-General Kawakami, Vice-Admiral Viscount Nakamura, besides Count Ito and Mr. Mutsu. It is also stated that Vice-Admiral Viscount Kabayama, who was on the retired list, has returned to active service and has been appointed Chief of the Command Department in the Navy, that post having become vacant by the transfer of Viscount Nakamura to the Privy Council. It is alleged by the *Kokumin Shimbun* that Viscount Kabayama accepted the post on condition that he would resign if the Cabinet abandoned the present war policy. We reproduce these items for what they may be worth.

The report of the appointment of Vice-Admiral Viscount Kabayama to the post of Chief of the Command Office in the Navy, vacated by the transfer of Vice-Admiral Viscount Nakamura to the Privy Council, has been confirmed by the *Official Gazette*. The rumour that important telegrams were received at the General Staff Office on the night of the 16th has turned out inaccurate. This rumour doubtless originated in the fact that a telegraphic message was received on the same day at the Foreign Office from the Japanese *Chargé d'Affaires* in Peking. Reference is elsewhere made to this communication and the reply to it.

Concerning the three Reform Commissioners recently appointed by the Korean King, we learn from the *Nichi Nichi Shimbun* that Mr. Shin Seiki comes of one of the most illustrious families in Korea. He is said to enjoy the reputation of being a man of character and decision. Mr. Kim Sokan, another Commissioner, is stated to be one of the most talented officials in the Korean Government. The third Commissioner, Mr. So Ensho, has hitherto been known principally on account of his skill in penmanship, but is believed to be a man of considerable ability.

According to trustworthy telegrams, it seems that the Korean Government declared on the 10th instant its consent to the programme of reforms submitted by the Japanese Minister. This declaration seems to have been delivered by word of mouth, for a later telegram states that Mr. Otori requested the Korean Government to put the statement in writing.

The *Yomiuri Shimbun's* extra states that a party of British Marines entered Söul on the morning of the 18th instant, for the protection of the Legation.

The same paper also reports that, according to a telegram received by the Japanese Government from In-chön on the evening of the 17th instant, 80 American marines were to be despatched to Söul. The *Nichi Nichi Shimbun* publishes the following telegram, dated Vladivostok, July 17, 1 p.m.:—"Steps are being taken for the mobilization of three battalions of infantry, and a company of engineers, and for the departure of seven men-of-war. It is not known whether these are destined for Korea."

Telegrams from China state that some vessels belonging to the China Merchants' Steam Navigation Company have sailed for Tientsin. Their number is put by some telegrams at nine and by others at four, the latter being more probable.

The *Nichi Nichi Shimbun's* Söul correspondent states that Hong Tjyong-on, the murderer of Kim Ok-kyün, who was some time ago appointed to the office of *Fuku-shuri* (Official Recorder), has been removed to that of *Kennö*, the nature of which post is not known.

Concerning the movements of the Chinese troops at A-san, it is stated that, notwithstanding the conflicting reports recently circulated, the object of the Chinese Commander is to shift his headquarters to Sü-won. Indeed it is even mentioned that a number of Chinese soldiers are already stationed there. The castle of Sü-won is said to occupy a position of great strategic advantage. The delay in the proposed

removal of the Chinese troops thither is perhaps owing to the fact that considerable repairs have to be done to the road in order to fit it to the passage of the field-pieces which were brought from China.

The *Nichi Nichi Shimbun's* Extra on the 19th instant published the following telegram, dated Tientsin, July 18, 6.30 p.m.:—"The Chinese Government has decided to send 12,000 troops to Korea in the course of two days, to-morrow and the day after to-morrow. They are to be transported by 8 men-of-war and 8 merchant ships. Preparations for the departure of these troops have already been completed." There seems to be no reason to doubt the truth of this telegram. From this it appears that the Cabinet in Peking has at last made up its mind to settle the matter with Japan at the point of the bayonet. The warlike preparations on China's part have no doubt been keenly watched by the Japanese Government, so that we may safely conclude that all necessary steps have been taken by this country to counterbalance the impending augmentation of the Chinese force in the peninsula.

Vice-Admiral Viscount Kabayama and Lieutenant-General Viscount Takashima are reported to have left Tokyo by the first train on the morning of the 19th instant. It is believed that they have gone to Hiroshima, the former to direct from there the movements of the Japanese fleet in Korean waters and the latter to proceed to the peninsula to assume the command of the land troops there.

The number of British Marines who entered Söul on the 18th instant is put by some telegrams at 20 and by others at 25. It thus appears that their number is exceedingly small.

The entry of 80 American Marines into Söul has already been noticed. The *Tokyo News Agency*, however, has received the following telegram, dated In-chön, July 18, p.m.:—"The entry of 80 American Marines has been stopped on instructions from the American Minister." This is incompatible with telegrams published in papers like the *Nichi Nichi* and others equally reliable, that a party of American Marines had entered the Korean capital.

The negotiations between the Japanese Minister and the Korean Government on the subject of internal reforms are said, by a telegram in the *Nichi Nichi*, to be making steady progress; but no particulars are known. A report has found its way into the columns of some papers that Mr. Kim Koshu, who was but recently appointed to the newly created office of President of Foreign Affairs, has been transferred to a comparatively insignificant post. But this report is evidently false, for no such communication has thus far been received by the Japanese Government.

Another erroneous report published by some journals is to the effect that the Korean Government has appointed fifteen Commissioners to the Bureau of Reforms. It is very well known that three such Commissioners have been appointed, and their names have been published. The Japanese Cabinet, we are informed, has not yet received the notification of the increase of Commissioners.

Concerning the question of the neutrality of In-chön, the *Nichi Nichi's* Söul correspondent wires as follows under date of July 17th, 6 p.m.:—"The report that In-chön has been declared a neutral port in the event of war is erroneous. The first conference of the various foreign Representatives ended without leading to any definite result, and the second meeting, which took place on the 14th instant, was also without issue. The question still remains undecided. Mr. Otori, our Minister, has attended all the meetings so far convened and declared his willingness to consent to the proposal if all the conditions unfavourable to Japan were rejected."

The *Yiji Shimpö* publishes a telegram, dated Tientsin, July 17, which states that the Chinese Government is taking steps to organize volunteer corps in Ho-nam and Am-phi.

According to a telegram dated Söul, July 18, p.m., the Chinese in that city are stated to be fast taking departure for home.

THE GOVERNMENTS OF JAPAN AND CHINA.

On the night of the 16th instant, the Cabinet in Tokyo received a telegraphic message from its *Chargé d'Affaires* in Peking, forwarding a communication from the Chinese Government to the following effect:—"Pending the present affair between the two countries, with a view to the avoidance of possible dangers, the Government of China has instructed its war-vessels not to enter any of the open ports in Japan, and in turn would request the Government of Japan to prohibit its war-vessels from entering the ports of Kiang-Soo, See-kiang, and Foo-chow, or when it be absolutely necessary to approach those ports, to cause its war-vessels to anchor at the outer limits of such."

On the receipt of this telegram, the Japanese Government is reported to have at once directed its *Chargé d'Affaires* to reply to the Tsung-li Yamen to the following effect:—"The Japanese war-vessels, according to the stipulations of the Commercial Treaty of 1881, have the right at any moment to enter any open ports in your country. The Japanese Government sees no reason why the exercise of this right should now be suspended, when the two countries are at peace with each other."

Commenting on this correspondence, the *Nichi Nichi Shimbun* calls attention to the singular fact that the Chinese Government's request relates only to the ports under the admiralty jurisdiction of the Canton Fleet. From this fact, our contemporary infers that the Chinese Government, though feeling some confidence in the efficiency of the Northern Fleet, seems to be in grave anxiety about the capacity of the Canton Fleet to cope with Japanese men-of-war.

FIRE ON THE BLUFF.

The fire which broke out on Sunday evening, about half-past seven o'clock, originated on the Bluff premises of Capt. W. E. Pyne—a building in foreign style—and resulted in the utter destruction of that house, another European house on Lot No. 103, also owned by Mr. Pyne and occupied by Messrs. Morris, Smith and another, and some Japanese houses. Had any sufficient quantity of water been available the fire might have been stamped out very quickly, but the wells in the immediate neighbourhood were either too deep for the small manuals to work properly, or else had run nearly dry during these last few hot days. For some time it looked as if No. 103 would escape, but upon the fire coolies observing a few sparks under the roof, they at once commenced to remove the tiles and thus created a splendid flue. The sparks were soon fanned into flame and the building was doomed; the roof fell in within twenty minutes and then the side walls. Mr. A. H. Dare's house, in the adjoining compound, was in considerable danger for some time, but the trees near the dividing fence fortunately provided an effective screen, and staved off the advance of the conflagration. The trees on the compound of 103, nearest the outbreak, suffered severely, especially when a large quantity of kerosene exploded, and this morning they present a pitiable appearance. Supt. Morgan brought up a detachment of firemen from the Settlement Brigade, while the Brigade's Bluff men were present in force, as well as the Police Brigades, but they could do little owing to the scarcity of water. The property was insured. We think that the police could have done better service had they stopped the vehicular traffic along the main road sooner; many *jinrikishas* were hauled over the fire-hose to its manifest detriment, before the police stepped in and put a stop to the practice.

"Why did General Washington cross the Delaware on a dark, stormy night?" asked the funny man. "Give it up," answered the crowd. "To get to the other side," retorted the funny man; and then the crowd killed him, gently but firmly.

SHANGHAI NEWS.

The British barque *Contest* was run into at Pagoda Anchorage on Monday, July 9, by a Chinese gunboat. The *Contest* was at anchor at the time and her cargo had to be discharged in order to repair the damage done.

The Chinkiang correspondent of the *N.-C. Daily News* pens the following encomium at the end of his description of the Fourth of July celebration in that outpost:—"Presently China was on her feet in the person of our all-accomplished Taotai. Imagine a Taotai, who is full of Western notions of sanitation, who is so fond of foreign society that no social gathering seems complete without him, who is assiduous at tennis and five o'clock teas, who can bandy compliment and repartee in half-a-dozen European tongues; who has a hundred good stories about people in Paris, Madrid, London, and Washington, D.C.; finally appears every day in raiment more quaint and splendid than the last, with the most wonderful girdle appendages and bracelets and jade rings and necklaces—what other community does not long to rob us of such a *biblot*?"

Quaint is the language used in the centuries' old *Peking Gazette*, as witness the following:—"Shên Ping-chên, Governor of Anhui, asks us to allow a late general, Wang Hua-ch'eng, to be deified, owing to eminent services during the Taiping Rebellion. It has now turned out from investigation of this officer's official record that he has done nothing very wonderful, but only the duty to be expected from a person of his rank. Hence we command that this petition for deification, etc., be shelved." "13th April.—No news of interest this day." "Yu Lu, Governor-General of Fêng-tien, reports an appeal case from Peking which had been sent down to him. The investigations led to the following evidence by the appellant, a woman named Wang Chang-shih. She claimed that she had been engaged as a servant in the household of one Ch'ang Ch'i, a *bikeshi* or clerk in the White Mongolian Banner at Shing-king. In September, 1893, it so happened that appellant's daughter Siao Huan arrived at the house where appellant was working (she being a native of Chengtê-fu, Chihli), for the purpose of calling appellant to return. Ch'ang Ch'i, her master, however, saw the giri and wished to make her his concubine, although he did not say so; but as a pretence said that he would be the middleman in a match of some pretensions. In this way he inveigled the giri to another place and ravished her. Memorialist had other persons examined before him as witnesses all of whose evidence tallied with each other. He then sent for the Bannerman, Ch'ang Ch'i, but the latter showed considerable craftiness and obstinacy, so that the truth could not be got from him. Memorialist therefore asks that Ch'ang Ch'i be cashiered and reduced to the ranks so that he may take his trial with the others.—*Rescript: Let it be so and let the Board concerned take note.*"

The *N.-C. Daily News* of the 10th inst. has the following:—"Five sailing vessels with oil from New York passed Anjer on the 19th of June, four of them for Shanghai, three leaving New York close together. The *State of Maine* sailed from New York on the 3rd of March, the *Indiana* on the 4th and the *Glenfinlas* on the 5th. The *Glenfinlas* and *State of Maine* arrived on Sunday while the *Roanoke* which arrived here yesterday passed Anjer on the same day as the others and has made the run to Woosung in nineteen days. The fifth vessel is the *John McDonald*, but she is bound to Yokohama. The *Siren*, which left New York on the 6th of December, but put into Cape Town, passed Anjer on the 20th of June for Japan.

Mr. Jungbluth, a once well-known resident of Yokohama, died in the General Hospital on Wednesday, July 11, from heat apoplexy. He had been drinking heavily for some time. His wife, an Anglo-Indian, committed suicide while temporarily insane, by hanging herself, a few days before. The couple leave three children.

HONGKONG NEWS.

Prices of provisions have risen considerably in Haiphong in consequence of the cessation of shipments from Hongkong on account of the plague, and the other day there was a threatened scarcity of flour.

The British sailing vessel *William le Lacheur*, concerning which a report was current in Hongkong on the 19th ult. that she had been lost, was signalled on the 21st ult. by the Russian steamer *Nijni Novgorod*.

The Port Darwin paper of the 8th ult. says:—"In consequence of the presence of plague in Hongkong, the steamer *Tsinan* was not granted pratique on her arrival at this port. The steamer had no communication with the shore except through the Customs boat, and the passengers who booked in her were placed in a boat towing astern and thence hauled up to the ship. The greatest pains were taken by the health authorities to isolate the *Tsinan* while she remained in harbour. Her cargo, consisting of 62 tons general, has been carried over to the next port, much to the disgust of the Chinese, whose stocks are likely to get very low before replenishments can arrive.

Two cholera cases, certified as such by Dr. James, A.M.S., have been discovered among the boat population at Lai-chi-kok. They are considered to be merely sporadic.

The Straits Government and the Pahang authorities are taking prompt measures to suppress the outbreak of the revived 'rebels' on the Tembeling River. Some 250 Sikhs, with European officers, have been sent to assist the Pahang military police; and as the rising is so far purely local, without any indication of becoming infectious, peace is expected to be soon restored.

A piece of land on the Shauiwan Road, near Quarry Bay, Hongkong, was exposed for sale by public auction on July 2nd. The lot contained 39,000 square feet, the upset price was \$1,950 (or 5 cents a foot), and the annual rental is \$90. There was only one bidder, Mr. Mok Chi Wing, who secured the lot for \$1,960.

A batch of nuns are expected to sail from Lisbon in September next *en route* for Macao, where they are to replace the French sisters, who were ordered to leave that city in May last.

The *Bangkok Times* of the 27th ult. says:—"His Majesty the King returned here on Monday and proceeded up to Pakret, whence he is expected to-day. By last advices His Majesty was free of the fever, although weak from its effects.

From Australian papers we notice that steamers from Hongkong were not allowed to hold communication with the shore at Port Darwin or Brisbane and proceeded straight on to Sydney.

The plague returns for the 24 hours to noon on Saturday, July 7th, were as follows:—

	Hygienic.	Kennedy Town.	Alice M. Hospital.	Cattle De-posit.	City.	Total.	Increase.	Decrease.
Admissions	—	1	4	7	—	12	9	—
Deaths	—	1	4	4	3	9	—	5
Discharges	—	—	—	—	—	—	1	—
Under treatment	9	37	21	94	—	161	5	—

The total number of deaths from the commencement of the epidemic to noon on Saturday amounted to 2,361.

Original from

During the last day or two, says the *Daily Press* of the 9th inst., the natives who left the colony have been returning in large numbers, the general opinion amongst them being that the plague is now practically over. Considering that the deaths have fallen from over a hundred in one day to nine the opinion is not without justification, though we cannot yet consider ourselves quite out of the wood. Mr. H. E. Allen, of the Hongkong Dispensary, is progressing very favourably.

The *Singapore Free Press* hears that Ceylon is to send a cricket team to Singapore about the end of January, 1895. It is probable that Hongkong will also be invited to send down a team at the same time, which will suit Singapore and Hongkong admirably as being the time of Chinese New Year. Only three matches would be played:—Straits v. Ceylon; Straits v. Hongkong; Hongkong v. Ceylon. The matter has been discussed informally by the Committee of the Singapore C.C.

ENGLISH NEWS.

The *Times* publishes a long letter from Mr. Robert Louis Stevenson on the condition of affairs in Samoa. According to his charges, the independence of the natives, guaranteed by the Samoan Conference at Berlin in 1889, is a farce, and the two officials, the Chief Justice and the President, provided by the treaty are completely under the control of the three Consuls, English, German, and American, who rule, or rather misrule, the islands as a kind of irresponsible triumvirate. When Mr. Stevenson last wrote to *The Times* he was expecting the arrival of two new treaty officials, and was hoping for better things. He wished, indeed, for the impossible, for the return of the defeated chief Mataafa, who had been deported to a coral reef under the German flag; and he says of Mataafa, "I thought him, on the whole, the most honest man in Samoa, not excepting the white officials." But since Mataafa's return was impossible, Mr. Stevenson was looking forward to the coming of the two new treaty officials, and to the certainty of relief for the Samoans from the Consular misgovernment:—

I told myself that this was the Government of the Consular Triumvirate. When the new officials came it would cease; it would pass away like a dream in the night; and the solid *Fax Romana* of the Berlin General Act would succeed. After all, what was there to complain of? The Consuls had shown themselves no slovens and no sentimentalists. They had shown themselves not very particular, but in one sense very thorough. Rebellion was to be put down swiftly and rigorously, if need were with the hand of Cromwell; at least, it was to be put down. And in those unruly islands I was prepared almost to welcome the face of Rhadamanthine severity.

And now it appears it was all a mistake. The government by the Berlin General Act is no more than a mask, and a very expensive one, for government by the Consular Triumvirate. Samoa pays (or tries to pay) £2,200 a year to a couple of helpers; and they dare not call their souls their own. They take their walks abroad with an anxious eye on the three Consuls, like two well-behaved children with three nurses; and the Consuls, smiling superior, allow them to amuse themselves with the routine of business. But let trouble come, and the farce is suspended. At the whistle of a squall these heaven-born mariners seized the tiller, and the £2,200 amateurs are knocked sprawling on the bilge. At the first beat of the drum, the treaty officials are sent below, gently protesting, like a pair of old ladies, and behold! the indomitable Consuls ready to clear the wreck and make the deadly cutlass shine. And their method, studied under the light of a new example wears another air. They are not so Rhadamanthine as we thought. Something that we can only call a dignified panic presides over their deliberations. They have one idea, to lighten the ship. "Overboard with the ballast, the mainmast, and the chronometer!" is the cry. In the last war they got rid (first) of the honour of their respective countries, and (second) of all idea that Samoa was to be governed in a manner consistent with civilization, or Government troops punished for any conceivable misconduct. In the present war they have sacrificed (first) the prestige of the new Chief

Justice, and (second) the very principle for which they had contended so vigorously and so successfully in the war before—that rebellion was a thing to be punished.

We have not space to show how Mr. Stevenson attempts to substantiate these charges: those that are familiar with his writing will know that he is always both lucid and picturesque. He concludes by saying: "It is to be presumed that Mr. Ide and Herr Schmidt [the Chief Justice and the President] were chosen for their qualities; it is little good we are likely to get by them if, at every wind of rumour, the three Consuls are to intervene. The three Consuls are paid far smaller salaries, they have no right under the treaty to interfere with the government of autonomous Samoa, and they have contrived to make themselves all in all. The King and a majority of the Faipule fear them and look to them alone, while the legitimate adviser occupies a second place, if that. The misconduct of MM. Cedercrantz and Senft von Pilsach was so extreme that the Consuls were obliged to encroach; and now when these are gone the authority acquired in the contest remains with the encroachers. On their side they have no rights, but a tradition of victory, the ear of the Governments at home, and the *vis viva* of the warships. For the poor treaty officials, what have they but rights very obscurely expressed and very weakly defended by their predecessors? Thus it comes about that people who are scarcely mentioned in the text of the treaty are, to all intents and purposes, our only rulers."

If such have been the evil effects of a compromise arrived at from considerations of expediency five years ago, in dealing with a group of small islands with a population of thirty or forty thousand people, what are we to anticipate from a similar piece of opportunistic policy about to be perpetrated in Africa, where far larger interests are involved? We refer of course to Uganda, the region at present attracting most attention in connexion with what is called by some "the partition of," by others "the scramble for," Africa. The intentions of the government in relation to this region were communicated to the two Houses on the first of June. Either of two courses might seem wise to adopt, the annexation of Uganda, a vigorous effort at the development of its commercial resources, at the suppression of the slave-trade, and at the introduction of our own type of civilization; or, on the other hand, the complete abandonment of the country. The first of these courses would satisfy the imperial aggrandisement party and alienate the extreme radical section; the second would appear little short of treasonable to the Jingoos, but would delight the soul of Mr. Henry Labouchere. On the whole, we think the former course would now, not merely on commercial but also on moral grounds, be the best; but the latter course has also the merit of logical consistency. But neither course is to be adopted. Uganda is to be declared a protected state, and is to be governed by a native king, with a white commissioner to advise him (this gives us a singular reminiscence of the Samoan muddle). But we are not to build a railway from the Victoria Nyanza to the sea, though such a railway would be the only effective means of making our protectorate a reality. The *Spectator* publishes the following severe comments on the decision of the Government:

The effect of this absurd arrangement hardly needs explanation. The British Government does no good in East Africa, while it burdens itself with possessions left, as it were, in the air. It is responsible for Uganda and half-a-dozen little States around it, and takes no pains to make itself strong enough to fulfil its responsibilities. It leaves the petty States avowedly to go to the devil their own way—a permission at which they will jump eagerly—and leaves Uganda at the disposal of the black King Mwanga, who, if he sees a chance, will probably dispose of all Europeans by a general massacre. If he does, we have no power to punish him except by an expedition which will occupy five thousand men for many months, for we refuse to make a road to the Lake, and cannot without the road maintain on the Lake an armed flotilla. The decision is positively fatuous. We admit and leave untouched a whole series of heavy obligations, not the

least being the international one—for we are responsible for Mwanga, Kabarega, and the rest of the savages—we plant Europeans in a nest of deadly enemies, Europeans who, if anything happens to them, we must rescue or avenge; and we refuse to make the only road by which we can easily exert the Imperial force necessary to fulfil our obligations and protect our people. We, in fact, render ourselves as powerless as if we had quitted East Africa, yet gain none of the exemptions which we should have enjoyed if we had quitted the territory altogether. We shall have no real power of putting down the slave stealers, or protecting the missionaries, or introducing law, order, and industry among the Waganda, the most hopeful by far of all the African tribes, men who want nothing but security to be as quiet and peaceful cultivators and artisans as our own Hindoos.

It is obvious that such a sitting between two stools as this cannot continue long, and that within a year or two the Government will have to make a definite decision between the annexation and the abandonment of Uganda. Meanwhile, we hardly think the Government is likely to gain strength by this ill-judged attempt to please both parties at once.

One of the minor sensations of the first week in June was the battle of the bullet-proof cuirasses—that of Herr Dowe and that of Mr. Maxim. Mr. Maxim declared he had invented a cuirass much lighter than that of Herr Dowe, and equally bullet-proof; and that he was prepared to sell the secret of his invention for 7s. 6d. A large number of experts were invited to witness a test of Mr. Maxim's cuirass; but when it appeared that the meeting had really been summoned as an advertising venture on the part of Mr. Maxim, and that his bullet-proof cuirass consisted only of a covered plate of steel, the most influential spectators went away in disgust. A long correspondence in *The Times* followed. Mr. Maxim professes to treat the whole affair as "a huge joke;" declares that his intimate knowledge of the physical constitution of this planet makes him certain that there is no cuirass that can stop a bullet except a plate of steel, and further, that an examination of a bullet arrested by Herr Dowe's cuirass convinced him that the cuirass did contain such a plate; asserts that Herr Dowe's cuirass consists merely of a thin steel-plate concealed in layers of felt; and finally says he hopes that within twenty days the British public may know whether they are being fooled by a German tailor or by an American civil engineer. On the other hand, Herr Dowe, who discovered the cuirass, and Captain Martin, who discovered Herr Dowe, write to *The Times* to declare that the cuirass does not contain either iron or steel. Herr Dowe adds that he has never asked any definite sum for his cuirass, but that Mr. Maxim "can buy it for considerably less than the £200,000 mentioned in the newspapers if he will deposit the purchase money in responsible hands. He can then dissect my cuirass to his heart's content in the presence of experts and take a lesson in his profession, I on my side being quite ready to forfeit every farthing of the purchase money if iron or steel is found in the construction of the cuirass. I think Mr. Maxim makes a mistake in claiming to be omniscient in matters of resisting materials so far as this planet is concerned."

After all, when thinking of a bullet-proof cuirass, the most important question that occurs to one is not, "Does the cuirass contain steel," but, "Is the cuirass bullet-proof?" Since Herr Dowe has stood up in the Alhambra Music Hall protected by his own cuirass, and has had shots fired at him from a Lee-Metford rifle loaded with the service cartridge, a ball from the same rifle having penetrated a log of wood 2 feet 4 inches thick, the fact that his cuirass is bullet-proof can hardly be disputed. Mr. Maxim's steel plate, however, will answer similar tests. Its comparative lightness, as compared with Herr Dowe's cuirass, may more than compensate for its want of flexibility. But the important practical point is that neither inventor appears to claim that his cuirass cannot be pierced by a steel bullet. It is the old story of the armour plate and the projectile, in which the projectile always wins.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

JAPAN AND KOREA.

THERE seems to be no longer any doubt that, despite the secret obstructions devised by China, the Korean Government has resolved to rely upon Japan's protection and, at her suggestion and with her assistance, to carry out thorough reforms in all branches of the administration. What reforms have been suggested is, however, a secret not yet divulged. Some of the metropolitan journals vie with each other in publishing what they allege to be the demands preferred to the Sōul Cabinet by Minister OTORI. But, as we stated in a previous issue, none of these reports is trustworthy. The *Nichi Nichi Shimbun*, however, which doubtless knows what it is talking about, alleges that the scheme of reform presented to the Korean Government contains a number of separate headings, and there has not been omitted anything deemed essential for the maintenance of the independence of Korea and the peace of the East. It seems to have been the first demand of the Japanese Minister that the Korean Government should appoint a Commission invested with full powers to consult with him on the question of reforms. Such a Commission has been appointed, but exactly when its appointment took place and of whom it is composed, the public is not yet informed. It is certain, however, that the Commission was nominated within a few days of the 10th instant, if not actually on that day, for, according to the *Nichi Nichi's* Sōul correspondent, wiring on July 12th, at 8 a.m., Mr. OTORI met the three Korean Commissioners on the 10th instant and explained to them in full the details of the proposed reforms.

Another piece of intelligence, showing that the Korean Government is in earnest about the subject of reform, is that a new office, called *Gaimu Sosai* (President of Foreign Affairs), has been created, and that Mr. KIM KOSHU has been appointed to it. The so-called Korean Minister of Foreign Affairs, under the present system, is comparatively a petty official with little or no discretionary powers, and the fact has long been a subject of complaint among the Japanese. The importance of any portfolio in Korea, and consequently the anxiety to obtain it that exists among men of influence, depend upon the pecuniary opportunities arising out of the discharge of its functions. At the Foreign Office there are no such opportunities. A Minister who has to accept the canons of right and wrong as laid down by foreign diplomatists in accordance with Occidental ethics, has no latitude of action saleable to the highest bidder. He is obliged, therefore, to rule bribes out of his career, and a post without such perquisites presents no attraction to Korean statesmen. Moreover, the Korean Minister of Foreign Affairs finds no chance of getting *douceurs*, it is not

so with those whose guidance has he has to accept, from the SOVEREIGN downwards. They, being already moved by money, decline to be moved by his reasoning, and simply call upon him to resign if he cannot manage matters in the fashion to which they have pledged themselves "for a consideration." But the resignation of the Foreign Minister means not merely the interruption of any negotiations in which he may have been engaged with a foreign Representative, but also their resumption *ab initio*, if resumed at all. The Japanese of late years have repeatedly suffered from the inevitable inconveniences of such a faulty system. The object of the establishment of the new office is evidently to terminate this flagrant evil, and the fact that a statesman of power and standing, with pro-Japanese tendencies, has been chosen to occupy the post is a clear indication which way the wind now blows in the peninsular Kingdom.

Commenting on the subject, the *Nichi Nichi* cautions its countrymen against supposing that, because the Korean Government has consented to introduce reforms, all danger of war is over. There is no doubt, says our contemporary, that a step has been gained toward the accomplishment of Japan's object, but what has thus far been done is merely a preliminary measure; the real work still remains to be achieved. Under these circumstances, it is altogether premature to suppose, as some papers in Tokyo seem to suppose, that the Japanese troops will be speedily withdrawn from Korea. "Korea having agreed to introduce reforms, Japan should now proceed with promptitude and decision to carry out her task, determined to fight with any Power that may attempt to obstruct her course. Consequently, Korea's consent to the Japanese proposals can not be regarded as a sure indication of peace and tranquillity: everything depends upon the future course of events. Should it become evident that the work of reform is impossible on account of obstructions, Japan will not hesitate to compass her object at the point of the bayonet. China's refusal to act in concert with Japan has compelled the latter to undertake, on her sole responsibility, the work of regenerating Korea. Hence every step on China's part tending to hamper Japan's policy must now be regarded as an act of hostility. . . . As to the question of an international congress, Japan's rights, interests, and honour, alike forbid her either to propose the opening of such a congress or to take part in it if opened. Supposing that certain Powers should address a joint note to Japan recommending the withdrawal of her troops, she would never agree to such a course. Now that she has undertaken the task of reforming the Korean Government, she will not listen to anything that may be said to her by China, much less by a Western Power. Her present concern

is to bring about the better government of Korea, and her troops in that country will hereafter be employed not only for the protection of the Japanese Legation and subjects, but also for the maintenance of peace and good order in the peninsula. They are to be stationed there at least until Korea shall have proved competent to protect herself. Such being the case, barracks may be erected, parade grounds prepared, and manœuvres conducted by the Japanese troops at any place in the peninsula. Moreover, with regard to the Chinese troops, who were despatched at the request of Korea to subdue the insurrection, their withdrawal should be demanded, and in case the demand be not heeded by China, they must be driven out of the peninsula by force. For the past two centuries, Korea's tendency has been to rely more upon China's aid than upon Japan's. Especially of late years repeated complications between this country and Korea have served to push the latter into China's arms. Under these circumstances the best course for Japan will be to fight China and convince the Koreans that the wisest thing for them is to rely implicitly upon Japan's protection."

JAPANESE JINGOISM.

IT has been said that the Japanese are conceited. Very likely. They ought to be complimented by the comment. People without conceit are not worth a row of pins, nationally speaking. The English have made in the history of the world a mark out of all proportion to their apparently small resources and numerical pettiness. To what element of character do they chiefly owe their wonderful success? To their supremely excellent opinion of themselves. In any society and under any circumstances the genuine Briton thinks himself the best man of the time, indeed of all time. From abiding self-content he acquires an unconscious superciliousness of demeanour that renders him horribly obnoxious to other nationals. He does not mind that. Their opinions of him pass by his ear like an idle wind. He is calm because he deems himself too big to be ruffled by any paltry breeze, and his calmness often gives him a marked advantage over persons more nervous and less self-confident. If any one wants to know what Britons think of themselves, he has only to consult a few of their favourite popular songs—"Rule Britannia," the "Nice little, tight little Island," and so forth. We declare unreservedly that our faith in the stability of the British empire could be disturbed by nothing so much as by any diminution of this splendid self-conceit. It is hard to beat a man so long as he believes himself invincible. Circumstances that would crush folks of smaller self-confidence, leave the Englishman unconcerned because he has absolute faith in his mission to master all circum-

stances. If the Japanese show some conceit, then, it does not become us either to denounce or to ridicule them. Your true Briton can give them many points at that game and still retain his front seat. With a kindly fellow-feeling, therefore, we read in the columns of the *Nichi Nichi Shim-bun* a pretty little display of braggadocio. It takes the form of a dialogue between an anonymous foreign diplomat and an anonymous Japanese statesman. "If you fight with China," says the former, "you will certainly beat her at first. But she is too big to be sensitive. A long time must elapse before you can strike a mortal blow, and the protracted effort will exhaust your country also. Take an example from Europe. If Russia and Austria went to war, it is conceivable that the latter might gain some advantage at the outset, but she would be beaten at last by the bulk of her adversary." "That," replied the Japanese statesman, "is reasonable enough from your point of view. But if you read the history of Japan you would know that from time immemorial China and Japan have looked at each other with hostile eyes and that the former has always had a wholesome dread of the latter. Moreover, the military system of Japan enables her at any moment to raise an army of five or six hundred thousand men, and in addition she has four hundred thousand of her old *Samurai* who for years have been wasting their hearts in the hope of a fight. Then there are from five thousand to ten thousand so-called *Soshi*, and these as well as the *Samurai* are skilled in the use of the Japanese sword. So you see we could hurl at China's head a force that would make her shake in her shoes, big as she is. Then you must remember that if we could only land our troops in China, the question of commissariat would be comparatively easy. Finally, China would probably have to face an insurrection at home in addition to this overwhelming inroad of foreign foes. She would have a pretty rough time." With such tall talk embroidered by other comments which we do not reproduce did the Japanese statesman regale the foreign diplomat, until the latter's apprehension on Japan's account was converted into pity for the sufferings that would be inflicted on China. We entertain no doubt that these utterances will be attributed to Japanese conceit and cited as another instance of the bumpiness of an overweeningly self-opiniated people. But for our own part we think that if the Japanese went to war in any different spirit there would be very little hope for them. We think, too, that if it came to fighting they would give some valid reasons for their self-conceit.

MRS. FRASER'S DEPARTURE.

ON Monday afternoon Mrs. HUGH FRASER left Tokyo by the 5.50 train. The whole of the foreign community of all nationalities now present in Tokyo, the members of the Foreign Corps Diplomatique, and a very large number of Japanese, official and private, assembled at Shimbashi to say farewell to a lady whose memory will always be cherished with affection and respect in this country. Ministers of State and their wives, delegates of the EMPEROR and EMPRESS, the Sisters of Mercy, the Heads of the Foreign Missions, the Court Ladies—all the notables of Tokyo, in short, came together at Shimbashi to say adieu, and many of them accompanied Mrs. FRASER to Yokohama, where many friends awaited the arrival of the train or made their farewells on board the steamer.

Universally popular as Mrs. FRASER was with the foreign residents, to whom she endeared herself not less by her sunny disposition and bright sociability than by her unfailing kindness of heart, it is of the place she occupied in the affections of Japanese ladies that we should chiefly speak. For she was one of the very few foreigners that have succeeded in breaking down the impalpable but most substantial something dividing Western Society from Japanese, and standing always, a fatal obstacle, in the path to frank and hearty friendship. Many attempts have been made by observers, of insight more or less profound, to analyse that something; to determine on which side the difficulty lies; to say why it is that up to a certain point our association with the Japanese proceeds in the pleasantest, most successful manner imaginable, but that beyond that point there is no advance. As yet, we think, there has not been any entirely satisfactory analysis. All are agreed, however, as to the existence of some psychological partition, and as to the fact that it can be brushed aside only by very exceptional personalities. Such a personality was Mrs. FRASER. The Japanese ladies, one and all, with whom she came in contact soon learned to regard her as a trusted friend, not less close to them than their own countrywomen in everything that goes to constitute true intimacy. It may seem to our readers that, in speaking thus, we magnify a comparatively small matter. But nothing can ever be small that links nationalities in a common bond of kindly feeling, and it is certain that a Minister's wife such as Mrs. FRASER was in Tokyo, can accomplish not less than her husband in promoting the amicable aspects of Great Britain's policy. The late Mr. FRASER himself did not love society. He never utilized its opportunities for diplomatic purposes, deeming duty too sacred to be imported into any fortuitous domain and, not being able to adapt himself easily to

the trivialities and superficialities that play so large a part in social intercourse. Mrs. FRASER'S rare qualities were, therefore, all the more useful. We may justly say that in winning so many hearts she served her country's best interests, and materially furthered the work of the blameless man whose loss all unite with her in mourning. The cause of charity, too, found in her an unwearied servant. A long record of good deeds, performed with entire absence of ostentation and with the most unselfish zeal, stands to her credit, and sharpens the public's sense of the loss Japan must suffer by her departure. She has the profoundest sympathy of foreigners and Japanese alike in the sad circumstances that remove her from Japan. May we be permitted to express a hope that time will soften her great sorrow, and enable her one day to recall without pain people with whom her too brief presence will always remain a sunny memory, and scenes to which her graceful geniality lent a new charm.

THE RELATIVE ATTITUDES OF ENGLAND AND RUSSIA TOWARD THE ORIENT.

"NOW that the three countries of Japan, China, and Korea, are involved in difficulties," says the *Kokkai*, "the relations existing between England, Russia, and China deserve special consideration. As everybody knows, England as endeavoured for some time to establish special relations with China and in that way to extend her influence, political and commercial, in the Orient. In pursuance of that programme she has proposed one measure or another to China and has repeatedly obtained the Middle Kingdom's consent. But despite her earnest endeavours to compass her aim, she has failed to reach a satisfactory understanding with slow-moving China, to the great disappointment of the English Government. Last year, when things had reached this stage, Mr. FRASER, the late lamented British Representative to Japan, was in London on leave of absence, and among other points submitted by him for the consideration of the Ministry, one was the unwisdom of entering into a special league with China. Instead of such a course, he earnestly advised the desirability of establishing close relations with Japan. He further argued that, as a first step toward that consummation, the Treaty between England and Japan should be revised and satisfaction should be given to the Japanese by recognising their international equality. But as the British Cabinet had many reasons for adhering to its pro-Chinese policy, the opinions of the Ministers were divided with regard to the advice of Mr. FRASER, and he was unable to have his views carried into practice. In the meanwhile the term of his leave expired, and he returned for his post. When he

reached Hongkong he found a telegram from the Foreign Office awaiting him, and he had to turn his face homeward again. On his arrival in London, he found that the Cabinet had repeatedly discussed his scheme, and had decided to adopt it. It was for that reason that the telegram had been sent recalling him so unexpectedly. Nevertheless the programme of the British Cabinet was not to give up all attempt to cultivate China's friendship, but to enter upon a more elastic route so that advances might be made either to China or to Japan according to exigencies. In consequence of this partial departure from the old policy, the relations between England and China became somewhat cooler, while the reverse was the case with Japan. Russia is similarly seeking to extend her influence in the East, and is consequently desirous to obtain an ally. But the policy pursued by Russia in this respect is widely different from that of England. She has become convinced that not to be on especially intimate relations with China would be greatly against her interests, and a similar conviction is said to have grown up in China toward her Central-Asian neighbour. Who knows, therefore, what secret treaty Russia may not have concluded with China for the sake of currying her favour in the sequel of the Pamir affair? Diplomatic matters are full of artifice and craft. Their true aspect cannot be readily discerned. Still one fact, namely, that the attitude of England and Russia toward China and Japan has become materially changed during recent years, cannot be gainsaid."

We have reproduced these comments because they furnish an apt illustration of the extraordinary phantasies conceived by Japanese editors about foreign politics. The *Kokkai* is one of the leading Tokyo dailies. It is under the editorship of a gentleman of considerable reputation in the literary and political world. It is a paper whose opinions about the present crisis, for example, command attention among the Japanese and are supposed to be inspired by an intelligent knowledge of the situation. Yet the article quoted above shows that the *Kokkai* is groping in the crassest darkness when it enters the field of high politics, and moreover has not the most rudimentary knowledge of facts. The idea of England acting as a suppliant for China's friendship and alliance is almost farcical. Undoubtedly England feels that China has a common interest with her in limiting the spread of Russian dominion, and to the extent of that feeling is prepared to act in concert with the Middle Kingdom. But it is on China's side that the effective desire for an alliance with England exists and has existed for years. After the "state of reprisals" in 1885, China gave Great Britain clearly to understand that nothing would please her more than an alliance pointing, on the one hand, to the recovery of the Amur Pro-

vinces for the TSING Sovereigns, and on the other, to such armed menace on Russia's Mid-Asian flank as would effectually hamper her march toward India. England might have had that alliance at any moment if she pleased. But though England has been willing to attain and even to cultivate China's friendship, the notion of a definite alliance with a Power so deficient in the qualities that render an ally eligible has never, we venture to say, been seriously entertained in Downing Street. As for the story about Mr. FRASER recommending Japan as a preferable ally, suggesting Treaty Revision as the price of an alliance, and being recalled from Hongkong when *en route* for Japan—it is fabricated out of whole cloth. The English Government's attitude about Treaty Revision is dictated simply by a sense of justice. It may be taken for granted that the late Mr. FRASER did not oppose any policy resting on such a basis, but he was not recalled from Hongkong to solve the British Cabinet's dilemma. Indeed, he never was recalled from Hongkong at all. That is a pure invention, worthy to stand in its context of misconceptions and ignorance. If our quotation be a fair specimen of the notions entertained about foreign policy by a leading Japanese journal, the EMPEROR'S Ministers may be pardoned should they pay scant attention to the clamours of the vernacular press.

THE CHINESE IN JAPAN.

THERE appears to be no doubt that the Chinese residents both of Yokohama and Kobe are greatly and needlessly alarmed about their personal safety in the event of the Korean complication leading to war between their country and Japan. Several of them have already abandoned their business, presumably at serious inconvenience, and have taken their departure from Japan; others are preparing to following their example. There is no valid reason for such a scare. If the Chinese understood the spirit of Japanese civilization, they would know that their persons and properties are as sacred now as they ever were in the eyes of the law, and that under no circumstances will the full protection of the Authorities be withdrawn from them. But the Chinese evidently do not understand or appreciate Japanese civilization. They probably apply the test of their own instincts to the situation, and forget that Japan is bound, in any and every conjuncture, to protect foreigners within her borders just as jealously as she protects her own subjects. The Japanese Government is under no obligation to take an exceptional step out of consideration for the unreasoning apprehensions of the Chinese settlers. Yet it appears well worth while to reflect whether wisdom and generosity alike do not dictate some effort to save these poor

people from the consequences of their baseless fears. It seems to us that a politic course on the part of the Japanese Government would be to issue through the Chinese Minister a notification that the subjects of the Middle Kingdom, while they remain in Japan with the consent of the EMPEROR, are absolutely secure against all molestation, so far as people can be secure anywhere, and that, in the event of their being obliged to quit Japan, due notice will be given to them, as well as a reasonable interval to settle their affairs. We do not, for our own part, anticipate any such conjuncture, but it would of course be over-sanguine to deny the possibility of a rupture between the two empires, and in case of a rupture the subjects of each state would very probably be ordered to withdraw from the territories of the other, as has generally been the case in European wars. Japan, as a matter of course, will behave consistently with the spirit that has directed her international procedure throughout the *Meiji* era. She will take care that Chinese subjects, who have settled here under a treaty of amity and who are in no wise responsible for the Korean complication, shall not suffer any avoidable detriment to their business or injury to their persons or property. But it is too much, perhaps, to expect that the Chinese should feel and act upon that assurance unless they have some easily understood evidence of it, and the question is whether Japan would not be performing a meritorious act of civilized liberality as well as enhancing her own reputation abroad, did she furnish some such evidence. We think that she would.

SANITARY PRECAUTIONS.

NEVER yet did an Administration adopt and enforce precautions to exclude the advent of a disease but newspaper critics were found to condemn the procedure. It is so in the present case. The Japanese Authorities have considered it necessary to enforce a system of quarantine at Nagasaki in the case of ships coming from places at which the plague is raging. This step has been taken with the advice of the best available medical experts, both foreign and Japanese—men who may be supposed to know a great deal more about the matter than any ordinary journalist can possibly know. Yet the ordinary journalist—the *very* ordinary journalist—glibly criticises the measure, writing of it as though the persons carrying it out and the persons recommending it were tyros like himself, upon whose opinions and doings he was quite competent to pass judgment. There is a great deal to be said against quarantine, and unquestionably it sometimes entails inconvenience in excess of its advantages. But we can not forget what a terrible danger menaces Japan. It is very fine,

and sounds very erudite, to allege that the plague is a local emanation, and that it will not visit places where the conditions suitable to its development have been duly eliminated. But who is sufficiently wise to define those conditions precisely, and what Administration is sufficiently omnipotent to provide for their complete removal? Until the overwhelming bulk of medical testimony decides that the plague can not be propagated from place to place by its victims, and that the period of incubation is invariably shorter than the number of days occupied on the voyage from the nearest infected port to Japan, the Authorities have no choice but to apply quarantine, whatever be the momentary inconveniences involved. Europeans and Americans can afford to treat the question philosophically, because the pest, as it now exists in China, seems to confine its ravages to Orientals, the exceptions being so few as to confirm the rule. But evidence is wanting that the Japanese enjoy a similar immunity, and we can not be in the least degree surprised if they adopt every conceivable precaution, even at the risk of incurring journalistic censure. Great Britain's action is always adduced by the opponents of quarantine. They allege that the much simpler and less vexatious system of medical inspection sufficed to guarantee England against invasion by the last cholera epidemic, and that, consequently, medical inspection and disinfection must be pronounced sufficient everywhere and under all circumstances. But one of the greatest specialists has declared that the spread of cholera depends primarily upon the nature of the water-supply, and that communities drinking pure water may snap their fingers at the dread disease. Who, then, can undertake to decide whether England owed her immunity to medical inspection and disinfection at the ports of entry, or to the steps she had already taken to provide her people with good water? Only irresponsible shallowness ventures to pass a final judgment in these matters. Possibly local conditions are chiefly answerable for the spread of the plague. But may not those local conditions exist in Japan? Their existence in Hongkong was not suspected until the plague came, nor did the plague come until it was imported from Canton, so far as we know. The danger to Japan is not to be exaggerated. She is thoroughly justified in seeking to avert it by every means that her medical advisers recommend, though the efficacy of some of the methods adopted may be open to doubt. The science of preventive sanitation is not yet sufficiently exact to sanction any final judgments as to what must be done and what may be left undone.

THE KOREAN AFFAIR.

THE telegram from Tientsin to the *Nichi Nichi Shimbun*, published in another column, shows that matters have assumed a graver aspect. The Reuter's telegram we published a few days ago, stating that England's mediation had been accepted by Japan, appears, like the other telegrams received from Europe about the Korean Affair, to have been inaccurate.

The renewed activity exhibited by China, in preparing to send immediately 12,000 men to Korea, suggests a final determination to decide the issue by an appeal to arms.

We abstain from further comment pending the receipt of more definite information.

THE MUSIC OF JAPAN.

Nippon Gakufu.—Six Japanese Popular Songs, Collected and Arranged for the Pianoforte by RUDOLPH DITTRICH.

Rakubai.—Japanese Song with Koto, Arranged for the Pianoforte by RUDOLPH DITTRICH.

THE above-named publications are from the house of Messrs. BREITKOPF and HÄRTEL, whose agencies are established in various European and American cities, and who are represented in the Far East by Mr. J. G. DOERING. Neater or more attractive looking specimens of sheet music than these two brochures are rarely seen. The notation is boldly and clearly engraved, the paper is of excellent quality, and the printing a model of neatness. Bright coloured lithographs adorn the covers, one of which, executed by Mr. T. HASEGAWA, of Tokyo, ingeniously combines the scenes associated with the "six popular songs." The other picture is a copy of an appropriate print, faithfully reproduced by the publishers in Leipsic.

Melodies of the kind which Mr. DITTRICH has chosen may always be made interesting by skillful arrangement, and their appearance in harmonized form is sure to revive the familiar questions as to the real value of Japanese compositions and their title to hold a place among the art products of the world. The music of this country has been so often and so exhaustively discussed that the possibility of exhibiting it in any new light may well be doubted, but a comparison of some of its characteristics with those of the primitive songs of other peoples will perhaps serve to indicate the stage of development at which it has arrived, and to assist inquirers in judging whether it is, or is not, susceptible of further advancement under scientific treatment.

The origin of musical ideas, wherever they were first embodied, may safely be attributed to the desire to express human emotions with greater emphasis and intensity than could be conveyed in ordinary speech. Poetic diction of some sort was probably the first step in the endeavour to rise above a bald and common-place delivery of thoughts, and that rhythmic utterances

were of very early growth we may assume from the ability of the lowest grades of civilization to appreciate metrical divisions of sound. There is no race so barbarous that it does not understand the measured beat of a drum, and if anything that passes for music is heard in the wildest parts of the earth, we may be reasonably sure that, even though defective in all other respects, it will show an accurate sense of time. This is one of nature's first lessons, taught by the pulsations of the heart, the regular drawing of the breath, the planting of the feet and the swing of the arms in walking; or by larger processes like those which accompany the rise and fall of tides. Coherent music began, we may believe, with the singing voice, used in alliance with sustained metres, to heighten the effect of impressive declamation. Presently, perhaps almost simultaneously, it was made an adjunct of the dance,—another vehicle for the expression of strong feeling in ancient times. The observance of rhythm was essential from the outset, as it ever since has been, as a means of fixing the succession of sounds in the memory. Even in our age, music would have no hold upon the mind if the regular divisions into eight measures, or fractions of eight, were not adhered to. In this particular we stand precisely where the musicians of the remotest antiquity stood. The oldest Japanese tunes of which we have any knowledge are, as a rule, governed by the same laws of time as those which control the most finished compositions of modern Europe. The masters of the *samisen* or *koto* have as keen an appreciation of lyrical measurements as the leaders of the best trained orchestras in the West.

For the little we can learn of the early progress of music we are dependent upon the records of the Greeks. It does not appear that the melodies they cultivated were of ambitious range. They were made to accommodate themselves to the vocal faculties of humanity, and it was not until a much later era, when instruments of broad compass came into service, that musical statements were expanded to exceed the limitations of the voice. But the Greeks went to considerable lengths in creating modes, or keys, with dissimilar progressions of tones, each one of which possessed a separate individuality, and was believed to be adapted to some peculiar sentiment or moral purpose. They carried these subtleties of distinction to an extent which would now be considered worthless even if the conditions of advancing art had not long ago rendered them impracticable. In our day two strongly contrasting modes are found sufficient for most requirements; the major, into which cheerful and invigorating ideas commonly resolve themselves, and the minor, which is the medium of sadness. As all persons familiar with the pianoforte are aware, a typical major key

is that which runs from C to C on the white notes of the fingerboard, ascending and descending. The minor is produced, in its usual descent, by the white notes running down from A to A. Its irregularities are such that the ascent follows a different course, but for the purpose we have in view it is necessary to speak only of the sounds which the white notes give forth.* The major and minor, then, are represented by C and A, and no key, or mode, which begins on any other white note, and adheres throughout to white notes, can be utilized in modern music, for reasons soon to be explained. But the Greeks had modes beginning on nearly all, if not all, of the white notes. We may imagine the surprise of a pianist who is told that he is expected to play a piece in the key of B, without touching any black notes. Yet that, and other abnormal things, is what he would have to do if he attempted to reproduce the several modes of antiquity.

The Christian era was well advanced before music took any decisive forward movement. Many of the old classical forms were retained by the guardians of learning through the dark ages, and the services of the Church were chanted to perhaps the same strains as those which resounded in the Academic groves to the glory of Olympian deities, or even to the still more ancient MANEROS of the Egyptians, which so profoundly astonished HERODOTUS in his travels. The qualities of the modes were preserved by tradition, though their names underwent so many changes that it became difficult to trace their specific identity. No effort was made to go beyond them until the discovery of a new and mighty element in music compelled the masters of the art to rebuild their system and discard much that had previously been deemed indispensable. From the moment that harmony was studied and applied, nothing that could not be reconciled with harmonic influences was tolerated. Up to that period everything had been played or sung in unison. This could no longer be allowed. For a time it was dimly supposed that all the methods then existing might be controlled by the new force in art, but experience gradually demonstrated that only a few of the once venerated modes could be brought under its yoke. The majority proved wholly unmanageable, and there was no alternative but to abandon them. Except by antiquarians, and by musicians who occasionally explore the past in search of eccentric effects, they are now forgotten. The two modes of major and minor alone remain in general use.

From these historical facts, and the circumstances connected therewith, we are enabled to draw conclusions bearing upon

* It is almost superfluous to remind the reader that common usage has somewhat confused the meaning of the words "note," "key" and "tone," and that a writer must sometimes endeavour to make himself clear at the expense of strict verbal exactitude.

the status of Japanese music and its relations to the art as it stands in modern development. For the music of Japan is virtually what the music of Europe was in the immature epoch preceding the invention of harmony. It certainly has no higher value, and no stronger claim to attention. Its modes may not correspond exactly, note for note, to the Phrygian, the Dorian, or the Ionian, but they are quite as intractable as regards harmonic treatment, and they have the same characteristic of beginning with irregular notes and being based upon scales which science discards. Amateurs sometimes amuse themselves by fitting arbitrary accompaniments to melodies like "Hitotsutoya," and asserting that the combination is just and satisfactory. They choose, let us say, the key of A minor for this particular song, without stopping to ask themselves what authority they have for assuming that it belongs to any key whatever that we are acquainted with. No one has learned enough about Japanese music to warrant him in determining the key of a single tune. Careful musicians are content to leave the question open, and get over the difficulty as lightly as they can,—often without touching it at all. The arrangement of "Kimigayo," as played by Mr. ECKERT'S military band, is extremely effective to foreign ears, and on paper it looks as if it were in C major; but we do not think that Mr. ECKERT would take the responsibility of saying that the Japanese song is actually in our key of C major. One of the best established rules of composition is that a piece of music must end with what is called the chord of the tonic. That is to say, if it is written in C major, the concluding chord must rest upon the note C in the bass. To end with any other chord would be an insufferable strain upon the ear. The chord which usually comes before the last is called that of the dominant. In the key of C major, this would consist of G, B, D, F, and G. If it were made the final sound in a performance, a most disagreeable sensation would follow. It is related that MENDELSSOHN once compelled CLARA SCHUMANN to play a finale of BEETHOVEN, against her wish and resolve, by striking this chord of expectancy, and dwelling upon it till she could no longer resist. Yet the same effect of incompleteness would necessarily be produced at the close of Mr. ECKERT'S adaptation of "Kimigayo," if he had affixed to the concluding notes the chords which belong to them, in the key he chooses for the occasion. As it is, he uses no harmony at all in the last two or three bars, allowing the melody to be played by all the instruments in unison. This is probably the best expedient he could have adopted. The listener is left in some uncertainty, but not in uncomfortable suspense, as he would be if the dominant chord were fully sounded on the terminating note. Yet it is only an expedient, and its employment

leaves the problem of the real key entirely unsettled. All theories of analogy lead us to believe that "Kimigayo" is in a mode nearly akin to the ancient Dorian, and that its key note is D, the scale consisting of only the white notes of the piano. Mr. ECKERT brings it into C, and gives a fine effect to the greater part of it. We can easily see, however, that the passages he leaves in unison might be harmonized on the strict principles of the mediæval school, without departure from the ancient forms, and making D the fundamental note. This would be more in accordance with the laws of scientific construction, but it would, deprive the piece of its genuine Japanese character to a much greater extent than the device Mr. ECKERT has adopted.

Parallels to numerous songs of this country are found in the primitive music of many Western nations; in old French romances and Scotch and Irish ballads, as well as in the chants of the North American Indians. One of the most popular of Caledonian ditties, known and cherished the world over, is ordinarily written and printed in the modern key of D minor,—the B of the scale being necessarily flattened,—and contains a modulation into A minor. But it is, in fact, of great antiquity, and was originally composed in the same mode as that to which "Kimigayo" probably belongs,—that of D without the flattened B. The melody is preserved unchanged, but no modulation was consciously aimed at in the earlier form, which antedates the invention of harmony. If we could call to life a Scotsman of the time in which the song was first sung, and should let him hear it without accompaniment, he would naturally recognise it; but if played with the succession of chords we have now applied to the notes, it would convey no meaning to his ear. Thus it is, also, with Japanese melodies. By supplying harmonies, we give them a new character, and make them more congenial to our alien senses, but we destroy their integrity as national songs. Every true musician understands that when he constructs a harmonic foundation for a Japanese tune he diverts it entirely from its real meaning and purpose. He finds a few strains which may be treated like similar strains of European music, and he forthwith proceeds to convert them into European music. He can never go far without running against snags which no amount of ingenuity can overcome. Then he must drop harmony, and resort to unison,—as Mr. DITTRICH does at one point of the "Workmen's Chorus,"—or perhaps end a piece with an unwarranted chord, such as we discover at the close of his "Wedding Song." These are the inevitable consequences of attempting to develop music which is inherently incapable of development. It may be decorated and enlivened by harmony in a hundred

ways, but it ceases to be what it was, and becomes something radically different. WILLIAM BYRD, the reputed composer of the great "Non nobis Domine" of three hundred years ago, had the fancy to take a commonplace theme called "The Carman's Whistle," and arrange it with half a dozen or more variations, each differing from the other, and all so disguised from the simple strain as known to the vulgar, that no carman of the period could have detected in their learned intricacies the slightest resemblance to the shrill signal of his calling. To go still nearer to first principles, we may conceive a musician fixing in his memory a series of notes warbled by a bird, and reproducing them with harmonization satisfactory to his imagination. The experiment has, indeed, been tried by the Hungarian violinist MISKA HAUSER; but it goes without saying that no feathered songster thus distinguished would be allured by the revised and elaborated version of his artless carol, or persuaded, on any terms, to testify to its accuracy or truthfulness.

The final verdict of experts, as regards Japanese music, will be, we believe, to the following effect. Music in this country came into existence in obedience to a natural inspiration, precisely as it did elsewhere. Its growth, to a certain point, was regulated by the same principles as those under which the melodies of the Greeks were gradually developed. These melodies passed through the early centuries of the Christian era, and prevailed in Europe until many of their forms were found incompatible with the great system of which the Benedictines of Flanders were the first exponents—though probably not the inventors. Then the Greek music was re-created. But the music of Japan has never been re-created. It is of similar grade to that which was, for the most part, rejected by the mediæval harmonists, as having no proper standing in progressive art. It happened, however, that among the modes derived from the Greeks some were found which yielded readily to the new science, and upon these the forms of modern melody were doubtless based. We are not aware that any corresponding forms have been discovered in Japanese music. All the examples that we have had the opportunity of examining appear to represent modes which reached their limit ages ago. It is of no avail to point out "Hitotsutoya," and show that nearly the whole of this song may be supported by harmony. Its last note effectually upsets the argument. Either that note must be arbitrarily changed, or a law of composition must be broken to accommodate it. We can transform "Hitotsutoya" into a piece of foreign music, if we like, as we can a large number of kindred airs, but after the process they are no longer Japanese. In a word, Japanese music, as we have it handed down by tradition, belongs to the past,

and has no affinity with the European music of to-day. There is nothing in it that can be further developed while allowing it to retain its national character. It ought never to be lost sight of, and it may be turned to endless account by composers in the future; but only as an accessory to the new art which, in course of time, will take root and flourish here.

Mr. DITTRICH's arrangements, to which we now return with satisfaction, will be regarded by connoisseurs as purely European compositions suggested by popular Japanese themes. They are thoroughly artistic, and wrought out in quite a poetic vein; and the variety of expression introduced is remarkable, when the unelastic and often monotonous character of the motives is considered. Foreigners who have heard the several airs sung by Japanese, or played on native instruments, will probably find these adaptations much more agreeable than the crude originals. Whether they possess any of the quality which we commonly term local colouring is a question to be decided by each individual for himself. There is really no standard of Japanese colouring in music. A conscientious composer can only seek to convey, in sound, the ideas which impress themselves upon him while listening to the songs of the people under the best conditions. Other influences besides the music may have their effect. The surrounding view, the costumes, the action of the crowd, the general atmosphere, may all demand their share of indirect illustration. In the "Jizuki Uta,"—more generally called "Kigari Uta,"—Mr. DITTRICH probably aims at indicating the whole scene, as it presents itself to his mind's eye, as well as recalling the song and chorus of the group of pile-drivers. The result is a lively little tone-picture which foreigners will cordially appreciate, though few Japanese will discover any significance in the transcription, except in the passages which are narrowed down to unison. But the alien musician has no occasion to be concerned about the native estimate of works like these. If he sets out with the intention to reproduce the melodies in a shape that can be recognized by the people who habitually sing them, he will be hemmed in by the most elementary restrictions, and can accomplish nothing that a foreigner could hear with patience. For the use of students, and for historical purposes, it is eminently desirable that as much Japanese music as can be collected should be carefully noted down and preserved. It will be invaluable for reference hereafter. But there is no getting over the fact that to make it attractive to the ears of strangers, it must be transfigured by adornments which are wholly un-Japanese. It can be invested with interest only by the aid of combinations which carry it entirely beyond the average native comprehension. In the seven pieces prepared by Mr. DITTRICH,

although the airs are given with literal fidelity, they are all more or less idealized by dexterous and delicate treatment. Especially is this apparent in the "Rakubai," the scholarly properties of which invite the most critical examination. Great taste and judgment are shown throughout in uniting genuineness and authenticity with the graces of refined elaboration, and the arrangements will be warmly welcomed as memorials of the spirit in which characteristic and favourite Japanese diversions of song have been interpreted by a sympathetic and intelligent musician who is both a watchful observer and a master in his calling.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE LATE BLUFF FIRE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to the recent fire at 103, Bluff, I noticed in some of the papers a statement that the owner of the contents refused to accept aid in saving the property.

This I distinctly deny, as I was not asked by anyone for permission to do so.

When the house below the one occupied by me was on fire and I saw mine was in danger, I hastily packed up all my private effects, and while doing so, the house was invaded by a crowd of coolies, who actually tried to take the things out of my hand; this I naturally resented, as did also a Japanese policeman who was present, and who tried to drive off the mob.

I have lost several packages in this way, which I know were taken away.

When my house caught fire I got out all the things I could and had them removed to 120, close by. A friend of mine, however, I find, was a little too energetic in trying to prevent my things from being stolen, and this is the only cause which could have given rise to the statement.

Trusting you will find space in your paper for this explanation,

I beg to remain, yours respectfully,

WM. G. NORRIS.

Grand Hotel, July 17th, 1894.

POLICE DISCRIMINATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Yesterday evening, whilst riding on the Bluff in a jinrikisha, a policeman suddenly stepped across the road and arrested my progress. I asked for what reason I had been thus inconvenienced, and was told that my *kurumaya* had to button up his jacket. The coolie was dressed in *waraji*, long trousers, a large hat, and a jacket; the weather being very hot the latter happened to be open. Continuing my ride, I saw many ladies, who were to say the least of it, décolleté, and various gentlemen who had no clothing on at all worth mentioning. But no apparent notice was taken of them by the police. Would their scarcity of clothing have been more conspicuous had they been drawing jinrikisha? Can you, sir, explain, this incident, and oblige,

MAPADAKA.

Yokohama, July 19th, 1894.

[We are hardly prepared to answer our correspondent's conundrum. "No clothing at all worth mentioning" is a statement too vague in its exaggeration to enter into the argument. But we may point out that in the West also we should recognize a considerable difference between the degree of decency in clothing exhibited by a lady in a décolleté dress and a gentleman clad in a pair of trousers and an entirely unbuttoned coat, even with the *waraji* and the large hat thrown in. Should a man endeavour to perambulate the streets in such attire he would certainly be arrested by the first policeman he met, as a friend of ours was once when he endeavoured, for a wager, to walk down Fleet-street in the war-paint and feathers of a Red Indian. Presumably the policeman on the Bluff had received instructions to attend to this particular matter in the clothing of jinrikishamen.—Ed. J.M.]

The committee of the Athenæum Club have completed for the present year the election as members of gentlemen distinguished in literature, science, and art, or on account of important public service, the choice having fallen on General Sir Redvers Buller, Mr. Alfred Austin, and Lord Lingen. General Buller has taken part in almost all our wars since he first saw service in China in 1860.

PROCEEDINGS OF THE METHODIST EPISCOPAL CONFERENCE.

FIFTH DAY.

The opening devotional exercises were conducted by the Rev. T. Kasahara. After the transaction of various items of routine business, a fraternal delegation from the General Assembly of the United Church of Christ in Japan, consisting of the Rev. Y. Ishihara and the Rev. M. Ogimi, was introduced and invited to seats on the platform. Both addressed the Conference, Y. Honda, C. Nagano, and Bishop Ninde replying.

The Rev. G. M. Meacham, pastor of the Union Church, Yokohama, was introduced and invited to a seat on the platform.

Revs. Eber Crumby and Y. Takeda, delegates from the Methodist Church of Japan, were introduced and presented the fraternal greetings of that body. At the request of the Conference, the Rev. J. Soper and the Rev. Y. Aibara responded.

In the evening at 7.30 the Conference Church Extension Society held its anniversary. The Rev. J. G. Cleveland was re-elected President, and the Rev. S. Ogata, Secretary of the Society.

SIXTH DAY.

After the reports of various committees, a series of resolutions on Self-support, offered by the Rev. C. Bishop, were taken up and after slight amendment were adopted by the unanimous vote of the Conference.

A series of resolutions offered by the Rev. J. Soper were also adopted. These resolutions requested that in fixing the appointments special attention be paid to those churches doing the most in the way of self-support, and that each regularly organized church be requested to send a delegate to sit as a Corresponding Member of the Annual Conference. And that during the session of the next Annual Conference there be held a meeting in which such subjects as self-support, evangelistic work, &c., shall be considered.

The Report of the Educational Committee was presented and after considerable discussion the report was adopted. The Conference voted that Cobeigh Seminary at Nagasaki should be moved to Kumamoto.

Aoyama, Tokyo, was selected as the place of holding the next session of the Conference.

SEVENTH DAY.

The opening exercises were lead by the Rev. S. Ogata. The Rev. K. Miyama presented a report recommending the holding of a Camp Meeting at Dzushi, Kamakura. The report was received, but the sense of the Conference was that such a step would be somewhat premature.

Bishop Ninde presented several constitutional changes, relating to the equal representation of ministers and laymen in the General Conference, and also to the ratio of ministerial representation, which were both rejected by the Conference.

EIGHTH DAY.

On the motion of the Rev. J. W. Wadman, the Conference requested the Board of Bishops to fix the first Thursday after the first Sunday of July as the time of holding this Conference.

The Committee on Conference programme was instructed to provide for two days for examinations before the time of holding the Conference.

The Rev. J. Wier, as the Treasurer of the Conference Claimant's Fund presented his report.

The Rev. Y. Honda presented the plan of organization for the Conference Missionary Society, which was taken up and discussed item by item. In view of certain difficulties in the case, the report was referred to a committee of three who were ordered to submit the plan to the General Missionary Committee and to report at the next session of the Conference. Rev. I. H. Correll, Y. Honda, and J. Soper were appointed on the committee.

The Revs. Y. Aibara and K. Miyama were re-elected on the Board of Managers of the Tokyo Ei-wa Gakko.

The Rev. J. C. Davidson presented a report on behalf of the Committee on the Revision of the Hymn-book. He stated that the Hymns in the present collection had been carefully revised and corrected, and about a hundred and thirty new hymns prepared. The report was adopted and the committee continued.

NINTH DAY.

The Prayer-meeting on Friday morning was led by the Rev. C. Nagano. The Rev. U. Sasamori reported for the Committee on the Epworth League. There are now four chapters of this Young People's Society organized in the Conference, and there were reported as doing good work. The Rev. Henry B. Schwartz, was elected Conference Secretary of the League, and Y. Aibara, Y. Takasugi, and S. Ogata were appointed a Committee on

League Literature. Rev. J. C. Davidson and Y. Honda were selected to represent the Methodist Episcopal Church in the management of the *Gyokyo*, the Methodist paper.

Y. Honda, for the committee on the Conference Library, presented his report, which was which accepted and the committee continued.

The committee on the Conference Home Missionary Society reported that yen 557 had been collected during the year. This amount will be sufficient not only to carry on the work of the society in the Riuiki Islands as last year, but will also enable it to open new work in the Kurile Islands.

A committee of five consisting of Revs. Y. Honda, Y. Aibara, H. Yamaka, J. G. Cleveland, and I. H. Correll were appointed to consider the special needs of the Japan Conference and prepare memorials to the next General Conference relating to them.

Rev. J. Soper moved that we request the presiding Bishop to appoint C. Bishop and H. W. Swartz, agents of the Publishing House, and the motion was carried.

The following Publishing Committee was appointed: Y. Honda, C. Bishop, H. W. Swartz, J. C. Davidson, K. Miyama, J. O. Spencer, and J. Shimizu.

Rev. S. Soper was appointed to edit and publish parts of the discipline.

Mr. D. S. Spencer, the Statistical Secretary, presented his report, which showed a total membership of 3,278 full members, and 728 probationers, a gain of 85 full members; 86 children and 424 adults have received baptism during the year, a total gain of 77.

The Conference Treasurer, Mr. B. Chappell, reported a total of 713 yen raised for benevolent purposes.

The Conference adjourned to meet at 7.30, but at the time appointed the committee on distribution of mission funds not being able to report, the Conference adjourned until the next morning at nine o'clock.

TENTH DAY.

The Conference devotional exercises were conducted by U. Sasamori.

On the motion of Rev. T. Ikeda, the week beginning with the first Sunday in October was designated as a week of special prayer for a general revival of religion.

The Committee on Distribution of Evangelistic Funds presented their report, which had occupied the attention of a large committee for two days and is generally regarded as a long step in advance toward self-support.

Bishop Ninde called on Rev. H. W. Swartz, and K. Miyama to lead in prayer, after which he made a touching address and read the appointments for the ensuing year. The foreign members of the conference received the following appointments:—

Aomori District, Henry B. Schwartz, Presiding Elder; Hakodate District, J. Soper, Presiding Elder; Nagasaki District, I. H. Correll, Presiding Elder; Nagoya District, D. S. Spencer, Presiding Elder; Sendai, H. W. Swartz.

Publishing Agents.—C. Bishop and J. W. Wadman, Tokyo.

Tokyo, West District, J. C. Davidson, Presiding Elder; John Wier, Dean; B. Chappell, Professor in Philander Smith Biblical Institute; N. B. Johnson, Dean; J. O. Spencer, R. P. Alexander, and Pennie S. Vail, Professors in College and Preparatory Department; J. O. Spencer Supt. of Industrial Department.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, June 23rd.

Bunki Matsuki and his American bride, who were married at Salem, Mass., last Thursday, are to reside in the Japanese villa which Mr. Matsuki has recently erected in South Salem, and will receive their friends in September. Mr. Matsuki is a graduate of the Salem high school of the class of 1891.

Prof. T. C. Mendenhall, Ph.D., LL.D., for three years (1878-1881) professor of experimental physics in the University of Tokyo, has resigned his position as Superintendent of the Coast and Geodetic Survey. He is to deliver the address July 2 at the next Convocation of the University of Chicago.

"Probably the most artistically tattooed man in the world is William Furness, a son of Dr. Horace Howard Furness, the noted Shakespearean scholar. Mr. Furness spent a long term in Japan, and it was there that the figures that adorn his body were excuted. A splendid reproduction of the

Goddess of Love covers his chest, and the God of Thunder illuminates his back. Snakes and birds by the dozen mark his arms and thighs. A pagoda is designed on one shoulder and a fearful and wonderful collection of geometrical designs covers the other shoulder. A Chinese boat is tattooed on one leg and a dragon looks up from the other. The artist who executed these designs was paid \$12 an hour for his services, an appalling fee in that country, where 25 cents per diem is a princely salary."—*Philadelphia Record*.

The January-March issue of the *Journal of American Folk Lore*, contains "Items of Ainu Folk Lore," by Rev. John Batchelor.

J. B. Lippincott and Company have published "Society in China," by Robert K. Douglas, Keeper of the Oriental Books and Manuscripts in the British Museum; and G. P. Putnam's Sons have brought out, as Vol. I. of the "Incognito Library," a story called "The Shen's Pigtail" by Mr. M.

The Chicago Chinese Club was instituted the other evening with appropriate ceremonies. It is composed of 150 merchants of this city, and accepts as members only men "of good moral character."

Another U.S. cruiser, named the *Cincinnati*, was launched on the 16th inst. at New York.

The Bryant Relief Party has left New York on its expedition to bring the Peary party from Greenland.

The tariff bill is still in the Senate. Free coal and free woollen clothing could command only a few votes; but free wool received the support of all the Democrats and the Populists.

The Hatch anti-option bill has passed the House of Representatives by a vote of 149 to 87.

The Republicans of California have nominated M. M. Estee for Governor; the Republicans of Vermont have nominated S. A. Woodbury for Governor; and the Populists of Texas have put up Judge Nugent for Governor.

President Cleveland has again been compelled, on account of poor health, to take a trip on the salt water.

Three well-known ex-Congressmen have recently passed away:—ex-Representative Thomas M. Bayne, of Pennsylvania (who committed suicide); ex-Representative and ex-Senator B. W. Perkins, of Kansas; and Hon. W. W. Phelps, of New Jersey. The last-mentioned had also won fame in diplomacy as U.S. Minister to Austria and afterwards to Germany, and as an American member of the Samoan Commission in Berlin.

The casualty list this time includes a big fire in Jersey City and severe wind storms in Nebraska with loss, not only of property, but also of life.

"General" Kelly and his army have reached Louisville, Ky. The general and his lieutenant were arrested there as "vagrabonds" but afterwards set free. At Leavenworth, Kansas, Judge Thomas sentenced Sanders' army to fines and imprisonment in different jails in the State; and at Sidney, Nebraska, Judge Dundy is trying another body of "commonwealers" for the same crime of stealing a train. A Montana division, under "Jumbo" Cantwell, is expected here to-day or to-morrow from Racine, Wis.

This is "Derby Day" at Washington Park in this city, and, though very hot, is drawing an immense crowd to see the races. On the 21st inst., at Corington, Ky., one race was won by a colt with the æsthetic name of "Satsuma." On the same day at New York "Ramapo" gained the Surburban Handicap in 2.06½ which is ½ faster than the record of last year.

The jury by which Ikrastus Wiman was tried found him guilty of forgery in the second degree; and the judge has since sentenced him to imprisonment in Sing Sing for five years and six months.

The Prendergast case is at last up again before Judge Payne in this city. Twelve jurors have already been secured, so that the trial will begin next Monday. The accused continues to do his best to make the public think that he is insane.

"American Flag Day" does not exactly correspond to the Japanese "Feast of Flags;" but it is a new holiday for the children. It is celebrated on the 16th inst. in the different parks of the city. The soldiers of Chicago united with the school children in various exercises appropriately glorifying the American flag.

The school census, just completed, gives the population of Chicago at 1,562,796 as against 1,438,010 in 1892.

The equatorial dome and the transit room which belonged to the exhibit of the naval observatory at the World's Fair have been given to the astronomical department of the University of Chicago, and have been removed to the University grounds. Secretary Goodspeed is hopeful that the \$1,000,000 fund for general equipment will all be raised by July 1st. The department of philosophy at the

University has been strengthened by the addition of Geo. H. Mead, A.B., and James R. Angell A.M. from the University of Michigan.

President Harper, Hon. C. C. Bonney, Rev. S. Gilbert, Miss Jane Addams, Wm. J. Onahan, and others, representing "all shades of religious belief," have sent to Mayor Hopkins an important memorial with reference to "the introduction of distinctively moral education in the public Schools." They refer to the "Parliament of Religions," in which all participants united each morning in "the universal prayer" to "Our Father who art in Heaven;" and they also propose the following:—That the question of proper instruction in such fundamentals of religion and morality be entirely separated from all other questions relating to the systems of public schools, and that Catholics and Protestants, Jews and Gentiles—in a word, all good citizens—unite in recommending that the reading book consisting of selections from the sacred scriptures in use in the schools of Toronto, Canada, with the approval of both the Catholic and the Protestant churches, or similar selections, be put in use in the public schools of this country without delay.

The City Council lately passed a Sunday-closing ordinance by a large majority, but the Mayor vetoed it on the ground that it was "class legislation."

The miners' strike is not yet entirely over. In many localities the compromise terms have been accepted, and work will soon be resumed; in other localities the terms have been rejected. The Ohio miners have generally acquiesced; while the Indian miners are still dissatisfied; and the Illinois men are divided. Troops have had to be called out in some places to restrain riots. There is a new strike on the Gogewic range in Northern Michigan and Wisconsin.

The American Railway Union has made an attempt, but in vain, to get the Pullman Company to submit the differences with the strikers to arbitration. It has also passed a resolution, notifying the Pullman Company that, unless they change their decision before next Tuesday noon a general boycott on all Pullman sleeping and dining cars in the country will be ordered. This step would make matters most serious and complicated; the effect of it can not be prognosticated. And now word comes that the supplies for the strikers at Pullman are almost exhausted.

R. G. Dun & Co. announces to-day:—The week has been rich in promise but poor in performance. It was confidently promised that exports of gold would cease, but they have not. It was promised that the end of the coal strike would bring immediate recovery of industries, but partial resumption of work discloses comparative scantiness of demand for products.

The evening papers, just at hand, contain a sensational item of news from Colorado Springs. About one o'clock this morning Adjutant-General Tarsney was taken forcibly from the Alamo Hotel by a gang of masked men, placed in a hack, and driven several miles from town, where he was beaten, tarred and feathered, and left lying unconscious on the prairie. The missing man was finally found at Palmer Lake, 25 miles away. Governor Waite has offered a reward of \$1,000 for the arrest and conviction of any of the participants, who are generally believed to be enemies of the State administration. The victim was obnoxious to Cripple Creek mine owners and to deputy sheriffs, and was friendly to the striking miners.

Another ex-Congressman, S. H. Boyd, of Mo., has died. He also served one year as U.S. Minister to Siam.

THE INTERNATIONAL BIMETALLIC CONFERENCE.

The *Statist* gives the following epitome of the proceedings of the International Bimetallic Conference:—

The CHAIRMAN (Alderman and Sheriff Sir DAVID EVANS), said:—Gentlemen, in the unavoidable absence of the Lord Mayor, who is officiating elsewhere under the presidency of the Prince of Wales, it falls to me to occupy this responsible and distinguished position. In the name of the Lord Mayor, I desire to accord you all a hearty welcome, and more especially the visitors from foreign countries and our Colonies:—(hear, hear.)—Some of the most distinguished men in the field of academic thought, of industry, of finance, and of literature. I would remind this distinguished company that the first meeting of the Bimetallic Conference was held at the Mansion House twelve years ago, under the presidency of the then Lord Mayor, and we have a vivid recollection of the meeting held here last year in furtherance of this same object. The fact of our meeting here to-day

needs no apology. The importance of the question to be discussed is confessed by the present Prime Minister, Lord Rosebery, who wrote that it was one of the most important questions of the day.—(Hear, hear.) No one with any knowledge of business can be blind to the calamities resulting from the depreciation of silver, or, in other words, the appreciation of gold.—(Hear, hear.) In commerce, in industry, in agriculture, its detrimental effects are equally manifest, and any measures which would lead to a solution of the difficulty would be cordially welcomed by all who have the interest of the community at heart.—(Applause.) I desire to read the following cablegram from America, addressed to the Lord Mayor, to be read to this meeting this morning:—"We desire to express our cordial sympathy with the movement to promote the restoration of silver by international agreement, in aid of which we understand a meeting is to be held to-morrow, under your Lordship's presidency. We believe that the free coinage of both gold and silver by international agreement at a fixed ratio would secure to mankind the blessing of a sufficient volume of metallic money, and, what is hardly less important, would secure to the world of trade immunity from violent exchange fluctuations." This cablegram is signed by John Sherman, William B. Allison, D. W. Voorhees, Cabot Lodge, G. F. Hoar, N. W. Aldrich, D. B. Hill, E. Murphy, C. Brice, C. H. Platt, A. D. Gosman, W. P. Fry, C. K. Davis, S. M. Cullum, J. M. Carey.—(Applause.) Having to discharge magisterial duties for the Lord Mayor, I will ask my esteemed friend, Mr. Hicks Gibbs, to take the chair in my place.—(Loud applause.)

Mr. HENRY HUCKS GIBBS then took the Chair. Mr. HENRY GIBBS—The Secretary will read certain letters of apology, but before he does so I will mention that the significance of that cablegram which has just been read to you is much enhanced by the fact that the names appended to it include those of the leading "gold men," as they are called, of the Senate, and the leading advocates of the repeal of the Sherman Act.—(Hear, hear.)

The SECRETARY read several letters of apology, including the following from Mons. J. Magnin, Vice-President of the Senate, and Governor of the Bank of France:—

(TRANSLATION.)

"I applaud with both hands your resolution of getting together in London an International Bimetallic Conference. The Silver question impresses itself more and more every day on the attention of the financiers of the whole world; it requires a solution in the general interest; it is intimately bound up with the commercial and industrial prosperity of all nations.

"I had the honour of presiding in 1881 at the International Monetary Conference which met in Paris, and in 1889 at the Monetary Conference of the Universal Exhibition. I am, therefore, a resolute partisan of the rehabilitation of silver, and actual facts can only confirm me in my settled conviction. Hence it is with great sincerity that I wish your Conference all success; its deliberations will have a large circulation; they will contribute I feel sure, to the advancement of a solution ardently desired by all who understand that the monetary question is one of those which, in the present day, must be dealt with, if the present condition, so fatal to business, is to cease."

From Mr. H. W. Cannon, President of the Chase National Bank, New York:—

I regret that business engagements prevent my accepting the kind invitation of your Council to participate in the Demonstration and Conference on International Bimetalism, to be held at the Mansion House, London, on the second proximo.

The proceedings of your meeting will excite great interest throughout the civilised world. It is, I believe, now generally conceded that the responsibility for the solution of the silver problem rests upon the people of Great Britain, and the other nations look to your Government to settle the status of silver as a money metal, and to decide whether or not the mints of the various nations shall again be opened to its coinage, or whether the demonetisation of the white metal shall be complete and continuous.

From our standpoint, the interest of Great Britain in the re-establishment of a ratio between gold and silver is identical with that of the United States, only greater in degree, for if gold is to be the sole money of the civilised world, and if silver is to be abandoned as a money metal, what will be the value of the immense stock of silver in India and the East, and silver coins in circulation and held by the great banks of Europe as a basis for the redemption of outstanding notes? How can a stable rate of exchange be fixed and maintained between gold and silver under existing conditions? It would seem that the citizens of Great Britain

have a greater and more vital interest in the stability of such exchange than any other nation in the world by reason of her complex and extended commercial relations. If the Government of Great Britain is willing to suggest a practical plan, looking to the use of both gold and silver as money on some ratio to be fixed by international agreement, the Government of the United States will coöperate and assist in every possible way in carrying out such a plan, and the result would undoubtedly be of incalculable benefit to all mankind.

From Prof. R. Benj. Andrews, President of Brown University, Providence, U.S.A.:—

I am greatly your debtor for the interesting information conveyed in yours of March 31st. It is a delight to all of us here to know that interest in bimetalism is so encouraging in the City of London.

Now, as to your important meeting with delegates present from different nations. That is precisely the scheme I have been thinking of for months, and I sincerely hope and pray that it will be a great success. You gentlemen in England occupy the central point in this great fight.

I have conferred with General Walker, and much to my sorrow I find that neither he nor myself can possibly be with you on that occasion, but we will try to send you someone else. Our cause is making rapid progress. A committee parallel with ours has been started in Chicago, led by the very ablest business men in that city. We are certain to succeed.

The SECRETARY also read the following telegrams:—From Prof. Mavor, University of Toronto, Canada: "Cordial wishes for success of Conference." From Victorian Bimetallic League: "Wish success Mansion House Conference."

Prof. J. SHIELD NICHOLSON, M.A., D.Sc., read a Paper on "The Fall in the General Level of Prices in relation to the Appreciation of Gold and the Divergence in the relative Value of Gold and Silver," in the course of which he said, with reference to the quantity theory of money:

Can we find a principle that will stand the test of verification, not only through six centuries of English prices, but through the whole range of history, and over the whole field of the industrial world?

The answer is unquestionably in the affirmative, and the principle may be stated in these terms:—*The general level of prices depends on the quantity of money compared with the work of circulation to be done by it.* All the causes affecting the general level of prices may be brought under one or other of these comprehensive terms—the quantity of money and the work of circulation. If we take into account only one of these causes at a time, we must insert the qualifying phrase, "other things remaining the same," because it is plain that its effect may be neutralised by some other cause. Thus discoveries of the precious metals may, to some extent, be neutralised by the rapid growth of wealth and population. On the other hand, in spite of an increased volume of trade and commerce, the extension of credit, the use of substitutes for metallic money, in a word, the increase in representative money may keep up and even raise the level of prices. If the trade of the world had to be carried on with the rudimentary credit institutions of the mediæval period, it would be impossible to realise the extent in the fall of prices that must occur.

In conclusion, Prof. Nicholson summarised his paper as follows:—

- (1) There are certain causes affecting the general level of prices, apart from the special causes affecting particular prices.
- (2) Since 1873 there has been a fall in the general level of prices in gold using countries—in other words, an appreciation of gold.
- (3) This general appreciation of gold has, on the whole, coincided with the fall in the gold price of silver or the specific depreciation of silver.
- (4) The fall in silver is rather a cause than a consequence of the fall in gold prices, although the special events (chiefly political) which have caused the fall in silver have also tended to cause pressure on gold.—(Applause.)

Mr. G. M. BOISSEVAIN, of Amsterdam, having spoken,

Mr. MONTAGU SAMUEL, M.P. said—I need not argue with regard to the practicability of bimetalism, because that has been proved over and over again before the Royal Commission on Gold and Silver, of which I had the honour to be a member. There is no doubt that bimetalism has spread fast in the country. There is, however, one danger ahead which I trust its promoters will carefully avoid, and that is the danger of making bimetalism a party question.—(Hear, hear.) If its adoption would steady agriculture and other industries, it would also greatly benefit our traders in cotton manufactures in Lancashire, and other of our manufacturing districts. What we want is another

Conference of nations, and I should not be very much surprised if, now this movement is so popular, our Government were compelled to join with other great Powers in bringing about a settlement of this great question in a business-like fashion, not going to the Conference to discuss a variety of possibly worse projects brought up by one member or the other, but going at once on the basis of bimetalism. Then we should find this vast question settled for our time, and perhaps for many centuries, for the benefit of trade, which is the chief thing which actuates me in supporting bimetalism, and the commerce of this country would be conducted on an enlarged and safer basis.

Dr. OTTO ARNDT, Member of the Prussian Diet, Berlin, spoke of the progress of the bimetallic movement in Germany, and expressed a conviction that at the next International Conference Germany will heartily support bimetalism.

Mr. S. SMITH, M.P., said—The kernel of this question is the appreciation of gold, and if we examine the price levels of this century some startling facts are revealed. The first price level was from 1800 to 1815, when the country was suffering under an inconvertible paper currency, and when we had a very high scale of prices. Then came the contraction after the great French war, with the establishment of the single gold standard and a fall in prices; and during the period between 1815 and 1850 we had a fall in prices equal to about 50 per cent. That was the period, perhaps, of greatest danger that this country ever passed through—(Hear, hear)—and practically the effect was to double the weight of the National Debt. The National Debt of £900,000,000, bequeathed to us by the great war, became as heavy as if it had been increased to £1,800,000,000, because the interest on this debt was paid by the sale of commodities, and it required just twice as many commodities to meet the interest on the debt after the fall of prices than before.—(Hear, hear.) That accounted for the intolerable misery that existed in this country during that period. Then came the third period of the Australian and Californian gold discoveries, which started with a rise in prices, and went on till 1873 or 1874, which rise amounted to 40 per cent. That lightened the burden of debt enormously, and gave life to all the industrial enterprises of the country, and was the most brilliant period of trade that this country has ever enjoyed.—(Hear, hear.) Now comes the fourth period. The fourth period began with 1873-1874, and has gone on till now—that is, 20 years. The feature of that period has been a constant fall in prices, broken now and then by small reactions. According to Mr. Sauerbeck's excellent figures, based upon 45 commodities, I see that in the month of March this year we are just 42 per cent. below the prices of 1873. Therefore, we have now reached a much lower level than was attained during the depreciation of the period between 1840 and 1850. We are at the lowest level within the present century; indeed, a good deal lower than we have been at any point in this century. Now the effect of this immense fall of prices is that all the debts, burdens, and obligations of the country have been directly increased in value.

Mr. W. E. DORRINGTON, of Manchester, said—Can it be doubted that it is the function of Governments to determine the monetary use of the precious metals, or can it be doubted that it is the duty of governments to base that determination upon such a system as offers the greatest point of stability within the standard itself? But, beyond this, governments have not to deal with the ideal or primitive state of society. They have to deal with the world of hard facts, and one of these facts is, that however much the idea of a single gold standard may command theoretical admiration, more than half the world uses silver money, and either will not or cannot consent to abandon it in favour of gold.—(Applause.) The development of international intercourse by means of steamers, railways, and telegraphs, which have brought New York as near to London, perhaps, as Edinburgh was to London fifty years ago, the tendency towards the annihilation of time and space, have made currency an international instrument in a wider sense than ever before, and it is difficult to believe that a currency system which isolates the silver-using portion of the globe from the gold-using portion can claim superiority over a system which would tend to unite the metallic currencies of the world under one international exchange.—(Applause.)

Mr. CHARLES HOARE—I must apologise because I have not prepared a Paper with such care as the Papers that you have heard read to-day have been prepared, but perhaps a few remarks by me may not be out of place. I should like to say a few words on the difficulty of fixing the value of silver, and on why bankers should be interested in arresting the appreciation of gold, and how the question of prices is really a question

between producers and people with fixed incomes. The most important question of all, perhaps, is the fixing of the ratio between gold and silver, and I understand that is to be dealt with by Mr. Hicks Gibbs. With regard to the action of the bankers on this question: it has generally been considered that bankers are opposed to any bimetallic alteration of the currency because they are supposed to gain by the appreciation of gold. As far as I can understand the question, bankers are mixed up most intimately with the prosperity of the country, and we do not gain by any large proportion of customers carrying on their business at a loss. We gain by the general state of our customers' businesses being prosperous—(hear, hear)—so it is quite a mistake to suppose that bankers gain by the appreciation of gold, which means the constant fall in prices, which means a constant carrying on, by our most important customers, of their business at a loss. Many with fixed incomes may be hostile or indifferent to bimetalism, but a time will come, if nothing is done to arrest the appreciation of gold, when these people with their fixed incomes will not get them.—(Applause.)

(The proceedings were adjourned, and resumed at 2.30 p.m.)

The LORD MAYOR, who occupied the chair, said: This morning I was prevented from attending here at the opening of this Conference, but I have great pleasure in doing so now, and I give you all a hearty welcome.

The Right Hon. A. J. BALFOUR, M.P., in the course of a lengthy address, said—It appears to me that there are three questions, and three questions only, which we have got to decide in connection with this great controversy; and the first question is this: Is bimetalism—is a double standard—possible? The second question is, Supposing a double standard to be possible, is it just, and is it equitable? And the third question is, Whether, supposing it to be both possible and equitable, it is expedient that we should adopt it. On the first of those questions, namely, whether a bimetallic or double standard be possible, I think I see signs of a great change of public opinion.—(Applause.) There was a period, and a period not so long ago, when any man who had the courage, or, as it was then termed, the audacity, to express an opinion in favour of the double standard, was supposed to be guilty of some economical heresy, which, if we still sent people to the stake for heresy, would certainly deserve the utmost rigour of treatment that either the secular or the ecclesiastical law could impose. I think those days have long gone by. The general consensus of scientific economic opinion has now for many years been thrown with an overwhelming balance of opinion into the scale of the double standard.—(Loud applause.) I am not offering an opinion now as to whether the double standard is just or is expedient, I am only discussing whether it is possible, and I say that on the question there is practically now a consensus of the whole economic scientific opinion which has devoted itself to the elucidation of this problem, and any man who, in the face of that opinion, now quotes any of the old tags about demand and supply making it impossible to fix a ratio between the two metals, or such doctrines as that the interference of the State fixing prices must necessarily fail—any man who now relies upon arguments of that kind to show that the double standard is an impossible expedient, does nothing else than write himself down as an individual ignorant of the latest scientific development of political economy.—(Applause.) Of course, the percolation of scientific opinion through the general body of the community is slow in this case, as it is in every other case; but, as in every other case, you may be quite certain that what scientific and detached and disinterested speculation decides to be true will ultimately come to be the conviction of the great mass of the educated population of the country, so you may be sure that in this case many years will not elapse before a man who should say that a double standard is beyond the power of international agreement will show himself to be entirely outside the general balance and body of educated opinion, and will make it clear to all who care to form an opinion upon his authority upon such matters that he is still helplessly and hopelessly groping among ancient and forgotten fallacies.—(Loud applause.) I quite grant that it is almost impossible, perhaps it is quite impossible, to pass any legislation with regard to the monetary standard which shall not have some effect or other upon the relations between debtor and creditor, public or private; but who on that account has ever thought it wrong for a State to rectify a debased currency, or for a State to substitute hard coin (I think that is the American expression) for an inconvertible paper currency? Such operations, of course, have some effect upon the relations between debtor and creditor, but so far from thinking them blame-

worthy, the conscience of civilised mankind has always been of opinion, has always thought that there is no object more worthy of the efforts of a great financier than the placing of the currency of his country upon a permanent and stable basis, and the regulating it as far as he could for all time, so that these monetary obligations shall be governed by a fixed and stable measure of exchange.—(Loud applause.) I think I am not wrong in saying that there are indications of an important change in feeling amongst those who lead financial opinion in the great commercial community, before some of the leading members of which I have the honour of speaking at the present moment. It does not require much argument upon the platform from which I am addressing you to convince you that many persons who looked with either active dislike or with suspicion or doubt upon these schemes have now come to the double conclusion that we are menaced at the present time by a grave public danger, and that the way to meet that public danger is again to rehabilitate silver as one of the great instruments of monetary transaction in the world.—(Hear, hear.) I believe I am not wrong in saying that there is no name which commands greater respect in the City than that of Mr. Lidderdale—(loud applause)—the ex-governor of the Bank of England, who did so much to steer us through one of the most fearful crises which has ever occurred within the memory of living man—(hear, hear)—and I believe I am not wrong—he is present, and he will contradict me if I am wrong—in expressing it as his opinion that it is absolutely necessary that the function of silver should be restored if the commerce of the world is to be carried on under healthy conditions and a permanent basis.—(Applause.) What Mr. Lidderdale thinks, I am convinced many others think in the City of London, and I do not believe that I am taking part in an impossible, or even a difficult propaganda, in desiring to spread further opinions, with the success of which, in my judgment, the prosperity of the City of London is so intimately bound up.—(Applause.) Having dealt with the three questions which he propounded, the right hon. gentleman concluded by saying: I, therefore, gentlemen, think that for the reason I have given there is a plain answer to be made to each of the three questions which I put to you at the beginning of my address. I think that bimetalism or the double standard is a possible system, because that joint standard, perhaps I ought to call it, is a possible system. I think, in the second place, that we are morally justified as a nation in adopting it.—(Hear, hear.) And I think, in the third place, that every reason of expediency ought to urge us to come into international agreement with the other great commercial peoples of the world, in order to upon what is the most stable basis that we can possibly attain for the measure which is to decide fix upon all commercial international relations, not now but for all future times.—(Loud applause.) Holding these opinions, and feeling as I do how great has been the loss to the world at large, and to this great nation in particular, of having deferred so long coming to a decision on this question; feeling as I do that the solution of the problem was incomparably easier ten years ago than it was five years ago, five years ago than it is now, and now than it will be five years hence—(loud applause)—holding, I say, those opinions, great is the responsibility which rests on those who keep England, the country which, of all others, should take the lead in this matter, in a selfish and I will add a stupid isolation with regard to the movement by which the settlement of this great international question may finally be determined.—(Loud applause.)

The Right Hon. LEONARD COURTNEY, M.P., in the course of a paper upon "The Practicability of Maintaining a Ratio between Gold and Silver under an International Bimetallic Agreement," said—To persons of candid mind who are approaching this question, I would suggest that it is a somewhat staggering fact that twelve men (the members of the Royal Commission on Gold and Silver) having been selected presumably because of some special qualifications for the work, and having given two years, more or less, to its consideration, came in the end unanimously to the conclusion that a stable ratio between gold and silver might, by agreement, be maintained in any condition of the future that could fairly be contemplated. Two, indeed, subscribed to the conclusion with hesitation, doubting about the permanency of the ratio, though it might be maintained for a considerable time; but this hesitancy scarcely abates from the significance of the consensus. Here are the words of the twelve:—"We think that in any conditions fairly to be contemplated in the future, so far as we can forecast them from the experience of the past, a stable ratio might be maintained if the nations we have alluded to (the United Kingdom, Germany, the United States, and the Latin Union) were to

accept and strictly adhere to bimetalism at the suggested ratio. We think that if in all these countries gold and silver could be freely coined, and thus become exchangeable against commodities at the fixed ratio, the market value of silver as measured by gold would conform to that ratio, and not vary to any material extent."

I would here refer to another body of opinion—that of the professors. Now professors do not rule the world, therefore I would not lay too much stress on the practical consequences that should flow from unanimity of professorial opinion, but I may still put upon record upon high authority what I believe is true—that all the professors of the United Kingdom have recently had it under their consideration whether they should not sign a declaration of opinion in favour, not only of the possibility of establishing an international ratio, but of the desirability of doing it.—(Applause.) They have not, I understand, finally agreed upon action; they have differed as men do yet differ as to whether there should be any indication of the kind of ratio to be established, and they differed also as to the character and reasons upon which stress should be laid for adopting international action, but the fact remains—and the fact is significant and important—that they were all agreed, not only on the possibility of an international ratio being stable, but on the desirability of arriving at an international ratio.—(Applause.) The practical evidence that an international agreement, though partially limited, was still powerful enough to be maintained under a severe trial—a trial the like of which it is improbable will soon again be met with—is what I believe told with the mass of the Royal Commissioners in coming to the conclusion at which they arrived.

Whether gold grew on silver, or silver on gold, the price of silver measured in gold remained steady at and about 60 pence an ounce, until something happened in 1873 having no direct relation to the supply of either metal. Germany demonetised silver, and the mints of France and the Latin Union, which had been freely open to the coinage of it and of gold, under a law which allowed every debtor the option of paying his debt in silver or gold at the ratio of 15½ to 1, were closed to silver; and the price of 60 pence per ounce—the price corresponding to this ratio—which had remained steady under all vicissitudes of production of silver and of gold, began at once to waver, and decline has proceeded to this day. With experiences such as these before them, it is not surprising that the Royal Commissioners who shrank from bimetalism were encouraged to express an opinion that a bimetallic ratio might be agreed upon with promise of permanence. There appeared to be no reason to apprehend greater changes in the conditions of production of the precious metals in the future than had occurred in the past, and the changes that have been realised have, in fact, not approached those that accompanied the gold discoveries; and if one agreement of limited range had weathered the severest trials, another and wider agreement might weather the future. It is too late to deny the possibility of that happening again which has happened up to 1873.

There is one critic—one critic of the highest authority—who shakes his head very sadly at the miscarriage of the judgment of those twelve men. The demonstration of the movement of the heavens was resisted long after it was made patent by Newton's discoveries, and it was resisted until the conviction of the accuracy of his reasoning permeated the public or instructed mind when his explanation came to be adopted.

I therefore only desire in conclusion to say that I have limited my speech and address to the point of the practicability of the ratio. I have myself gone farther. I have attempted to argue—and I do not shrink from it—that it is desirable that a ratio should be effected by international agreement.—(Loud cheers.) The evils of its absence press upon me more and more heavily. I think it is desirable, but my Paper here is only directed to the question of the practicability of a ratio. To that only it is addressed—not to the desirability of it, though I am in favour of it. Nothing whatever has been said—and I desire to safeguard myself in conclusion from being supposed to utter any opinion—as to what the ratio should be if the ratio is to be adopted. I have only endeavoured to dispel, as far as I can, the prejudice of the common man—the unthinking prejudice—the vulgar prejudice—the primary prejudice of the primary human being—that this thing is impossible because he has not appreciated that it has been done, and because he has not been able to follow out the argument which demonstrates the reason why it has been accomplished.—(Loud cheers.)

Mons. H. CERNUSCHI (Paris) argued in favour of the restoration of silver to its former status as a monetary metal.

Mr. ROBERT BARCLAY said—I think we are to-day witnessing here a resurrection of the valuable report—the Gold and Silver Commission—and in the masterly speech of Mr. Courtney we have come to see to-day the underground foundation which this Commission laid—a strong and stable underground foundation, not only in the report of the Bimetallic members as they came to be called (they were not such when they began their labours, you must remember), but in the report of the whole twelve has laid a foundation upon which we can build up and go forward in this glorious cause. You have given an impetus to-day to it by this Conference, and by these noble words which we have heard from Mr. Balfour, as well as from Mr. Courtney. You have made an impression which cannot be gainsaid, and I believe we have to-day made a step in the march which will carry us on to victory. The question reaches to all quarters, and is so many-sided because it touches the whole life of man, of the whole of his relations, both in business and in social life.—(Applause.)

Mons. ALPHONSE ALLARD (of Brussels) then addressed the meeting.

Mr. WM. SMART, M.A., LL.D. (Lecturer on Political Economy, University of Glasgow), said—If we find that, for the first 70 years of the present century, one nation, almost single-handed, maintained a fixed ratio between gold and silver, and so affected their relative values in the other countries that the greatest variation from that ratio was insignificant, I think we may say that an international agreement to maintain the ratio does not deserve to be called an "experiment"—(Applause.)

The Conference met again on Thursday, May 3, 1894, at 11 a.m., Mr. Henry Hicks Gibbs in the chair.

Sir WILLIAM H. HOULDSWORTH, Bart., M.P., read a Paper on "The Effects of the Fall in the General Level of Prices."

- | | |
|------------------------|-------------------|
| a. The Agriculturists. | d. The Merchants. |
| b. The Manufacturers. | e. The Bankers. |
| c. The Wage-Earners. | f. The Investors. |

He said the main reason why a continuous or prolonged fall in prices causes depression in trade and industry is that it discourages enterprise on the part of capitalists, whether large or small; and by increasing the burden of their obligations gradually deprives them of the power to extend or even to carry on productive industries. This state of things sooner or later must rob an increasing population of wage-earners of the opportunities of labour. This, in its turn, must react prejudicially on the army of distributors (sometimes called middlemen,) whether merchants, brokers, or shop keepers, and on the auxiliary businesses of bankers, stock-brokers, and others.—(Applause.) The process by which the wave of depression, caused by the failure and inability of capitalists to keep the wheels of industry going, reaches these latter classes, may be a slow one. But it will reach them at last; as, indeed, is proved by the fact that the 20 years of depression, through which we have been passing since 1873, is now making its effect felt upon many departments of business in this City which, till lately, it was supposed, would remain exempted under all circumstances from the difficulties and losses which agricultural and manufacturing industries have for a long time been struggling under.

It will be admitted, I suppose, that it is productive industry alone which creates wealth; and that it is increased wealth which tends to diffuse prosperity. It will also be admitted that the first requisite for the development of industries is capital. Now, if it can be shown that a fall of prices discourages capitalists from embarking fresh capital in fresh undertakings or in new extensions, then it is obvious that falling prices must have the effect of retarding industrial development, thus diminishing the demand for labour, decreasing the calls upon the auxiliary forces of commerce, such as bankers, financiers, stockbrokers, contractors, engineers, lawyers, and others, and in the end producing what is called depression of trade.—(Applause.) The question therefore is, do falling prices discourage capitalists from investing capital in trade? And if so, why? As an abstract proposition I imagine few will dispute that falling prices do tend to discourage the investment of capital in industrial undertakings. But the disastrous consequences of such discouragement seem to be very imperfectly realised. Francis Walker, the eminent American economist, whose book on Political Economy is the text-book at Oxford, speaking of the appreciation of gold, says, "An appreciation of gold constitutes a truly fearful addition to debts, mortgages, and fixed charges of every description. But even this is hardly the worst feature of the situation. Nothing is so discouraging to the merchant and manufacturer as to bring forward goods for a falling market. Declining prices cut into normal profits

of business, check enterprise, and retard the productive investment of capital."

With regard to the merchants' position, the policy of "masterly inactivity," which they are often forced to adopt in times of falling prices tends still further to lower prices, thus injuring the manufacturer and producer, while at the time they suffer loss themselves by the stoppage of their trade.—(Hear, hear.) If, therefore, during any period, a sudden disturbance in price, or abnormal variations in the exchange between gold and silver countries alarms the merchant and arrests his operations, it is not his individual loss which is the most serious feature in the situation (though that is not to be lost sight of), but it is the reflex action of the stoppage of distribution, upon all the industries of the nation which is most disastrous.—(Applause.) There is scarcely a single trade which does not exhibit marked symptoms of retrogression during the last five years.—(Applause.) In the Iron and Steel industries the production of pig iron has gradually diminished from 8½ million tons in 1889 to 6½ million tons in 1892 and in 1893. The exports of iron and steel have fallen in the same period from 4 million tons in 1889 to 2½ million tons in 1892 and in 1893. In December, 1892, there were 91 furnaces in blast in Scotland, while in December, 1893, there were only 84. Shipbuilding has dwindled from 1,209,000 tons in 1889 down to 836,000 tons in 1893—a decrease of not less than 30 per cent. in four years. In the Cotton trade the raw cotton consumed has fallen from 1,656,000,000 lb. in the year 1890 to 1,482,000,000 lb. in the year 1893. The exports of cotton yarn have fallen off from 258,000,000 lb. to 189 to 206,000,000 lb. in 1893, and the exports of cotton piece goods from 5,124,000,000 yards in 1890 to 4,653,000,000 yards in 1893. As to cotton weaving, "Worrall's Directory" states that in four counties of England alone, viz., Lancashire, Cheshire, Yorkshire, and Derbyshire (no account being taken of Scotland, or other parts of England), "there has been a diminution within the last twelve months of over 13,000 looms" on a total of 600,000.

It is the Currency Question that lies at the root of those social disturbances and those difficult labour questions which are so prominent a feature for the present time, and for which no real solution can be found so long as this deepening trade depression continues to paralyse the energies of the nation. The "deadening and benumbing effects" of a continuous fall in prices must, in the long run (slowly, insidiously, and silently it may be, yet certainly), reach every class in the community, from the highest to the lowest. It is perfectly idle to expect prosperity so long as honest, industrious effort is weighted by ever-increasing burdens, and so long as capital is driven away from industrial enterprise.—(Loud cheers.)

Mr. R. LACEY EVERETT, M.P.—In agriculture everywhere you find depression, sinking of values, and agricultural ruin steadily progressing and a constantly appreciating standard, and, therefore, a constantly depreciating value of agricultural produce. This dogs the heels of the agriculturist in every gold standard country, and curses him in his occupation all the world over.—(Loud applause.) [A Voice: "Free trade."] Not free trade. After we had free trade in England for thirty years we looked back upon the longest period of continual agricultural prosperity that we had ever known in this country.—(Loud and prolonged applause.) It is not free trade that has ruined us; it is not the open ports that are ruining us; it is the closing of the mints. With free trade in produce, we ought also to have free trade in the precious metals, and I unhesitatingly affirm, in the presence of this meeting, that given to us along with open ports open mints, the farmer in England can hold his own against the whole world.—(Loud applause.)

Mr. VESSEY KNOX, M.P., spoke as to the evil effects of the appreciation of gold on Irish industries.

Mons. RENÉ LAVOLLÉE (Paris) also addressed the meeting.

Mr. WILLIAM TAYLOR, of Blackburn—What is the main cause of all the disturbance in the cotton trade, with which I am connected, and in other different trades? It is the want of a stable rate of exchange between gold and silver-using countries. With a stable ratio secured, as it can be secured, the industries of this country need fear no competition.—(Applause.)

Sir ALFRED HICKMAN, M.P.—All history teaches us that prosperity in the iron trade has been absolutely coincident with an expanding currency, and the contrary when currency has been contracted. As an ironmaster, I must cordially support the proposal to rehabilitate silver.—(Applause.)

Mr. JAMES MANNING (Secretary of the United Textile Factory Workers' member of the Trade

Union Congress Parliamentary Committee, and member of the Royal Commission of Labour) said—The fall in the gold prices of silver has induced, and is inducing, tremendous development to cotton spinning in Japan and China on what is practically an artificial basis. I will only mention one fact in this connection. Already freight has been engaged for the shipment this year of 40,000 tons of cotton-spinning machinery to Japan, and it is estimated that the number of spindles at the end of this year will be more than double what they were when the Indian mints were closed. We do not object to this competition so long as it is fair and above board. If in the race or in the battle we in the textile districts of this country are beaten fairly and squarely man to man, we shall have to accept our fate as people have had to do before us, but we do object to our own Government, by its policy, being a party to the artificial bolstering up of a competitive industry, either in foreign countries or in any other part of the British Empire. The textile workers of the North intended to make bimetalism a test question at Parliamentary elections.—(Applause.)

Monsieur THÉRY, of Paris, also addressed the meeting.

Mr. THOMAS HANBURY said—After an absence of 22 years from Shanghai, where I formerly lived, I found that the market prices of all the chief necessities of life showed no material variation, but that bar gold, on the contrary, has risen from 165 to 324. In view of this, I confess I am at a loss to understand how there can be found thinking men in this City of London who will continue to assert that gold has not appreciated.—(Hear, hear.)

Mr. DAVID MURRAY, of Adelaide, South Australia (President of the South Australian Branch of the Bimetallic League; late President of the Adelaide Chamber of Commerce), after speaking of the serious effects on Colonial industries of the appreciation of gold, said—There is reason to fear that unless counteracted by legislative action, the continued strain on our producing capabilities may precipitate a catastrophe involving not merely the Australian Colonies, but, under the universal influence of a reduced or inflated currency, the entire industrial world.—(Applause.)

Mr. E. R. PEARCE-RODGER and Mr. STEPHEN WILLIAMSON, M.P., having spoken, the morning sitting terminated.

At the afternoon sitting Mr. Henry Hicks Gibbs occupied the chair.

The SECRETARY announced that Sir Henry Meysey-Thompson, Bart., M.P., offered a prize of a silver cup, value £25, and £25 in sovereigns, for the best essay on certain points of the currency question, and that full particulars were to be obtained at any of the offices of the Bimetallic League.

Sir DAVID BARBOUR, K.C.S.I., then read a Paper on "The Finances of India," in the course of which he said—Up to 1893 amongst the effects of the divergence in the value of gold and silver on the finances of India might be mentioned—
"The expenditure on exchange had largely increased, so that the amount entered in the Estimates of 1893-94 came to Rs. 9,935,000, almost wholly due to the divergence." Also further expenditure, which could not be put at less than Rs. 1,000,000, and which would probably exceed that sum, must be incurred in order to improve the position of the European officers of Government.

Since the Mints were closed in June last, we have seen (1) disturbance in the trade between India and silver-standard countries; (2) a failure to draw in 1893-94 the full amount of Council Bills, and a consequent increase in the sterling debt of India; (3) a further fall in exchange; (4) an increase in the expenditure under exchange in the Indian estimates for the current year to Rs. 10,309,000; (5) a further increase of the rupee cost of the British troops serving in India, and an additional charge, estimated at Rs. 1,113,000 for the current year (but which will exceed that estimate) for compensation to European officers; (6) the absorption of the available portion of the famine grant; (7) the imposition of further taxation in the objectionable form of import duties; (8) the exaction of a contribution from Local Governments; (9) reductions in public works expenditure; (10) a deficit of Rs. 302,000 in the Estimates for 1894-95.—(Applause.) The catalogue of evils which I have given is not exhaustive. The speculative element which has been introduced into Indian finance is not favourable to good or economical administration. The contentment and (as a consequence) the efficiency of the European services has been affected by their losses, while considerable political agitation has been caused in India.—(Applause.)

Mr. HERMANN SCHMIDT said India may be the object lesson to this country of what the danger

of exchanges bring about all over the world. It is not only that the commerce is disturbed; it is that the whole system of their finances is brought to the verge of ruin, and in some countries to the verge of bankruptcy. The expedient now being tried in India does not afford even a temporary relief from the evils of the present situation. We shall have to come back to the remedy which the Indian Government and the Indian officials originally proposed, the remedy of a fixed international relation between gold and silver.—(Loud applause.)

Mr. R. BARCLAY CHAPMAN, C.S.I., said—I look upon the Indian exchanges as a most instructive object lesson to this country. This desperate condition, for it is desperate, of the Indian exchanges, is not only an evil itself, it is a symptom of evils, which affect not the gold-using countries only, but all countries in the world.—(Hear, hear.) Be very sure—I have not time to establish it now—that no country is more adversely affected by the present critical state of affairs than this country of ours—Great Britain. India is unable to pay her gold obligations, which are not less part of her obligations than any other obligations that she has. Last year she took power to borrow £10,000,000, and before very long it seems to me inevitable that the Government of India will again have to come to the Government of Great Britain, and say, "We cannot pay our way; we cannot meet our current obligations; we must again borrow £10,000,000." The real difficulty of the position is that we have not got to any end, there is no bottom to this thing. Monometallists have nothing to suggest. Our remedy holds the field. It is founded upon actual experience, and not upon any fancy theories which everybody can reject or split up. It constitutes the aggressive party, the aggressive force, and it has great progress. Let us be prepared with it, so that when then moment of extreme crisis comes to the Government, if they have not discovered it for themselves, may have from us the true remedy to fall back upon.—(Loud cheers.)

Mr. N. P. VAN DEN BERG, President of the Bank of the Netherlands, Amsterdam, then addressed the meeting on the monetary system of Holland and Java—As regards the currency matters to which I beg more particularly to draw your attention, I need not remind you that Holland has often been blamed for adopting the single silver standard in 1847, a couple of years before the gold discoveries in California and Australia became known, and before the alarm was raised about the fall in the value of gold, which even impelled Richard Cobden to advocate the general demotion of the yellow metal, the value of silver being, according to his views, much more stable, and the white metal therefore much more suitable to fulfil the functions of a measure of value than gold. Whether Cobden may have been right or wrong, Holland at all events did extremely well under the silver standard during the 25 years of its working. Never has the country been so prosperous as during the period 1850 to 1870. Agriculture and industry were in a most flourishing condition; trade was growing and extending, and the credit of the State stood almost unrivalled amongst all the nations of the Continent. Our experience thus goes to prove that certainly the commercial prosperity of a nation does not lie in a gold standard, as seems to be the common belief here in England, notwithstanding that great statesman Lord Beaconsfield already told you 20 years ago that there scarcely could be a greater fallacy than this belief.

Well, he said on November, 10th, 1873, when he was installed as Rector of the University of Glasgow, "I think that any country which has a gold standard of value should think once, twice, and thrice before it gives it up. But it is the greatest delusion in the world to attribute the commercial preponderance and prosperity of England to our having a gold standard. Our gold standard is not the cause of our commercial prosperity, but the consequence of our commercial prosperity." In many respects Holland may be taken as a most eloquent proof of the soundness of his views, and thoroughly satisfied as we were with our silver standard, and the monetary system based thereon, which for years has been considered as one of the most perfect systems of Europe, we certainly should not even have thought of altering our system, if Germany had only left things alone. The relative stability of its value is one of the essential conditions of a good money, and a gradual appreciation of the standard used to measure all values and effect all exchanges cannot fail to be disastrous to all mankind as it benefits only those who own money and aggravates the position of the others, the workers—in a word, the immense majority of the population.—(Applause.)

The more I have studied the subject, and it is

now already over twenty years that it is occupying almost daily my attention, the more I feel convinced that the only remedy for the present evil lies in international bimetalism, and that the universal adoption of a fixed ratio between gold and silver would be of incalculable benefit to all the world.—(Applause.)

Prof. MILLEWSKI, Professor of Political Economy, University of Cracow, also addressed the meeting, contending, as a Member of the Austro-Hungarian Monetary Commission that the necessity of introducing a gold standard in Austria-Hungary was not a victory, but a defeat for the theory and parity of gold monometallism.

Mr. A. COTTERILL TUPP gave detailed figures showing the increased burden of National Debts owing to the appreciation of gold.

Mr. W. H. GRANFELL—No great movement of this sort can progress without adequate funds, and I should like to bring before those who have not yet been appealed to, the fact that even were they to subscribe somewhat largely to this movement, it would still bear but a small proportion to the interests which we all have at stake.—(Applause.) The League has drawn up a certain number of questions which it is proposed and intended to submit to every candidate in every constituency throughout the kingdom, and for that purpose I should be very much obliged to any gentleman here present who would volunteer to help me by undertaking different constituencies, and seeing that deputations waited on each candidate with these questions.

Mr. HENRY HICKS GIBBS read a Paper on "The Principles upon which an International Ratio should be fixed." He said—The real root of the matter is—not the ratio, but the admission of the principle that the two money-metals, that is, the two metals now serving as money in the several states of the civilised world—some using one metal as their chief or standard money, and some using the other, with no link between them—should be for the future, as they were in the past, so linked together as to be, both of them practically money throughout the world.—(Applause.)

I desire to give the strongest possible expression to the opinion, that the *precise figure* of the ratio is not the point of the greatest importance, any ratio being better than none. What the Bimetallic League urges is, that there should be a ratio—a link between the moneys of the two halves of the world. We are ready to assent to that ratio which can be adopted with the least international friction, and with the least national inconvenience.—(Applause.)

Whatever ratio is adopted as the ultimate goal, and whatever the point of commencement, care will no doubt be taken, in the interest of international commerce, that the speed of the movement be, as far as possible, so regulated as to cause the minimum of inconvenience to traders.—(Applause.)

At the conclusion of the reading of his Paper, Mr. Hicks Gibbs said—Now I think we may congratulate ourselves on the successful issue of these two days' conference, and we all desire to acknowledge the kindness of the Lord Mayor of London.

Sir WM. HOULDSWORTH moved, and Mr. G. M. BOISSEVAIN (Amsterdam) seconded, a vote of thanks to the Lord Mayor, and it was passed amidst loud cheers.

On Wednesday evening, May 2nd, the members of the Conference dined together at the Albion, Aldersgate, E.C., Sir David Evans, K.C.M.G., in the chair, the toast of the evening, "Success to International Bimetalism," being proposed by the Right Hon. Henry Chaplin, M.P.

REPORT ON THE CULTIVATION OF COTTON IN KOREA.

Mr. O'CONOR to the Earl of ROSEBURY.

Pekin, August 3rd, 1893.

My LORD,—I have the honour to enclose herewith to your Lordship a copy of a despatch from Mr. Hillier covering a Report on the Cultivation of Cotton in Korea.

I have, &c., (Signed) N. R. O'CONOR.

Mr. HILLIER to Mr. O'CONOR.

SIR,—I have the honour to enclose some Notes on the Cultivation of Cotton in Korea, which have been kindly furnished to me by Mr. J. Hunt, Commissioner of Korean Customs at Fusan.

I have, &c., (Signed) WALTER C. HILLIER.

Mr. HUNT to Mr. HILLIER.

My dear Mr. HILLIER,—In reply to your request for information as to the Production of Cotton in Korea, I have done my best to procure you the data you require, and have embodied the results of my investigations below.

(This, as you know, next to impossible to obtain reliable information from the natives, and most of

my figures are based to a certain extent upon conjecture. As you will see in my Notes, I estimate the yearly consumption of cleaned or raw cotton in Korea at 300,000,000 lbs., and I base this estimate upon a population of, say, 12,000,000, with a consumption of 25 lbs. per head. I consider this a low estimate, for I find from statistics in the Cyclopaedia of India that the East Indian people are supposed to consume 20 lbs. annually per head of the population, and I think we should be quite justified in doubling this estimate for Korea, where the winters are long and rigorous; but in order to err on the safe side, I base my calculations at the low estimate of 25 lbs.

I have, &c., (Signed) J. H. HUNT.

NOTES ON THE CULTIVATION OF COTTON IN KOREA.

The total area under cultivation throughout Korea is roughly computed to be 872,000 acres, and the aggregate quantity of seed cotton (i.e., uncleaned cotton) produced per annum is set down as 1,200,000,000 lbs., at an average cost of 4 c. Mexican (1½¢) per lb. The bulk of this comes from the provinces of Whanghai, Cholla, and Kyengsang, where the climate and soil are most suitable to the growth of the plant. The yearly consumption of "cleaned" or raw cotton is roughly estimated at 300,000,000 lbs., and considering that the majority of Koreans use cotton almost exclusively, whereas Japanese and Chinese use furs, silk, and silk-waste considerably, I judge that this estimate is rather under than over-stated.

Taking the population at 12,000,000, it would give 25 lbs. of cotton a head, by no means an excessive amount where cotton enters so largely into every-day use as in Korea. The greater portion of the cotton is made into piece-goods for garments, and padding for winter clothing. Much of the cotton is also used for the padded socks worn both in summer and winter by the nobility and well-to-do classes—a custom peculiar to Korea. The Korean fibre is reported to be superior in durability and in warmth-giving qualities to that produced in Japan. A piece of the cloth as manufactured in this province (Kyengsang) usually measures 60 feet by 14 inches wide, weighs from 3 lbs. to 4 lbs., and varies in price from 80 c. to 1 dol. (about 2s. 1½¢ to 2s. 8½¢). The quantity of raw or cleaned cotton raised in this and the Cholla province is said to average 85 lbs. per acre, and of seed cotton 345 lbs. per acre.

The following table gives the quantity and prices of seed cotton and cotton cloth exported to foreign countries (Japan) from the three Korean open ports (Jenchuan, Fusan, and Yuensan) during the years 1888-92:—

Year.	Seed Cotton.		Cotton Cloth.	
	Quantity.	Price per	Quantity.	Price per
	Lbs.	Cents.	Lbs.	Cents.
1888	45,200	2	5,425	26
1889	58,400	3	4,032	24
1890	90,500	3	763	25
1891	673,700	3	1,106	27
1892	157,800	2	35	29

No cotton thread was exported during these years, and no cleaned cotton (i.e., cotton divested of its seed) was shipped abroad either then or previous to 1888.

The cloth sent to Japan is there made chiefly into bags used in the manufacture of soy, and for hospital mattress coverings.

Of the three Korean ports, Yuensan consumes most of the native cotton piece-goods made in this and the Cholla province. An abnormally large crop of cotton is said to have been gathered in 1890, which statement the appended tables of import and export for that year serve to corroborate. The following table shows the import of raw cotton piece-goods, and cotton thread from foreign countries for the years 1888-92:—

Year.	Raw (Cleaned) Cotton.		Cotton Cloth, chiefly European.		Cotton Thread.	
	Quantity in Lbs.	Price per Lb. in Dollars.	Quantity in Pieces.	Price per Piece in Dollars.	Quantity in Pieces.	Price per Piece in Dollars.
1888.....	241,600	1.245,791	181	216,000	0.32	
1889.....	191,500	1.27,947	179	120,000	0.37	
1890.....	230,000	1.477,742	183	192,000	0.32	
1891.....	511,600	1.506,328	183	277,000	0.32	
1892.....	295,700	1.266,302	190	380,000	0.38	

Grass and hemp cloth to some extent take the place of cotton during the summer months, and during periods of mourning, but as these fabrics are more expensive to produce than cotton cloth, their use is restricted to the above-mentioned occasions. As far as I have been able to learn, there is no tendency to mix cotton with other fibres. A fabric consisting of half silk and half cotton is manufactured in some parts of this province, but not in large quantities.

One may, I think, reasonably expect an increase in the production of cotton. Ground suitable for its growth is practically plentiful, and it needs but a steady market at remunerative prices to stimulate an extended cultivation.

At present only a small percentage of the area available is utilised.

The plant, properly speaking, is not an annual, but it is found to be more profitable to uproot it after the crop is gathered, and sow new seed each year. The dead stalk is used for fuel, and its ashes finally for manure. The method of cultivation in Korea is much the same as in China. The ground is usually ploughed up during the early winter and allowed to remain in this condition until the frost is well out of it, when it is broken up with a hoe and manure composed of human excrement, mixed with wood ashes, spread over it. The fields are now ready for the reception of the seed, which is generally sown about April to May. The seed, of which, I am told, there is but one kind, is not placed in drills, as is done in Japan, but is sown broad cast, and then trodden in and covered up with the feet, sesame seed being very often sown in the same field along with it. The young shoot shows above ground about the tenth day, and at maturity attains a height of from 2 feet to 2½ feet. The plant blossoms in August, and on an average bears 40 pods, each containing 4 cells, as a rule, within a double capsule. The gathering of the crop, which begins about October, continues until frost sets in, some time in November. The plant flourishes best in a sandy loam soil on the low hillsides, or in the valleys, in weather slightly moist from the sowing of the seed until it appears above ground and blossoms. After this dry weather is essential, rain checking the proper maturing of the fibre. No attention is paid or skill displayed in the cultivation once the seed is in the ground; everything is then left to nature. No further manure is added, nor are they ever thinned out or given water in times of drought. The crops are gathered by women principally, who also are largely employed afterwards in separating the seed. The instrument used by the natives in this process is the primitive roller-gin, but the Japanese in this settlement have recently introduced machines of the modern saw-gin type, and obtain 35 lbs. of clean from 140 lbs. of seed cotton a day. A native woman can with the roller-gin turn out per day about 3 lbs. of clean cotton from 12 lbs. of seed cotton, the generally estimated proportion in weight being 1 to 4. The spinning-wheel in common use all over Korea, unlike the western "Jenny," makes but one thread at a time. Before spinning, the cotton is prepared in a similar manner to that in China, with the elastic bow, the string of which, being struck after it is passed under a quantity of cotton laid on a table, tosses the cotton into the air by its rebound, and so separates the staple without injury.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, July 13.

The Earl of Kimberley has offered to mediate between China and Japan, and the latter has accepted.

The Chicago trouble is practically over.

London, July 15.

China has accepted the proposition of Earl Kimberley for mediation in the Korean Affair.

Shocks of earthquake continue in Turkey. Cholera is increasing in Russia and alarm is felt at St. Petersburg. There were 300 deaths in that city last week.

London, July 18.

As a result of the recent earthquakes in Turkey, the damage sustained in Stamboul is estimated at six millions of Turkish pounds. Over two hundred persons were killed in Stamboul alone.

Later.

The Budget has been brought up a third time and passed by a majority of twenty.

A Republic has been proclaimed in Hawaii.

[FROM TONGKING PAPERS.]

Paris, June 29.

Many Italians are leaving France.

Paris, July 2.

It is stated that seven anarchists tried to assassinate M. Carnot at Cette to avenge Vaillant and Henry.

The obsequies of M. Carnot were magnificent. There was an enormous crowd, visibly affected. The heat was terrific and several hundred persons suffered sunstroke.

Two hundred anarchists were arrested in the morning at their homes.

[FROM JAPANESE PAPERS.]

Tientsin, July 17.

The Peking Government has resolved to send all the *Seiji* troops to Korea, and soldiers from six barracks belonging to the *Seiji* division have just embarked. General Shu Kei will also proceed to Korea with a detachment of the *Kiji* troops. The General, it is said, will be appointed Commander-in-Chief of the Chinese Army in the peninsula.

Soul, July 19.

Mr. Yuan, Chinese Resident in Korea, has been recalled to Tientsin.

It is stated that the negotiations between the Japanese Minister and the Korean Government, which have been making steady progress, underwent a sudden change about the 15th, and the Peninsular Government is said to have informed the Japanese Minister that although the Korean Government is most willing to effect various internal reforms, its subjects are much disturbed by the long stay in the peninsula of such a large number of Japanese soldiers, and it is feared that if the troops continue in occupation it may lead to a breach of the peace. The Korean Government can, therefore, only effect the contemplated reforms after the withdrawal of the Japanese troops.

Shimonoseki, July 19.

A Soul correspondent states that a Russian naval officer has been attacked by cholera, and is receiving medical treatment at Getsubi-Shima.

Three Koreans having cut the military telegraph wires, have been arrested by the Japanese guards.

Soul, July 19.

The Chinese Resident, Mr. Yuan, left here for home yesterday.

The Korean Government is said to have requested the Japanese Minister to withdraw the Japanese troops from the country and also the proposals made by the Japanese Government to the Korean Government, on the ground that if Korea adopts Japan's proposals other Powers will dispatch forces to the Kingdom and make similar demands, thereby embarrassing as well as forcing the Korean Government to do their bidding. Korea will make the various internal reforms only after the departure of the Japanese soldiers from Korea. Korea is undoubtedly instigated by China in this course.

Soul, July 19.

Lieut.-Colonel Fukushima and Mr. Motono arrived here to-day.

Ninsen, July 19.

Mr. Yuan, Chinese Resident, left here for home in the Chinese man-of-war *Foi* to-day. The Chinese female residents of Soul have retired to this port, and things have assumed a critical complexion.

Soul, July 19.

Mr. Yuan, Chinese Resident in Soul, is expected to return here in a distant date.

Shanghai, July 20.

The Peking Government has chartered three British ships as military transports.

Tientsin, July 20.

The Chinese Northern Squadron are expected to leave here for Ninsen to-day.

Soul, July 20.

The work of conducting telegraph wires between Soul and Fusan was commenced yesterday. The workmen set out at both ends at the same time.

Kobe, July 20.

Twenty Chinese residents have left here for home by the *Kobe Maru*.

Nagasaki, July 20.

The Nagasaki Coal Co. has exported 1,800 tons of Karatsu and Hirado coals to Shanghai by the British steamer *Malta*. Another British steamer has taken coal to Shanghai from Kuchinotsu.

Matsuyama, July 20.

Several hundred farmers attacked the lead refinery of Mr. Sumitomo, at Niihama, yesterday, and there are signs of an outbreak of serious disturbances. Many constables of the Matsuyama Police Office proceeded to the spot to-day to render assistance to the local police. The poisons discharged in the rivers and streams of the country have given rise to the dispute.

CHESS.

And the young negro resigns.

Note.

(a) It would not have been any better to capture the Bishop. For if 28..... K takes B, then 19—P to K Kt 5 ch., K to R sq.; 20—Q to R 4 ch., Kt to K R 3; 21—B takes Kt, B takes B; 22—Q to K B 6 ch., followed by R takes Kt.

It were superfluous, says the *Saturday Review*, to set down in detail for any cultured mind the advantages which the art of chess has over most other delectable occupations. In the words of a Teutonic enthusiast, it excels as a *Lustgefecht* and as a *Kriegspiel*: "it is good for rivalry and strategy, for the expulsion of humours and the assuagement of domestic jars. These and other virtues proceed largely from its infinite variety of combination and resource. Every move of each of the thirty-two pieces affects every succeeding move of all the rest; and when only a dozen or twenty pieces remain on the board, the possible variations of a single move and reply may generally be numbered by the thousand. In such a maze of moves, the good player threads his way by a sort of cultivated instinct, not so much as

heeding a title of the turnings which lie open to him, and not seriously studying, in the most difficult situations, more than the two or three alternatives which jump to his eyes. It is when a player has reached this stage in his development that the problem begins to attract and interest him."

CHESS BRILLIANT.

Played between M. Jasnogrodsky (Black) against an amateur (White).

GAME No. 141.—SCOTCH GAMBIT.

WHITE. Amateur.	BLACK. Jasnogrodsky.

Per German steamer *Nürnberg*, from Hongkong:—Mr. Pertile in cabin; Mr. Herm. Altona in second class, and Mr. Thallant in steerage.
Per British steamer *Ancona*, from Hongkong via ports:—Mr. and Miss Orth and servant in cabin. The following passengers were looked to Kobe:—Mr. and Mrs. Muir, Mr. W. Moraes, Mr. Tamenari, and Miss Okuyi in cabin.
Per British steamer *Gaelic*, from Hongkong via ports:—Captain W. R. Bridgeman, U.S.N., Mr. and Mrs. H. W. Sale, infant, and servant, Mr.

S. M. Joseph, Mr. S. M. Joseph, Mr. Percy Mathias, and Mr. H. W. Saucht in cabin, and 2 Europeans in steerage.

Per British steamer *Empress of India*, from Hongkong via ports:—Rev. W. Bushell, Captain Thomas, Dr. Burton, Mr. K. F. Carreg, Hon. J. J. Keswick, Mr. F. M. de Cunha, Dr. and Mrs. Colborne, Mr. George, Mr. F. Pamplona, Mr. C. A. Richardson, Dr. Rennie, Rev. Wm. McGregor, Miss McGregor, Rev. D. L. and Mrs. McNab and child, Mr. H. Graham, Mr. and Mrs. Saw, Mrs. Ritchie, Mrs. D. W. Nicholls and family, Mrs. Page, Mr. A. Elbert, H.E. Senor Don Delabat and servant, Madame Delabat and servant, Mr. E. H. Grimani, Mr. E. W. George, Captain Shaw, Lieut. Fox, U.S.N., Mrs. Stafford, Mrs. Denig and 2 children, Mrs. Flint, Captain Brumie, Mr. A. H. Groom, Miss Jenkins, Miss Chaston, Mr. A. S. Garfit, Mr. T. W. Hallyer, Mr. M. Brown, Mr. G. W. Brockhurst, and Mr. E. A. Tasseville in cabin; Mr. E. L. Tindall in second class.

Per British steamer *Belgie*, from San Francisco:—Miss Nellie M. Hill, Mrs. J. C. Hill, Master Caryl Hill, Master Paul Hill, Mr. A. Schatzmann, Mrs. M. Allison, Miss Fanny Liddiard, Mr. Daniel Kelly, Miss Bessie Kelly, Mr. H. B. Robinson, Mr. J. Cadematory, Mr. H. Curra, Mr. Alfred James, Major Waugh, Mr. James Boyer, Mr. Walter B. Vanderlip, Miss Elsie Adair, Mr. Lewis H. Abel, Mrs. Abel, Mr. H. Snell, Mr. James Kelly, and Mr. Thomas Anderson in cabin. From Hongkong:—Mrs. Geo. B. Clark in cabin. From Honolulu to Yokohama:—Mr. W. B. Crocker, Mr. R. C. Roby, Mr. E. W. Panfield, and Mr. S. Matsumura in cabin. From Honolulu to Hongkong:—Mr. W. G. Smith in cabin.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Admiral and Mrs. Skerrett, the Misses Skerrett, Lieut. and Mrs. Wilson, Mr. and Mrs. J. G. Doering, Mrs. and Master Lowder, Miss Howell, Miss L. Cabeldin, Miss Evans, Messrs. S. Hashimoto, B. Kobayashi, W. Cabeldin, Omori, P. S. Cabeldin, Howell, T. Fukuroi, G. Kililia, T. J. Thornbury, L. J. Sa, and Mitchell in cabin; Mr. Sagara, Mr. Otsuka, Mr. and Mrs. Nara, and Mr. Nakashima in second class, and 40 passengers in steerage. For Otaru:—Mrs. Danforth, Misses Irvin and Malvin in cabin. DEPARTED.

Per British steamer *Empress of India*, for Vancouver, B.C.:—Mr. Barney, Rev. Mr. Belknap and child, Miss Blackmore, Miss Brown, Mr. Burman, Rev. W. Bushell, Mr. Charlton, Miss Clayton, Mr. Cowan, Mr. S. Dawson, M. le Comte de Durlot, H.E. Senor and Madame Delavat, Miss Edington, Mr. Ellert, Mr. Fox, Mr. George, Mr. Frank Gove, Mr. Graham, Mr. E. H. Grimani, Mr. Hart, Miss Hart, Mr. Ignishoff, Dr. Jackson, Mr. James, Mr. Jeffries, Mr. C. E. Jennings, Miss Jenkins, Mr. Charles Jung, Miss Lee, Miss McDonald, Mr. Jas. McKie, Rev. Mr. and Mrs. McNabb and child, Miss Macphail, Mr. W. Munzie, Mrs. D. W. Nichols and 3 children, Mr. Niclussen, Mr. Page, Mr. Edgar Poyser, Dr. Rennie, Mr. C. B. Rickett, Mr. Ring, Mr. Ritchie, Captain Saillard, Rev. Mr. and Mrs. Saw, Miss Scriven, Mr. Seel, Mr. Thos. Shaw, Dr. Stimson, Miss Stimson, Colonel H. H. Tabb, Mr. Morhea, Mr. Claridge, Count Terashima, Mr. and Mrs. Theodor, Hon. S. Tollemache, Mr. and Mrs. Conrad Wagen, Mrs. Walker and infant, Lady Maud Warrender and maid, Mr. F. C. Van der Byl and servant, and Mr. P. B. Van der Byl in cabin.

Per British steamer *Gaelic*, for San Francisco:—Mr. E. M. Byers, Mr. S. A. Boyd, Dr. Bodkin, Mr. W. J. Bonnin, Captain William R. Bridgman, U.S.N., Mr. C. A. Carlisle, Mr. C. S. Coningham, Mr. and Mrs. A. Easton, Mr. W. C. Eaton, P. S. Engineer, U.S.N., Mr. J. Eyseric, Mrs. Fraser and maid, Mr. F. E. Fernald, Mr. G. Guerin, Mr. W. S. Hale, Mrs. M. Henderson, Mr. W. J. Hogg, Dr. W. Van der Heyden, Mr. T. Van der Heyden, Mr. K. Kagami, Mr. A. J. Lamontin, Mr. W. Lamontin, Mrs. F. Mercer, Mr. Shio Nemoto, Mr. Timothy O'Leary, Mr. C. E. Hamilton Paine, Miss Von Rabr, Mr. D. P. Stubbs, Mr. W. D. Stubbs, Mr. Thomas H. Williams, and Mr. G. W. Wunnie in cabin.

Per German steamer *Nürnberg*, for Hongkong via ports:—Mr. O. Voigt, Mr. C. M. Benedict, Mr. A. M. Benedict, Captain D. S. Bailey, Captain A. Scotland, Mr. A. Laurie, Mr. J. Day, Mr. T. Alwen, Mr. R. Berger, Mr. M. Mackeller, Mr. P. Goodal, Mr. F. Woollich, Captain Connelson, Mr. P. M. Stangard, and Mr. Dannenberg in cabin; and 4 Europeans, 54 Chinese, and 54 Lascars in steerage.

Per British steamer *Belgie*, for Hongkong:—Mr. Kohn and Mrs. Alford, two children, and maid in cabin.

Per British steamer *Ancona*, for Hongkong via ports:—Mr. E. L. C. Berger, Mr. and Mrs.

Eaton, Mr. C. Mattie, Mr. Ch. V. Gelderman, Mr. L. G. Pardo, Rev. H. B. Johnson, Mr. C. R. Clow, Mr. J. W. Welten, Mr. A. G. Smart, Mr. J. Kirkwood, Mr. Van Chung, Mr. Lo Sui Cho, Mr. Ng Hog, Mr. T. F. Shimidzu, and Mr. T. Snail in cabin; 4 Chinese and 1 Indian in steerage.

CARGOES.

Per French steamer *Caledonia*, for Shanghai via Kobe:—Raw Silk for Europe, 408 bales. Treasure for Singapore, \$264,000.

Per British steamer *Empress of India*, for Vancouver, B.C.:—

For Hongkong.....	per P. & O. Co.	Saturday, Aug. 4th.
For America.....	per O. & O. Co.	Saturday, Aug. 12th.

LATEST COMMERCIAL.

IMPORTS.

The week opened with the *Bon* festival, which is a general excuse for holiday-making with all classes of traders. Dealers appear to be in no hurry to return to work, and the markets for Yarn and Piece Goods hang in suspense awaiting the good pleasure of buyers generally.

COTTON PICK GOODS.

	PER POUND.
Grey Shirts—2 1/2 yds. 3 1/2 inches.....	\$2.40 to 3.00
Grey Shirts—2 1/2 yds. 4 1/2 inches.....	2.60 to 3.40
P. Cloth—7 1/2 yds. 3 1/2 inches.....	1.60 to 1.90
Indigo Shirts—12 yds. 4 1/2 inches.....	1.70 to 2.35

No. 328, Two-fold.....	42.00 to 44.00
No. 428, Two-fold.....	49.00 to 52.00

METALS.

Poor market all round, with quotations unchanged. Dealers make all sorts of excuses for the absence of trade. *Bon*, "Hot weather," "tight money," being among them.

	PER POUND.
Flat Bars, 4 inch.....	\$3.45 to 3.50
Flat Bars, 4 inch.....	3.55 to 3.60
Round and square up to 4 inch.....	3.50 to 3.60
Iron Plates, assorted.....	3.60 to 3.75
Sheet Iron.....	4.70 to 4.85
Galvanized Iron sheets.....	9.40 to 9.60
Wire Nails, assorted.....	6.00 to 6.50
Iron Plates, per box.....	5.80 to 6.00
Pig Iron, No. 3.....	1.60 to 1.65

KEROSENE.

Not much done this week. Further arrivals of Cheater and Comet from New York have filled up stocks, and buyers are well supplied at present by their recent purchases.

Chester.....	\$1.70 to 1.72 1/2
Comet.....	1.67 1/2 to 1.70
Deuce.....	—
Russian Anchor.....	1.67 1/2 to 1.70
Russian Moon.....	1.65 to 1.67 1/2

SUGAR.

Browns—Plenty of stock with small demand. Prices nominally unchanged, but importers are looking for godown-room. White—Market quiet, but steady at quotations.

	PER POUND.
Brown Takao.....	\$4.60 to 4.70
Brown Manila.....	5.20 to 5.60
Brown Datong.....	3.30 to 3.40
Brown Canton.....	4.00 to 4.30
White Java and Penang.....	7.10 to 7.25
White Refined.....	7.60 to 9.90

EXPORTS.

RAW SILK.

Our last issue was of the 13th instant, since which date settlements on this market are 605 piculs, divided thus: *Filatures*, 538 piculs; *Re-reels*, 67 piculs; Direct shipments have been 380 bales, making the total business for the week 1,000 piculs.

The market has been steady since we last wrote, and at the close-holders have succeeded in obtaining a slight advance upon some things in spite of the large arrivals and the increasing stock. We do not quite see the reason for this and merely state the fact.

New Crop.—Some advices report that in the Kakeda districts the yield of cocoons is not good and that there will be a shortage there to a greater or less extent; but we must wait yet a little while before we can tell how much damage has been done.

Arrivals come in freely every day and genuine Shinshu silks will soon be on the market.

There have been four shipping opportunities since we last wrote, the French, German, American, and Canadian mails all taking silk. The *Caledonia*, 14th instant, had 408 bales for Europe; the *Nuerberg*, 17th instant, 348 bales for the same destination; the *Gaelic*, 17th instant, 468 bales for the New York trade, and the *Empress of India*, same date, had 461 bales for the same destination. These departures make the present export figures 2,237 piculs, against 479 piculs last year, and 1,618 piculs at the same date in 1892.

Hanks.—A few more bales have come to hand, but no business has been done so far.

Filatures.—There seems to be a fair demand from day to day, all classes participating, and for Europe \$710 has been freely paid for some decent quality reeling 10/12 deniers.

In silks for New York some advance has been obtained, and among the latest sales are noted *Shojikan* and *Kobun-sen* at \$700; *Chashin*

sha, \$690; Tokosha and Shunmeisha have again brought \$665 but are now held for an advance. Second grade *Filatures* suitable for tram have also been done at \$645.

Re-reels.—There has not been much done but high prices have been paid, and the silks look relatively dearer than *Filatures*. The parcel of *Tortoise* mentioned in our last was eventually settled at \$650, with *Horaisha* at \$625. A small parcel of *Oshu* brought \$660, but during the last day or two a further advance of \$5 has been paid.

Kakeda.—No business this week. Nothing is down save a few sample boxes which have so far led to no trade.

QUOTATIONS.—(NEW SILK.)

Export Raw Silk Tables to 20th July, 1894:—

Season	1893-94.	1894-95.	1895-96.
Exports	1,077	377	850
America	1,063	96	707
Total	2,140	473	1,558
Settlements and Direct	2,300	700	3,000
Export from 1st July	2,300	700	3,000
Stock, 20th July	6,600	2,300	2,300
Available supplies to date	8,900	3,000	4,300

WASTE SILK.

Since our last, settlements amount to 207 piculs, divided thus: *Noshi*, 184 piculs; *Kibiso*, 16 piculs; *Neri*, 7 piculs. No direct shipments.

Trade remains very dull, with a quiet market. A large transaction in *Boseki-wata* is said to be pending, but details have not yet come to hand.

There have been two shipping opportunities since we last wrote, the *Glenahedil*, 12th instant, taking 39 bales, and the *Nuernberg*, 17th instant, 269 bales, all for Europe. These departures make the present export figures 1,058 piculs against 55 piculs last year and 847 piculs at the same date in 1893.

Pierced Cocoons.—A few bales continue to come in, but there is nothing done so far and values are nominal.

Noshi.—Some few parcels of ordinary *Fosha* have been taken at \$55, while in old fibre a nice parcel of *Tomoko* *Filature* was bought at \$128. Further purchases of *Oshu* (old), have also been made at \$125.

Kibiso.—Nothing done beyond sample purchases of *Filature* at prices ranging from \$90 to \$100.

Sundries.—A small purchase of *Neri* at \$8 completes the list.

Export Table Waste Silk to 20th July, 1894:—

Season	1893-94.	1894-95.	1895-96.
Waste Silk	1,058	55	847
Pierced Cocoons	1,058	55	847
Settlements and Direct	650	170	300
Export from 1st July	12,250	3,700	4,300
Stock, 20th July	12,250	3,700	4,300
Available supplies to date	12,900	3,870	4,500

Exchange has been remarkably steady all through the week closing firm in sympathy with rates in China and the Straits. LONDON, 4m/s. Credits, 2/1½; Documents, 2/1½; 6m/s. Credits, 2/1½. NEW YORK, 30d/s. U.S. \$52; 4m/s. U.S. \$52½. PARIS, or LYONS, 4m/s. fcs. 2.69; 6m/s. fcs. 2.70.

Estimated Silk Stock, 20th July, 1894:—

Raw.	PICULS.	WASTE.	PICULS.
Hanks	30	Cocoons	140
Filatures	4,820	Noshi-to	6,050
Re-reels	1,860	Kibiso	5,550
Kakeda	475	Mawata	100
Oshu	5	Sundries	430
Tayssam Kinds	10		
Total piculs	6,600	Total piculs	12,250

TEA.

The season, which commenced with a rush, has slowed down considerably and the settlements to date are a few thousand piculs less than same time last year. There is a fair demand for the medium grades at quotations; but not much enthusiasm in the trade just at present.

QUOTATIONS.

Choicest	30 to 33
Choice	27 to 29
Finest	24 to 26
Fine	21 to 23
Good Medium	17 to 19
Medium	15 to 16
Good Common	13 to 14
Common	11 to 12

EXCHANGE.

Exchange has again been steady during the week, and rates close firm.

A DELIGHTFUL MOUNTAIN RESORT.

THE most delightful Mountain Resort in the Hakone District is the KAIKATEI, at KOWAKI-DANI, which is admitted by the Medical Faculty of Tokyo and Yokohama to be the Sunniest, Breeziest, and most healthful spot accessible to Foreigners in the Hakone District, standing alone and delightfully situated upon the mountain side, free from every suspicion of bad drainage and malaria, with a cool and constant breeze in the hot summer weather, and a view not to be equalled in the neighbourhood for variety and extent.

The BATHS are filled with a constant and never failing supply from the HOT MINERAL SPRINGS just above the Hotel, the medicinal virtues of which are too well-known to need recapitulation. It is sufficient to say that whereas Visitors find many of the hot springs enervating those at Kowaki-dani are distinctly invigorating.

One of the features of the Kaikatei is the detached Suites of Apartments, where perfect quiet and privacy can be secured. This arrangement for invalids and convalescents from the Tropics is a great desideratum, as being entirely removed from the Dining Room, Billiard Room, Bar, and Baths, while all are connected by covered passages.

To a Liberal Table are added an excellent Cuisine and good attendance, supplemented by a large variety of Wines, Spirits, and Malt Liquors of the very best kinds.

For the amusement of Guests, a fine English Billiard Table, by Burroughs and Watts, has been added to the Establishment, as well as Archery, Quoits, and other Games, and Ponies for riding over the hills and a Yacht for sailing on Hakone Lake can be hired.

Visitors to Kowaki-dani who bring a rod with them will be shown the haunts of the speckled Trout, a nice stream of several miles in length being within easy walking distance of the Hotel; Hakone Lake is also well stocked with a variety of fish, including salmon, and the Fishing is FREE; while Entomologists will find rare and valuable specimens in the surrounding hills, and the Flora of the district is extremely interesting to the Botanist.

Apartments may be secured by Letter or Telegram, and Special arrangements made for the conveyance of Visitors and Baggage from the Tramway Terminus at Yumoto, by addressing

Y. HOSHINO,

KAIKATEI, KOWAKI-DANI,
HAKONE.

BOARDING HOUSE FOR MISSIONARIES & OTHERS.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BASER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.
May 21st, 1890.

MONEY & TRADE,

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

"MONEY AND TRADE" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY AND TRADE" is THE JOURNAL for Investors, Speculators, Manufacturers, and Traders.

"MONEY AND TRADE" is a thoroughly up-to-date Weekly Record of all Monetary, Trading, and Business Matters. Bankers, Manufacturers, Merchants, Storekeepers, and Wholesale Buyers all over the world say it is indispensable.

"MONEY AND TRADE" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Shipping, Trading, Manufacturing, and Trust Companies are fearlessly and impartially criticised in "MONEY AND TRADE."

"MONEY AND TRADE" enjoys a very large circulation, not only in Great Britain and Ireland, but also in all Foreign markets where English goods are sold; and, as it goes direct into the hands of the wholesale and retail buyers, it offers unique advantages to advertisers.

THE MONTHLY FOREIGN AND COLONIAL EDITION is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

YOKOHAMA: SATURDAY, JULY 28TH, 1894.

SUMMARY OF NEWS.

THE 17-rater *Daisy* has won the Daimyo Cup for the year.

DR. TAKENOUCHI, a Court Physician, died in the capital on the 26th inst.

THE Tai Won-kun, father of the King of Korea, has been appointed Regent of the kingdom.

THE resolution reducing the capital of Messrs. Deakin Bros. to \$30,000 has been confirmed.

H.M.S. *Undaunted* has arrived in Japanese waters, putting into Nagasaki on Wednesday.

THE newly appointed French Minister to this Court paid his first official visits during the week.

DR. KITAZATO and party arrived in Nagasaki by the P. & O. steamer *Verona* on Wednesday.

A STORM which swept over Okinawa at the end of last month did great damage on the islands.

ONE hundred and seven places in the vicinity of Nagoya were struck by lightning on the 24th inst.

THE Vanderlip American Novelty Company have been playing at the Public Hall during the week.

THE statement that the First Artillery Reserve of the Imperial Guard was to be called out was incorrect. The Artillerymen summoned were those on active service who had been allowed to

return home, or account of good conduct, prior to the expiration of their terms of service.

A MAN and a boy were run over and killed by a train at Shinsenzu crossing, Shiba, on Wednesday night.

THE Grand Hotel, Yokohama, declare a dividend for the half-year of 6 per cent., carrying forward \$10,000.

THE N.Y.K. steamer *Mtiki Maru* arrived in Yokohama on the 23rd inst. with 257 Japanese from Hawaii.

OVER three hundred officials of various Departments received Imperial Silver Wedding medals on the 23rd inst.

A FIRE in China-town, Yokohama, on Sunday night, destroyed a two-storied brick building and its contents.

An incendiary fire took place in Nagasaki, among the Chinese houses, on Monday, and much damage was done.

PRESENTS of money and in kind for the Japanese soldiers in Korea are pouring in freely at the Central Office, Tokyo.

A SEVERE gale raged over Hiroshima, Nagasaki, and Kumamoto on the 23rd and 24th inst. Much damage was done.

MANY deaths of men, women, and animals caused by lightning were reported in various Prefectures during the week.

A SCHEME is on foot in Yokohama to give the proceeds of some public property, now in dispute, to the War Chest in Korea.

A MOST successful series of swimming and diving competitions took place off the Bathing Barge on Thursday evening.

DANJURO and Madame Theo. de Bolsheim, a Russian actress, are appearing in a hybrid Franco-Japanese play at the Kabukiza.

THE total number of public subscriptions received at the War Department up to the 24th inst. was 91, amounting to yen 13,360.

THE Chinese in Yokohama are at last taking alarm, and preparations are being made for a hasty exodus should occasion demand.

OVER one hundred pupils of the Nobles' School for Boys proceeded on the 20th inst. to Katase, near Enoshima, where they intend to stay for three weeks.

THE Chief of Police of Kanagawa Prefecture has presented the Empress, who is staying at Hayama, with some convolvuli (morning-glory, *asagao*) in pots.

Some stone-throwing was indulged in on Sunday evening between the Japanese mob and some Chinese who foregathered at the fire in China-town. Several arrests were made.

A SLIGHT skirmish is reported to have taken place in the Palace at Sōni, between Korean and Japanese soldiers. The latter were escorting the Tai Won-kun to the Palace.

THE *City of Peking* ran aground near Nagaura Quarantine Station on Monday midnight, but was floated the following evening. Having sustained no damage, the vessel was despatched for San Francisco on Thursday.

COAL has risen in value owing to the Korean trouble, and buyers experience great difficulty in filling orders under ten yen per ton. If the trouble is not settled peacefully and soon, many small factories will have to stop work.

RUTER telegraphs that the Queen's Prize of the Bisley meeting has been won by Rennie of the 3rd Lanarkshire. The Sultan of Morocco has formally entered Fez at the head of an army and has been loyally acclaimed. The tribes are said to be submissive. The Italian Chamber has adopted a stringent anti-Anarchist Law in spite of the determined opposition of the Radicals and Socialists. A fresh shock of earthquake was experienced in Constantinople on Thursday, and further damage was done. There has been a renewal of the panic. The extradition of Jabez Balfour from Argentina has been refused. After conferring with the leaders of the strike, President Cleveland has appointed a commission to enquire into the Chicago troubles. An anarchist plot has been discovered in Toulon. The plotters intended to destroy the Arsenal and to burn the ironclad *Carnot*, now in course of construction. The national fêtes in Paris were on a small scale this year owing to the untimely fate of the late M. Carnot. Messrs. Ernsthausen, an Indian firm, have failed. The bankruptcy is attributed to jute failures in Dundee and the low prices prevailing for indigo. Dr. Williams, the accoucheur of the Duchess of York, has been made a baronet. The son of the Duke and Duchess of York was baptized by the Archbishop of Canterbury in the presence of the Queen, the Prince and Princess of Wales, the Duke of Cambridge, and other royalties. The Royal infant received the names of Edward Albert Christian George Andrew Patrick David. The Government has withdrawn the Welsh Disestablishment Bill, the Registration Bill, and the Local Veio Bill. It proposes to pass the Evicted Tenants' Bill, and the Miners' Eight Hours Bill. *The Times* says that the American Treasury is expected to soon order the resumption of coinage to a limited amount in silver dollars. President Cleveland reminds the Democrats that they are bound to fulfil their promise to free raw materials.

No change of importance can be noted in the Import trade, and buyers of Yarns holding aloof from the market another dull week has to be recorded. In Shirts and certain other Piece-goods there is generally a fair demand during this month, but its close is upon us and no revival has taken place. There has been a small enquiry for T.-Cloths and Twills, lower prices being offered, but it has resulted in more talk than business, and Fancy goods are neglected, while Woollens are hardly mentioned. The Metal trade continues dull, and there are no signs of a revival. The Kerosene market remains quiet, and with fresh arrivals upon an already large stock, the prospect of an increase in values does not present itself. There is no change in the value of Sugar, and very little has been sold, the stock remaining heavy with no immediate sign of its reduction. There has been a small daily business in Silk, and the total, which is not large, has again been assisted by direct shipments. There have been no changes in quotations, which have been steady throughout, but at the end of the week there is a tendency to a hardening of present rates. For Waste Silk there has been little enquiry, the somewhat large figures denoting the settlements of the week being caused by the pending transactions referred to last week in low grade cheap fibre. The Tea season has advanced to the point of dullness in so far as transactions in leaf are concerned, and parcels have only been taken to the extent of making quotations, consequently the stock is on the increase, and if arrivals continue lower prices may be looked for. Exchange has been steady and firm, with a slight improvement during the interval, rates closing strong.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The papers write as through war has already commenced. The *Yomiuri Shimbun* even goes so far as to say that hostilities must have commenced on the 25th instant somewhere in the Yellow Sea or in the Korean peninsula, or perhaps at both points. Other papers are not bold enough to hazard such an opinion, but all the while they use language which leaves little doubt in the minds of their readers about their views of the situation. A glance at the articles in the *Nichi Nichi Shimbun* is sufficient to convince anybody that even that cautious journal takes it for granted that war is inevitable, if it has not already begun. Our contemporary, for instance, in one of its latest articles advises its countrymen not to attach undue importance to the reports of either victory or defeat. "To be betrayed into transports of ecstasy by the news of victory, or to be easily disappointed on account of defeat, will ill become us as a great nation. It is equally improper to publish exaggerated accounts of a victory and to conceal the news of a defeat. The *Nichi Nichi* consequently promises to be guided by the dictates of truth in its reports about the future fortunes of war. In another article, our contemporary advises the Japanese Military and Naval authorities to avoid petty skirmishes, as far as possible, and to devote the national forces to decisive engagements with the enemy. "Before entering the gulf of Pe-chili and marching troops to Peking, it may be necessary for the Japanese war-vessels to fight with the Chinese men-of-war in Korean waters, if an opportunity presents itself in that quarter; or if it be possible to deal a crushing blow at the Chinese Navy in any other place, such opportunity must be fully utilized. At all events war must be commenced not by a petty and unimportant affair, but by an engagement of sufficient magnitude seriously to affect the ultimate fortunes of the struggle." In yet another article, the same journal warns its countrymen against suffering themselves to be so much engrossed in watching the fortunes of war as to slacken their energies in the fields of peaceful commerce and industry. The Government is also advised as far as possible to avoid impeding the course of trade and industry. Our contemporary's meaning is that the emporiums of international commerce should not be blockaded unless such a measure be deemed absolutely necessary for reducing the enemy; and that as little inconvenience as possible should be given to the citizens and subjects of the neutral powers in Japan. Even to the Chinese residents, the *Nichi Nichi* observes, full protection should be afforded and they should be subjected to no inconvenience except as a necessary measure of retaliation.

All the papers advise the Government to prevent any further Chinese reinforcements from landing in Korea, by intercepting them on the sea. The *Hochi Shimbun* thinks it certain that before long news of a brilliant naval victory in Korean water will be received. The papers also advise the government to deal leniently with the Koreans, whatever blunders they may commit at the present juncture, for as soon as China shall have been humbled, Korea will be meek and docile enough.

The question what demands to make from China after defeating her, is engaging the attention of the Japanese public. This subject has indeed been exercising the public mind from the very beginning of the present complication. The *Kokumin Shimbun*, we noticed some time ago, advocates the demand of the payment by China of 50 million yen in gold as indemnity, our contemporary's object being to employ the money thus obtained for the adoption of a gold standard. The *Chu-o Shimbun* now suggests that peace should be concluded on two conditions, namely, first, that China should pledge herself never to interfere with Korea's internal affairs; and secondly, that the island of Formosa should be ceded to Japan.

The acquisition of the island, in the *Chu-o's* opinion, is essential for securing the safety of the southern extremity of the Empire and as a convenient stepping-stone for the further extension of Japanese influence. Its defence may entail upon the country a considerable amount of money, but in view of the enormous advantages above alluded to such an outlay need not be grudged. Moreover, under proper management the island, says the Tokyo paper, is capable of adding to the wealth of the country.

The accession of the Tai Won-kun to political power, as we have already noticed, has been favourably received by the Japanese press. Writing on this subject, the *Fiji Shimpō* remarks, the direction of public affairs having assumed by the Tai Won-kun there is now no longer any doubt that the reforms recommended by Japan will be effectively carried out. Our contemporary then proceeds to consider the question about the fate of the officials of the Ming faction. From past experience in Korea, the *Fiji* fears that extreme measures might be adopted against them, even going to the length of their wholesale extermination. From a Korean point of view, such measures may be thought but natural, especially when it is remembered that severe measures were meted out by the Ming faction to its antagonists. But the *Fiji* strongly advises the new Regent of Korea to inaugurate a more humane and enlightened method of dealing with political opponents. The officers in charge of the troops that fired upon the escort of the Tai Won-kun, and their instigators, says the *Fiji*, should be sentenced to rigorous punishments. But the rest of the fallen party ought to be simply turned out of office. Our contemporary entertains especial anxiety about the safety of the Queen. She is regarded, with reason, as the leader of the Ming faction, and it is not unlikely that the new rulers of the Kingdom may attempt to subject her to some indignities. The *Fiji* earnestly hopes that no such steps will be taken by the new government. She is, says the *Fiji*, after all a woman, and the part she has played in politics is the fault as much of the political system as of her personal character. The mischief can be easily avoided by erecting an insurmountable barrier between the Royal Households and the political departments. In conclusion, the *Fiji* calls the attention of the Japanese Government to the importance of the seeing that no unnecessary cruelties shall be committed by the new Korean Cabinet upon the unfortunate members of the fallen party.

The better class vernacular journals are advising the Chinese residents in this country not to be in any way anxious about their personal safety in the event of war. It will be sufficient to reproduce here an article from the *Fiji Shimpō*. Our contemporary observes with much concern the tendency among the Chinese residents to be alarmed on account of their personal safety. They perhaps think that, when war breaks out, they will be exposed to the unbridled violence and cruelty of the Japanese, and that the Japanese Government will not afford them efficient protection. The day has long since passed away when Powers at war regarded non-combatants as enemies. The present practice—continues our contemporary—is to order the subjects of the enemy to leave the country within a reasonable length of time, and in some cases even to permit them to remain in the country so long as they behave themselves in an orderly manner. The *Fiji* tells the Chinese in this country that Japan will not fail to adopt the most liberal customs in the treatment of the non-combatant subjects of her enemy. The Chinese residents are therefore advised to make no haste to go home. In conclusion, our contemporary reminds both the Government and the people of the importance of affording protection and facilities to the Chinese residents.

The *Kokkai* advises the Japanese Government to declare a protectorate over Korea. Japan's object being to place Korean independence on a secure footing, she ought to

be prepared to afford effective protection to the peninsular kingdom until the latter shall have developed sufficient strength to take care of itself. It will take at least ten years to accomplish the task, and in order to carry out her object, Japan will have to lend her officers to Korea to organize an army there. To do these things in an effective manner, would require that the peninsula be placed formally under Japanese protection, and Japanese troops in sufficient numbers must be stationed in Korea so long as the protectorate continues in force. We (*Japan Mail*) are disposed to think that our contemporary is a little behind the times. That Korea would have to be placed under Japanese protection, was evident from the moment when Japan declared her intention to undertake the regeneration of Korea. Indeed, Japan's subsequent conduct in Korea is tantamount to the declaration of a protectorate over the peninsula. The *Kokkai* ought to be sagacious enough to perceive such an evident fact. Our contemporary states that there are some Japanese who advocate the withdrawal of Japanese troops from Korea as soon as Korea shall have proved herself in earnest to carry out the reforms recommended by Japan. We, however, are inclined to think that such an opinion—if it really exist—is not entertained in any influential quarters. At all events, such a course, as far as we know, has not been advocated by any of the newspapers in the country.

The dissolution of the Journalistic League by the Metropolitan Police Inspector-General has evoked hostile comment from the Opposition press. These papers contend that the League ought to be governed by the Newspaper Regulations, and not by the Political Association Law. Moreover, the League having given strong support to the Cabinet on the Korean question, the exigencies of good policy ought, say these papers, to have counselled a different course to those in power. These journals seem to forget or wittingly ignore the plain fact that the League has been behaving itself in every respect as a political association. The question of policy apart, there is no doubt that the step taken by the Government is proper and legal.

EDITORIAL NOTES.

THE P. AND O. COMPANY AND THE NIPPON YUSEN KAISHA.

THE *Tokyo Asahi* is responsible for the statement that the Peninsular and Oriental Company has decided to make a new departure in its competition with the Yusen Kaisha and that hereafter the Company will chiefly devote itself toward disorganizing the Spinner's Union, which the Company regards as the main bulwark that gives strength to the Yusen Kaisha. The *Asahi* further says that the Company, in consultation with the N.D. Lloyd and the Italian Company, has decided to spend some fifty or sixty thousand yen for this given purpose. In fact this more desperate way of carrying on competition appears to have already been started in Kobe. The new programme of the Company is to sell yarns and raw cotton extraordinarily cheap in Japan, the freight being restored to the former rates. A contract has been entered into with a certain foreign firm in Kobe, and the underselling of cotton has commenced. It is true the Spinner's League has devised a provision against any such emergency and a member of the League found guilty of getting a supply of cotton through the agency of the rival Company is obliged to pay a penalty of 3 yen per bale of cotton; but the P. and O. Company is equally prepared to cope with the difficulty. It has sold cotton 3.70 yen cheaper per bale, so that even when a member offends against this mutual agreement he will be the gainer of some 70 sen per bale. This is found too tempting an offer even to those who had at first agreed to observe the covenant, so that the penalty which the League has imposed upon the offenders since May is said to have amounted to 2,000 yen, which means that the cotton of the rival Company has already been purchased to the extent of

above 600 bales. The League is alarmed and, as the result of an extraordinary meeting lately held it has decided to raise the rate of the penalty to 5 *yen* instead of 3 *yen*. Whether the P. & O. Company is going to reduce the price of its cotton in a similar proportion we are not yet told, but it is not improbable that it will do so. The *Bellona*, has arrived at Kobe laden with more than four thousand and a half bales, of which about a third is said to have being brought on contact. No. 50, Yokohama, appears to be the office of the Company for Tokyo and Yokohama and, through the medium of this third party, an agent has already sold about 43 bales to the Nozawa Cotton Shop at Hisamatacho, Tokyo. The proprietor of the shop being the President of the Shimotsuke Spinning Factory, and one of the League, the rest of the combination are said to have accused him of a breach of the contract.

"RECORD-BREAKING."

An enthusiastic desire to do something that no one else has ever done before, to ride faster, to swim farther, to go up higher in a balloon, than any one has previously succeeded in doing—in short, "to break the record"—is the ruling passion with many young men of our time. This spirit is not, of course, peculiar to our own age, a similar ambition was the moving principle of such men as Alexander and Napoleon; and competition was the key-note of those wonderful games that played so great a part in the life of ancient Greece. But prolonged tests of physical endurance "against time" are, we believe, a peculiar feature of modern athleticism.

The latest of these foolish performances has been a ride on a bicycle from Land's End to John o' Groat's, in the almost incredibly short period of eighty-six hours and fifteen minutes. The effort was continuous, with the exception of short dismounts for hurried meals, and the rider took no sleep throughout the whole ride. It is said that he rode the last part of his journey at the rate of sixteen miles an hour, that he experienced little fatigue, and that to all appearance he was not in any way injured by his success.

From the physiological point of view this is an interesting experiment. That the human machine can thus run at full speed for more than three days without stopping to take rest, makes us think more highly of it, as a machine, than previously. But the human organism differs from other machines in being self-regulating and self-repairing: one of the most clearly established physiological principles is that every organ needs a just measure alike of rest and exercise; and there can be no question but that a continuous effort like that on which we are commenting demands from the various organs work far in excess of that which they are fitted by nature to perform. The man seemed well when it was over—true, but Nature's revenge is sure, though often long-deferred: it may even spare the individual, whose physiological sins may be visited upon his children and his children's children. In such cases as this, however, revenge is swifter: there is already sufficient evidence that those who take part in these prolonged "record-breaking" contests are liable to premature decay of the organism they have so woefully overtasked. We think the time is not far distant when it will be generally admitted that the craving for notoriety that manifests itself in the "record-breaking" ambition is opposed to the true interests alike of sport and of physical culture.

THE YOKOHAMA HARBOUR WORKS.

SINCE the Diet refused to provide the money needed for the completion of the Yokohama harbour works, the public has been left in the dark as to the measures the Government intend to take in the matter. It appears that the Government appropriated from the Second Reserve a sum of about 108,000 *yen*, a portion of which was used to defray the current expenses of the works from April to June of this year. The Minister for Home Affairs has now issued an order to Mr. Nakano, the chief of the Construction Office, to the effect that the remainder

of this sum shall be applied to the maintenance of the works for the six months from June to December, the active work of construction being suspended during this period as before. It is said that the Minister for Home Affairs intends to introduce the matter once more at the regular session of the Diet to be held in the ensuing autumn, and to ask the Diet to grant the sum necessary for the completion of the works.

RETRIBUTION.

TOWARDS the end of June, 1887, some children were playing in a field in one of the outlying suburbs of Tokyo, when one of them was attracted by the cry as of a very young child, apparently proceeding from the ground beneath their feet. Noticing that some earth had been freshly heaped up on the spot, they began to dig and soon unearthed the body of a female infant. Help was speedily summoned and it was found that the little unfortunate, though bleeding from several wounds, was still alive. Carefully nursed, the little one slowly recovered. The police made strict inquiries, but nothing concerning its parentage could be elicited, and the matter was finally shelved as one of the many unsolved problems of crime. The little girl was sent to a charitable institution and thrived wonderfully, being described at present as a child of unusual precocity. In the course of time, the chief police official of the suburb in question was promoted to a higher post in the Yotsuya District Police, Tokyo. Here he formed the acquaintance of a well-to-do merchant who had married a woman coming from a village near the suburb where the crime had been committed. He learned that the merchant's wife, Kiku, had had a child before being married, and that she was in the habit of saying that "if her little girl had only lived, she would now be seven years old." This reminded the police-official of the attempted infanticide, and he very quietly set to work to learn more about the woman. In a word, he found that she was the probable culprit, and on taxing her suddenly with the crime, she made a clean breast of the whole matter—being of course ignorant that the little one had lived—and gave as the reason of her unnatural act the fact that if she had failed to conceal the birth of the child she would not have been married by her present husband. She was arrested and is now in jail, and so justice is satisfied. In narrating this story, the *Kaishin Shimbun* is moved to take a high, moral tone, and concludes by saying *Keshite warui koto wa dekimasenu so*, "we must never do anything bad, you know," in which sentiment all will doubtless agree.

POLICE CORRUPTION IN NEW YORK.

ACCORDING to the latest issue of *Bradstreet's*, "Some remarkable developments which have followed the investigation by a legislative committee of the police department of New York city have attracted public attention to that municipality, particularly during the last week or two. Testimony has been adduced before the committee which goes to show that money to secure police "protection" has been paid either directly or indirectly to persons connected in one way or another with the department by persons engaged in illegal and vicious occupations. Of course much of the evidence laid before the committee has come from a class of individuals whose credibility is ordinarily regarded as more or less open to question, but, as a whole, it has been given with sufficient circumstantiality to at least put the department upon the defensive. The disclosures are not yet at an end, and they have grown in interest as the investigation has proceeded."

A NEW OFFICE IN THE WAR DEPARTMENT.

IN view of the earnest solicitation of the patriotic public for permission to contribute money or goods for the use of the troops despatched to Korea, the War Department has decided to establish a special office to deal with the matter. The details relating to this new office have been published in the columns of the *Official Gazette*, with a list of the articles which would be accepted. Lieutenant-Colonel Okura has been

appointed Superintendent of the Office. Thus far the applications for the contribution of money are 25, and those of goods 21. An applicant whose contribution is duly accepted is now made to send it to the place specified by the Office, the cost of transportation being borne by the applicant. But this is considered as somewhat open to criticism, and the War Department will, it is expected, effect some amendment in this point. In passing, we may note that Mr. Otani Kahei, the big tea merchant of Yokohama, applied for permission to contribute 6,000 *yen* toward the military expenditure. Another gentleman of the same city has offered a contribution of 10 *yen*, while two citizens of Tokyo have similarly asked for permission to contribute certain articles for use of the troops.

WHOLESALE POISONING.

A REMARKABLE case of wholesale poisoning is reported from the town of Matsumoto, in Shinshu. On the 11th instant, a local wealthy merchant gave a feast in honour of the birth of his first grandson. Over thirty guests were invited, the viands being specially prepared for the occasion at one of the largest restaurants in Matsumoto. Shortly after partaking of the food, every one present exhibited symptoms of poisoning, with convulsions and profuse vomiting. In spite of medical help being immediately summoned, four persons died in less than two hours, including the father of the child, the grandmother, one of the guests, and a maid-servant. Three others are not expected to recover, while twenty are still under treatment with every hope of convalescence. The *Miyako Shimbun* gives a list of the viands eaten, among which we note two kinds of fish that may possibly belong to the genus *Tetrodon*. There is, it is said, no reason to expect foul play.

SPURIOUS MENDICANT PRIESTS.

AMONG the many curious sights in Japan are the mendicant priests, or *Iakuhatsu-so*. It is not every sect that permits its professors to beg for alms at the doors of the faithful, the Jodo sect in particular being much opposed to the custom, though sanctioned by no less a person than Buddha himself. The majority of these begging friars belong to the Shingon and Tendai sects, and some temples are in the habit of making every one of their acolytes accustom himself to this species of self-humiliation, from which only full-fledged priests are exempt. Pleasant or not as a devotional exercise, it is immensely popular with the public, who ascribe peculiar power to the unintelligible litanies of these priests, and the faithful are always ready to give according to their means. For these reasons, a number of vagabonds and incurable idlers have recently seen fit, according to police investigations, to disguise themselves in priestly garb and perambulate the streets in quest of alms, greatly preferring this kind of occupation to actual work. It is reported that over eighty of these pseudo-mendicants are to be found in Asakusa District alone. They have organised a regular guild for the purpose. For their outfit they must pay twelve *sen* the first day, ten *sen* the next, and eight *sen* for the third and each subsequent day. Of their earnings, two per cent. must go to the head of the "guild"; ten per cent. to the guild itself for license to beg; and another ten per cent. to some temple of note, as a sort of "sop to Cerberus." With all this, the spurious priests manage to make between eighty *sen* and one *yen* daily: an income of very respectable proportions as things go. The only visible or audible difference between them and the regular begging priests in their unfamiliarity with the litanies actually employed. But then their prayers are presumably less efficacious.

MRS. W. A. WOOLLEY.

MRS. W. A. WOOLLEY, formerly a resident of Yokohama, wore one of the handsomest white satin costumes at Her Majesty's last Drawing Room of the season. The skirt had a deep band of white roses and shamrocks embroidered with Indian silver sequins, and a waterfall of real variegated grass. On the corsage was a plait of beautifully embroidered shamrocks.

and there were ostrich plumes on the shoulders. The train was elegantly festooned with groups of white roses, shamrocks, and ostrich plumes; she carried a Victorian shower bouquet of choice white flowers, the trails of which reached the hem of the skirt. Beautiful diamond stars and Indian ornaments completed the entrancing costume. The *Court Journal* says that Mrs. Woolley looked exceedingly youthful and pretty in her Court toilette.

A COMMENDABLE PROJECT.

THE Women's Society for the Suppression of Vice is engaged in the commendable project of founding a charitable establishment where girls of the lower classes will be afforded certain honest means of earning their bread. The Society has appointed a committee entrusted with the task of finding a suitable site where such an establishment can be built, and to carrying out inquiries into the actual state of fallen women. The Committee was fortunate enough to find a piece of ground of about one acre in extent in Okubo, Tokyo, with three buildings serviceable for habitation standing upon it. The scheme of the Society seems to be to employ the girls in silk-culture and agricultural pursuits, for both of which the land is said to be excellently suited. For the purchase of the land and buildings a sum of yen 1,800 is wanted, a sum which the Society can not itself supply. The Committee has therefore decided to appeal to the charitable public at large, and the *Mainichi*, from which we quote these particulars, will gladly receive on behalf of the Society subscriptions from any philanthropist desirous of forwarding the scheme.

THE SUBMARINE CABLE BETWEEN HIZEN AND TSUSHIMA.

THE *Nichi Nichi* is surprised to see that so much ignorance should prevail among its Tokyo contemporaries about the ownership of the submarine cable starting from Yokohama, Nagasaki Prefecture, to the island of Tsushima. Many of the papers with an unpardonable ignorance strongly urge the Government that this cable should be purchased from the Great Northern Telegraph Company, whereas more than three years ago the ownership was formally transferred to the Japanese Government. It was previously owned by the Great Northern Company, but the Department of Communications, thinking that the foreign ownership of this cable was opposed to the commercial and political interests of Japan, entered into negotiations with the Company for the purchase of the cable in December, 1890, declaring at the same time that, should the Company decline to sell, the Government would be obliged to construct a cable of its own in the same place. The Company was unwilling to sell, but, under the circumstances, it had no choice, and the cable became State property in April, 1891. Apart from military and patriotic considerations, the possession of this cable has been a great convenience to Japan, for the means of communication throughout the Empire are now national property, and further the charge for telegrams transmitted between Fusan and Japan has been reduced to one half of what it was before. It is said that the Government is negotiating for the purchase from the Northern Telegraph Company, of the cable between Tsushima and Fusan, it being deemed of great importance for the country to get the complete control of this line.

"WRESTLERS AND WRESTLING IN JAPAN."

MR. K. OGAWA, the well-known artist-photographer, has published a most interesting volume on the above subject, the book being based on a series of photographs taken by Professor W. K. Burton, with a "historical and descriptive account" of the art compiled by the Mr. Jukichi Inouye. Like all the colotype albums brought out by Mr. Ogawa, this work is attractive externally as well between the covers, the whole redounding greatly to the credit of the gentlemen therein concerned. Of course the photographs are the most important part, and of these we have twelve fine plates, representing some of the most famous of living wrestlers, the wrestling actually in progress,

falls, and various postures. Where all is so well done, it is difficult to criticize: still one can not help wishing that the *gyōji* or umpire had kept his eyes on the wrestlers and not looked, as he evidently has done, at the camera. This careless attitude does away with much of the effect. Moreover, while we are told that "the interior of the Ekoin is not favourable to photography of any kind," and that all the photographs were taken in Prof. Burton's own garden, it certainly destroys the illusion to have the corner of a foreign-built house take up so large a portion of the plates. Plates VII. and VIII. are described as depicting various falls. Plate VII. does so indeed, giving a very spirited portrayal of the fall known as *kan-no-meshi*; but Plate VIII. is not a fall, the wrestlers are merely skylarking after one has been thrown. In Plate II. we find Gigon-san doing the "leg-stretching" (*sic*) prior to a bout, but the leg is lifted unnaturally high. This is far better represented in Plate IX. where the same wrestler is doing the *yumi-furi* posturing; at the same time Nishinomi (Plate X.) tricked out with all the bravery of *donku* and *yokosuna* is an excellent figure; but unquestionably best is the last Plate (XII.), representing Ozutsu, one of the largest of living wrestlers, standing at ease. The great figure is magnificent in repose, and the contrast between him and the European figure is shown with a keen sense of humour. The coloured wood-engraving that introduces the book, gives an excellent idea of the Ekoin, the *shi-kon-bashira*, or wrestling-ring, and the actual appearance of the arena on a gala-day.

With regard to Mr. Inouye's text, one could wish that it had received careful revision at the hands of a good writer. The subject matter is interesting and well treated, so that the flatness of the style is all the more apparent. Yet considered as being written by a Japanese, without correction, it is a very creditable performance. We should, in so thorough an essay on the subject, like to hear somewhat more about the strange *mawashi* or apron worn by wrestlers, why it is that the war-fan, or *gumbai*, used by umpires, is modelled after a form once used only by the upper classes in China; what the *yumi-furi* means; nor do we find any mention of the fact that the costly aprons are generally the gifts of patrons, and are embroidered with the crests of the givers. But all this is of minor importance. The book is a welcome addition to the literature of a subject about which little or nothing is known by Europeans. Nothing is said as to the price of the volume.

MESSRS. DEAKIN BROS., LIMITED.

THE adjourned extraordinary general meeting of Messrs. Deakin Bros., Limited, was held at the Company's offices, Water-Street, on Tuesday afternoon. There were present Messrs. J. Rickett (Chairman), A. B. Walford, J. R. Parsons, C. K. Marshall Martin, and C. D. Fearon (Secretary). The Chairman announced that the meeting was held in consequence of a quorum not being present that day week, and convened in order to confirm a resolution passed at a previous meeting upon the subject of reducing their capital. He would now ask someone to formally move that the resolution of the 25th June be confirmed. Mr. Walford proposed and Mr. Parsons seconded a proposal that the proposition of the 25th July—"That the capital of the Company be reduced from \$150,000 to \$30,000 by cancelling paid up capital to the extent of \$40 per share in respect of each of the 2,984 Ordinary Shares of \$50 each, and to the extent of \$4 per share in respect of each of the 160 Founders' Shares of \$5 each, and reducing the nominal amount of such shares respectively *pro tanto*,"—be herewith confirmed. The Chairman thought that all present were fully agreed upon the point, and declared the resolution confirmed. The meeting then dispersed.

THE LATE PRINCESS TOKUGAWA.

THE late Princess Tokugawa, whose obsequies were performed on the 15th instant, appears to have been thoroughly respected and beloved

by all who knew her. This showed itself in the ceremonies, in the course of which many ladies were overcome by their feelings. Among the instances of loyalty shown by the former retainers of the House toward the remains of the wife of the last of the Shoguns, that of Count Katsuo was most touching and moved all who saw him. Though now a peer he was formerly a retainer of the Tokugawa family and a sense of gratitude toward the family of his quondam lord never leaves him. On the occasion of the last ceremony the Count walked bare-footed beside the bier as a last mark of his respect to the Princess. As he is not quite convalescent from his last illness, and there was reason to fear that such an exertion might do him harm, for the distance from the residence of Prince Tokugawa to Uyeno must be five or six miles, many of his friends advised him to take a carriage. This the staunch old gentleman declined to do and, supported by the stick which Prince Tokugawa gave him during the progress of the procession, he reached Uyeno by the side of the bier. It is said that more than ten thousand sympathizers followed the remains to Uyeno.

THE BOMBAY LINE.

THE following telegram has been received from Bombay by the *Shogyo Shimpō*. The P. & O. Company has suddenly reduced the freight of Cotton Yarn by 2 rupees, thus making it the same as the rate now offered by Mr. Tata's firm. The actual freight to Shanghai has therefore become 6 rupees and that to Hongkong 4½ rupees. The Company thus appears to intend to prosecute the competition with vigour.

At this juncture, what strikes the *Shogyo* with wonder is the proceeding of the Yusen Kaisha, which has raised the freight to Shanghai to 4 yen, while it was only 2.40 yen before. Is it the intention of the Kaisha to give up the competition and to declare itself defeated? asks the *Shogyo Shimpō* sarcastically. This latest news given in the *Shogyo* entirely reverses the situation reported by the *Hochi*. We averred, when we transcribed the article from the latter paper, that we did not attach importance to it, and our presumption is corroborated by the news received by the *Shogyo*.

TOKYO KO SHIMBUNSHI AND KOREAN AFFAIRS.

AS might be expected, the Tokyo *Ko Shimbun*, never remarkable for either veracity or accuracy of statement, are now-a-days given to revelling in stories sent them from real or fictitious correspondents in Korea. No one, we assume, is expected to believe these tales, or if any one does so it is at his personal risk. We are told, for instance, that General Legendre is pocketing large sums and making quite a pretty fortune out of the situation; that Mr. Great-house is not slow in following his example, and both are heartily disliked for these reasons by everyone from the King down. Yet the correspondents of the dailies of note have shown that at least General Legendre's opinions were never so highly prized as at present and that he fills with admirable skill the rôle of *deus ex machina*.

But what the loquacious *Ko Shimbun* love most to dwell on is the intrepidity displayed by the Japanese troops and the pusillanimity of the Chinese and Koreans, particularly the former. We are quite willing to credit a good deal that is favourable to the well-trained and well-equipped soldiers of this Empire, but we fail to see where the intrepidity comes in when we hear of a Korean official being unceremoniously "bonneted" by a sentinel because of the former's neglect to return a salute. And listen to the following: "One of the sentinels stationed at Kubeki-zan arrested a Korean officer and his servant who had endeavoured to pass without saluting. They were greatly surprised and cowed by the demeanour of the Japanese soldiers. Upon being asked why they had not saluted, they apologized as courteously and profoundly as possible, and it is said that their manner when apologizing was so queer that the bystanders could not refrain

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

from laughing." It goes without saying that we do not credit the above instructive tale, but, if true, our sympathies are entirely with him of the horse-hair hat. Then we are told by another correspondent that on seeing some Japanese soldiers engaged in digging a well, all the Koreans in the vicinity made haste to decamp, going even so far as to forget to take their household belongings in their eagerness to get away. When questioned as to the reason of their apprehension, they replied that they believed the Japanese were making a dynamite mine, calculated to send them and their houses into the air without loss of time.

The *Miyako Shimbun's* Sōul correspondent relates the following story with evident gusto. Some days ago the Korean Minister for Foreign Affairs, with a retinue numbering more than one hundred, attempted to pass by the Deikenko, at the entrance of the Foreign Settlement, to pass which everybody in required to have a written permit. Two Japanese soldiers were on guard at this place, and as the Minister had no permit, refused to let him and his followers go by. This neither the Minister nor his attendants would hear and they began to hustle the guards, who, without the slightest discomposure at once charged the mob at the point of the bayonet. "The cowardly Koreans were thoroughly intimidated and did not dare to go on until, a few minutes later, a proper permit was secured for the Minister and his retinue."

THE NIPPON YUSEN KAISHA.

THE *Yiji Shimpō* tries to undeceive those who are labouring under the misconception that the Yusen Kaisha is deriving a large profit by lending its ships to the Government. The *Yiji* says that this is far from the case. Nor should it be otherwise. The Kaisha is under obligation to Government to offer its ships to the latter's service in virtue of the subsidy of 880,000 yen which the Company has been enjoying for years. The terms of hire were fixed several years ago, and should rather be considered, observes the *Yiji*, very low, relatively speaking. The figure is said to be at the rate of some 9,000 yen per mensem for a ship of 2,000 tons. This is far lower than the rate at which the Company has chartered foreign ships, it being 13,000 yen for a ship of the same capacity. In other words, the Company is losing out of the present transactions a sum of 4,000 yen per mensem for each ship. No other Company, besides the Yusen Kaisha, would consent to offer its ships at such low terms. It is quite proper, therefore, adds the *Yiji*, for the Company to enjoy certain special advantages in getting its new ships. The rates which the other Companies are obtaining from the Government are far higher, that of the Osaka Steamship Company, which is enjoying a certain amount of subsidy, being 60 per cent. higher than that of the Yusen Kaisha. But the greatest profit falls to the lot of other Companies which are not under any such obligation to the Government. Thus the Mitsui Bussan Kaisha has succeeded in securing terms as high as 45,000 yen per month for three ships whose tonnage varies from 800 to 4,100 tons. The transaction must prove highly profitable to the Company; but it is said that at this juncture, when the scarcity of ships is greatly felt, shipowners are not anxious to offer their ships for Government service even at such rates.

The same paper states that any ship which has been requisitioned for Government use is obliged to exclude all foreigners from its crew, and to substitute Japanese. This is found very embarrassing in the cases of foreigners who have been engaged for certain number of years, for in that case the employer can do nothing but let them remain idle, paying their salaries the while.

THE KABUKIZA PERFORMANCE.

THE hybrid play of Danjuro and the Russian actress will be performed at the Kabukiza for three days of the 28th, 29th, and 30th of this month. Two pieces will be performed, one

entitled *Shusse Kagekiyo* (Kagekiyo Promoted) by Danjuro, and the other a play adapted for the foreign lady. This last is entitled "Mutual Suspicion," and its plot is said to be as follows, according to the *Yomiuri Shimbun*. A gentleman named Asai Chishiki (Danjuro) remained for some years in Paris, where he met with a daughter of a certain family (Madame de Bolsheim), who falls in love with him. The love was reciprocated and the two became greatly attached to each other. Asai, however, was obliged to return home a short time after, which he did, to the great grief of the young girl. What caused the girl to feel greater anxiety about him was his failure to write to her, despite the solemn vow which he made that he would do so, and though the girl, faithful to her promise, had written several times to him. The girl concluded that Asai must have got a wife at home and must have become weary of her in consequence. The idea caused her such vexation and jealousy that she determined to come over to Tokyo alone. This she did, and, accompanied by a guide (Shinzo), she begins to search about the streets where he is supposed to live. His house is discovered at last, and the girl meets her lover. True to her supposition she finds a beautiful Japanese lady (Fukusuke) in Asai's house, and refusing any explanation of Asai's, she out of jealousy, strongly rebukes him for the supposed faithlessness, and even quarrels with him in the presence of the astonished inmates of the house. The lady, however, was not his wife, as she hastily supposed, but a younger sister of Asai's. This point made clear, the lady begs her lover's pardon for her hasty charge, and the two celebrate their marriage. This sets an example to the guide and the sister of Asai who also marry. The guide (Shinzo) then performs a congratulatory dance and the curtain falls.

The performance finished, Messrs. Fukuchi and Osada will make short addresses to the audience, after which Danjuro will introduce his foreign partner to the spectators. That closes the play. It is said that the present entertainment originated through Viscount Enomoto, and that Madame de Bolsheim has had no literary connexion with it. The proceeds of the undertaking will be applied toward purchasing various articles to be sent to the soldiers stationed in Korea.

A "FOUL BALL."

SHORTLY before four o'clock on the afternoon of Sunday last, a large stone, impelled by an evidently strong arm, came flying in through the window of the Greek Cathedral at Surugadai, Tokyo. A rush was made in the direction whence the stone had come, but without finding anybody. After a prolonged search in the neighbourhood, the police discovered a coat and umbrella, evidently thrown away, at a little distance back of the Cathedral. In one of the sleeves was a card with the owner's name, the possessor living in Surugaku-cho, not far from Surugadai. Constables speedily repaired to the house in question and arrested the owner of the articles. On being taken to the Police Station he at once confessed that he was the thrower of the stone that had caused all the trouble, and ingeniously proceeded to explain—according to the *Asahi Shimbun*—that the roof had looked so high and so tempting that he had been led to see if he could throw a stone clean over it. The throw was however, a poor one, as the stone had fallen short of its goal and had gone in through the window instead. This ingenious statement had the desired effect, and the thrower was dismissed with a reprimand and a fine of one yen.

IMPORTANT ADVICE TO THE PEOPLE OF YOKOHAMA.

MR. BABA, of the Central Meteorological Observatory, has given very important advice to the people of Yokohama. It is to urge them to establish a meteorological signal in the harbour. Mr. Baba justly observes that the knowledge of the atmospheric condition of distant places is of the utmost importance to navigators, for by this alone can any certain weather forecast be

obtained. It is true that every ship has a barometer of its own, but this records local variations only. To give trustworthy weather forecasts a signal is established in many harbours, showing a red ball when a storm is apprehended, and so forth, the forecast depending on news received from the Central Observatory. Already there are in Japan one hundred and five signals of this description, as many as nine in Wakayama Prefecture and eight both in Ishikawa and Osaka. The expense, which is trifling, is either defrayed out of local expenditures, or out of the contributions of those who are interested in the matter. What Mr. Baba regards with wonder is that, while so many signals are established in such remote places, and in the other treaty ports, such a signal is not yet established in Yokohama, the most important and most prosperous place in Japan. Mr. Baba hears that masters of foreign vessels complain bitterly of this unpardonable negligence on the part of the people in providing for the safety of ships, and that they are frequently obliged to obtain weather forecasts by telegram from the Central Observatory. Such a signal was established in Yokohama about 1887, and was kept up for about five years, when it was discontinued, for unknown reasons. Mr. Baba advises the people of the harbour again to erect a weather warning, and this promptly, as the stormy season is approaching. The cost is only about a hundred yen.

YOKOHAMA NEWS.

As more than once referred to in these columns the citizens of Yokohama are still dissatisfied with the plan suggested by Mr. Kawata, President of the Bank of Japan for the disposal of the municipal property. It is not, however, the whole community that is dissatisfied with the suggestion of Mr. Kawata; it is only a body of some five hundred merchants engaged in foreign trade that objects to it, the others being ready to adopt Mr. Kawata's plan. Mr. Hara Zenzaburo and twenty-five others who are entrusted with the task of conciliating the malcontents do not know what to do with them; they persist in their old programme; and the mediators have at last thought that it may perhaps be better to ask the help of Mr. Iijima, chief of the guild of those merchants, and to have them persuaded by him. In compliance with the request of Mr. Hara and others, Mr. Iijima called together several of the leading members of the guild and asked their opinion about this long-standing difficulty. He found them as constant as before in their opposition to the programme suggested by the President of the Bank of Japan, and discovered not the least sign that they would consent to any compromise. Mr. Iijima then proposed, in his private capacity, a very novel as well as romantic scheme, which was to sell off the municipal property, and to contribute the money thus accruing, about 300,000 yen, to the war fund. This was hailed with the unanimous approbation of all those present, and Mr. Iijima now intends to ask the opinion of all the members of his guild.

A BIMETALLIC CONFERENCE.

A CORRESPONDENT of the *Keisai Zasshi* proposes a romantic scheme for the consideration of the public. It is to hold an international bimetallic conference in Tokyo. He thinks that conferences of the kind thus far held in Europe have failed to result in any satisfactory manner, chiefly because the situation of the conferences were rather secluded from the rest of the world and thus failed to bring together all the important materials useful for the successful deliberation of this grave problem. His opinion is that the place most suited for the conference is Japan which he regards, with pardonable exaggeration, as the centre of Occidental and Oriental commerce and as the leader among silver-using countries. He is poetical also, for he suggests that next year at the season when the cherry-blossoms would be at its height at Arashiyama, and the view of the sea from Shinagawa would be at its best, should be availed of as the time to hold the conference. And then the Fourth Domestic Exhibition will be held at Kyoto, and so the representa-

tives coming from foreign countries would be enabled at the same time to witness how far Japan is advancing in its manufactures and industries, and how charming its scenes are. To the objection that other countries could not accept the proposal, the correspondent replies with something of anger, saying that though in point of extent of area Japan can not boast as occupying the first place, still with respect to the progress of her economy Japan is entitled to regard herself as the leader among silver-using countries. Therefore, continues the correspondent, she may, with perfect reason, consider herself as taking a lead in the world's commerce, and may offer herself as the centre of the conferences. The correspondent disavows any idea of being pompous and grandiloquent, but says that he is obliged to make such a suggestion, being impressed by the present state of the problem.

ALMOST A RIOT.

A SURGING and excited mob filled Rynzenjima, Shitaya District, Tokyo, on the afternoon of the 20th instant. Fighting was going on all over the place and quiet was not restored until a large body of police had made more than twenty arrests. The origin of the fracas was very simple. It appears that one of the dwellers in that street happened to return to his home a little the worse for drink. His condition was resented by his wife and a quarrel ensued, to the keen delight of a crowd that stood outside the house and cheered the combatants on. Irritated at the comments on himself, the husband suddenly sprang out into the crowd and began hitting right and left. Some took his part while others hit back and soon a pitched battle was going on, the whole street being full of riot and disorder. Scores of people took part in a hand-to-hand combat, and it was not until some time had passed that a reinforcement of constables was able to quell the disturbance. Several people received slight injuries, no serious wounds being inflicted.

'AGITATION FOR THE AMENDMENT OF THE SEA-OTTER AND SEAL HUNTING LAW.

SEEMING that in consequence of the prohibition of seal hunting in Behring Straits by agreement of England, America, and Russia, the sealers of various countries are coming to the Japanese coasts in far larger numbers than before, the Authorities are said to be considering how to cope with the situation. The necessity of taking active measures is also felt by the inhabitants of Hakodate, and they have now despatched a representative to Tokyo to lay their written views on the subject before the Minister of Agriculture and Commerce and the Chief of the Hokkaido Administration Board. The documents set forth the defects of the law now in force and contain suggestions as to the improvements to be effected. The present law was enacted in 1884, when, for the purpose of protecting otters and seals during the breeding-season the hunting of these marine quadrupeds was forbidden in Hokkaido, but at the same time it was provided that those who are specially licensed by the Minister of State for Agriculture and Commerce shall be permitted to pursue hunting within certain limits of time and place, to be determined by the Chief of the Hokkaido Board. Moreover, the fresh skins of the animals have to undergo inspection at the branch offices of the Board before they are sold. At the time of the framing of that law the resorts of otters and seals were not well known and so the jurisdiction of the law was simply confined to Hokkaido. This was soon found to be insufficient, and, with a view of supplementing this defect, it was provided two years later that for the hunting pursued in the Japanese waters outside Hokkaido the license of the Minister of State for Agriculture and Commerce should also be secured, while those who have pursued their hunting in American and Russian waters by permission of the respective Governments should be allowed to sell the skins they had obtained only after securing a permit from certain special officers of those countries or from the consuls of the countries who are stationed in Japan. These

supplementary provisions, however, were subsequently discovered to be abortive, as there was no control established over places beyond the control of the Hokkaido Board, such as Miyagi, Aomori, Fukushima, Ibaraki, Niigata, Ishikawa, and so forth, nor any provision in virtue of which the fresh skins of the animals caught in such places might be inspected. The hunting conducted in the other Japanese waters not under the control of the Hokkaido Board has therefore fallen into a state of anarchy. In fact, this enterprise is now virtually monopolised by the foreign sealers, for while in Japan the only license for sealing granted by the Department of Agriculture and Commerce is to the Imperial Marine Company, numerous foreign ships are engaged in it in that wide extent of waters stretching for more than 800 miles from off the cape of Shimosa to the island of Suisho, some distance away from Nemuro. The protection of otters and seals is, in short, only nominal and the animals are at the mercy of the foreign hunters. The document next suggests the improvements to be made, and states, among other things, that while asserting rigidly the rights of Japan to prohibit foreign sealers from hunting in its territorial waters, the same waters should be left open to the ships of the country; that further, without regarding the covenants of the triple Powers, England, America, and Russia, Japan should insist on the right of pelagic sealing and, lastly, that the process of granting license should be made as simple as possible. The subscribers of the representation suggest that should it be impossible to effect the improvements indicated above, then at least the Regulations now enforced by the Hokkaido Board should be simplified, and that some effective control of sealing should be maintained in the north-eastern prefectures of the main island. The document gives in the appendix the names of fifty-three foreign sealers that have put into Hakodate from March to July of this year, together with the number of the seals caught by each ship. The number of skins obtained differs considerably in different ships, the most successful having brought more than 2,400, and the least successful only 48. The total amounts to 47,037 skins, an average of more than 800 skins per ship.

THE TREASURY AND THE BANKERS.

MR. WATANABE, Minister of Finance, summoned Messrs. Shibusawa, President of the 1st National Bank, and Yamamoto, a manager of the 15th (Peers') National Bank, to the Treasury on the 23rd instant, and, in the presence of Messrs. Tajiri, Vice-Minister of the Department, Soyeda, Chief of the 3rd Section, and others, spoke as follows concerning the reorganization of the national banks on the expiration of their charters. Desirous that the national banks should wind up their business satisfactorily on the expiration of their charters and that no grave change should agitate the economical world, the Government, after mature consideration brought before the 6th session of the Diet a bill bearing on the matter. It was carried unanimously through the House of Representatives, but while in the hands of a Committee in the House of Peers the Diet was dissolved and the bill had not become law. Since then the bankers, among whom the two gentlemen present take a leading position, have conceived the idea of prolonging the charters of the national banks, and have stated their views on the matter to the Treasury. Mr. Watanabe moreover, learns, that, according to the rumours now widely circulated, the bankers have determined to make the prolongation programme a test question in the general election now pending, thus intending to nullify the unanimous decision of the Lower House. Such a line of conduct being an improper one on the part of the bankers, who should stand aloof with rigid impartiality from politics, it is difficult, if not impossible, to believe, observed the Minister of Finance, that among the bankers there can be any that have conceived so extraordinary a project and that would dare to resort to any measure of the kind. The Government being desirous on the one hand to satisfy the existing economic needs

without infringing the privileges enjoyed by the banks for many years and without throwing the money market into disorder, and on the other to carry out the policy of the unification of the currency, steadily kept in view for many years past, there is no better measure, so the Government was and is still convinced, than the re-organization of the banks. The Government is resolved to oppose firmly any scheme not consistent with the reorganization of the banks. Such being the case any agitation for the prolongation is not only a waste of labour, but will be highly pernicious in its result, for it will do nothing more or less than plunge the monetary mechanism of the country into the vortex of politics. Wishing to intimate distinctly the intentions of the Government in the matter, the Minister, as the representative of the Government, had asked the two bankers to attend. The Government is desirous, concluded the Minister, that the two bankers present should communicate what he had said to the other bankers, so as to keep the banks from going astray in the discharge of their functions. This speech of the Minister ended, Mr. Shibusawa observed that he had earnestly hoped for the successful passage of the Re-organization Bill brought forward by the Government, and for the abandonment of various contrary measures which the bankers had projected. The failure of the Bill to become law had obliged him, he said, to side with the prolongation programme, though in his individual capacity he still remained faithful to the original idea. He admitted the force of the Minister's arguments, and agreed that the intermeddling of the bankers in the elections would be a most improper proceeding. Promising that what he and Mr. Yamamoto had heard from the Minister should be promptly conveyed to the bankers, the gentlemen withdrew.

MRS. AOYAMA.

WHEN Dr. Kitazato's first telegram relating to Dr. Aoyama's seizure by the plague arrived in Tokyo, it became an unpleasant duty to break the news, as gently as might be, to the scientist's wife. Several friends were, one after the other, requested to act as bearer of the ill-tidings, and, when all refused, a certain gentleman only slightly acquainted with the family, volunteered to undertake the mission. With no little trepidation he announced to Mrs. Aoyama that her husband was ill, and finally, seeing her keep her composure in a very remarkable manner, managed to blurt out the whole truth. The lady received the news with a smile and a calm "Is it possible?" Unable to understand her apparent indifference, the gentleman asked for an explanation. "My husband," replied she, "is gone upon a Government mission of high importance. If while engaged in the discharge of his duty he dies at his post, such a death can only redound to his fame. There is nothing to grieve over in such tidings." The Tokyo journals, several of which report this conversation, wax enthusiastic over Mrs. Aoyama's spirited speech. This, they exclaim, is the true *samurai* spirit, which has made Japan the great nation she is. *E ben trovato*, at all events.

OBSEQUIES OF MAJOR MORI.

THE *Official Gazette* gives the following note on the obsequies of Major Mori (of the Artillery), who has met with an untimely death while staying in Italy on official business. Major Mori died in Elba on the 21st of May last. Deeply regretting his untimely death during his official mission, the Government and people of Italy accorded him a funeral with military honours. The remains of the Major were interred in the cemetery of the island, and at the ceremony officials of the various Government Departments and the distinguished personages of the island were present, also two companies of soldiers as escort, with gendarmes, and military bands. Though the honours paid to the remains of the Major may be attributed to the cordial friendship which the Government and people of Italy entertain towards Japan, and to the deep sympathy which they feel at the death of the Major, still, it must also be in part ascribed to the kind intercession of Major

Braccellini, an Italian artillery officer who was once engaged in this country but was obliged to return home on account of illness before the expiration of his term of service. This gentleman was a warm friend of the late Major Mori.

A DISTURBANCE IN EHIME.

A DISTURBANCE of an alarming character is reported by the *Fiji* as having happened at Niihama, Ehime Prefecture, between some eight hundred of the inhabitants and a number of Police. The cause of the discontent was the smelting establishment of Mr. Sumitomo, which stands in that district. They complain that the smoke from the chimneys of the workshop causes considerable damage to the crops of the adjoining farms, and, failing to obtain any other remedy for their supposed grievance, they determined to demolish the factory by force. The leader of the malcontents is said to be an ex-private-soldier and under his direction the farmers marched toward the workshop on the afternoon of the 19th instant. The news coming to the ears of the village Police, they met the motley battalion on the march and sternly ordered them to abandon their illegal intention. They were obliged to march back that time, but only to arrange another hour to accomplish their original design. The Police Office therefore thought it prudent to provide against the emergency and asked the neighbouring office to despatch a band of Police as reinforcements. A detachment of constables was sent at once and the Police, more than fifty in all, were set to guard the place in case of an assault by the farmers. In the evening of the same day, under cover of darkness, the farmers stealthily approached the work-shop, and a scuffle ensued between them and the Police guarding the place. The farmers were all armed with various weapons and also carried many stones, and, at the command of the ex-private, they hurled the missiles against the Police, causing thereby more or less injury to about a dozen. The Police stood their ground in spite of the missiles that came against them as thick as hailstones, and at last succeeded in repelling the invaders, and, moreover, in capturing six of them. When the skirmish was ended it was found that there was not a policeman but had his sabre, cap, and clothes stained with blood, and it is therefore supposed that not a few of the farmers must have been wounded. The perverse farmers are far from being cowed at the determined treatment they have sustained at the hands of the Police, but are still secretly holding conferences how to renew their assault and to compass their object. They are being backed by the villagers who are supplying them with daily rations at the rate of 400 of rice and 500 of *sake* per head. The Police and the people of the workshop are making proper preparations on their part, Mr. Sumitomo, having summoned about one thousand sturdy miners from the mine which he owns not far away from the place. It is apprehended that more serious disturbances may occur between the two parties.

THE CHARITY PERFORMANCES AT THE KABUKIZA.

THE plots of the charity performances to be held on the 28th, 29th, and 30th instant at the Kabukiza require some addition and rectification. The argument of the first piece, Kagekiyo is as follows:—Kagekiyo, a chieftain of the Taira clan, was in prison, his plot to assassinate Yoritomo, who had destroyed the Taira clan, having failed. The scene opens with the suggestion of Kajiwara to put the assassin to death. Yoritomo, however, is inclined to be generous to the brave warrior of the vanquished party, and, causing him to be led out from prison by Hatakeyama Shigetada, advises him to become his own follower. Kagekiyo feigns to agree, and dressing himself in a proper suit of clothes waits on Yoritomo. The latter orders his servants to bring in *sake* cups and something to eat, and giving one filled with wine to the new retainer, orders him to narrate the incidents of the battle of Dannoura, the last decisive battle between the two clans, in which the Heike (Taira) was entirely destroyed.

tion Kagekiyo, taking advantage of an unguarded moment, catches hold of the sleeve of Yoritomo's clothing and endeavours to stab him. Yoritomo frees himself by tearing off the sleeve, but is still in imminent danger. Shigetada then seizes a little waiting-girl, believed to be the daughter of Kagekiyo, but really that of Shigemori, Kagekiyo's dead master, and prepares to kill her should Kagekiyo still pursue his murderous design. Convinced that his effort would be fruitless, Kagekiyo merely gives vent to his wrath by stabbing the torn sleeve of Yoritomo's garment through and through. He then pierces his own eyes, saying that his vindictive design can only be put a stop to by precluding himself from witnessing the prosperity of the Genji. He then rushes out of the Palace leaving the girl behind him. The persons in the piece are as follows:—Yoritomo,—Yaozo; Kagekiyo,—Danjuro; Shigetada,—[Shinzo; Kagekiyo,—Ichizo; the Waitress—Merota.

The next piece is a French Comedy specially translated by Mr. Osada for the occasion. A doctor of law is mistaken for a doctor of medicine by a lady who needed medical advice. The lady discovers her comical mistake and blushing takes leave of the learned lawyer. This piece is for the Russian actress.

The last piece called "Mutual Suspicion" is specially composed by Mr. Fukuchi. The scene is laid in the house of Asai Tomonori, where his friend Toyama Hajuru is visiting and is reading out of a French paper. A student, Asai, comes in and hands a telegram from Yokohama to his master. The telegram has been sent by a French lady whom he has promised to marry, who has just arrived, escorted by a gentleman, in Japan. The lady then appears, and after they have exchanged greetings, she gives Asai several curios as presents, while Asai, on his part gives her a suit of clothing worn by a Japanese lady of the olden time. The lady puts this on, and, through the interpretation of Toyama, a pleasant conversation ensues between the two. At this juncture a younger sister of Asai returns from outside, whom the French woman misconceives to be Asai's wife, and in consequence gives vent to some expressions of rage and jealousy. Asai, on his part, suspects the gentleman with whom she has come Japan to be her lover, and return the charge of unfaithfulness. The interpreter disappears at this critical moment leaving the two to carry on their quarrel in jargon unintelligible to each other. After a time, Toyama reappears on the scene and explains the misconception under which the two were labouring. The marriage ceremony of the two is then celebrated, and also that of the interpreter and the sister, between whom a secret engagement already existed. The persons of the piece are Asai,—(not Fukusuke, as previously announced) Danjuro; the Student—Saruzo; Kaneko (sister)—Matora; Toyama,—Shinzo; the French lady—Madame Theo. de Bolsheim. The price for a box to hold five persons varies, according to position, from two *yen* to six *yen*. The theatre will open at 7 o'clock in the evening. It is said that the actors have all offered to perform without any emolument, and that the proceeds are to provide various comforts for the troops in Korea.

FOR THE TROOPS IN KOREA.

THERE is no question that the nation at large feels a thrill of pride at the thought of Japanese troops being stationed in a foreign land, ready to do battle for Japan's cause. This patriotic sentiment is causing scores of people to subscribe, or ask permission to subscribe, sums of no inconsiderable magnitude towards the "war expenses." His Majesty the Emperor has also shown the same deep interest in the welfare of the soldiery, the recent Imperial gift of cigarettes and *sake* bearing ample testimony of the fact. Private individuals are never slow to follow the Imperial example, and many are the petitions to be allowed to do something for the comfort of the army now in Korea. Above all, the War Department is taking every measure to insure the well-being of the troops. Ten

days or so ago the Fugetsudo received an order from the Department in question for one hundred thousand *catties* (*kin*) of biscuit, weighing about twenty to the pound and slightly sweetened. This order was promptly and satisfactorily filled. On Friday last a second order for a like quantity was given to the same firm, the biscuits to be ready by the end of the month. Second grade American flour is used, as this keeps much better and sweeter than flour made in Japan.

HIGHWAY ROBBERY.

THE excellence of the Tokyo police force is such that the city is one of the safest in the world, there being few parts of the metropolis where one can not walk with perfect impunity at night. Yet, as mistakes will happen even in the best regulated families, so are some very bold crimes occasionally committed in the very heart of the City. About a week ago, a wealthy merchant in Nihombashi sent his maidservant to cash a cheque at the Hundredth National Bank. On her way back, directly in front of the Central Post Office, she received a severe blow from behind and the money was snatched from her girdle. The highway man managed to make off in the crowded thoroughfare without being recognized. A somewhat similar instance occurred in Kanda District a little while ago. In this case a shop-boy or *kozo* was waylaid and murdered, just at nightfall. He was carrying a comparatively large sum of money, which was the object of the crime. Here, however, the malefactor was speedily discovered and has since expiated his offence on the scaffold.

A PHOTOGRAPHER'S TROUBLES IN KOREA.

A TOKYO photographer of a certain degree of fame is now in Korea, where he is engaged in taking views of many places of note. In a humorous letter sent by him to one of the vernacular journals he gives a graphic description of the difficulties he has to meet with. Photographers, it appears, are rare in the Peninsular Kingdom, and his movement are being watched with undisguised suspicion. At first it was no easy task to persuade the people that the camera was not some sort of new-fangled cannon, calculated to kill at a short range only; but grown familiar with the tripod, the curiosity of the Koreans knew no bounds. They lift up the black curtain, stand in front of the lens, and inspect each part of the machinery with eager and most unpleasant inquisitiveness. The only way to get rid of the spectators is to throw handfuls of small coins to a distance and then take a hasty negative during the lull. Despite all these drawbacks, however, the enterprising photographer writes that he has succeeded in getting a large number of interesting views.

THE JAPANESE IN SŌUL.

THE *Asahi Shimbun* and other Tokyo journals state that there are now only twenty-eight Japanese men and one Japanese woman in the foreign settlement at SŌul,—figures that are doubtful in our opinion. At all events these twenty-nine residents recently drew up a petition which they presented to Minister Otori. The petitioners urged the advisability of war and dwelt at considerable length on the advantages derivable from a Japanese occupation of Korean territory. Unanimity would appear to exist on both sides of the Sea of Japan, but surely the ultimate object of this Empire is the pacification and reform of the Kingdom, not its forcible annexation.

DISTRESS IN THE INTERIOR.

PRIVATE letters recently received confirm the report of wide-spread distress in the interior, especially in Enshu, in the vicinity of Hamamatsu. Rice is just twenty-five per cent. dearer than it was at the same time last year, and with the prospect of a great failure in the crops the condition of petty agriculturists in particular is described as being simply deplorable. Scores of farmers' sons and daughters are seeking for employment in the larger towns, being well content if they can only get food enough to eat in return for the most assiduous and menial labour. Wages are in most cases out of the question.

In Tokyo at present a good maid-servant can be had for eighty *sen* a month and her food, while young girls under fifteen are glad to go out into service for a monthly wage of less than fifty *sen*. From the neighbouring provinces hundreds of penniless wanderers reach the metropolis day after day, foot-sore and without a home or a friend to go to.

BIG MEN FOR KOREA.

It is said that the wrestlers now in Tokyo have, as already noted two or three times, in the history of the present era, offered their services *en bloc* to the authorities, being ready to act as weight-carriers, coolies, or what not. It is quite on the cards that their services will be required, and, speculating on the possibility, a certain *Ko Shimbun* informs us that Nishinomiya, the present champion, would be a match for nine and two-thirds Chinamen. It would be instructive to learn on what data this calculation is based.

DR. KITAZATO'S HOSPITAL FOR CONSUMPTIVES.

Dr. Kitazato's treatment of consumptives in his Shiba Hospital has been attended with marked success, the daily clinics being visited often by as many as five or six hundred patients. It is calculated that the daily profits of the hospital—by no means a spacious one—amount to over one hundred and fifty *yen*. The charges are, nevertheless, extremely moderate, each patient paying only twenty-five *sen* for a hypodermic injection of Koch's anti-tuberculosis lymph. It is understood that after Dr. Kitazato's return the Hospital will be rebuilt on a very large scale.

CORRESPONDENTS IN KOREA.

The vernacular press has shown no want of enterprise in connection with the Korean embargo. No less than twenty-five reporters have been despatched by the various newspapers to the peninsula. If these gentlemen were qualified to report after the manner of European war-correspondents, we ought to be in constant possession of full and interesting news. But unfortunately they do not appear to be superior to the ordinary Japanese *tamposha* who collects items of intelligence by quantity rather than by quality and whose statements the public have learned to regard with more distrust than curiosity.

"THE MINER'S HANDBOOK."

We clip from *Nature* the following brief notice of Professor Milne's recently published work:—"During his long stay in Japan, Prof. Milne seems to have acquired the deftness of a native in packing, for it is difficult to conceive how more information could have been crammed into a book no bigger than a cigar case, and weighing only six and a half ounces. It is a veritable miniature compendium of mining, which is likely to find a place not only on the shelves, but also in the luggage of most mining engineers."

THE N.Y.K. MAIL SERVICE TO SHANGHAI.

We are informed by the Nippon Yusen Kaisha that, until further notice, the weekly Shanghai mail service will be effected beyond Nagasaki by a chartered steamer, therefore transshipment of passengers, mails, and cargo will be effected at Nagasaki, both ways. The service as far as Nagasaki will be maintained by the steamers *Saikio Maru* and *Kobe Maru*. The chartered steamer on the Nagasaki and Shanghai portion of the route is the *Angers*.

FATAL RAILWAY ACCIDENT.

The *Mainichi Shimbun* states that shortly before ten o'clock last night the crossing-keeper at Shinsenzu, Shiba, Tokyo, and a boy (15) were run over by a train from Shimbashi. Both died almost immediately.

PRINCE BISMARCK.

TELEGRAPHIC intelligence received in the capital on the 23rd inst. announces that Prince Bismarck is again very ill, and his proposed visit to Baden-Baden to take the waters has been abandoned. Digitized by Google

THE "HACHIDATE MARU" IN COLLISION.

Messrs. W. M. Strachan & Co., the Agents of the steamer *Hachidate Maru*, from Glasgow and Liverpool, inform us that the steamer was in collision after leaving Shanghai, on the morning of the 21st inst., which necessitated her returning to that port, where she will very likely be detained for some time.

THE "CITY OF PEKING."

The P.M. steamer *City of Peking* ran aground on Monday midnight as she was approaching the Quarantine station at Nagaura. The *Peru* was sent to the assistance of the stranded vessel on Tuesday morning, but finding that her services were scarcely required returned to harbour about noon. The *Peking's* forward cargo was then discharged into lighters, and hawsers were run out astern. With the aid of these and assistance rendered by a Government tug from Yokosuka, the big mail packet gradually slid back into deep water, anchoring in a safe place about eight o'clock. Lloyds' Agent in Yokohama having reported that the *Peking* has sustained no damage, she was dispatched for San Francisco at noon on Thursday. We understand that the *City of Peking* was in charge of a Government pilot at the time of her stranding. He is said to have mistaken the lights on the headlands which landlock Nagaura Bay.

FIRE IN CHINA TOWN.

A fire broke out about 8.20 o'clock on Sunday night in one of the most congested blocks in China Town, originating in a small two-storied brick building on No. 146. Superintendent Morgan and his men were quickly on the spot with three hose-reels and three stand-pipes. Owing to the house being so completely sandwiched in great difficulty was experienced at getting to the seat of the fire, but this was surmounted by the firemen climbing to the roofs of the adjoining houses and playing on the flames from their elevated positions. The police did good work with their hose too, and as there was a plentiful supply of water, the steamer working from a well on the compound of No. 76, all danger was at an end within an hour. The house in which the fire began was the only one destroyed; its occupants were Chinese. Much ill-feeling between the Chinese and the Japanese mob developed at the close of the conflagration, and at one time a fight was imminent. The police, however, gave ready protection to the Chinese and forced the opposing parties asunder. As it was stonies flew about freely for a minute or so, but no injuries were sustained on either side.

KOREAN AFFAIRS.

The *Fiji Shimpō's* second extra on Monday contained the following telegram, dated Sōul July 27, 7 p.m.:—"Things having come to extremes, our troops at You-san will march tomorrow morning to Su-wōn." The latter place is about midway between Sōul and A-san, and is reputed to be a point of great strategical importance. If the troops left You-san on the morning of the 23rd, as stated in the telegram, they will arrive at Su-wōn in the course of today, 24th, for the distance is about 18 miles. From Su-wōn to A-san the distance is about 27 miles, so that it will take 3 days more to bring the Japanese army in sight of the Chinese. That is without allowing any lengthened stoppage at Su-wōn. According to this calculation, collision between the two armies cannot take place earlier than the 27th instant, unless, indeed, the Chinese come out to seek a battle, which is more than improbable.

The same sheet also had the following telegram, dated Shanghai July 22:—"Six battalions collected in the neighbourhood of Taku have already left for Korea."

The *Chu-shi Shimbun* extra has the following telegram said to have been received in Tokyo on the 22nd instant from Tientsin:—"Four thousand soldiers belonging to the Viceroy Li have left for Korea on board eight vessels, four of which are English merchant ships. The troops are accompanied by two German military instructors, Major Enekel (?) and Major Ritter (?)." Our contemporary is confident of the truth of this telegram, especially the latter part relating to the German officers.

The *Fiji Shimpō* to-day states that the Chinese Minister to this Court will leave the capital in a day or two. A similar step will be taken by the Korean *Chargé d'Affaires*.

Subsequent intelligence from China agrees in confirming the news about the despatch of troops to Korea. Reports vary as to the exact number of soldiers, some putting it at 4,000 others at 3,000, and still others at 2,080. From past experience, we are inclined to think that the smallest number is nearer the truth. The date of departure of the troops is stated by some papers to have been the 21st instant and by others the 22nd. As to the point where the troops are to be landed in Korea, various conjectures are made, some saying that it will be at A-san and others at some place on the banks of the Tai-dong-yang.

The *Nichi Nichi Shimbun's* Shanghai correspondent sends the following telegram, under date of July 23rd, 9.12 a.m.:—"The Southern Fleet has left this morning but its destination is not known."

The report that among the transports by which the Chinese reinforcements have been sent to Korea are four English merchant vessels, seems to be doubtful. The *Nichi Nichi Shimbun* assures us that the statement is unfounded. On the other hand, the statement that two German military officers have accompanied the Chinese troops in the capacity of advisers has been received by the Japanese journals with a considerable degree of confidence. They remember that a similar step was taken by China at the time of the Franco-Chinese war, and so there is no reason, think they, to wonder at the present news. These Germans are believed to be naturalized Chinamen.

As to the ultimatum addressed to the Korean Government by the Japanese Minister, we have already noticed that an answer to it was requested in three days. There seems to be some doubt about the exact date when the above mentioned period expires. Even the *Nichi Nichi Shimbun* is uncertain on the point; but it thinks that the period must have expired either on the 22nd or the 23rd instant. What answer the Korean Government has made or, indeed, whether any answer has been made during the specified time, is not yet known. It is, however, almost certain that the Korean Government is not disposed to comply with the demands made by Japan. War is now regarded by the Japanese papers as inevitable and imminent.

It is reported that the members of the Chinese Legation in Tokyo are packing up in preparation for departure home at any moment. It is even said that the Minister has applied to the Foreign Office for a passport. This, however, lacks confirmation.

Even at this late hour some papers in Tokyo express some alarm at the rumour that the British *Chargé d'Affaires* has proposed to the Japanese Government to mediate between this country and China, and that the proposal has been accepted by the Japanese Government. Some people are inclined to think that this rumour owes its origin to emissaries from China.

Seventy-one Chinese residents in Yokohama left for home on Wednesday by the *Peru*.

The Commander-in-Chief of the Yokosuka Admiralty Station on Wednesday ordered the men of the 1st and 2nd Reserves to report immediately at head-quarters.

The *Tokyo Asahi Shimbun's* Sōul correspondent has stated that the construction of the Sōul-Fusan telegraph line has been suspended. But that report has been found to be incorrect. It appears that serious inconvenience was experienced by the Japanese Engineer Corps

charged with the construction of the line on account of the proclamation issued by the Korean Government strictly prohibiting the Korean people from working for the Japanese. Several hundreds of Korean coolies had been engaged by the Japanese Engineer Corps, and were working on the line, when the above mentioned proclamation was issued. The Koreans at once left their work and would on no account continue in Japanese service, so a temporary suspension of the work was of course unavoidable; but, according to the *Nichi Nichi*'s Fusan correspondent, the Japanese authorities are said to have obtained a number of labourers from among the Japanese residents, so that they were able to resume the work without any serious loss of time.

The *Fuji Shimpō* has published in full the programme of the reforms presented to the Korean Government by the Japanese Minister. Our contemporary has obtained the document from a Korean source. It is very lengthy and contains a large number of topics arranged under five principal headings, namely, first the reform of the central and provincial government, and the appointment of men of talent to office; secondly, financial reform and the development of the resources of the country; thirdly, the compilation of laws and the establishment of a system of judiciary; fourthly the organization of the army and the navy, and the establishment of a police system; and fifthly, a thorough reorganization of the educational system. These headings are each subdivided into a number of items in which the details of the reforms are minutely explained.

The proposal which has been engaging the attention of the foreign Representatives in Seoul, relating to the declaration of In-chhōn as a neutral port, is reported by the *Kokkai*'s correspondent to have fallen through at the conference held on the 16th instant.

The *Nichi Nichi Shimbun*'s extra of Tuesday last contain the following telegram, dated Seoul July 23, 10 a.m.:—"At 8 o'clock this morning our Minister Otori visited the Royal palace attended by a party of Japanese troops. On the way he was attacked by the Korean soldiers, and after a fight of twenty minutes, the Japanese force put the Koreans to flight and captured about eighty stands of arms. The Japanese troops then entered the palace and are stationed there as guards. Minister Otori is safe. A number of Koreans were killed and wounded." From this telegram, it is to be gathered that, the Korean Government having refused to comply with the Japanese demands, Minister Otori was on his way to the King's Palace to carry out the threat contained in his ultimatum when the collision took place. Things having come to this pass there remains for Japan no other course than to undertake the reform of the Korean Government herself. Nothing at present is known about the progress of the Japanese troops marched in the direction of A-San, but it is believed that a collision between the two armies will take place in a few days, unless, indeed, the Chinese troops consent at once to withdraw without any further ado.

The *Nichi Nichi Shimbun*'s extra also contain the following telegram, dated Fusan July 24, 6 a.m.:—"The construction of the Seoul-Fusan telegraph line has been interrupted by thunder-storms."

Later.

The *Fuji Shimpō*'s extra contains the following telegram, dated Seoul, July 23rd, 11.15 a.m.:—"The last demands of Minister Otori having been rejected by the Korean Government in an extremely insolent manner, Mr. Otori was about to leave the Legation this morning to seek a personal interview with the King, when a messenger arrived from the palace requesting the despatch of Japanese troops to escort the Tai Won-kun to the palace, for there was danger of his being intercepted by the Ming faction. Accordingly, Mr. Otori escorted the Tai Won-kun to the palace at 8 o'clock this morning. When the party was about to enter the palace they were fired at by Korean troops who had doubtless received their orders from the Ming faction. The Japanese troops succeeded in

about twenty minutes, in silencing the Korean soldiers. The Tai Won-kun and the Japanese Minister then entered the palace and had an audience with the King, who expressed sincere thanks for the efforts which Minister Otori had thus far taken for the benefit of Korea and declared that the rejection of the Japanese demands had not received his (the King's) approval. The King then and there appointed the Tai Won-kun as Regent. The Tai Won-kun is for the present to occupy apartments in the palace."

The *Kokumin Shimbun*'s extra had the following telegram dated Seoul, July 23, 3 p.m.:—"Our troops have just now commenced fighting with Korean troops in the vicinity of Seoul." This report lacks confirmation, and we are disposed to doubt its accuracy.

It is supposed in Tokyo that the Korean troops who fired at the Japanese escort of the Tai Won-kun and Minister Otori, were probably Chinese soldiers in disguise. Had they been really Koreans, they would not—so think the Tokyo papers—have dared to do anything that might put the person of the Tai Won-kun in serious danger. Be this as it may, it seems very doubtful that Korean soldiers would have had the courage to offer open resistance to the Japanese troops when it must have been obvious that such resistance would prove entirely fruitless. One newspaper mentions that, previous to the collision of the 23rd instant, an emissary had arrived in Seoul from China bearing an important message from Mr. Yuan Shaikai to the leaders of the Ming faction. The purport of the message is said to have been to induce the Ming faction to entice the King out of the Capital on pretence of a summer excursion. This news seems doubtful. It will be remembered that Mr. Yuan only left In-chhōn on the 19th inst.

There is a strange rumour in Tokyo that a collision took place between some Japanese and Chinese war-vessels about 100 miles off In-chhōn on the morning of the 23rd instant. But no definite report has yet been published about the affair.

The news that the Tai Won-kun has been appointed Regent of the Korean Kingdom has been received with joy by the Japanese press. The King has always been supposed to be favourably disposed towards Japan, and sincerely devoted to the cause of progress and improvement. As to the new Regent, he was formerly regarded as the leader of the conservative element in the Kingdom. Of late years, however, he is said to have considerably changed his opinion, so much so that he is now universally considered to be the head of the progressive section of the Korean nation. A man of undoubted capacity and of ripe experience, he possesses an unbounded influence in the country, not only on account of his commanding personal character but also as the father of the present King. Now that such a man has, under the special protection of Japan, been placed at the helm of the State, it is justly considered certain that the Japanese scheme of regenerating Korea will have a fair chance of success.

The Chinese Resident, Mr. Yuan, who left In-chhōn on the 19th instant, is said to have reached Tientsin on the 22nd. The cause of his journey is still unknown. Some persons believe that, foreseeing an emergency in Seoul, he fled in fear of personal danger. Others say that he went home on account of illness. Yet another story is that, the Chinese Government believing his continued stay in Seoul to be prejudicial to a peaceful settlement of the Korean question, he was recalled. The last mentioned explanation seems to be nearest the truth.

The report that the Chinese Government has asked the Government of the United States of America to protect the Chinese residents in Japan in the event of war, seems to be true. The United States Government is said to have complied with China's application.

Considerable attention has been excited by frequent interviews between the Ministers of Russia and China in Tokyo. Some people are credulous enough to imagine that the exchange of visits between these two diplomats has a

grave political significance. At the commencement of the present complication, a section of the metropolitan press was inclined to think that a secret understanding existed between Russia and China about the Korean question. By and by it came to be rumoured that Russia, with her ally France, was particularly friendly towards this country in connection with the present complication. And now these irresponsible journals are again reverting to their original belief about a Russo-Chinese alliance. These papers, it must be observed, belong to the less important portion of the press.

As to the destination of the Chinese Southern Fleet which recently left Shanghai for the north, the *Nichi Nichi Shimbun* states that it must have gone either to Wai-Hai-Wai or to Chefoo.

It is stated in the *Nichi Nichi* that a number of prominent capitalists in Tokyo have effected an arrangement for the construction of a railway line between Seoul and Fusan, as soon as the situation in Korea admits of such an undertaking.

By an order dated Tokyo, July 24th, 5 p.m., posted to-day at every police-box in the capital, all the members of the First Class Reserve of the Artillery of the Imperial Guard (1,800 men in all) are required to report immediately at headquarters.

We are also informed that the staff of the Red Cross Society of Japan is ready to start for Korea at any moment on receipt of instructions from the War Office.

No news has been received from Korea about the state of affairs subsequent to the incident of the 23rd instant. Much anxiety is felt on this account. Some persons believe that the delay in the arrival of mail steamers from In-chhōn is perhaps owing to collisions between the Japanese and the Chinese fleets in Korean waters. But we hope that, whatever may have happened, it will not be long before definite intelligence is received in Tokyo. Two mail steamers, which had left In-chhōn on the 22nd instant, put in at Fusan on the night of the 25th. They, however, brought no important news. They report an extremely rough voyage, and the fog is said to have been so dense that they sighted no other vessels all the way.

The last mail from Korea brought letters up to the 20th instant. From these letters we shall reproduce accounts of the more important events previous to the change of the situation on the 23rd instant. The *Nichi Nichi Shimbun*'s correspondent, writing under date of the 17th instant, describes in full what took place between the acting British Consul-General and Japanese troops at A-Yōn. On the 15th instant at about half-past six, Mr. and Mrs. Gardner, attended by Messrs. Brown and Fox, attempted to cross the military cordon of the troops stationed at A-Yōn. The sentinel stopped them and reported the matter to the officer in command who sent to the place one of his subordinates. When this officer arrived there the British Consul and his party had already advanced about 50 or 60 metres inside the cordon. The Japanese officer presented his card to the British Consul, and asked for that of the latter. Until this time the name and status of the intruders had not been known. But Military discipline does not make any allowance on account of rank or quality, and the Japanese officer told Mr. Gardner that nobody could be permitted to cross the military cordon without a pass from the officer in command. Mr. Gardner, however, replied that he and his party were on a public road, and that, therefore, no one had the right to hinder their movements. So saying he and his party attempted to advance still further, but the dispute having attracted to the spot a crowd of officers and subordinates, the British Consul suddenly retraced his steps and left the place. On his return to Seoul he at once addressed a complaint to the Japanese Minister. He is also said to have stated to outsiders that, while walking along a public road at A-Yōn, he and his party were unreasonably stopped by Japanese soldiers, that he was struck on the head, that his wife was insulted, and that her palanquin was

carried away and thrown over by the roadside. These statements are said by the *Nichi Nichi's* correspondent to be entirely without foundation. The camp at A-Yön is about a *cho* from the public way, and no sentinel is posted on the public road. Moreover, no insult was offered to any of the party. The Japanese Minister is reported to have asked the British Consul to forward him a more definite account of the place, time, and other particulars. No answer had been received from Mr. Gardner before the correspondent closed his letter.

The *Nichi Nichi's* correspondent recently made a trip to A-san, leaving Söul on the 11th instant and returning there on the morning of the 15th. No particularly interesting incident is recorded by him; but his personal observations have established the fact that the rumour about the repair of the road between A-san and Su-Wön, preparatory to the march of the Chinese troops to the latter place, has no foundation at all. He states that the road between the two places is very bad, in some places it being so narrow that foot soldiers can hardly march abreast. He went as far as Tun-Pho on the southern shores of the bay of A-San. He did not proceed further, for to do so would have been to fall into Chinese hands. From him we also hear that Japanese scouts are found as far as Chin-Wi, some distance south of Su-Wön, which latter place was occupied by a small party of Japanese cavalry.

On the night of the 17th instant, Söul is stated to have been thrown into great excitement by a report, afterward discovered to have been without foundation, that several thousands of Chinese troops were on their way to the capital from the direction of Wön-San. It was also rumoured in Söul that the small party of Japanese *soshi* under the leadership of Tanaka Jiro and Sujuku Tsutomu, who had been wandering about in the province of Kyöng-sang-do, had been arrested by the Korean authorities. But this rumour also seems to have been without foundation, for the *Niroku Shimpö's* correspondent, who ought to be well informed about the doings of these *soshi*, entirely denies its trustworthiness.

Concerning the conference of the foreign Representatives in Söul held on the 16th instant, to consider the proposal for declaring In-Chön a neutral port, the letters just received by the Tokyo papers agree in stating that the proposal fell through on account of the opposition of the Japanese and the Russian Ministers. It is also stated that the Russian Minister and the British Consul-General are on bad terms.

The Japanese correspondents mention that, according to the report of a member of the Japanese Consulate in Söul, who had been dispatched to Chöl-la-do, the *Togaku-to* disturbance had revived in the southern parts of that province.

Kim-ka-Chin, An-kei-Ju, Yukitsu-Ei, and other prominent members of the so-called Japanese party are said to have fallen under the suspicion of the Korean Government. Their houses were guarded by Korean soldiers for the purpose of preventing them from seeing any of their Japanese friends. But these things must have completely changed since the appointment of the Tai Won-kun as Regent.

The *Nichi Nichi Shimbun* states that a party of gendarmes is about to be sent to Wön San for permanent stay there.

The same paper informs us that the Japanese residents in China will be placed under the protection of the United States Minister in the event of war.

Telegrams from China continue to report increasing war-like preparations there. As to the eight vessels which left Taku on the 21st inst., with 4,000 troops in all on board, no report has yet been received about their subsequent movements. That they left Taku on the above mentioned date, is regarded by the Japanese papers as a fact admitting little about. Were they destined for the Korean coast, they must have been sighted by some of the Japanese war vessels which are now coasting the shores of the peninsula facing the China Sea. But nothing has been reported about these Chinese vessels

by the Japanese Naval authorities in Korea; at least the public has no knowledge of such report. This circumstance has consequently given rise to various rumours. It is surmised by a few papers that they must have been sunk by Japanese men-of-war while some others opine that they have been wrecked during a storm. The latest theory is that these vessels must have gone to some place along the southern coast of China, from thence to proceed to the islands of Okinawa as soon as war should break out.

The following telegram, dated Tientsin, July 23, 9 p.m., is said to have been received by the Mitsui Bussan Kaisha in Tokyo:—"About seven vessels belonging to the China Merchants Steam Navigation Company, with 3,000 troops on board, heaved anchor the day before yesterday. It is not known whether their destination is Korea or Newchwang."

The Tokyo News Agency informs us that, according to a Shanghai telegram, the efforts of the Chinese Government to raise volunteer troops have not been attended with much success, only about 2,000 men having answered the call.

The Chinese residents in Japan seem to have been seized with great alarm. They may, however, rest assured that, under all circumstances, their safety will be cared for by the Japanese authorities. Indeed, the Ministers of Home and of Foreign Affairs have issued joint instructions to the Local Governors throughout the Empire to see that no violence is done to Chinese subjects by any hot-blooded people in their districts.

The *Nichi Nichi Shimbun* has received the following telegram from Tientsin, under date of July 25, 5 p.m.:—"The number of troops, for the departure of which preparations have been effected, is 12,000. Further, the Chinese Government is taking steps for the enlistment of volunteers in the An-ki district."

The *Kokkai's* extra on Friday contains a telegram from its correspondent at Shimonoseki, with the substance of a letter received by him from Korea. From this telegram it appears that the fighting on the 23rd instant between the Japanese and the Korean troops in Söul lasted only about 10 minutes, instead of 20 as originally reported. On the Japanese side, there were one killed and two wounded, while among the Koreans the number of casualties is said to have been more than 10. Shortly after the appointment of the Tai Won-kun as Regent, the various foreign Representatives are said to have repaired to the palace to pay respects to the king. The Queen is reported to have fallen sick immediately after the fighting. Min Ei-shun and other members of the Ming faction have all fled from Söul. The palace is stated to be strictly guarded by Japanese troops.

The *Nichi Nichi Shimbun's* extra on the same day has the following telegram dated Shanghai July 28th, 8.25 a.m.:—"There is said to be a rumour at Tientsin that there was fighting between Japanese and Chinese war-vessels off the coast of A-San on the 23rd instant." Our contemporary seems to attach some importance to this telegram.

THE TAI WON-KUN.

The new Regent of Korea is one of the few Eastern statesmen outside Japan who are as well-known among the Japanese as any of their own statesmen. For the past few years not a single Japanese of any pretension to public consideration has gone to Korea who has not paid a visit to the Tai Won-kun. No correspondence from Söul has been thought complete without some reference to the father of the Korean king. But just at present he is a particularly prominent figure in the columns of the vernacular press, and portraits and biographical sketches of him occupy prominent places in the papers. From these sketches we shall reproduce a few salient facts in the life history of the distinguished Korean. He was born in January, 1821, in one of the most powerful branches of the Royal family. At the demise of the last King, the Queen-dowager, who appears to have been

a woman of character and ability, took the responsibility upon herself of calling to the throne the second son of the Tai Won-kun, or, as he was called, the Li-sei-wo (Japanese pronunciation). The title Tai Won-kun, it must be remembered, was assumed by him only after the coronation of his son as King, it being an honorary designation of the father of the King of Korea. His son being then very young, the Tai Won-kun directed the affairs of State as Regent of the realm. His Regency extended over a period of about twelve years (1865-1876). His administration was stained by a cruel persecution of the Christians, thousands of whom suffered horrible deaths, and by the blood of nearly ten thousand unfortunate people who were butchered simply for the purpose of counteracting a prophecy that the Tai Won-kun was doomed to be vanquished by ten thousand enemies. But in spite of these great blemishes, the Tai Won-kun's Government was on the whole beneficial to the country. Perhaps the most conspicuous feature of his administration was the steadiness and energy with which the independent rights of the kingdom were asserted. His administration was also distinguished on the whole by the absence of corruption and other vices, which have been the curses of the Ming Government. Especially in the appointment of officials, the Tai Won-kun showed a remarkable disinterestedness, for he paid no attention to the birth and family connections of candidates for official posts. In 1876 he resigned the Regency and lived a private life for six years, when in 1881 he again became the head of the government. But the Ming faction being now overwhelmingly powerful, his tenure of office was not long. He was decoyed under false pretences to China, where he was kept a close prisoner for a few years. Since his return to Söul he has led a strictly secluded life, and seemed to have abandoned all idea of taking part in political affairs. It was during this period of inactivity that he showed a particular delight in conversing with numerous Japanese visitors. This circumstance made him the object of intense suspicion and hatred of the Ming politicians, who did not allow him even to see the king. But now the tables have been turned and he is once more at the head of the State, the last hope of all the friends of Korean independence and progress.

SHANGHAI NEWS.

A fatal accident occurred on Friday, July 16, at about 7 o'clock in the evening at Wönsung. It appears that a sailor belonging to the *Indiana* went for a swim, going with the tide, and got too far away from his ship. In endeavouring to return he appears to have become exhausted, and sank before help, which was being sent from several ships, could reach him.

Of three letters addressed to London from Shanghai on the 5th of May last, one sent *via* Canada arrived on the 6th, one *via* San Francisco on the 8th, and the third *via* Suez, by English mail, on the 9th of June.

Writing from Shantung a correspondent of the Shanghai morning journal says:—"An unofficial report has just come from Ching-chou to the effect that the recent trouble between the Roman Catholic constituency and populace at Tsou-hsien has been adjusted by the payment of an indemnity of Tls. 2,000 to the Mission, and Tls. 200 to the family of each man slain in the riot, with promise of damage-money to such as were injured. This riot was entirely among the natives, and grew out of a complication of events as between the converts and people. One prominent grievance seems to have been a broken marriage contract. The occasion of the outbreak was a quarrel over the fee for a market-stand, which soon embroiled the whole street, and resulted in a pitched battle between the whilom foes."

The *China Gazette* is responsible for the following story:—"At the dinner given to H.E. Li Hung-chang by Admiral Fremantle during the Naval Review, the Viceroy remarked:—"I am told by my adviser, Mr. Detring, that all Englishmen are of small stature and that you

have no big men in England." "Is that really so?" said the Admiral, at the same time beckoning to one of his Lieutenants, a gentleman of six foot six inches and proportionately well built. "This your Excellency is a specimen of an Englishman. We have whole regiments of men this size." It was afterwards explained to the Viceroy that big men as a rule did not enter the Navy, but the finest specimens that the British Isles produce join the Army. The statement pleased the Great Man of the North, and he subjected the big lieutenant to a close and amusing scrutiny.

Captain Wallace, of the C. M. S. N. Co.'s steamer *Fungshung*, has been presented by H.E. Li Hung-chang with a button in recognition of the services rendered by the *Fungshung* while engaged by the Viceroy in the late naval review. The *China Gazette* learns that H.E. gave a month's extra pay to all on board the *Fungshung*.

The Jungbluth Orphans are being well-cared for by the generous Shanghai community. The two younger children are to remain at the French Convent, while the eldest of the three, a boy of eight, is to be placed in the Hanbury School. A sum of \$2,400 is required to keep them for 12 years, and of this \$574 is already announced.

The new Central Police Station at Shanghai was officially opened by Mr. Scott, the Chairman of the Municipal Council, on July 17th, when he said:—"Gentlemen, we are met here this afternoon formally to open the new Central Police Station, which I am sure you will agree with me is the best in Shanghai, if not in the whole East. It is a building which reflects the highest credit on its designer and on those who erected it, and I think the men will appreciate the accommodation provided for them. The entire force is housed now in a very satisfactory manner, which I think may be taken as showing the solicitude of the community for their comfort. I hope they will remember this, and that it will serve to make them do their best to maintain their present high standard of efficiency on which the good order of the Settlement so much depends. I now declare this building open, and I wish to express my gratification at such a duty falling to me. The erection of this building is an event in the history of the Municipality. It also marks the extension of our Municipal government, regarding which I say long may it prosper and flourish, and may its success in the future be as great as in the past."—(Applause.)

The breaches in the railway line, says the *Peking and Tientsin Times*, are nearly repaired, and the trains will run through to and from Shan-hai-kuan as usual in a day or two. The traffic between Tientsin and T'angshan over the older part of the line has not been seriously interrupted, it is the newly made Imperial line that has suffered most. This is now nearly restored to its normal condition. It is something to say that in spite of an almost unprecedented rainfall of 24.63 inches in 48 hours and streams flowing with extraordinary breadth and violence, the works have without exception escaped any important injury.

HONGKONG NEWS.

Singapore, alarmed by what has befallen Hongkong, is putting its house in order. At the Police Court the other day some eighty natives and Chinese were summoned for having failed to comply with Municipal notices calling upon them to white-wash their premises, the majority being fined \$1 each and costs.

The following, from a home paper, says the *Daily Press*, is not a bad skit:—

BRITISH INDIA IN LIQUIDATION: CHEAP WEEKLY AUCTION SALES OF BANKRUPT STOCK.

The Secretary of State for India (Managing Director of the Bankrupt Company) has much pleasure in intimating to the public that, in consequence of 36 years of gross incompetency, mismanagement, and persistent Neglect of Duty by his illustrious predecessors, colleagues, assistants, and himself he has at length succeeded in making the said Company BANKRUPT, and its moveable assets will be realised for behoof of the creditors by cheap weekly Auction Sales.

Next week there will be exposed at Public Auction, for sale absolutely without reserve, 50 LAKHS OF BRITISH INDIAN RUPEES.

Further amounts can be obtained on private application at exceedingly lower rates.

The Secretary of State trusts that the public will duly value

clate his earnest endeavours to place at their disposal an UNLIMITED supply of depreciated rupees, and assures his patrons that there is no necessity for undue haste in purchasing as he has an unlimited STOCK, which he intends to dispose of at HALF PRICE.

Latest plague returns are as follows:—

The Alice Memorial Branch Hospital at Kennedy Town will be closed shortly there being now fortunately no necessity for it.

The Governor of Hongkong is having a "bad time" just at present owing to his methods of dealing with the plague. The Chairman of the Special Sanitary Committee has been teaching him law, the daily papers and their correspondents have done their best to point out to him "the way that he should go," and now the *China Mail*, a one-time staunch supporter of his Excellency, publishes the following unkind allegory, which has special reference to his policy in regard to the Chinese hospital on the borders of Kowloon:—

A HONGKONG KING CANUTH.

(Note.—This title is copyrighted as a cure for intemperance.)

Once upon a time there was a great King, of comely appearance, wonderfully good-hearted, and wise in a way; that is, he went to a great deal of trouble to let people see what a good thing it would have been if he could have kept his mouth shut. Thus he sacrificed their esteem for the sake of teaching a valuable lesson at his own expense; and to warn them against the evils of folly he made foolish exhibitions of himself.

Now, to further open his people's eyes, he made a show of intense ignorance about what concerned his country, and one day, discovering a particularly nasty hole, he put his foot in it. Then some of his courtiers at once cried out that it would be undignified for him to withdraw from that position; having got into the mud, he must in consistency stop there and pretend it was nice. So the King following the example of Canute (who implicitly believed his foolish courtiers, and tried to stop the tide from rising, and then when he failed pretended he had only done it to rebuke them) tried to maintain his absurd attitude and put down his foot harder than ever, and got deeper into the mire.

Then all the people who loved their King were indignant; and all who loved their country were afraid; and all who loved a joke laughed till they burst a button off, and there was a boom in the market price of thread.

But still the courtiers were unconvinced; they got a great number of hirelings to go to the place and applaud; others they got to fix up a lot of artificial surroundings on a beautiful scale—"stage properties," and carefully learnt their parts, and held dress rehearsals. Then when all was ready they got two sheep, and led them to the place, and went through the performance. And the sheep bleated, and the courtiers crowded, and the performers went home marvelling at succeeding with such an easy and cheap show.

But the King, seeing that the object lesson had not yet struck home, and that it takes a delicate surgical operation with a meat-axe to let sense into some people, decided to let the courtiers still have their own way, and let them shove him into

the hole worse and worse, for the sake of the terrible example.

The trouble is, however, that the evil consequences fall on his subjects. Meantime, he stays in his position, with every appearance of being perfectly comfortable. If the appearances do become realities, if the 'stage props' do become genuine articles, if the leopard changes his spots and the Ethiopian his skin, and the Mongolian his complexion, then it will be time to look out for the end of the world and the *début* of the Millennium.

The *Chung Ngai San Po* says:—We are glad to be able to state that the plague in Canton is now nearly finished the admissions of plague patients in the hospitals in the South Gate district being only one or two daily during the past few days, and in those in the West Gate district between fifteen and twenty.

ENGLISH NEWS.

It is a curious coincidence that in England and in the United States legislative measures, described by those opposed to them as a "robbery of the rich," should at the same moment be under discussion. We refer, of course, to the Finance Bill on the one hand and to the Income Tax scheme of the Tariff Bill on the other.

The Chancellor of the Exchequer is sturdy in his resistance to any modifications of the Finance Bill; and he is probably wise in his generation, for the only modification that would satisfy his opponents would be a complete abandonment of the essential part of the scheme, the graduated death duty on a gross assessment of all real and personal property. But the application of the scheme to British capital invested in the colonies is arousing protests from that quarter; and it undoubtedly seems unjust that under any circumstances a man should be taxed twice over. But while a British subject owning property in the colonies would be subject, of course, to the local duty, whatever it might be, he would also become liable, under the new Budget scheme, to the Imperial estate duty, which on a large property might fall very heavily. Suppose, for instance, a British-born colonist who had made by hard work and well-directed enterprise a fortune valued at one million, in Victoria, and who had retired to spend the evening of his days—surely not an undesirable thing from any point of view—in his native land. He would have to pay 10 per cent. to the colonial Government and 8 per cent. in addition to the Imperial Government, all on the same estate. It may be said that the colonies have already submitted to the imposition of existing duties, which touch them very lightly, but the situation has been practically altered by the proposal to enact the graduated charge which, it is believed, will have a restrictive effect on the investment of British capital in colonial enterprises. The colonists assert that the duties to which Sir William Harcourt appeals as a precedent were inherited from the time when there were no self-governing colonies, and that they have recorded protests against the recent extensions of the practice. Past experience should make the British Government shy about having any difference of opinion with its colonies concerning the question of taxation.

In a speech delivered at St. James's Hall, Lord Salisbury thus summed up his objections to the scheme:—

I do not know if any of you understand the death duties. I confess myself to have been seriously puzzled. I only understand one thing from the truculent defiance occasionally launched by the Chancellor of the Exchequer, that he imagines that he is taxing heavily the richer classes. To that I have no objection to offer. The richer classes are the natural prey of the Chancellor of the Exchequer. But it does not always follow that he always catches them when he thinks he has got them. But still, nobody can object to his trying. I do, however, object to this desire to rample the classes under foot being treated as if it were like charity, that covers a multitude of sins. Whenever any objection is offered to his Budget, from the point of view of logic or finance or any other consideration, his sole answer is that

he is taxing the richer classes and that therefore we ought to be content. Well, if he is taxing the richer classes, at least let him devise a machinery which will do what he intends, and not tax the poorer classes instead. And not only the poorer classes, for among the other ingenuities of this strange Budget he is contriving to furnish a rock of offence to our brethren across the water in the colonies. . . . What will be the general result of the new method of taxation? Every country house in the country, great and small, down to the smallest, supports a large number of people. There are a large number of people who work for the owner in various capacities—some capacities of pleasure, some capacities of usefulness. They work for him as cultivators of the land, as gardeners, as game keepers, as bricklayers and carpenters who keep up the houses on the estate; but if you take away from a man four years of his income he is obliged to drop all that expense; and the measure, which merely at first sight inconvenienced a man who is more or less rich will in its ultimate effect dislocate the industry of a whole district, and condemn a great many humble people—who never heard of death duties, and are only trying to live on their daily wage as best they can—to starvation or the workhouse. Now, I maintain that it is not necessary to produce all this inconvenience in order to attain this one object of taxing rich men, and I condemn most heartily this Budget, not on account of its object, but on account of the extreme and phenomenal clumsiness with which it has been constructed. It is the worst piece of work—the most hasty, superficial piece of work—ever presented to Parliament.

We should say that the argument in the latter part of our extract was one of the most superficial pieces of rhetorical claptrap ever presented by an ex-prime minister to an educated audience. It is obvious that the same argument applies to all taxes whatever; if the money had not been demanded by the State, it would have spent by the owner in some other way. The avowed object of the bill is to apply a tax in such a manner that expenditure by the rich in luxuries will be especially curtailed and if the bill should lead, for instance, to a diminished expenditure in game-preserving we should think this a notable point in its favour.

It is extremely interesting to compare a political map of Africa in the present year with one drawn fourteen of fifteen years ago, and to note how, what was then a thin line of colour round the margin of the continent has now spread inwards till there is hardly any white space left. Such a comparison helps us to understand the increasing importance of African questions in European politics. It is a little difficult to obtain from the home papers a perfectly clear idea of the latest question of this kind—the Anglo-Belgian Convention, or, as it is more correct to call it, the Convention between England and the Congo Free State.

Along the Eastern border of the Congo Free State lie, from south to north, the following: a portion of British Central Africa, Lake Tanganyika, a portion of German East Africa, Uganda, and British East Africa. The Convention arranges for the cession by the Congo Free State to England of a narrow strip of territory lying along the boundary of German East Africa, thus connecting British Central Africa with Uganda, British East Africa, and the head waters of the Nile. A glance at the map of Africa will show that, with our predominant influence in Egypt, this means an English line across Africa from north to south. The publication of the terms of this convention has raised a storm of indignation both in France and in Germany—a storm quite unexpected if we may credit the English Foreign Office, which in this matter must certainly have been sadly wanting either in sincerity or in foresight.

The German protest came first. Germany contends that it is not competent for England and the Congo Free State to enter into any arrangement of this kind upon the German frontier without the consent of Germany; and there is further a great deal of irritation aroused by what is regarded as the unfriendly manner in which the arrangement was carried out without intimation to Germany.

When we consider the circumstances under which the Congo Free State came into being we can fully sympathise with Germany's im-

tation at such a negotiation being undertaken without consulting her in the matter; and we are glad to hope that the anger she exhibited was rather at this breach of international etiquette than that she considers us as likely to be unpleasant neighbours in Central Africa.

The attitude taken by the French in the matter is less easy to justify, but quite easy to understand. We do not, by the Congo agreement, become neighbours to France, but we open up a way from our South African possessions to the head-waters of the Nile. The French, who have from first to last distrusted our good faith in the matter of Egypt, probably regard this as a renewed proof of perfidious Albion's intention to maintain in her own hands the Nile from the source to the Delta.

The French newspapers, however, have seldom said anything more ill-natured of England than is said of France in a recent number of the *Saturday Review*—always a truculent journal whether in dealing with foreign politics or with domestic affairs. "By general consent of third parties, the French, though much pleasanter companions than ourselves, are not nearly as good neighbours; and in their colonies more particularly they are apt to be possessed by a hot and restless spirit of encroachment and quarrel-seeking. They really do believe (what no Englishman with a little brains ever quite brings himself to believe) that the bestowal of their presence and rule upon the world at large is a sacred mission for themselves and an unquestioned blessing for the others. Added to which the ignorance of Frenchmen is colossal, and their docility to whoso speaks with an air of authority enormous."

"Oh wad some power the giftie gie us; . . . Why, that very claim on the part of us Englishmen, 'that the bestowal of our presence on the world at large is a sacred mission for ourselves and an unquestionable blessing for the others,' is one heard throughout the land in connection with every fresh effort after territorial aggrandisement. *Ergo*, if the *Saturday's* contention be true, either Englishmen with a little brains are few and far between, or, and this is what our neighbours think, the claim that it is England's mission to civilize the world is merely a canting trick to excuse an unwarranted act of aggression. It is certain that nations are not helped to understand one another by such newspapers as the *Saturday Review*."

The *Pall Mall* takes a less insular view of the situation:—

"Africa is a big place. But it is not big enough to contain England, France, Germany, Portugal, and Italy. And when England starts with a 'Cape Town to Cairo' idea, while France sets herself to expand across the continent the other way, it is obvious that there is a point somewhere in the middle at which the two must meet. And that point has now been reached. Of course we are bound to maintain that England is in the right. We have acquired a notion, not without some show of reason, that England is the residuary legatee of the inheritance of the earth. A country may be unexplored and valueless, but we experience a sense of personal wrong if another nation goes and sticks up a flag upon it. 'Omne ignotum pro-Britannico' is the motto upon which the British Empire has been built. I do not know that either Great Britain or France has any particular right to slices of Africa, except that they want those slices. And the one that wants the most will probably get them."

To return to the Congo Free State Convention. With regard to France the Government has agreed to review all African questions pending between it and the French Government. How the difficulty with Germany is to be settled has not yet been made manifest. The death of the Sultan of Morocco turned attention for a time to another quarter of Africa, and will perhaps bring about a better feeling between England and her continental neighbours. For happily nobody suspects England of designs on Morocco; and France, Germany, and England seem inclined to join hands to preserve the *status quo*, and to prevent any aggressive thoughts from entering the mind of Spain

or Italy. The *Cologne Gazette*, however, was unable to refer even to the Morocco question without displaying a certain amount of irritation:—"After our recent experiences of English diplomacy in connexion with the Congo agreement and of Spanish diplomacy in connexion with our commercial treaty, neither of those countries can rely so implicitly upon our friendly co-operation and goodwill as they might confidently have looked for in other circumstances. It is time for Germany to show that, apart from what she owes to her position in Europe, she is quite determined not to be treated as a *quantité négligeable* in African questions."

It is said that the members of the European Happy Family should continue to eye one another with so much distrust.

Before we quit the subject of Africa we should like to give an interesting extract from Sir Gerald Portal's posthumous work on "The Mission to Uganda," which has just been published. After pointing out the necessity for a railway to that region, and saying that in his opinion the zebra is the most suitable beast of burden for Central Africa, he goes on to criticise the animal commonly employed in this capacity:—"As an animal of burden, man is out and out the worst. He eats more, carries less, is more liable to sickness, gets over less ground, is more expensive, more troublesome, and in every way less satisfactory than the meanest four-footed creature that can be trained, induced, or forced to carry a load." Sir Gerald's opinion is that nothing but a combination of the advantages of slave dealing with the necessities of transport could have brought about the general employment of so costly and unsatisfactory a means of carrying goods.

The following amusing story is from the Paris correspondent of *The Times*:—

I learnt one day that a newly-appointed Minister of Foreign Affairs had been conversing with an Ambassador. The latter having urged a particular argument, the Minister shrugged his shoulders and exclaimed, "Allons donc." The Ambassador had a moment of surprise. "Excuse me," he said, "but if you had been in the presence of my Sovereign would you have answered him, 'Allons donc'?" "Certainly not," rejoined the Minister. "Then pray do not forget," added the Ambassador, "that I represent him."

A Reuter's telegram to *The Times* from Norfolk, Virginia, U.S.A., dated June 9th, runs as follows:—

According to intelligence from Newport News a band of men, disguised as negroes, stripped, tarred, and feathered Dr. Stone, a medical man in the town, on account of a pamphlet which he wrote denouncing the recent shooting affair.

The mob warned him that he would be lynched if he was caught in Newport News after six days. Dr. Stone is a British subject, and has applied to Sir Julian Pauncefote, the British Ambassador, for protection and indemnity for the insult offered to him.

We saw an account of this disgraceful assault in an American paper, but in this it was not stated that Dr. Stone was a British subject.

The French anarchist Meunier, who was recently committed by Sir John Bridge for extradition on two charges of murder and attempted murder in Paris, made an application for a writ of *habeas corpus* to discharge him on several grounds, the chief of which was the want of proof of identity. The case was argued before Mr. Justice Cave and Mr. Justice Collins. The application for a *habeas corpus* was refused. The most interesting point in the case occurred at the close of Mr. Justice Cave's judgment:—

"Then as to the point that the offence of the explosion at the barracks was 'political,' to constitute a political offence it must appear that there were two parties or factions struggling for power and each seeking to impose its rule upon the other, and here there was no such conflict. The persons with whom the prisoner was connected were rather the enemies of all Governments, and their crimes were rather directed against the people generally than the Government; and he was very clearly of opinion that this was not a political offence but a crime against citizens, and he came to the conclusion, therefore, that there were no grounds for discharging the prisoner, and that the application for a *habeas corpus* must be refused."

Mr. Justice Collins concurred.

FOREIGN NEWSPAPERS AND THE KOREAN AFFAIR.

SOME of the vernacular journals, notably the *Fiji Shimpō*, express concern about the statements and views circulated by the foreign press with regard to the Korean affair. Attention is drawn specially to a telegram sent to the London *Times* from Tientsin representing China in the light of a patient peace-keeper, and Japan in that of a resolute peace-breaker. China, according to this statement, is said to have despatched troops to Korea primarily at the request of the Korean Government in order to quell an insurrection, and secondarily in pursuance of her suzerain rights in the peninsula. It is added that, having quelled the insurrection, she would have withdrawn her troops, and indeed signified her readiness to do so had not Japan, who had despatched troops for purely aggressive purposes, refused to retire simultaneously. From these premises it is inferred that Japan is deliberately bent upon disturbing the tranquillity of the Orient, interrupting the course of trade, and inflicting all the horrors of war upon herself and her neighbour. The *Fiji Shimpō* repeats a warning uttered by it at the outset of the trouble, namely, that the Government should take pains to prevent the circulation of these false rumours or to correct them if circulated. The *Fiji* speaks wisely, but on the whole we do not think that the Japanese need be much troubled about these misrepresentations. Every public event presents an occasion to a certain class of newsmongers and sensation-makers to air their own perspicacity. Some, indeed, obey more sinister proclivities. Even here in Yokohama, for example, we have a newspaper which from the very beginning of the Korean complication has put the worst possible construction on Japan's actions and devoted its columns to creating an unjust prejudice against her. The Japanese must be prepared for this sort of thing. There is a section in the foreign community that entertains feelings by no means friendly to Japan, regarding her as a power with unjustifiable pretensions and believing that they discover in her people conceit so dangerous as to need a sound drubbing in the interests of the world at large. These folks may be honest in their convictions or they may be merely malevolent, but in either case they find journalists to echo their sentiments. The trouble is not to be averted so long as men are what they are, and so long as newspapers reflect all sorts and conditions of opinion. But Japan may be sure of getting justice in the end. Truth always prevails, and the great journals of the West manage to reach the truth in the long run in however deep a well of falsehood or ignorance it may be sunk for the moment. Japan's procedure in Korea finds a parallel in England's action in Egypt, and is just-

fiable by considerations at least as powerful and logical as those that dictated the bombardment of Alexandria. The force of Great Britain's example will certainly be recognized. For the rest we can be sure that this page of Japan's history will be scrutinized with as much interest as any part of her remarkable modern annals has excited. An Oriental power, she is undertaking the propagandism of Occidental civilization in a neighbouring Oriental State, and is prepared to enforce her creed by the aid of arms, if necessary. That is a spectacle wholly new in the story of human progress, and its novelty, no less than its importance, will secure for it the attention of publicists incapable of being misled by petty slanders or selfish falsehoods.

A GREAT JAPANESE MERCHANT.

PEOPLE are accustomed to say that trade has always been a despised profession in Japan, and that its votaries have stood at the bottom of the social scale. But though that is true generally, there are exceptions. Japan has had her merchant princes, as we are forcibly reminded by the issue of a book entitled "Miike." The Miike coal-mines are the property of the Mitsui Company. Nearly 300 years have now elapsed since a feudal noble, YECHIGO-NO-KAMI, of Ise Province, finding his means somewhat straitened, had recourse to the expedient of *saké*-brewing. He opened a store in Kyoto and another in Yedo, but he does not appear to have been remarkably successful in business. He did succeed in one thing, however, namely, in reconciling his family to the idea of trade. His fourth son seems to have been a born merchant. We have no record whether he abandoned the *saké* business, but if he continued it he did so in subordination to a trade that soon developed much larger dimensions, namely, that of piece-goods, which has ever since remained the principal business of the Mitsui family. Who is there that does not know the huge store, "Yechigo-ya," in Tokyo, crowded with customers from year's end to year's end, and peopled by an army of shopmen and clerks that move about with an air of assured prosperity in the dignified obscurity of the vast building? Probably the general public have forgotten that the monster shop derives its name from the title of its noble founder, but history preserves the record. How were the foundations of this great business laid? It has been said by a wise man that there are as good fish in the sea as ever came out of it; an aphorism which, when applied to trade, means that the present offers just as many opportunities of growing rich as ever the past did, could we only detect and utilize them. It is sometimes difficult to believe the doctrine, especially when we examine such a story as that now before us, and find what large areas of the field of modern

trade still remained fallow three hundred years ago in Japan, when HACHIROYEMON, the aforesaid fourth son of YECHIGO-NO-KAMI, set his land to the plough of commerce. The transmission of money was one of the prominent difficulties of the time. The feudal chiefs, who kept great establishments in the capital cities as well as in the provinces, were obliged to transmit large sums in gold and silver hither and thither, and a similar necessity devolved upon the Tokugawa Regency in collecting its revenues or making local disbursements. HACHIROYEMON'S shrewdness detected the chance that such an absence of facilities presented. He inaugurated a system of bills of exchange. Thus he would receive money at his branch stores throughout the provinces and pay it in Yedo, Osaka, or Kyoto, or *vice versa*. For such service he made no charge, or at any rate, a charge so small as to be inconsiderable. His plan was to invest the money in goods at the producing centres, and transport his purchases for sale in the city where the money had to be repaid. By this process he soon obtained the command of large sums of capital. Meanwhile he introduced another great reform. It had never been the general custom in Japan to pay ready money for goods. Time was always given to suit a purchaser's convenience. This system is said to have worked excellently in early eras before men fully understood the possibilities of dishonesty. But by and by they discovered the advantages of not discharging a debt, and then tradesmen, in self-protection, began to make an additional charge of twenty, thirty, or forty per cent. for goods sold on credit. Out of this grew the abuses of two prices, bargaining and cutting, habits that were in full vogue when HACHIROYEMON opened his stores. He quickly grasped the situation, and attached to all his goods fixed prices—ready-money prices—from which he never abated a cash and which were conspicuously lower than the charges of other merchants. Such popularity did his business acquire by these methods that, after a time, the volume of his trade in piece-goods alone aggregated from 30 to 40 million *riyo* annually, a sum that must be quintupled or sextupled for purposes of comparison with the money of the present period. It was thus that the great business of Mitsui developed. The piece-goods department has undergone little change in all these years, but the exchange operations became, from the early days of the *Meiji era*, a regular banking business, so that the Mitsui Ginko is now one of the solidest and most flourishing institutions of the kind in Japan. Ever since HACHIROYEMON'S time a rigid code of house law has been observed. He had 13 sons and 5 daughters, and at his death the family was represented by the head house and seven branches, all working together in the business, and sharing its responsibilities,

all making its success their unique object, and all strictly subject to the family law, one article of which provided that if the head of any section of the MITSUI failed to observe that law, or from any cause whatever showed incapacity for business, he was at once obliged to go into retirement, his place being taken by the next in order of blood relationship. There are now eleven MITSUI families, forming one Company, and engaged in four classes of business; namely, the *Mitsui Ginko* (Bank), of which the heads are Messrs. MITSUI HACHIROEMON, MOTONOSUKE, TAKAYASU, HACHIROJIRO, and MORINOSUKE; the *Gofukuten* (Yechigo-ya), of which the heads are Messrs. MITSUI TAKUYEMON and FUKUTARO; the *Bussan Kaisha* (Products Company), of which the heads are Messrs. MITSUI TAKENOSUKE and YONOSUKE; and the *Kwanan Kaisha* (Mining Company), of which the heads are Messrs. MITSUI SABUROSUKE and GENYEMON. It is by the last that the book mentioned above has been issued. We have not left ourselves space to refer to it here at any length, so well worthy of prefatory comment did the annals of the Miike House appear, for certainly few countries can boast a commercial house of such antiquity which, from the first, has retained such large dimensions. It is difficult to arrive at any accurate estimate of the capital now possessed by the family. Being for the most part invested in various kinds of securities, its value as an available asset is not easily determined. But the best informed Japanese place it at not less than twenty millions of *yen*.

THE PARNELLITES AND THE INVINCIBLES.

WHEN BURKE and CAVENDISH were stabbed to death in Phoenix Park, Dublin, the chain of evidence that would have effectually bound the criminals lacked one link—a mysterious personage known at the time as "No. 1" and afterwards vaguely identified as P. J. P. TYNAN. The brutal deed strongly stirred England's heart and seemed not unlikely to raise an overwhelming storm of indignation against Irish nationalism. Whether to avoid that untoward result or in obedience to honest conviction, PARNELL and his friends issued a manifesto denouncing the assassination and denying any shadow of responsibility for it. There were those who ascribed this proclamation to political strategy, insisting that the "Invincibles" who planned and performed the deed of blood, were hand and glove with PARNELL and the other Nationalist leaders, and that the latter's disavowal was a necessity which they would gladly have avoided. That was the view taken by *The Times*—a view which the great journal ventilated and elaborated with all the vast resources and large ability at its command, the upshot being the celebrated Judicial Inquiry which cost *The Times* £100,000 and left the

public uncertain what to believe and what to reject. The Inquiry came to an end nearly five years ago, and there has now been published a book by no less a personage than "No. 1" himself; a book that vindicates the soundness of *The Times'* judgment and seems to fix indelibly upon PARNELL and his associates the indirect guilt of the Phoenix Park murder. It is true that PATRICK TYNAN can not be called an unimpeachable witness. But there is no apparent reason to doubt his veracity in this instance. He does not write for the purpose of making any exposures. His revelations are merely incidental to the general purpose of his book, which is to urge the final abandonment of constitutional agitation in Ireland, and the inauguration of a policy of dynamite and terror. He is mad enough to imagine that by such methods England could be compelled to surrender her claims on the island, and he professes to believe that the object of the British Government is to crush the life out of any movement toward Irish independence by fostering the Home-Rule fable. Hence the side light that he throws upon the connection between the Parnellites and the Invincibles is not discredited by the appearance of any direct motive. He asserts emphatically that all but two members of the Invincibles' executive were high officials in the Parnellite Irish Government; that the "Invincibles" were, in fact, the Land-leaguers under a new name; that in every province of Ireland the Invincible propaganda was spread by leading Parnellites; that before the Phoenix Park murder the Parnellite Government, which was also the executive of the Invincibles, decided that there was no alternative but to meet the "assassin rule" of Briton by force, and that a word from the Parnellite headquarters would have at once stopped the murder plot. TYNAN denies that he himself had any direct connection with the murder, though he admits that he was a party to the policy of which it was a result. He claims, also, that the vengeance of the Invincibles was directed, not against BURKE and CAVENDISH as individuals, but against the Chief and Under Secretary as officials, the "two bureaucrats" of Dublin Castle. The three men charged with the actual commission of the crime purchased the knives through a recruit and had them carried to Dublin by a lady. The immediate cause of the murder—which is euphemistically termed a "removal"—was a conflict between the police and the people of Ballina, in Mayo, on which occasion some children were killed by the fire of the police. TYNAN describes the foul deed thus:—

"The new chief of the British murder society had scarcely more than arrived in Dublin Castle to attend the mummeries attached to the installation of a new usurping Governor-General of Ireland to represent his sovereign, when he was made aware that he should be guarded as his predecessor was. The person who conveyed this information to him was the permanent official, the under-

secretary of the bureau of assassination. This official was stained with many crimes committed against Ireland, he was a rebel and a renegade in the employ of her foes, and yet his black offences were venal compared to those of this newcomer, his chief.

"The Invincible chief never for a moment lost sight of the probability, amounting almost to a certainty, of an alarm being given which would arouse the garrison and change the whole complexion of the attack. But this in all human probability could not occur before the chiefs of the British murder gang were destroyed. They knew the closing of the Park gates would more than probably follow any noisy commotion, which would also be the signal for the constabulary barracks, which were near by, to pour forth re-enforcements of armed men.

"Every precaution that human ingenuity could devise was taken so that there could be no blunder. That these chiefs of the murder bureau should be slain was of paramount importance, even if the sacred band perished and every man should be left bleeding on the greensward or roadway, near the Phoenix monument. This could not be accomplished, their leader knew well, without numbers of foes biting the dust. The Invincibles were prepared to sell their lives dearly. The sacred band went into the park that afternoon with the impression, which was more strongly shared by the leaders, that they could not possibly hope to expect such swift and rapid success to reward their efforts as came to pass; they went there expecting the 'suppression' of the Secretaries would almost certainly bring on a combat to the death.

"The newly arrived chief of the British assassination bureau in Ireland met his confederate, the Under Secretary, in Phoenix Park, by appointment, and not by accident, as was supposed. The subject of their conference was Forster's dangerous position, which the new invader received with incredulity. The Under Secretary spoke of increasing the vigilance and the number of official guards. Some of these guards were careless and, not expecting any attack, were to be seen loitering about. The two confederates were discussing the subject of Forster's danger when the Invincibles came up. The hearts of those present stood still for a moment as if their pulsation had ceased, and fingers were mechanically pressed upon the concealed weapons each man bore on his person.

"Every ear is strained for the shout of rage from the scattered foe, or a signal gun, sure to be re-echoed by the rattle of small arms. But it passed away; no alarms are sounded. The Secretaries are stretched upon the ground. Ireland has struck her assailant and invader back again. In the persons of the chieftains the foe is slain. The four Invincibles mount the car and are driving off, when the Irish paladin who struck the first blow leaves the side of his more youthful yet gallant comrade and steps again upon the ground. As if in protest against remaining concealed, his revolver has sprung on the sod. The young man coolly stepped down and picked up his weapon, and, resuming his place on the car, the vehicle quickly disappears."

TYNAN'S book proves, in fact—if we may accept its evidence—that the assertions of *The Times* about "Parnellism and Crime" were not only absolutely true as far as they went, but that they might have gone a great deal farther without transgressing the limits of truth. PIGOTT, it says, was deceived in one matter, but was correct in the main points of his allegations.

Of course these very damaging revelations have evoked a counterblast. Certain Irishmen declare that TYNAN'S book was written to assist the campaign of Lord SALISBURY and the Tories, and that, before its publication, copious extracts from it had been embodied in circulars of which millions are kept ready for distribution on the dissolution of Parliament. That is simply laughable, of course. But we can well imagine that this work of TYNAN'S will add materially to the discredit into which the Irish party has fallen.

Original from

THE VICEROY LI & THE "JIYU."

IT is a pity that the organ of a great political party should descend to such shallow slanders as that circulated by the *Jiyu* with reference to the Viceroy Li. Our contemporary represents the great Chinese statesman as having received from Korea 150,000 taels in consideration of his agreeing that the little kingdom, in reply to a categorical question from China, should declare itself independent. The story is too silly to be even laughable. One of the things that chiefly trouble thinking men in connection with the present crisis is its possible effect upon the reputation of the Viceroy. He is preëminently the Chinaman to whose initiative, always exercised with admirable prudence, the world attributes whatever progressive steps China has taken during the past twenty years. That he should retain his influence unimpaired and continue to apply it in the right direction are consummations to be devoutly desired in the interests of civilization. Now, unfortunately, it is to the Viceroy Li that the management of China's relations with Korea has been entrusted ever since they included any elements of international complication. So autocratic has the Viceroy's power been in this respect that in China he is not uncommonly spoken of as the ruling king of Korea. To his account, therefore, will be placed the entire responsibility of any serious trouble in the peninsula. In China statesmen are judged, uniquely by results. If they fail, they fall. No allowance is made for the circumstances with which they may have had to deal. Inability to shape circumstances to their own ends is accounted incapacity to govern. The Viceroy's management of Korean affairs invites strong criticism from a Western point of view. But when we remember what a huge mass of prejudice and conservatism the Viceroy has to move in order to admit a ray of really progressive civilization into any sphere of his administration, we find a thousand extenuations of the apparently invertebrate and shuffling policy pursued by him in the peninsula. At any rate he is the main-spring of Chinese progress, and were his influence eliminated the slowly-moving machine would be brought altogether to rest. Yet this is precisely the man whom the irony of fate condemns to stand in apparent opposition to Japan's progressive programme in Korea. Of the Viceroy's conduct toward her, Japan has certainly no reason to complain. He has always been friendly, always appreciative, and always liberal. Could he follow his own inclinations, we may be sure that he would coöperate frankly with this empire in the task of educating Korea's capacity to be independent. With the Viceroy Li the Japanese ought to sympathize heartily in this crisis. Its issue may involve his downfall; that it may involve the

downfall of the one Chinese statesman honestly desirous of promoting in his own country the very reforms that Japan has now undertaken to promote in Korea. We are surprised that a newspaper like the *Jiyu* does not appreciate this phase of the situation, and that instead of attributing miserably sordid motives and mean actions to the great Viceroy it does not take pains to make clear to its readers the cruel dilemma in which he is placed and the disastrous consequence to the general progress of the Orient that would be involved in his downfall.

"THESE BE THY GODS O ISRAEL."

(COMMUNICATED).

A CONTEMPORARY publishes, without comment, the following epigram: *Out of ten men nine are born to work for the tenth. Resolve to be the tenth.* This appears to express the sincere opinion of the management of the paper, for in a leading article published in the same column we find this passage: "The labourers in the United States have been so pampered by high wages and frequent concessions that they have become most despotic. A revolution was inevitable. Labour has to find its level in every country, and it is the process of finding it to which so much objection is taken. But the labourers will find in the long run that they must succumb, or the whole fabric of society as at present constituted will be overturned." In truth this is the alternative. We ourselves do not think that the labourers will succumb, and as for the prospect that the whole fabric of society as at present constituted will be overturned, we regard it with considerable equanimity. We hope indeed, and believe, that before long society will bow before the inevitable, and that then, while the process of change that began almost imperceptibly a few decades back will be rendered swifter and more efficacious, we may no longer be troubled by that disastrous industrial war which was an inevitable factor in the early days of the social revolution.

A substitution of a nobler ideal than that expressed by our contemporary's epigram will be at once the most potent factor, the clearest measure, and the most important result of the change. On the other hand, the gospel of idleness, the gospel of robbery, the gospel of parasitism, is at once the mainstay of the present system, and the most poisonous of its fruits. We call it the gospel of idleness because its ideal is not that steady labour for social ends which is man's chief good, but a full measure of the ignoble cunning that enables a man to shirk his share of the common duty. We call it the gospel of robbery because of the fruit of each man's labour part belongs to himself and part to the social organism, and the "tenth man" steals from the

labourer and from society. We call it the gospel of parasitism because the idle rich, to enter whose ranks is the aim of most educated men of our time, are parasites on the social organism.

The ideal that is to replace this gospel of unrighteousness, and to be the basis of a social organization founded upon justice instead of upon spoliation, is not a new ideal. Though not a peculiar product of Christianity, though far from being associated with historic Christianity, though likely in the future to be influential not so much because it is an embodiment of the best and most practical portion of Christian teaching as because it is one of the clearest principles of economic science, yet this ideal was never better expressed than by the greatest of CHRIST'S apostles.

Neither did we eat any man's bread for nought; but wrought with labour and travail night and day, that we might not be chargeable to any of you: not because we have not power, but to make ourselves an ensample unto you to follow us. For even when we were with you, this we commanded you, that if any would not work, neither should he eat.

CORRESPONDENCE.

UNE RECTIFICATION.

MONSIEUR LE DIRECTEUR.—J'apprends par votre estimable journal que j'ai été représenté à mon insu, dans la presse japonaise, comme ayant accepté de "mettre au point" en français une pièce qui doit être prochainement jouée à Kabukiza. Je tiens à déclarer qu'au point de vue littéraire, je n'ai rien de commun avec cette pièce, et que par conséquent j'en dégage absolument ma responsabilité.

Veuillez agréer, Monsieur le Directeur, l'assurance de ma considération très distinguée,

MICHEL REVON.

Nikko, le 19 juillet, 1894.

(TRANSLATION).

A DISCLAIMER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I learn from your valuable paper that I have been unwittingly represented, in the Japanese press, as having undertaken to put the finishing touches to the French version of a piece shortly to be played at the Kabuki Theatre. I beg to state that from the literary point of view I have nothing whatever to do with this piece, and that consequently I am entirely free from responsibility in the matter.

Believe me, Sir, yours most truly,

MICHEL REVON.

Nikko, July 19th, 1894.

[We have great pleasure in publishing M. Revon's disclaimer and we regret that we are responsible for the dissemination of the misstatement of the Japanese press concerning his connection with the play about to be performed at the Kabuki Theatre.—ED., J.W.M.]

THE JIZENKAI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you permit me to say a few words in regard to the Jizenkai Hospital, the one charity in Yokohama, so far as I know, for the Japanese and under their control.

Having been interested in the Jizenkai during its early struggle with great needs, small means, and indifference on the part of all but a few, it is a special pleasure to note the success it has won which is doubtless due to the fact that it meets a felt want in the community. The hospital is an outgrowth of the Fujin Jizenkai (Japanese Ladies' Benevolent Society) by which organization it was planned and built. Both have grown so large

now, though, that they must, of necessity, be under the management of separate committees, though each still contributes to the success of the other. To show how much such an institution is needed, it is only necessary to refer to the recent earthquake when many poor victims must have died had there been no place to receive them without pay, as they had no money. This being the only place, its supporters must feel compensated for their efforts, by that one opportunity to save life and spare suffering.

The hospital records show that of the twenty-five sufferers carried there on that dreadful day, all but the four, who died almost at once, have recovered and been dismissed, except three, and they are convalescent. Some were so seriously wounded that their recovery reflects great credit on Dr. Rokkaku, who performed the operations.

A visit to the hospital to-day showed ten patients, including the three not yet fully recovered from the effects of the earthquake. There was one poor woman, so burned by the explosion of a lamp that she cannot stand or sit, but must lie flat on her face. Everything possible is being done to relieve her and she is doing well, but one shudders to think of her suffering had there been no such place to which she could go. A sick baby with its sick mother, especially appealed to one's sympathy. I found on enquiry, that while the hospital is no well supplied with *futons*, sheets, and cheap garments for adults, there is no stock of clothing for babies, such as the one there now. As two or three yards of cloth is sufficient for one little *kimono*, I trust that this want may be also met, for the sake of the poor little people. Some picture books, too, would be enjoyed by such sufferers as the one first mentioned, the one who must lie on her face, or nearly so, for still a long time. Besides those in the hospital many receive medicine only, and in this way much suffering is relieved. In still another way is the hospital a good thing in the community, as the following instance will show. I met a man who seemed to be horribly in need of medical attention, a beggar. I had no means of testing his case, so told him to go to the hospital at Negishi. Later, I went to see if he had been there, and what was needed. Nothing had been seen of him, so I concluded that the hospital had saved me from wasting money on an impostor. This is no small matter where one has a desire to relieve real distress (as who has not?) as well as an objection to being imposed upon. I believe the hospital to be worthy of support, and that it is doing a benevolent work that is greatly needed among the poor of Yokohama.

AUSTRALIAN EDUCATIONAL PROGRESS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In no part of the civilised world are the advantages of education more appreciated than in Australia, especially in New South Wales. In that colony, according to Mr. Coghlan, the Government statistician, great as has been the rate of material progress, that of intellectual advancement has been much more rapid. At the Census of 1881, out of the 751,468 persons enumerated, there were 195,029, or very nearly 26 per cent., unable to read; at the Census of 1891, out of a population (exclusive of aborigines) of 1,123,954 persons, only 244,398, or 21.7 per cent., were returned as unable to read. Included in the number last given, there were 165,781 children of four years of age and under, so that there were only 78,617 persons, or 7 per cent. of the population five years of age and over, who were unable to read—a very small proportion when it is remembered that the number includes Chinese, Polynesians, and others. Another gauge of educational progress is to be found in the records of the marriage registers signed by marks. The earliest official record of marriages was for the year 1857, when, out of 5,804 persons married, 1,636 or 28.4 per cent. were unable to sign the marriage register. During 1891 the number of such persons was only 521, or 3.1 per cent. of the total number married. This rate of progress is simply marvellous. The residuum of population not yet educated is already very small, and, more over, of the 521 persons using marks a large proportion were not born in New South Wales, but arrived in this colony too late in life to avail themselves of its educational system. According to the last report of the New South Wales Department of Public Instruction for 1892-3, estimating the mean population of the colony for 1892 at 1,189,775, the population of the statutory school age was 223,948. Of this number, 174,230 or 77.8 per cent. attended State schools, and 49,712, or 22.2 per cent., received instruction in private schools and at home.

untaught. The latest returns of private schools attendance show the total enrolment to be 46,380, of which 33,870 pupils were between the ages of 6 and 14, showing that of the total statutory school population of 223,948 about 208,100, or 93 per cent., were enrolled at State and private schools, whilst 15,848, or 7 per cent., were taught at home, had left school after satisfying the standards of the Act, or remained untaught. In addition to pupils of the statutory school age, 29,298 under 6 years of age, and 20,951 over 14 years were also enrolled for school attendance—37,739 at state schools, and 12,510 at private schools. Thus, of 315,062 children in the colony between the ages of 4 and 15 years, 211,969 attended state schools, and 46,380 attended private schools; while the remainder, 56,713 received instruction at home, had completed their education, or were untaught. The course of instruction in the various schools is of a most comprehensive character, including, according to class, reading, writing, dictation, arithmetic, grammar, geography, history, drawing, music, Euclid, Latin, natural science, and other subjects. The Kindergarten system has been introduced into several of the schools. The supply of teachers is obtained from three sources—the two training colleges, ex-pupil teachers who do not enter a training college; and young persons, not less than 18 years of age, who have been mostly educated in the public schools of the colony, and who undergo a short course of training under qualified teachers. Few teachers trained outside the colony find employment under the department. The total number of teachers of all ranks, including those in the high schools, was 4,636, the salaries of the principal teachers ranging from £108 to £400 per annum. The total net State expenditure on public instruction in 1892 was £690,870. This does not include the grants for technical and higher education. During the five years ending 1892, New South Wales spent no less than £3,107,695 of public money on the work of primary instruction, a fact not without significance in estimating the probable future of the colony.

Yours, etc.,

JOHN PLUMMER.

Sydney, April 23rd.

BUYING AND SELLING LAND IN AUSTRALIA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—One of the things which most readily impress a new chum in New South Wales is the ease with which land is transferred from the hands of one person to those of another. There is very little real trouble in the matter, sales and purchases being effected with almost the same ease and facility as in the case of any ordinary marketable commodity. This is the result of the working of the Real Property Act, which embodies the system of land registration introduced into South Australia by the late Sir R. R. Torrens. It was adopted in New South Wales in 1862. It is not obligatory to bring private land under its provisions, but any land may be brought under it, and all Crown land granted since 1862 is subject to the Act. Advantage has been taken to an enormous extent of the general simplicity and utility of its provisions. By the end of the year 1875, when the Act had been in operation only thirteen years, 3,139,525 acres, valued at £6,447,484, had been brought under the Act, and the acreage has been swelling ever since, not only by titles to land granted prior to January 1st, 1863, gradually coming on to the registers, but also by the alienation by auction sales of the waste lands of the Crown, and by the system of free selection. The working of the Act is extremely simple and economical. An owner who wishes land placed on the register has to make application and submit all his title-deeds for examination: he also is required to make oath of the value of the land. Public notices of the application have to be issued, and any person may enter a caveat against it. The time for lodging a caveat lapses from thirty-five to seventy days after publication of notice in the Government *Gazette* unless proceedings are taken and notice thereof served on the Registrar-General, or unless an Injunction is obtained from the Supreme Court restraining the Registrar-General from bringing the land therein referred to under the provision of the Act. Further, machinery is provided for obtaining decisions on any doubtful or disputed point, and there is a general right of appeal to the Supreme Court. When the title has been approved, the name of the owner is entered on the register, and a certificate of title is issued. The former title-deeds, so far as they have exclusive reference to the land in question, are cancelled by the Registrar-General. On being entered as owner, the applicant acquires a title

which, subject only to such incumbrances or interests as are entered on the register, is an indefeasible one. Provision, however, is made for the subsequent invalidation of a certificate of title, if it can be shown to have been obtained by fraud. If the certificate of title should have been lost, a copy of it attested by the Registrar-General will suffice for all the purposes for which the original certificate was good. After the land has been brought under the provisions of the Act, all future dealings with it become extremely simplified, the land being transferred or dealt with by short instruments framed according to certain simple statutory forms, which in their turn are duly registered. A new owner acquiring land by such a transfer may either have a fresh certificate of title issued to him, or an endorsement showing the transfer put upon the old one. In addition to the advantages of facility in dealing with land, the registered owner obtains the enormous one of having his land protected against the Statute of Limitations, and therefore not liable to be taken from him by any amount of adverse possession. No instrument dealing with land is effectual until registered. Persons who enter into contracts with a registered owner must either trust to his honour or protect themselves by entering a caveat. Over and above the costs of advertisement, when an application is lodged fees have to be paid upon the several acts which the Statute enjoins or allows; but ordinarily these fees are of comparatively small amount, and a further charge of 3d. in the £ of the sworn value of the land is levied upon all applicants. This impost is applied to the creation of an assurance fund, which now amounts to a large sum, and exists to be drawn upon for the indemnification of the Government in the event of a title being wrongly given; and it is a signal proof of the excellence of the system, and of the smoothness of its working, that neither in New South Wales nor elsewhere has this fund been drawn on to any considerable extent.

Your obedient Servant,

JOHN PLUMMER.

THE GRAND HOTEL, LIMITED.

The half-yearly general meeting of shareholders in the Grand Hotel, Limited, was held in the Banqueting Room on Monday afternoon. There were present Mr. J. F. Lowder (in the Chair), Messrs. R. Howie, J. Rickett, J. Walter, C. K. M. Martin, W. Mann, Dr. Hall, and J. Tornoe (Secretary).

The CHAIRMAN said that he would take it for granted that all present had read the report and accounts which were presented that day. He was glad that their business had proved so satisfactory during the last half-year. This was, he thought, the tenth time in succession that he had had the pleasure of declaring a dividend, and he hoped the dividend which was declared that day was sufficiently worthy of their acceptance. He had nothing to add to the report, but would like to make some explanations of the reasons which induced their directors to carry forward such a large amount, \$10,000, to the next half-yearly account. It was partly owing in a great measure to the fact that they had a good deal of money locked up in wines and provisions \$1,100, and partly because they had some expenditures to meet during the next half-year which their directors thought it prudent to provide for in advance. He had mentioned at previous half-yearly meetings that their heating apparatus required re-installing. Now they had paid for the apparatus, but not for the installation. The cost of this would very likely be something over \$2,000, and would have to be met during the next half-year. When this installation was completed they would not only be effecting a considerable economy, but they would have a much better regulated apparatus. They had had frequent complaints formerly that their rooms in winter were either over-heated or else not sufficiently warmed, but Messrs. Bagnall and Hilles assured their directors that under the new system such things would never possibly occur. Another expense which they would incur during the coming half-year was the conversion of the room in which they met that afternoon into four or five bedrooms—perhaps six rooms in all. They had formerly used this room as a banqueting hall, but they had found that it did not pay for itself while kept solely for that purpose, so the directors had decided to give it up and devote it to purposes which would make it pay for itself as did the other apartments of the hotel. Of course it was not only the conversion of the room into bedrooms which had to be paid for. It would require furnishing and this would be an extra expense. Another expense which their Directors thought they could

afford to meet this next half-year was the providing of better closet accommodation. Both on the ground and on the attic floor there was a deficiency in this respect, but the Board considered that they were fully justified in recommending this improvement in the hope held out by the successful working of the past half-year. At any rate he ventured to hope that the opinion of shareholders would justify the Board in these undertakings during the coming half-year. He was pleased to be able to state that they had suffered little damage by the late big earthquake. The smoke-stack was being rebuilt under the best professional advice it was able to obtain in this country. The work was being so well done that he thought he could fairly say that it would henceforth be safe from the effects of an earthquake even as heavy as the one recently experienced. Another expense incurred through the earthquake was the re-roofing of the stone portion of the hotel. The whole of the tiles were being re-laid and at the same time advantage was being taken to put the roof into thorough repair. He did not think that these repairs would exceed \$1,000. He might say that they had suffered some damage, so the manager informed him, since the earthquake, during the time the shaft was being rebuilt, through the smuts entering the windows and damaging furniture and carpets. The various works which he had mentioned would not, he thought, exceed the \$10,000 which they were carrying forward. These were the explanations which he thought were required to show the reason for the largeness of the sum proposed to be carried forward. He had nothing further to add, but if any gentlemen desired any explanation of the accounts he would be pleased to answer him to the best of his ability.

REPORT.

The Profit and Loss Account, and Statement of Assets and Liabilities for the half-year ended the 30th June, 1894, accompany this Report.

The net profit for the half-year, including balance brought forward from the 31st December, 1893, and after providing for general expenses, Directors' and Auditors' fees, interest and depreciation, and after writing off bad and doubtful debts, amounts to \$30,000, which it is proposed to apply as follows:—

In payment of a dividend of 6 per cent. for the half-year	\$15,000
Reduction of debt	\$5,000
Balance to be carried to new account	10,000
	\$30,000

The Directors have to congratulate the Shareholders upon the continued prosperity of the Company, as shown by the above figures. After presenting the Manager with the usual gratuity of \$500, in lieu of an increase of salary, and after payment of all outgoings, and making provision for reducing the debt of the Company by \$5,000, there remained, inclusive of \$5,000 brought forward from the previous half-year, a net profit of 10 per cent., available for division, but of which the Directors have deemed it prudent to carry forward 4 per cent. for necessary repairs and improvements leaving a 6 per cent. dividend to be distributed for the half-year.

Messrs. Martin and Lowder retire from the Board by rotation, but offer themselves for re-election.

Mr. Keil retires from the office of Auditor, and the Directors have much pleasure in recommending his re-election to that office for the current year.

According to Article 86 of the Articles of Association, the amount of the Directors' fees for the year will have to be decided at this meeting.

It is proposed that the dividend shall be payable on the 15th day of July, when the warrants will be issued.

J. F. LOWDER, } Directors.
JAMES WALTER, }

Yokohama, 9th July, 1894.

E. & O. E.
Yokohama, 30th June, 1894.
J. F. LOWDER, } Directors.
JAMES WALTER, }
I have examined the foregoing accounts and compared them with the Vouchers of the Company, and certify them to be correct.
O. Keil, Auditor.

Yokohama, 9th July, 1894.
Mr. Howie said that before proceeding to the passing of the accounts, he had one question to ask. He had heard it remarked outside that the amount written off for depreciation was hardly sufficient. He would like to be assured that the basis on which the depreciation was adjusted was in the opinion of the directors fully adequate.

The CHAIRMAN said that he was quite prepared to give that assurance, and not only on behalf of the Board but also for their auditor and accountant, Mr. Keil, who was most particular on this point. It would be as well to explain that the figures on the debit side of the profit and loss account for depreciation of furniture, buildings, steam-launch, etc., were a conventional writing-off, which was as nothing compared with the enormous sums which had written-off every half-year. For instance in 1892, it will be remembered, we wrote off from our electric-light plant \$1,000; in 1893, from furniture account, \$3,500 and from the steam-launch \$500. At the end of the year we paid off \$5,000 from our debt, and when these accounts are adopted we will pay off another \$5,000, making \$15,000 in three years, in addition to the trivial amounts set down to the debit of the profit and loss account. He might add that they had expended upon their property as much as they had expended in dividends, and, what was more, most of this was written off, so that their property was infinitely more valuable than when they entered into possession. The \$10,000 which they were carrying forward that day would, in all probability, be written off when the accounts for the next half-year were made up.

Mr. Howie—Thank you, your explanation has made everything sufficiently clear. But I should like to know how it is that our liability is set down at \$35,000 instead of \$30,000.

The CHAIRMAN—We cannot apply the \$5,000 to reducing that sum until these accounts are passed. When the next accounts are presented in January, the liability will stand at \$30,000.

Mr. Howie—That being the case, I beg to move the adoption of the report and accounts.

Mr. W. MANN—I second.—Carried.

The CHAIRMAN—Two directors, Mr. Martin and myself, retire by rotation, but offer ourselves for re-election.

Mr. Howie—I have much pleasure in moving the re-election of Messrs. Lowder and Martin as directors.

Mr. MANN seconded, and the motion was carried.

The CHAIRMAN—I have much pleasure in suggesting the reappointment of Mr. Keil as our auditor.

The resolution was proposed by Mr. Howie, seconded by Mr. MANN, and carried.

The CHAIRMAN—There is only one other item of business before us—it is the settling of the Directors' fees for the coming year.

Mr. Howie—I beg to propose that the Directors' fees for the coming year be the same as heretofore, and in so doing propose a hearty vote of thanks to the directors and manager for their services during the past half year.

Mr. MANN seconded, and the meeting adjourned.

Bacteria, diatoms, spores, and certain tiny seeds are among the living organisms that have been frozen by Pictet in solidifying air, at about 323 deg. below zero, Fahr. All have shown their usual vitality after thawing.

THE COAL SUPPLY OF JAPAN.

The most important question regarding Japan's coal industry, is whether the collieries of the country can continuously supply the increasing demand for coal. This problem can only be solved after comparing the demand with the supply, and a careful study of the mines themselves. My intention is to give detailed accounts for this comparison in the present article.

The following table represents the annual production of coal in the whole country since 1888:—

	Production in tons.	Annual increment in tons.
1888.....	2,022,968	275,672
1889.....	2,388,614	365,646
1890.....	2,608,284	219,670
1891.....	3,037,288	429,000
1892.....	3,175,670	138,382
Mean increment		285,675

As seen from the above table, the production of coal in this country has increased annually; the average of the given five years shows an increase of as much as 285,675 tons. The sudden increment for 1891 may be accounted as the result of the "Coal fever" prevailing in 1889 and 1890, and this unusual increase may be clearly understood from the apparent decrease of the following year.

The consumption of coal may be divided under two heads; viz., for home consumption and export.

(1).—The export of coal was as follows:—

	Amount exported in tons.	Annual increment in tons.
1888.....	975,290	79,355
1889.....	1,053,822	78,532
1890.....	1,214,572	160,750
1891.....	1,239,821	25,249
1892.....	1,299,351	59,531
Mean increment		78,883.4

Thus the export has increased, on the average, from 1888 to 1892 as much as 78,883.4 tons annually.

(2).—The amount and purposes of consumption for inland use was as follows:—

CONSUMPTION OF COAL.			
Steamers.	Annual increment.	Locomotives.	Annual increment.
1886.....	237,130	18,350	
1887.....	251,982	19,768	
1888.....	288,998	26,918	
1889.....	392,943	44,023	
1890.....	460,641	68,825	
1891.....	518,137	98,595	
Mean increment		52,201.4	
Other Industries.			
Annual increment.	Annual increment.	Annual increment.	Annual increment.
1886.....	146,569	17,235	
1887.....	141,818	17,355	
1888.....	171,105	122,205	
1889.....	171,105	81,442	
1890.....	24,802	56,639	
1891.....	29,370	88,128	
Mean increment	16,049	73,129.8	
Salt-pans.			
Annual increment.	Total.	Annual increment.	Annual increment.
1886.....	455,794	857,848	
1887.....	394,939	830,493	27,350
1888.....	383,779	1,085,704	255,211
1889.....	358,872	1,163,289	77,585
1890.....	476,698	1,430,252	266,963
1891.....	454,853	1,583,803	153,551
Mean increment	188.2	145,192	

Although the total consumption in 1887 was less than in the preceding year, the consequence of a considerable increase on the part of salt-boiling the condition of the weather being unfavorable in that year, the annual increment in the total consumption in the following four years was on the average more than 188,000 tons. The consumption for steamers, locomotives, and for other industries increased considerably year after year, while that for salt boiling varied by small amounts according to the demand for food or bad weather, the latter therefore does not show, as a whole, any increment, because there is no considerable change in the demand for salt. In whichever way we regard the matter, the annual demand for coal, both inland and abroad, increased as much as 2,436,638 tons on an average for the last four years. This may be clearly seen from the following table:—

	Export in tons.	Inland Use in tons.	Total.	Annual increment.
1887.....	975,290	7,085,704	2,060,994	
1889.....	1,053,822	1,163,289	2,217,111	156,117
1890.....	1,214,572	1,430,252	2,644,824	427,713
1891.....	1,239,821	1,583,803	2,823,624	178,800
1892.....	1,299,351			
Mean			2,436,638	254,210

Now let us compare the total demand (consumption) and supply (production) in each year since 1888:—

	Supply in tons.	Demand in tons.	Increase or Decrease
1888.....	2,022,968	2,060,994	38,026
1889.....	2,388,614	2,217,111	+171,503
1890.....	2,608,284	2,644,824	36,540
1891.....	3,037,288	2,823,624	+213,664

From this table it is clear that both the demand and supply since 1888 have increased successively. Although in the two years 1888 and 1890, the demand had exceeded the production, the latter greatly exceeded the former in the two years 1889 and 1891. After all, the supply of coal seems, on the average, since 1888 to have exceeded the demand.

With these considerations, we have to take up the further questions:—

(1)—Is there any reason that the demand for coal should increase more and more in future?

(2)—Can the production of coal continually increase with the rate of increased demand?

On examining whether the demand for coal can increase in future, or not, we see, first of all that the export is inclined to increase year after year. Moreover, there is an intention to open a trade for coal with India. The idea of exporting Hokkaido coal to America has already been considered by both nations and by others, and it is said that 100,000 tons of the coal have been produced this year. When the central railway of Siberia is completed, it will surely result in an increase in the export for steamers and locomotives. For this reason I feel assured that the export of coal will gradually increase in future.

Examining then the conditions relating to the internal demand, we see that the extension of railways, increase of steamers, erection of factories of various kinds, have never been so marked as at present. Beside those already at work there are very many industrial schemes which will be carried out by and by. Among these are the following:

- (1)—Extension of railways.
- (2)—Increase of men of war and other ships.
- (3)—Erection of factories of various kinds and opening of industries, especially for Iron and Steel.
- (4)—Extension of machine and ship building works.

(5)—Development of Industries like glass manufactories and other chemical industries.

(6)—Gradual decrease in the supply of wood and charcoal, which must then be replaced by coal. Indeed, the consumption in these ways will amount to an enormous quantity, and the time when the inland demand will reach 3,000,000 tons annually is not far distant. Some examples of work already proposed indicate an increase of our future coal demand. For Iron works an annually production of 100,000 tons of coal would be required. In these ways the internal demand for coal must increase enormously.

Next we have to examine the source of supply in this country. Although there are many coal fields in Japan, only those of Kiushiu and Hokkaido are worthy of considerations, as a source from which to obtain a large supply. In Honshu we have an anthracite coal field, and a brown coal at Atsuta, in Nagato, the Shiramizu coal field extending over Iwaki and Hitachi, Aburatsubo coal field in Wuzen, &c., are fully well known; but the use of anthracite is somewhat limited, while the other coals, being inferior in quality, can scarcely cover the demand of the neighborhood. At present the number of sets for coal mining is 1,434, extending over 110,834,148 *tsubo* (1 *tsubo*=6 *shaku* square) in area, which amounts to 550,000,000 tons of coal, if the average reserve of the coal fields be estimated at a rate of 5 tons per *tsubo*. But this cannot be accurate, since the extension of the mining sets does not represent the proper area of the coal deposits. I should say the above figures are too great and are an outcome of the popular excitement for coal mining since 1889. Consequently such large areas can by no means denote the quantity of coal.

From the numerous coal mines in the whole country, there are only forty-nine which can produce annually over 10,000 tons of coal; the total production of coal from these mines in 1891 amounted to 2,275,617 tons or 74 per cent. of the whole production of the country in the same year, and in 1892 their out-put amounted to 2,509,055 tons or 79 per cent. of the whole production in that year.

In the following table, the collieries having the capacity of producing annually 30,000 tons of coal is tabulated:—

Collieries.	Province.	Production in tons.	1891.	1892.
Muke.....	Chikugo	593,259	481,191	
Takashima.....	Hizen	100,717	181,904	
Horonai.....	Isikari	144,038	134,689	
Nakanoshima.....	Hizen	138,960	160,819	
Namazuta.....	Chikuzen	87,169	123,624	
Otsuji.....	Chikuzen	74,930	72,972	
Shachi.....	Isikari	61,528	107,731

Daifu.....	Chikuzen and Buzen	56,092	48,285	
Shinnawa.....	Chikuzen	48,613	125,474	
Minezi.....	Buzen	46,600	59,050	
Shikanoo.....	Chikuzen	45,148	5,913	

Kushunbetsu.....	Isikari	43,726	50,416
Dainouuta.....	Chikuzen	36,096	50,472
Katsuno.....	Chikuzen	35,408	43,431
Ariho.....	Nagato	33,672	—
Takao.....	Chikuzen	30,393	38,684
Hashima.....	Hizen	30,201	51,213
Hoshii (Hokoku).....	—	12,827	50,393
Sasanotaira.....	Iwaki	—	34,264

NOTE.—The total sum should be 2,275,617 tons, the difference of this compared with the total number of the table has been caused by the rough reduction of different weights in tons.

As seen from this table, nearly the whole amount of coal required by the public is produced from the above forty-nine mines. From the mines which were opened since 1891 and therefore not given in this table, only those like Yubari in Hokkaido, Kauoda in Buzen, Matabe in Hizen, &c., are taken into consideration. While among the mines in this table, Nakanoshima has stopped work this year; Takashima has lost the greater part of its productive power. Most of the coal mines were started between 1887 and 1890, the period during which the so-called "coal fever" prevailed in the country. All deposits of coal which promise profit were opened since that time, while those which were hopeless of yielding any profit have been left unworked even up to the present. Considering then the real conditions of the coal sets mentioned, we find:—

- 1.—Those which contain no trace of coal.
- 2.—Coals of inferior quality which have been given up as unprofitable.
- 3.—Deposits too thin to be worked.
- 4.—Deposits where mining is stopped by floods.
- 5.—Deposits where working can no longer be continued in consequence of defective mining operations.
- 6.—Deposits where mining is stopped by faults or other geological changes in the seams.

For these reasons, the great number of mining sets and the large extension of the area composing these sets can by no means be a standard by which to determine the supply of coal.

In estimating the future supply of coal, the conditions of each coal field must be examined separately. There are only two or three collieries where the coal reserve has been hitherto calculated. The coal reserve of other collieries must be estimated from their present condition and the nature of the deposit.

THE COAL-FIELDS IN KIUSHIU.

(1)—MIKE COAL FIELD:—The area of this field is very large, extending over more than 3,000 *cho* (9,000,000 *tsubo*). There are two workable coal beds, 6 feet and 8 feet in thickness. The amount of coal reserve in these beds is estimated at more than 150,000,000 tons, all beds which are situated within 1,500 feet below the surface being included. This is the largest coal field in Japan, and as all mining arrangements are in good order, it is the most hopeful of any. The quality of coal is, however, too bituminous. It is rather inconvenient for fire grates of ordinary construction. The sulphur it contains is also remarkable, which makes it unfit for many iron works. The most difficult obstacle in working this coal field is the drainage. The overlying strata are composed of gravels and sand. The quantity of water percolating through the porous hanging wall of the whole district is enormous. But when the sinking of the drainage shaft at Katsutate, with pumping machinery is completed, the drainage of this deposit will no longer be difficult. At present this colliery can produce 700,000 tons per year. However, it is rather questionable whether it can continue this large production for many years.

(2)—TAKASHIMA COAL FIELD:—The coal seams found in the islets situated at the entrance to Nagasaki Bay, i.e., Takashima, Hashima, and Nakanoshima, are very thick and produce coal of the best quality. Their extent, however, is very limited. While Takashima has been exhausted except a portion of Hiakuma, Nakanoshima has been drowned by the sudden breaking in of the sea; and the mines worked at present are therefore Hashima and Hiakuma in Takashima only. The production of these two mines is about 100,000 tons per year. Even this quantity will not continue for long.

(3)—HIZEN COAL FIELD:—Except Takashima, there is scarcely a coal field in Hizen promising any hope. The colliery in Matsushima in spite of its reserve of over 5,000,000 tons of coal, has already been abandoned on account of flooding, although 200,000 *yen* had been expended in the works. At Karatsu, in the Matsushima county, there are two workable coal seams, 3 feet and 8 feet. But as the seams are dislocated by many faults and broken up into small divisions, only a few are worked and even this is done by special mining operations. For this reason only Kishiyama and Matabe are known as good mines in this district. These two mines can pro-

duce some 100,000 tons yearly. Takuhara colliery in the same district will also produce 50,000 tons. The collieries in Kineshima will considerably increase their out-put in future, although insignificant at present. Beside those mentioned there are very many coal fields in Higashimatsu-ura, Nishimatsu-ura, Kitamatsu-ura, Kineshima, Koshiro, Higashihiki, Nishihiki, &c., but almost all of them promise but little. About 30,000 tons of coal produced in these collieries is at present exported from Nagasaki by Chinese merchants as "Mixed Coal," to meet the demands of the total production of inland Chinese, while the remaining portion of is mostly utilized for salt making and other industries. Only the coal from Karatsu is generally good. Thus coal from many small collieries in Karatsu are mixed together, and partly exported and partly used in the country for locomotives, steamers, &c.

(4)—AMAKUSA COAL FIELDS:—The coal seam found in this island measures 3-4 feet in thickness. The quality of the coal is very good. The extent, however, is very limited, in consequence of which larger production than at present can by no means be expected.

(5)—CHIKUHO COAL FIELD:—Chikuho coal field, in the Prefecture of Fukuoka, is very extensive, and as the greatest part of it was reserved as the "provision coal field for the navy" up to 1889, it is now one of the most promising. But according to the report of Mr. Suzuki, Geologist, at the Office of the Geological Survey, the total coal reserve of this field may amount to 85,000,000 tons. Extracting, therefore, 1,500,000 tons annually, it must be exhausted in 50 years. The principal beds of coal constituting this coal field are as follows:—One starting from Wusui and Yamada districts in Kamagori, embraces, westward, Takakuma, Wurunoo, Takao, and other collieries, extends toward the north, and passes through Nanazuta, Shakanoo, Katsuno, Tsuruta, &c., and many collieries in Nishikawa district, till it reaches Noma in Ogagori. The conditions of the coal seams are different in some districts. In Yamada and Wusui the thickness of the coal seam is about 11 feet and the quality excellent. But one portion of the coal is frequently changed into the so-called *Senseki* (a kind of dry coal which is probably produced from the ordinary coal by volcanic action). In consequence of inconvenient transportation, the mines are not yet opened. In Takao, situated northwest of the latter, there is a seam of 5 feet. The coal is good in quality and possesses the character of caking and making coke. The mining arrangements are not yet completed. This will undoubtedly be one of the best collieries. Separated by a river from Takao, there are the Tadakuma, Yamano, Arit, Namaguta fields, side by side, while on the opposite side of the river there are Shakanoo, Katsuno, Sugemuta, Ono-ura, and many other collieries. From these collieries Namaguta will annually produce some 100,000 tons in future as at present, since the quality of coal is excellent and arrangements for mining have been completed. In Tadakuma coal mine there are two seams, 5 feet and 3 feet. The quality of the coal is not so uniform as at Namaguta. But a part of the 5-foot seam produces good coal. At present the annual production of this colliery is 20,000 to 30,000 tons. But an increase is hoped for in the future. The coal seam of Sakano is also rather unpromising, as it has been worked for more than ten years. In Katsuno, in Kurate, there are two workable seams, 5 feet and 3 feet. The quality of the coal is of medium class. One part of the seam is changed into *Senseki*, while another part is dislocated by faults. Both Sugemuta and Ono-ura possess two seams similar to those of Katsuno. The upper three feet seam produces good coal.

The second bed starts at the north-west corner of Kama, close to Tagawa, and passing through many collieries such as Seita, Gotoku, Shitasakai, Naokata, Shinmiu, Wueki, Nagayama, &c., it extends northward parallel to the bed first mentioned. Two seams, 3 feet and 5 feet, belonging to this series are workable, but the quality of the coal is of medium class, and becomes gradually inferior as we go northward along the extension of the bed. Collieries which have been opened for many years on a noticeable scale are Seita, Shitasakai, and Shinmiu. These collieries, however, will be unable to produce a larger amount in future than at present, except perhaps Shinmiu, which is working Wuyeki and Nakayama connectedly and is therefore promising.

Parallel to this second bed, especially on the east side of the Onaga river, there is a coal field called the Onaga coal bed. This bed is composed of three seams. The first five feet extends through Oginji, Muposhi, Kakibu, while two other seams, three feet and two-and-a-half feet in thick-

ness, extend through Kozuki, Nakama, Iwase, Yoshida, Takasu, Yamaga, &c. The coal from this bed is rather inferior in quality, and except such as produced in Atsugi, is principally consumed in salt making. The coal from Otsuji colliery, though similarly inferior, is largely exported in consequence of its being produced in larger blocks, which is very convenient for ordinary use. The next field is called the Tagawa coal bed. It begins at the village of Soyeda in Tagawa, from whence it extends toward the north passing through Ihara, Maki, Kawasaki, Ikejiri, Gotoji, Ikari, Ida, Miyao, Kawara, Yugeta, Hoshii, Kanoda, etc. It contains two coal seams, 8 feet and 4 feet. The quality of the coal from this bed is very good, and at the same time the thickness of the seams continues throughout the whole Chikuhō coal field. But part of the coal bed situated south of the Hoshii colliery is mixed with volcanic rocks and is changed into Senseki. In consequence of non-facilities for transportation this coal bed is partly left unworked; work however has been in progress though not on a large scale. The Hoshii colliery is said to be the most promising among all the collieries in the Tagawa country, as it possesses two so-called "Chirimen" seams, 8 feet and 4 feet. Although at present, in consequence of want of proper facilities for getting the coal, the output is not considerable, yet it would not be difficult to obtain an output of 100,000 tons of coal per year if the methods of working be improved.

At the Kanoda colliery, the neighbouring sett to Hoshii, the eight feet seam is now worked, while the four feet seam, which is supposed to lie under the eight feet seam, is as yet undiscovered. Without regard to the extension of the supposed seam, this colliery may be said to be a hopeful one. It is now carrying on unpayable work, but a considerable output will be seen in future.

The Ida colliery, a very extensive sett in this district, has been opened both in the eight feet and four feet seams, but the former seam was soon abandoned in consequence of the occurrence of volcanic dykes, "Senseki," faults, and other obstructions. The latter seam is now only being worked. The quality of coal from this seam is good. Even the eight feet seam would be perhaps workable in some parts. No river suitable for transportation of materials can be found in this district; in consequence of this a large output is not possible until a road is opened. If this be done, the colliery may produce much in the future.

The Akaike colliery contains a seam 5 feet in thickness, and the coal is of high grade. The preparatory works having been nearly finished, the output in the coming years will continue to be as great as it is at present.

Besides the collieries mentioned above there are many mines in the same country, as Nakamineji, Kamatsuga-ura, Ikejiri (Senseki), &c. Although they are now working the eight feet and four feet seams, their extent is very limited and work is on a small scale.

The Ikari colliery (the late "provision coal field of the Navy") situated on the east side of the Ida colliery, and Ota, Kawasaki, Maki, Shinjō, &c., all the latter being to the south of the Yasunaga-toke, have not yet been closely examined. Although some portion of the seam may be Senseki, as doubtless the Tagawa coal bed extends to this district, we may yet expect a large production.

In Kasuga there are three coal seams, especially one seam, 5 feet in thickness, which is worked on the east of Sasakuri, while the other two seams, 3 feet and 4 feet, are opened in the adjacent districts of Nihara. Altogether they produce annually some 100,000 tons. Also there are small seams in Munekata and Kiku; but they are not worthy of especial attention, being of small extent.

In the island of Yayeyama, in the prefecture of Okinawa, a coal seam, 4 feet in thickness, has been opened. The quality of coal is excellent. A few years ago, unfortunately, some disease broke out among the miners, and work was abandoned. Although the sett is not so extensive and consequently not very attractive, yet some profit might be anticipated, if the coal be extracted for exportation to China.

THE COAL FIELDS IN HONSHU.

(6)—THE ATSUGA COAL-FIELD, NAGATO:—This extends through the districts of Funaki, Takachihō, Atsunami, Suze, Yakebe, &c., but its area is limited. There are only two workable seams, 3½ feet and 2½ feet in thickness, and the coal is of inferior quality. Consequently, this coal is only used for salt boiling along the coast of Seto-uchi, and cannot supply the general demand of the whole country.

(7)—KISHIU ANTHRACITE:—Its quality is moderate. There are two thin seams that are workable to 1 foot in thickness, but their area is

very narrow. As its use is restricted to lime and cement manufactures, it does not influence the sale of the ordinary coal.

(8)—THE SHIRAMIZU COAL FIELD:—This field stretches over a wide area along the sea coast of Iwaki and Hitachi. But the 6 feet bed is alone workable, and the coal, though inferior in quality, may be used for many industries. Little water is found in the mine, and the hard solid rock forming the roof requires no timbering. The cost of getting the coal is therefore very low. Consequently, if a railway is constructed and transportation facilities are offered, the yield from this colliery would be sufficient to satisfy the demand of the Kwantō districts; but as the present method of working is too imperfect it can not give a large output unless some appropriate and systematic improvements are made.

(9)—THE ABEURATO COAL FIELD:—This is controlled by the Sado mine. Although the quality is of very low grade, it may be converted into coke when dressed. It is thus worked only at the time when the price of Hokkaido or Kiushiu coal becomes high. At present it is abandoned, and it is not expected to revive.

THE COAL YIELDS OF HOKKAIDO.

THE ISHIKARI COAL FIELD:—Many parts of Hokkaido yield coal. According to the report of Mr. Lyman, an American Geologist, who formerly explored the coal fields of Hokkaido, it seems that every coal field there embraces a considerable stock of coal, but since that time geologists having made more accurate surveys found that the coal fields, except the Ishikari, do not contain so much as Mr. Lyman expected. As great irregularities prevail in other deposits of coal in Hokkaido, and the transportation facilities are few, the only source for the future supply of coal towards which we can look will be the Ishikari coal field.

(11)—THE YUBARI COAL FIELD:—There are two workable beds of good coal, measuring 14.6 feet and 4 feet in thickness. The coal reserve above the water level is calculated to be more than 6,000,000 tons. This is one of the best coal fields in the country. If worked by some suitable method it will easily yield 300,000 tons of coal per year.

(12)—THE HORONAI COAL FIELD:—There are four workable seams of good coal, 3 to 4 feet in thickness. Although the colliery has been opened for the last few years, and more than 1,000,000 tons of coal have been taken out, yet there remains reserve above the water level is calculated at 3,000,000 tons. Hence the future out-put per year will be at least 70,000 to 80,000 tons.

(13)—THE SORACHI COAL FIELD:—This is divided into two separate setts, Kamiwuta-wusunai and Shinowuta-wusunai. The quality of coal is excellent, and fit for coking. There are four workable seams, 3 to 5 feet in thickness. Although this field has been worked during the last few years, yet the remaining reserve above the water level is estimated at more than 5,700,000 tons. The seams are, however, interrupted by dislocations, and the production of "small" is considerable.

(14)—THE IKUSHINBETSU COAL FIELD:—In this field, the seams in all respects closely resemble the Sorachi field, especially in the irregular dislocations which occur. The extension of the sett is limited. No large production can be expected from this mine in future.

In addition to those mentioned above some fields in the vicinity of Iwanai, i.e. Chinu, &c., are now worked, but their extent is narrow.

As a result of investigations hitherto made in Hokkaido, though not yet completed, we see that there is no probability of finding a large stock of coal; and as there is no facility for transportation the opening of any new colliery is almost hopeless.

The demand upon our coal is increasing year after year, and must be anticipated to grow at a greater rate than during the past. To consider how the source of supply can meet this increasing demand is a matter for anxiety. Since the year 1889, capital has been freely invested in the coal industry as a result of the "ardent fever for coal mining," and any coal fields, where more or less transportation facilities have been found, were opened within the last few years. From 1888 to 1891, the increase in the total annual production rose to more than 1,000,000 tons, an amount which far exceeded the demand, the result being a fall in prices. The decrease in price was assisted by large collieries endeavouring to increase their output. This they did to reduce the expenses, while small collieries were compelled to abandon their work. At present most of the existing collieries have reached the maximum point of their productive power. Finally, we come to the conclusion that within the coming ten years the annual production of 3,000,000 tons will be an adequate estimate. If other new collieries be opened, it may amount

to 4,000,000 tons. But even these amounts could not continue for ever.

Though unsystematic and irregular working is rigorously prohibited, and setts are worked most carefully, the working expenses increase year after year, and the production will necessarily become less and less. It would, therefore come about that after ten years it will be difficult to get the annual out-put of 3,000,000 tons. Indeed the life of some collieries must be shortened within a few years, if owners do not pay attention to the coal supply, and do not keep the production low, but only consider temporary profits which are obtained by random methods of extraction.

To keep the source of supply as steady and permanent as possible, the following rules must be adopted:—

- 1.—To prohibit blind digging and to improve the working methods.
- 2.—To protect the mineral wealth by mining on as large and complete a scale as possible, uniting many separate setts, and working one continuous coal seam in one sett.
- 3.—To prohibit the investment of insufficient capital on temporary works, but to make enterprise more complete by having adequate capital.
- 4.—To construct railways for transportation, and to open yet unworked collieries.

EXPLANATIONS.

(1).—If worked unsystematically, with the object of large production, as at present, even some of the best collieries will be exhausted in a few years. Therefore great improvements must be made in this matter.

(2).—It is most disadvantageous with respect to the protection of mineral wealth, that a continuous coal field is separated into small setts, which are worked separately, each with small capital. At most, only a small portion of the existing coal could be got. To obviate this, such small setts should be united.

(3).—The result of temporary working with inadequate capital on a good coal field will be similar to that described in the last section. It should be prohibited.

(4).—Coal seams which are left unworked on account of the inconvenience of transportation, should be opened with proper facilities for bondage.

In Japan, there are many good and promising coal fields yet unworked. In Kiushiu, the coal fields of Wusuye and Yamada in Kamagori, Chikuzen, and Nanbu in Tagawagori, Buzen, are the principal. To open these coal fields, the first thing is to explore the seams to determine the relation between volcanic rocks and the seams, to select proper ground for opening the mine, and as to the transportation, to prolong the Chikuhō Kogio Railway line for collieries in Kamagori districts; either to prolong the railway just mentioned, or to construct, as now intended, a special railway for coal between Kamagori and Gioji. This will be convenient for the latter districts because there are no other collieries along the existing railway line. If these two coal fields were opened, then an annual production of 400,000 to 500,000 tons of coal will not be difficult.

In Honshiu, the Shiramizu coal field extends widely in connection with the colliery now at work. If therefore a railway be constructed, as the Nippon Tetsudō Kaisha intends, through this district, an annual production of 200,000 tons will be easily obtained from this field. But Shiramizu coal is not good in quality. It is less fitted for steamers and locomotives, its application being restricted for use in workshops in Kwantō.

The second means to keep the source of supply of coal as steady and permanent as possible, is for consumers to reduce their consumption as much as possible.

In the past, our industries did not rely upon coal to obtain their motive power. As seen from the following report of 1891, steam power far exceeds water power in our industries (except for steamers and locomotives).

COMPARISON OF STEAM AND WATER POWER (1891.)

	Fabrics	Mining.	Total.
Steam power	25,998.24	11,559.54	37,557.74
Water power	3,060.64	2,562.94	5,623.54

That is, steam power for fabrics is 25,998 H.P., while water is only 3,060 H.P. For mining, notwithstanding that it is often possible to employ water power, the latter only amounts to 2,563 H.P., while steam power is 11,559 H.P. Thus the total water power in these two cases is only 5,623 H.P.

As Japan possesses many mountain streams, it would not be difficult to make use of them. How much labour and expense were incurred for the water-works of Kyoto is generally known. But its power is only used for electric machines. The reason why water power in Japan is insignificant, is not that it is difficult to get, but that it is not so easy to obtain it. Great attention

Next to select and employ steam engines of such construction that as much coal is economized as possible, is also an important point for consumers. Then the relation between forestry and the coal industry must be discussed. By virtue of richness in forests, there are many industries established in Japan which are supported by wood and charcoal. It is remarkable that Japanese houses require a considerably larger amount of wood as fuel, than that of foreigners.

TABLE SHOWING CONSUMPTION OF WOOD FUEL IN 1891.

Amount for.	Tons.*	Tons.
Mining	1,602,333	4,807,000
Silk manufactories.	623,833	1,871,500
Tea manufactories.	209,300	629,700
Domestic use	13,251,583	39,755,750
Total	15,687,759	47,063,950

* Tons = 6 x 6 x 4 = 24 cubic feet.

As seen from this table, the total consumption of wood fuel amounts to 47,063,950 tons, which is a considerable quantity. We judge from the past that the forest decrease and the price of wood rises more and more, or at least the forest never increases while the price of wood never decreases. Therefore, if sufficient care is not taken of the forests, a deficiency of wood fuel must follow, which should be compensated for by coal. If this be the case, coal must supply at least some part of the 47,000,000 tons of wood, in consequence of which the demand of coal will be extraordinarily increased. But as already stated our stock of coal is by no means unlimited. Therefore, unless great attention is paid to the supply of wood, the industries supported by such fuel must decline. For instance in some mines in the prefecture of Akita, it is customary to look to the supply of wood sooner than to the yield of ore. This is done to make an estimate as to next year's expenses. Thus the most important points for the future welfare of industries supported by wood fuel are to cultivate the forests to settle the law of "Cyclic lawing," and in this way keep the supply of wooden fuel steady.

As has already been stated, the source of supply of our coal is by no means so great. On the contrary, it is rather scanty. Therefore the means for steadying this source must be discussed. To do this, our Government should have skilful geologists investigate the coal fields in every district, determine their extent and the geological conditions, and at the same time make mining engineers inspect the method of extracting coal and strictly prohibit unsystematic and irregular working. The lessors should control them, and not be induced to seek temporary profit and not to cause permanent loss not only for himself but also for the whole country. Henceforth any one who enters upon an industry should take advantage of water-power as much as he can, while those who are engaged in an industry supported by wood fuel should always nurture the forests and discuss the question how to render the source of supply of their fuel steady.

Although no one could estimate the true quantity of coal reserve in Japan, owing to the incompleteness of surveys hitherto made, I conclude that 3,000,000 to 4,000,000 tons of coal might be produced for years from collieries both unworked and in work at present. If, however the present custom of unsystematic and irregular working continues, we shall see a time within ten years, when the coal will scarcely supply Japan's demands, and not only it will be insufficient for export, but some amount of Chinese coal would be imported, if the Chinese coalfields should be opened.

WATER SPORTS AT YOKOHAMA.

The swimming races and diving competitions of the Yokohama Amateur Rowing Club took place on Thursday evening, having been postponed for twenty-four hours to meet the exigencies of the outgoing American Mail. The weather was all that could be desired, so far as the spectators were concerned, but the slight breeze raised a choppy sea upon the outgoing tide which interfered to some extent with the competitors. Except in one event no times were taken, which is somewhat a pity, for the quarter mile was a splendid race, gamely contested from start to finish. The long dive, as usual, produced several unexpected finishes, but Campbell came up to expectation by being the last to appear, and that in a direction which the set of the tide and the wind had discounted. He was under about 50 secs. and covered fully a distance of 75 yards. The running headers produced nothing extraordinary, and to some folks' way of thinking were beneath the average of some previous years. The Committee in charge of affairs were: Messrs. J. Rickett, Captain, F. J. Hall, hon. sec. F. H. Hooper, D. McNeill, P. S. Bent, hon. treas. C. K.-M. Martin, and Digby.

duties were divided as follows:—Judges of Diving—Dr. Wheeler, G. H. Seidmore, and C. K. Martin; Starters, F. H. Hooper and F. J. Hall; Judge, F. J. Hall. The events were as follow:—

RUNNING HEADERS OFF TOP OF BARGE.

W. W. Campbell, 1; P. S. Bent, 2; H. F. Arthur, 3; H. S. Goddard, 0; W. Goddard, 0.

Seven entered, but two retired. The highest possible points were 60, which were given for take off, entrance, and general elegance. The first dives were poor, but each man improved on the second attempt, Campbell remarkably so. The aggregate points of the first three were:—W. W. Campbell, 45; P. S. Bent, 41; H. F. Arthur, 38.

100 YARDS—(Open).

J. Eyton, 1; H. S. Goddard, 2; P. S. Bent, 0; W. W. Campbell, 0.

Six entries, but only four started. Eyton colared the lead at the start and was never approached. Goddard easily took second place, Campbell and Bent coming in at their ease. Time, 1m. 17secs.

RUNNING HEADERS OFF SPRING BOARD.

A. L. Mottu, 1; H. S. Goddard, 2; P. S. Bent, 3; H. F. Arthur, 0; W. W. Campbell, 0; W. Goddard, 0.

Eight entries, six starters. This competition was not very exciting, though the average points gained were high. Mottu obtained 54, H. S. Goddard 51, and Bent 47.

QUARTER-MILE—(Handicap).

R. C. Ross, 25 secs., 1; K. F. Crawford, scratch, 2; H. R. Mair, 30 secs., 3; A. L. Mottu, 5 secs., 0; H. Goddard, 45 secs., 0; P. E. Webb, 45 secs., 0; W. Goddard, 30 secs., 0.

Ten entries, seven starters. The race was from the Barge to the 100-yards pontoon, touch the pontoon, then back to Barge, which was rounded on the starboard hand, back to pontoon and return to Barge. H. Goddard was the first to touch the pontoon, with Ross close behind and Crawford third. Coming down towards the Barge, the leaders gradually drew away, Crawford getting into second place, with Mair a few feet behind, and Ross leading. As the Barge was rounded Crawford was seen to be slightly ahead, with Ross pressing him hard. Four competitors dropped out at this point, leaving Crawford, Ross, Mair, and Mottu still in. Ross soon drew ahead of Crawford and maintained the advantage at the turn. Nearing the Barge, Mair sputed and gained on Crawford somewhat, but the positions remained unchanged at the close. Ross winning a well contested race by about three yards, a bare length separating second and third. No time was taken.

STANDING HEADERS OFF TOP OF BARGE.

H. S. Goddard, 1; A. L. Mottu, 2; W. W. Campbell, 3; H. F. Arthur, 0; P. S. Bent, 0; P. E. Webb, 0.

Six entries. This competition was very close, three points only separating first and second. Goddard obtained 50, Mottu, 49, and Campbell, 47.

LONG DIVE.

W. W. Campbell, 1; H. S. Goddard, 2; H. F. Arthur, 0; W. R. H. Carew, 0.

Carew was the first to appear, then Arthur, and then Goddard, Campbell not rising until 50 secs. had elapsed. He covered quite 75 yards. Goddard was only five seconds behind.

100 YARDS—(OPEN) NON-WINNERS IN JAPAN.

H. Goddard, 1; R. Boyes and J. B. Gibbs, jun., dead heat; H. F. Arthur, 3.

Six entries, four starters. Goddard had the race in hand from the commencement and won easily. A desperate struggle for second place resulted in a dead heat.

Dean Hole thus delivered himself recently on horse-racing:—"Racing will not harm a man any more than a rubber of whist. I would subscribe to races, and go to view them over the flat or the fences, and rejoice to see working men on a Bank Holiday enjoy the sport, if I could be assured that the best horse would win, that the knaves and hailots would be warned off the course, and that drunken men would be taken away and whipped. Neither the race nor the rubber is hurtful, until they become secondary and subservient to that love of money which is the root of all evil, and has nowhere a more abundant crop of its rank, vile produce than on our English Turf. A man who loves racing for its own sake may be as much *sans peur et sans reproche*—integer *vita scelerisque parus* as the best of preachers, but as soon as the greed of gain has the mastery, and he loves the clink of gold and the taste of the crisp bank-note more than he cares for the horses, and the horse and the sport, he begins to deteriorate."

THE DREAM OF A SUMMER-DAY.

BY LAFADIO HEARN.*

The hotel seemed to me a paradise, and the maids thereof celestial beings. This was because I had just fled away from one of the Open Ports, where I had ventured to seek comfort in a European hotel, supplied with all "modern improvements." To find myself at ease once more in a yukata, seated upon cool, soft matting, waited upon by sweet-voiced girls, and surrounded by things of beauty, was therefore like a redemption from all the sorrows of the nineteenth century. Bamboo-shoots and lotus-bulbs were given me for breakfast, and a fan from heaven for a keepsake. The design upon that fan represented only the white rushing burst of one great wave on a beach, and sea-birds shooting in exultation through the blue overhead. But to behold it was worth all the trouble of the journey. It was a glory of light, a thunder of motion, a triumph of sea wind,—all in one. It made me want to shout when I looked at it.

Between the cedar balcony-pillars I could see the course of the pretty grey town following the shore-sweep,—and yellow lazy junks asleep at anchor,—and the opening of the bay between enormous green cliffs,—and beyond it the blaze of Summer to the horizon. In that horizon there were mountain-shapes faint as old memories. And all things but the grey town, and the yellow junks, and the green cliffs, were blue.

Then a voice softly toned as a wind-bell began to tinkle words of courtesy into my reverie, and broke it; and I perceived that the mistress of the palace had come to thank me for the *chadai*.*—and I prostrated myself before her. She was very young, and more than pleasant to look upon,—like the moth-maidens, like the butterfly-women, of Kunisada. And I thought at once of death;—for the beautiful is sometimes a sorrow of anticipation.

She asked whither I honourably intended to go, that she might order a kuruma for me. And I made answer:—

"To Kumamoto. But the name of your house I much wish to know, that I may always remember it."

"My guest-rooms," she said, "are augustly insignificant, and all my maidens honorably rude. But the house is called the House of Urashima."

And now I go to order a kuruma."

The music of her voice passed; and I felt enchantment falling all about me,—like the thrilling of a ghostly web. For the name was the name of the story of a song that bewitches men.

11.

Once you hear the story you will never be able to forget it. Every summer when I find myself on the coast,—especially of very soft still days,—it haunts me most persistently. There are many native versions of it which have been the inspiration for countless works of art. But the most impressive and the most ancient is found in the *Manyōshū*, a collection of poems dating from the fifth to the ninth century. From this ancient version the great scholar Aston translated it into prose, and the great scholar Chamberlain into both prose and verse. But for English readers I think the most charming form of it is Chamberlain's version written for children, in the *Japanese Fairy-Tale Series*,—because of the delicious coloured pictures by native artists. With that little book before me, I shall try to tell the legend over again, in my own words.

Fourteen hundred and sixteen years ago, the fisherboy Urashima Taro left the shore of Suminoye in his boat.

Summer-days were then as now, all drowsy and tender-blue, with only some light, pure white clouds hanging over the mirror of the sea. Then, too, were the hills the same,—far blue soft shapes melting into the blue sky. And the winds were lazy.

And presently the boy, also lazy, let his boat drift as he fished. It was a queer boat, unpainted and rudderless, of a shape you probably never saw. But still, after fourteen hundred years, there are such boats to be seen in front of the ancient fishing-hamlets of the coast of the Sea of Japan.

After long waiting, Urashima caught something, and drew it up to him. But he found it was only a tortoise.

Now a tortoise is sacred to the Dragon-God of the Sea, and the period of its natural life is a thousand—some say, ten thousand—years. So that to kill it is very wrong. The boy gently unfasted the creature from his line, and set it free, with a prayer to the Gods.

But he caught nothing more. And the day was very warm, and sea and air and all things were

* A little gift of money, always made to me by the guest who let his trial.

very, very silent. And a great drowsiness grew upon him,—and he slept in his drifting boat.

Then out of the dreaming of the sea, rose up a beautiful girl,—just as you can see her in the picture to Professor Chamberlain's *Urashima*,—robed in crimson and blue, with long black hair flowing down her back even to her feet, after the fashion of a prince's daughter fourteen hundred years ago.

Gliding over the waters, yet all untouched by them, she came, softly as air; and she stood above the sleeping boy in the boat, and woke him with a light touch, and said:—

—"Do not be surprised. My father, the Dragon-King of the Sea, sent me to you, because of your kind heart. For to-day you set free a tortoise. And now we will go to my father's palace in the island where summer never dies; and I will be your flower-wife if you wish; and we shall live there happily forever."

And Urashima wondered more and more as he looked upon her; for she was more beautiful than any human being, and he could not but love her. Then she took one oar, and he took another, and they rowed away together,—just as you may still see, off the far Western coast, wife and husband rowing together, when the fishing-boats all fit into the evening-gold.

They rowed away softly and swiftly over the silent blue water down into the South,—till they came to the island where summer never dies,—and to the Palace of the Dragon-King of the Sea.

[Here the text of the little book suddenly shrinks away as you read;—and faint blue ripples flood the page,—and beyond them in a fairy horizon you can see the long low soft shore of the island, and peaked roofs rising through evergreen foliage: the roofs of the Sea God's palace—like the palace of the Mikado Yuraku, fourteen hundred and sixteen years ago.]

There strange servitors came to receive them in robes of ceremony—creatures of the Sea, who paid greeting to Urashima as the son-in-law of the Dragon King.

So the Sea God's daughter became the bride of Urashima; and it was a bridal of wondrous splendour; and in the Dragon Palace there was great rejoicing.

And each day for Urashima there were new wonders and new pleasures—wonders of the deepest deep brought up by the servants of the Ocean God;—pleasures of that enchanted land where summer never dies. And so three years passed.

But in spite of all these things, the fisherboy felt always a heaviness at his heart when he thought of his parents waiting alone. So that at last he prayed his bride to let him go home for a little while only, just to say one word to his father and mother,—after which he would hasten back to her.

At these words she began to weep; and for a long time she continued to weep silently. Then she said to him:—"Since you wish to go, of course you must go. I fear your going very much;—I fear we shall never see each other again. But I will give you a little box to take with you. It will help you to come back to me if you will do what I tell you. Do not open it. Above all things do not open it,—no matter what may happen! Because, if you open it, you will never be able to come back, and you will never see me again."

Then she gave him a little lacquered box tied about with a silken cord.—[And that box can be seen unto this day in the temple of Kanegawa, by the sea shore; and the priests there also keep Urashima Taro's fishing-line, and some strange jewels which he brought back with him from the realm of the Dragon-King.]

But Urashima comforted his bride,—and promised her never, never to open the box,—never even to loosen the silken string. Then he passed away through the summer light over the ever-sleeping sea; and the shape of the island where summer never dies faded behind him like a dream; and he saw again before him the blue mountains of Japan, sharpening in the soft white glow of the northern horizon.

Again at last he glided into his native bay;—again he stood upon his beach. But as he looked, there came upon him a great bewilderment,—a weird doubt.

For the place was at once the same, and yet not the same. The cottage of his fathers had disappeared. There was a village; but the shapes of the houses were all strange, and the trees were strange, and the fields, and even the faces of the people. Nearly all remembered landmarks were gone;—the Shinto temple appeared to have been rebuilt in a new place; the woods had vanished from the neighbouring slopes. Only the voice of the little stream flowing through the settlement, and the forms of the mountains were still the same. All else was unfamiliar and new. In vain he tried to find the dwelling of his parents; and the fisher-folk stared wonderingly at him, and

he could not remember having ever seen any of those faces before.

There came along a very old man, leaning on a stick, and Urashima asked him the way to the house of the Urashima family. But the old man looked quite astonished, and made him repeat the question many times, and then cried out:—

"Urashima Taro! Where do you come from that you do not know the story? Urashima Taro!! Why, it is more than four hundred years since he was drowned, and a monument is erected to his memory in the graveyard. The graves of all his people are in that graveyard,—the old graveyard which is not now used any more. Urashima Taro!! How can you be so foolish as to ask where his house is? . . ." And the old man hobbled on, laughing at the simplicity of his questioner.

But Urashima went to the village graveyard,—the old graveyard that was not used any more,—and there he found his own tombstone, and the tombstones of his father and his mother and his kindred, and the tombstones of many others he had known. So old they were, so moss-eaten, that it was very hard to read the names upon them.

Then he knew himself the victim of some strange illusion, and he took his way back to the beach,—always carrying in his hand the box, the gift of the Sea-God's daughter. But what was this illusion? And what could be in that box? Or might not that which was in the box be the cause of the illusion? Doubt mastered faith. Recklessly he broke the promise made to his beloved;—he loosened the silken cord;—he opened the box!

Instantly, without any sound, there burst from it a white cold spectral vapour that rose in air like a summer cloud, and began to drift away swiftly into the South, over the silent sea There was nothing else in the box.

And Urashima then knew that he had destroyed his own happiness,—that he could never again return to his beloved, the daughter of the Ocean King. So that he wept and cried out bitterly in his despair.

Yet for a moment only. In another, he himself was changed. An icy chill shot through all his blood;—his teeth fell out; his face shivered;—his hair turned white as snow; his limbs withered; his strength ebbed;—he sank down lifeless on the sand, crushed by the weight of four hundred winters.

Now in the official annals of the Emperors it is written that "in the twenty-first year of the Mikado Yuraku, the boy Urashima of Midzunoyé, in the district of Yosa, in the province of Tango, a descendant of the divinity Shimanemi, went to Elysium [*Hōrai*] in a fishing-boat." After this there is no more news of Urashima during the reigns of thirty-one emperors and empresses—that is from the fifth until the ninth century. And then the annals announce that "in the second year of Tenchiyō, in the reign of the Mikado Go-Junwa, the boy Urashima returned, and presently departed again, none knew whither."

III.

The fairy-mistress came back to tell me that everything was ready, and tried to lift my valise in her slender hands,—which I prevented her from doing, because it was heavy. Then she laughed, but would not suffer that I should carry it myself, and summoned a sea-creature with Chinese characters upon his back. I made obeisance to her; and she prayed me to remember the unworthy house despite the rudeness of the maidens. "And you will pay the kurumaya," she said, "only seventy-five sen."

Then I slipped into the vehicle; and in a few minutes the little grey town had vanished behind a curve. I was rolling along a white road overlooking the shore. To the right were pale-brown cliffs; to the left only space and sea.

Mile after mile I rolled along that shore, looking always into the infinite light. All was steeped in blue,—a marvellous blue, like that which comes and goes in the heart of a great shell. Glowing blue sea met hollow blue sky in a brightness of electric fusion; and vast blue apparitions,—the mountains of Higo,—angled up through the blaze, like masses of amethyst. What a blue transparency! The universal colour was broken only by the dazzling white of a few high summer clouds, motionlessly curled above one phantom peak in the offing. They threw down upon the water snowy wide tremulous lights. Midges of ships creeping far away seemed to pull long threads after them, the only sharp lines in all that lazy glory. But what divine clouds! White purified spirits of clouds, resting on their way to the beatitude of Nirvana? Or perhaps the mists escaped from Urashima's box a thousand years ago?

* See "The Classical Poetry of the Japanese," by Professor Chamberlain, in *Tribner's Oriental Series*. According to Western chronology, Urashima went fishing in 477 A.D., and returned 1483.

The gnat of the soul of me fitted out into that dream of blue, twist sea and sun,—hummed back to the shore of Suminoye through the luminous ghosts of fourteen hundred summers. Vaguely I felt beneath me the motion of a keel. It was the time of the Mikado Yuraku. And the Daughter of the Dragon-King said tinklingly,—"Now we will go to my father's palace where it is always blue." "Why always blue?" I asked. "Because," she said, "I put all the clouds into the Box." "But I must go home," I answered resolutely. "Then," she said, "you will pay the kurumaya only seventy-five sen."

Wherewith I woke into Doyo, or the Period of Greatest Heat, in the twenty-sixth year of Meiji—and saw proof of the era in a line of telegraph-poles reaching out of sight on the land-side of the way. The kuruma was still fleeing by the shore, before the same blue vision of sky, peak, and sea; but the white clouds were gone, and there were no more cliffs close to the road, but fields of rice and of barley stretching to far-off hills. The telegraph-lines absorbed my attention for a moment, because on the top-wire—and only on the top-wire, hosts of little birds were perched, all with their heads to the road, and nowise disturbed by our coming. They remained quite still, looking down upon us as mere passing phenomena. There were hundreds and hundreds in rank, for miles and miles. And I could not see one having its tail turned to the road. Why they sat thus, and what they were watching or waiting for, I could not guess. At intervals I waved my hat and shouted to startle the ranks. Whereupon a few would rise up fluttering and chipping, and drop back again upon the wire in the same position as before. The vast majority refused to take me seriously.

The sharp rattle of the wheels was drowned by a deep booming; and as we whirled past a village I caught sight of an immense drum under an open shed, beaten by naked men.

"O Kurumaya!" I shouted—"that—what is it?"

He, without stopping, shouted back:—"Everywhere now the same thing is. Much time in rain has not been: So the Gods-to-prayers are made, and drums are beaten."

We flashed through other villages; and I saw and heard more drums of various sizes,—and from hamlets invisible, over miles of parching rice-fields, yet other drums, like echoes, responded.

IV.

Then I began to think about Urashima again. I thought of the pictures and poems and proverbs recording the influence of the legend upon the imagination of a race. I thought of an Izumo dancing-girl I saw at a banquet acting the part of Urashima, with a little lacquered box whence there issued at the tragical minute a mist of Kyoto incense. I thought about the antiquity of the beautiful dance,—and therefore about vanished generations of dancing-girls,—and therefore about dust in the abstract. Which, again, led me to think of dust in the concrete, as beset by the sandals of the kurumaya in whom I was to pay only seventy-five sen. And I wondered how much of it might be old human dust, and whether in the eternal order things the motion of hearts might be of any more consequence than the motion of dust. Then my ancestral morality took alarm; and I tried to persuade myself that a story which had lived for a thousand years, gaining fresher charm with the passing of every century, could only have survived by virtue of some truth in it. But what truth? For the time being I could find no answer to this question.

The heat had become very great; and I cried,—

"O kurumaya! the throat of Selfishness is dry: water desirable is."

He, still running, answered:—"The Village of the Long Beach inside of—not far,—a great gush-water is. There pure august water will be given."

I cried again:—

"O Kurumaya!—those little birds as-for, why this way always facing?"

He, running still more swiftly, responded:—"All birds wind-to facing sit."

I laughed first at my own simplicity; then, at my forgetfulness, remembering I had been told the same thing, somewhere or other, when a boy. Perhaps the mystery of Urashima might also have been created by forgetfulness.

I thought again about Urashima. I saw the Daughter of the Dragon-King waiting vainly in the palace made beautiful for his welcome,—and the pitiless return of the Cloud, announcing what had happened,—and the loving uncouth sea creatures, in their garments of great ceremony, trying to comfort her. But in the real story there was nothing of all this; and the

pity of the people seemed to be all for Urashima. And I began to discourse with myself thus:—

Is it right to pity Urashima at all? Of course he was bewildered by the Gods. But who is not bewildered by the Gods? What is Life itself but a bewilderment? And Urashima in his bewilderment doubted the purpose of the Gods, and opened the box. Then he died without any trouble, and the people built a shrine to him as Urashima Mio-jin. Why, then, so much pity?

Things are quite differently managed in the West. After disobeying Western Gods we have still to remain alive and to learn the height and the breadth and the depth of superlative sorrow. We are not allowed to die quite comfortably just at the best possible time; much less are we suffered to become after death small Gods in our own right. . . . How can we pity the folly of Urashima after he had lived so long alone with visible Gods?

Perhaps the fact that we do may answer the riddle. This pity must be self-pity;—wherefore the legend may be the legend of a myriad souls. The thought of it comes always at a particular time of blue light and soft wind,—and always like an old reproach. It has too intimate relation to a season and the feeling of a season not to be also related to something real in one's life, or in the lives of one's ancestors. But what was that real something? Who was the Daughter of the Dragon King? Where was the Island of unending summer? And what was the cloud in the box?

I cannot answer all those questions. I know this only,—which is not at all new:—

I have memory of a place and a magical time in which the Sun and the Moon were larger and brighter than now. Whether it was of this life or of some life before I cannot tell. But I know the sky was very much more blue, and nearer to the world,—almost as it seems to become above the masts of a steamer steaming into equatorial summer. The Sea was alive, and used to talk,—and the wind made me cry out for joy when it touched me. . . . Once or twice during other years, in divine days living among the peaks, I have dreamed just for a moment that the same wind was blowing,—but it was only a remembrance.

Also in that place the clouds were wonderful, and of colours for which there are no names at all,—colours that used to make me hungry and thirsty. I remember, too, that the days were ever so much longer than these days,—and that every day there were new wonders and new pleasures for me. And all that country and time were softly ruled by One who thought only of ways to make me happy. Sometimes I would refuse to be made happy; and that always caused her pain, although she was divine;—and I remember that I tried very hard to be sorry. When day was done, and there fell the great hush of the light before moonrise, she would tell me stories that made me tingle from head to foot with pleasure. I have never heard any other stories half so beautiful. And when the pleasure became too great, she would sing a weird little song which always brought sleep. At last there came a parting-day; and she wept, and told me of a charm she had given that I must never, never lose, because it would keep me young, and give me power to return. But I never returned. And the years went; and one day I knew that I had lost the charm, and had become ridiculously old.

Y.

The Village of the Long Beach is at the foot of a green cliff near the road, and consists of a dozen thatched cottages clustered about a rocky pool, shaded by pines. The basin overflows with cold water, supplied by a stream that leaps straight from the heart of the cliff,—just as folks imagine that a poem ought to spring from the heart of a poet. It was evidently a favourite halting-place, judging by the number of kuruma and of people resting. There were benches under the trees, and after having allayed thirst, I sat down to smoke and to look at the women washing clothes and the travellers refreshing themselves at the pool,—while my kurumaya stripped, and proceeded to dash buckets of cold water over his body. Then tea was brought me by a young man with a baby on his back; and I tried to play with the baby, which said "Ah, bah!"

Such are the first sounds uttered by a Japanese babe. But they are purely Oriental; and in Romanji should be written *Aba*. And, as an utterance untaught, *Aba* is interesting. It is in Japanese child-speech the word for "goodbye,"—precisely the last we would expect an infant to pronounce on entering into this world of illusion. To whom or to what is the little soul saying goodbye?—to friends in a previous state of existence still freshly remembered?—to comrades of its shadowy journey from nobody-knows-where? Such

theorizing is tolerably safe, from a pious point of view,—since the child can never decide for us. What its thoughts were at that mysterious moment of first speech, it will have forgotten long before it has become able to answer questions.

Unexpectedly, a queer recollection came to me,—resurrected, perhaps, by the sight of the young man with the baby,—perhaps by the song of the water in the cliff: the recollection of a story once told me by a Japanese student:—

Long, long ago there lived somewhere among the mountains of Japan a poor woodcutter and his wife. They were very old, and had no children. Every day the husband went alone to the forest to cut wood, while the wife sat weaving at home.

One day the old man went further into the forest than was his custom, to seek a certain kind of wood; and he suddenly found himself at the edge of a little spring he had never seen before. The water was strangely clear and cold, and he was thirsty; for the day was hot, and he had been working hard. So he doffed his huge straw-hat, knelt down, and took a long drink. That water seemed to refresh him in a most extraordinary way. Then he caught sight of his own face in the spring, and started back. It was certainly his own face, but not at all as he was accustomed to see it in the bronze mirror at home. It was the face of a very young man! He could not believe his eyes. He put up both hands to his head which had been quite bald only a moment before, when he had wiped it with the little blue towel he always carried with him. But now it was covered with thick black hair. And his face had become smooth as a boy's: every wrinkle was gone. At the same moment he discovered himself full of new strength. He stared in astonishment at the limbs that had been so long withered by age: they were now shapely and hard with dense young muscle. Unknowingly he had drunk of the Fountain of Youth; and that draught had transformed him.

First he leaped high and shouted for joy;—then he ran home faster than he had ever run before in his life. When he entered his house his wife was frightened;—because she took him for a stranger; and when he told her the wonder, she could not at once believe him. But after a long time he was able to convince her that the young man she now saw before her was really her husband; and he told her where the spring was, and asked her to go there with him.

Then she said:—"You have become so handsome and so young that you cannot continue to love an old woman;—so I must drink some of that water immediately. But it will never do for both of us to be away from the house at the same time. Do you wait here, while I go." And she ran to the woods all by herself.

She found the spring and knelt down, and began to drink. Oh! how cool and sweet that water was! She drank and drank and drank, and stopped for breath only to begin again.

Her husband waited for her impatiently;—he expected to see her come back changed into a pretty slender girl. But she did not come back at all. He got anxious, shut up the house, and went to look for her.

When he reached the spring, he could not see her. He was just on the point of returning when he heard a little wail in the high grass near the spring. He searched there and discovered his wife's clothes and a baby,—a very small baby, perhaps six months old.

For the old woman had drunk too deeply of the magical water; she had drunk herself far back beyond the time of youth into the period of speechless infancy.

He took up the child in his arms. It looked at him in a sad wondering way. He carried it home,—murmuring to it,—thinking strange melancholy thoughts.

In that hour, after my reverie about Urashima, the moral of this story seemed less satisfactory than in former time. Because by drinking too deeply of life we do not become young.

Naked and cool my kurumaya returned and said that because of the heat he could not finish the promised run of twenty-five miles, but that he had found another runner to take me the rest of the way. For so much as he himself had done, he wanted fifty-five *sen*.

It was really very hot—more than 100° I afterwards learned; and far away there throbbed continually, like a pulsation of the heat itself, the sound of the great drums beating for rain. And I thought of the Daughter of the Dragon-King.

"Seventy-five *sen* she told me," I observed;—"and that promised to be done has not been done. Nevertheless seventy-five *sen* to you shall be given,—because I am afraid of the Gods."

And behind a yet unwearied runner I flid away in an enormous blaze—in the direction of the great drums.

LETTER FROM AUSTRALIA.

(FROM OUR OWN CORRESPONDENT.)

Healesville, Victoria, June 18th.

The sporting trial, of which I gave some account in my last letter, proved to be a fiasco. The jury were unable to agree and were discharged. The chief interest of the case lay in the startling facts which were disclosed. It transpired that the youth, still a minor, who figured as the plaintiff, managed for three years to make an income of £3,500 a year, which being interpreted means that lightness of weight and ability to ride enabled this lad to earn as much money as is paid to an average Colonial Governor, two County Court Judges, three Cabinet Ministers, six country doctors, ten members of parliament, or a dozen sound divines. It was a curious coincidence that the above named salary is precisely the sum paid annually to the Chief Justice who sat on the bench during the trial. So that, taken at their money value, the profligate, vulgar, and low-minded jockey and the highly refined, cultured, and erudite Judge are on a par. One would like to impress this fact on the minds of certain Japanese officials who argue that the issuing of invitations to entertainments and official ceremonies and the granting of other favours should be controlled by consideration of the salaries paid to foreign employés.

Mr. D. Wilson, the Government dairy expert, has lately furnished the Minister of Agriculture with an interesting report on the dairying industry, from which I cull the following figures and facts:—

During the butter shipping season, which commenced about the middle of September and will end on 28th March, we will have exported 7,315 tons of butter, which, at the net value of, say, 11d. per lb., gives us as the total value of our export of butter for the season the magnificent sum of £761,273 6s. 8d. The appended table shows the annually increasing value of our export trade in butter:—

Year.	Value.
1889-90	£ 51,300
1890-91	91,200
1891-92	225,000
1892-93	404,432
1893-94	761,273

By including 220 tons of cheese, valued at £50 per ton, which have been exported this season, the clear return to dairy farmers for the exports of dairy produce will reach £772,273 6s. 8d. The total weight of butter exported was 16,609,600 lbs. Assuming that every pound of butter requires 2½ gal. of milk for its production, figures show that 41,524,000 gal. had to be gathered and separated in order to furnish the quantity of butter exported. The freight charged for butter from Melbourne to London has hitherto been 2d. per lb. After a good deal of agitation the price has been reduced to a little over 2d. per lb. At the end of every butter season there is a glut in the local market. The Department of Agriculture is suggesting measures for preventing these gluts. They propose to hold over in refrigerating Chambers either here or in London a large percentage of the butter that accumulates late in the autumn and early in the winter, so as to have it placed on the London market at the beginning of each season. The Department also suggests that during the autumn and winter months the factories should make cheese instead of butter. A stimulus has been given to the cheese industry by the granting of a Government bonus of £6 per ton. As yet, however, Victorian cheese is by no means first class. It is considered necessary to obtain practical instructors in cheese-making from New Zealand or Canada. In order to show what the cheese industry may become to Victoria, Mr. Wilson furnishes the following statistics bearing on the export of cheese from Canada, which it is acknowledged supplies the best cheese to the English market:—

Year.	Exported. Lb.	Value. £.
1866	974,736	24,968
1870	5,827,782	134,896
1875	32,342,030	774,245
1880	40,368,678	801,000
1885	79,655,367	1,653,048
1890	94,260,187	1,874,442
1891	106,202,140	1,936,000

Mr. Wilson urges the importance of extending the export trade in poultry and frozen meats, the production of the colony having for a long time exceeded the local demand in most articles of food of this class.

The following paragraph which appeared in the *Argus* a few weeks ago will be of interest to many of your readers:—

Mr. Alfred C. Smart, of Elizabeth-street, has invented and patented a new art process which he proposes taking to England with him on Saturday

next. He entitles it the Pyrotint, and the idea is as simple as Π is ingenious. Hot air supplies the place of pencil or brush, and it is propelled through a fine point of platinum, which is kept incandescent by means of benzoline. The implement does not touch the wood upon which the design is executed, but is moved over its surface without contact by the draughtsman's hand, and the picture produced has all the effect of a rich mezzotint engraving, but strong and clearer in high lights. It is also permanent, because the heat has effected a chemical change in the panel. The invention appears to be admirably adapted for decorative purposes, and the process can be employed by anyone possessing a competent knowledge of drawing. Indeed, it is likely to be taken up by numbers of amateurs, as it can be rapidly used and the results obtained begin to be immediately apparent. Mr. Smart, it may be mentioned, was the first colonial who won an associateship in the Royal Institute at Kensington.

Who is the richest man in Melbourne? This is a question which the Postmaster-General is now asking himself. A letter has been lying at the Post Office, written in German, and addressed to be richest man in Melbourne. In order to obtain some information to facilitate its delivery, the letter was opened and its contents were found to be as follows:—

"Sir,—Excuse me as a perfect stranger in addressing a petition to you. At Easter I qualified for admission to the university. In order to lessen the expenses to my parents I apply to you to lend me a sum of money, amount at your option, though it should serve me for six years. If possibly I could not repay the loan, then it would be treated as if it had been made a present to me, which, as the richest man in Melbourne, could not affect you much. Kindly address to care of Mr. W. Grobe, in Tilsfurt, Weimar, Germany, with the instruction to keep the letter for me. If neither you nor any of your friends are prepared to grant my request, I would need to apply to kinder and richer people in other directions.—H. H."

An account of the losses of the Mercantile Bank, now in liquidation gives a fair idea of the wildness with which the institution speculated a few years ago.

Heavy advances on share scrip—over 700,000 shares in various companies being held Π security—now mostly worthless.

Advances to companies to the extent of upwards of £400,000 (on insufficient securities), upon which a loss of upwards of £500,000 is now estimated.

Advance to debtors on properties and scrip at boom values without a sufficient margin for depreciation.

Advances on Mercantile Bank shares, of which 35,000 are now held, resulting generally, not only in the loss of the advances made but in the loss of call money—£3 per share.

Advances on second mortgages of properties, now not worth the amounts owing under the first mortgages.

Advances on guarantees to the extent of £150,000 of which £135,000 is considered not recoverable.

Advances to bank officials and clerks, and to auditors and solicitors of banks, about £27,000.

Paying high dividends to shareholders without making adequate provision to meet bad debts and losses.

In the face of such a statement it is hardly to be wondered at that a large section of the victimised public should try their best to send the Directors and manager to gaol. The business morality which sanctioned such transactions as are here recorded was of a type difficult to find out of Christendom. The Federal Bank has, it seems, been pursuing the same policy as the Mercantile. Its directors lately received a scathing criticism at the hands of Mr. Justice Holroyd, who observed that excessive advances had been made to directors, that large sums had been lent to them, their nominees and friends on securities which had not only turned out utterly insufficient or worthless but were often purely speculative; that some of the directors had speculated largely and recklessly with the bank's money; that the bank had lent money on the security of its own shares and bought its own shares in order to "support the market," both transactions being illegal. "In fact," said his Honour, "the evidence produces a strong impression that the bank was used by a majority at least of the directors for their own convenience and that of their friends, without regard to the interests of the great body of shareholders."

The third session of the fifteenth Parliament of Victoria was formally opened by His Excellency the Governor on May 30th. The address in reply to the Governor's speech was moved by Mr. Frank Madden, a new member. He has been preceded by two brothers, Sir John Madden, the present Chief Justice, and Mr. Walter Madden. The three brothers, though in style they differ considerably, have all made reputations as orators. Mr. Frank Madden's speech consisted of a deadly onslaught on the system of protection which was inaugurated by the Shields Ministry, and

which has proved a great curse to the colony. The speech caused a great commotion among the Opposition which was partially suppressed by Mr. George Turner's shouting, "New member, new member." So far nothing very exciting has taken place in the House. Till the Budget comes up for discussion things will go on their even way. It seems that Parliament costs the country £200 an hour. One of the members, in order to cause a little stir among the electors, took the trouble to make the calculation, the result of which I have given. Reckoning the interest to be paid on the cost of the parliament houses, he found that the total annual expenditure for both Houses was £87,447, which, taking the average number of sittings of the assembly at 75 days, of six hours each, gave the result in round figures at £200 per hour. There is no doubt that the whole system of colonial government is far more costly than it need be. The Tasmanian *Statist* has lately published a table which shows the cost of civil government in the colonies. The figures do not include the trading concerns of the governments, such as railways, post and telegraphs, water-works, &c. They embrace merely the cost of the general government, the collection of customs excise, law and protection, education and charity. The figures for 1890-91 give the expenditure of Victoria at £2,832,977 and of Australia at £7,943,423, a grand total of nearly eight millions for a population of four million people. In comparison with other colonies, Victoria came out badly, because, while the general average was £2 per head, her average was £2 9s., although she had the advantage of being the most thickly populated in proportion to area of the whole group. The financial condition of Victoria at the present moment resembles that of New Zealand in 1887. The latter colony was saved by the courage and patriotism of her public men. In that memorable year no less than four successive retrenchment acts were passed by her parliament. The first was to reduce the emoluments of the Governor, the second to reduce the members of the Assembly from 95 to 70; the third was to reduce the payment of members; the fourth was to reduce the emoluments of Ministers from £10,200 per annum to £5,800. The result of five years of economical administration is that New Zealand is now the envy and admiration of the Australian group of colonies.

The Melbourne Chamber of Commerce has lately held its annual meeting. Among the remarks of the retiring president one or two bearing on the present state of finance in the colony are worthy of being quoted. "Our last quarter's banking returns," said the president, "show reserves awaiting employment to the amount of eight and a quarter millions." The address went on to observe that the ordinary observer could not understand how a small community of about a million persons could afford to have idle coin to the amount of half the reserves of the Bank of England. "It was palpable to all," said the President, "that there was no dearth of cash, but he knew that there was a great dearth of confidence. There was still the natural yearning for profitable investments, as they saw by the rush for debentures of the Metropolitan Board of Works the other day. The £500,000 taken up by the board was doing excellent work."

The Rev. Dr. Green was last month consecrated Bishop of Grafton and Armidale. This is the first consecration that has taken place in Victoria, hence the ceremony attracted a larger audience than the Cathedral could accommodate. Dr. Green received his training in Melbourne and enjoys great popularity throughout the colony.

The quantity of gold obtained in the colony during the quarter ending March 31st was 155,461 oz., being an increase of 2,475 oz. over that of the corresponding period last year.

Our premier, hitherto Mr. Tattersall, was knighted on the Queen's birthday and now has the gratification of hearing his political opponents call him "Sir James."

The members of the New South Wales parliament have been keeping up their reputation for acrimony, vulgarity, and pettiness. One honourable member in commending the temperance cause to his hearers made the assertion that the New South Wales Assembly contained "drunken blackguards" and "licentious brutes." Sir George Dibbs drew the attention of the House to the above and other statements of Mr. Hindle, the offending member, and the whole affair was discussed in parliament in a most undignified manner. The journals of the New South Wales Assembly furnished Mr. Hindle with abundant material for attacking the morality of members. He "disinterred the bones of buried scandals, read to the House Official records of members being carried cursing and

kicking from the precincts of the Chamber, of vulgar insults offered to the Chair and recalled glaring instances of inebriety." The whole debate was a disgrace to a civilised community. I know of no other Assembly where a member stands up and says, "I have been tight before and hope to be tight many times again," or where a Minister of the Crown proclaims for the benefit of those whom it may concern the number of glasses of wine he has swallowed that evening and informs his listeners that newspaper criticism on Parliamentary misconduct are written by journalists "too drunk to know whether they are dipping their pens into the whisky-glass or the ink-bottle."

There is no end to the intolerance of some of our district police magistrates. Several of them have actually had the audacity to revive a statute of Charles II. which orders that persons guilty of exercising their worldly labour on the Sabbath day shall be placed in the stocks. In the cases to which I refer the parties have paid fines, but were informed that in default of payment they would be set publicly in the stocks for two hours. It would have been preferable for the accused to refuse to pay the fines and submit Π the cruel treatment for the sake of making laughing-stocks of the magistrates. I have observed in other matters that there is no small amount of mediæval intolerance in purely personal affairs lying dormant in certain Colonial minds. Not long ago two butchers fined by a Suburban Council for selling meat on a Wednesday afternoon contrary to the bye-laws of the Council.

DR. KITASATO ON THE PLAGUE BACILLUS.

THE PROFESSOR'S RESEARCHES.

Professor Kitasato's paper (read by Dr. Lawson) at the Government Civil Hospital on Tuesday, July 10, was, though only a preliminary pronouncement, a very valuable contribution to the literature of the plague, and will, when published in the *Lancet* (as we understand is the intention) doubtless attract a considerable amount of notice in the medical world. We endeavoured after the meeting to obtain excerpts from the paper, as we were informed it was not available for publication *in extenso*, but owing to a fortuitous concurrence of unfortunate circumstances—the principal being the heavy duties of Dr. J. A. Lawson—we were unable to obtain a summary. Yesterday our representative was received courteously at the Government Civil Hospital, and after a short consultation with Professor Kitasato—a short-haired, genial, and profound-looking gentleman with a very large head—permission was given to Dr. Molineux to give us a short *précis* of the paper. It is well known that Kitasato is, next to Koch his master, perhaps the greatest bacteriologist in the world, and it is extremely fortunate that the colony, and humanity at large, have had the benefit of his presence and prompt investigations into the causes and character of a disease which, wherever it has appeared, has always been most calamitous in its results. The Japanese Government on receiving news of the appearance of plague in this colony dispatched the great Professor and an able staff to study the disease and report upon it. With Professor Kitasato came Professor Aoyama, now unfortunately so seriously ill on the *Hygieia*. The first-named had in hand the bacteriological work, while his able *compère* was in charge of the pathological and clinical features of the disease. That they have both worked with a zeal and ability deserving of the highest encomiums there is no doubt, and the pity of it is that Dr. Aoyama's important branch of their joint labour was interfered with at an early stage by his contracting the very disease which he was so assiduously investigating.

In the introduction to his address, Professor Kitasato acknowledged his indebtedness to Dr. Lawson for the facilities which had been given him. On the first day of his investigations he was able to discover the bacillus in the bubo, blood, lungs, liver, and spleen of dead patients, and he immediately made a cultivation in agar-agar. On the same day he took, with all due precautions, some blood from the finger tips of patients suffering from the disease in a severe form and here again he found the bacilli. He then inoculated mice, guinea pigs, and rabbits with the virus, and in every instance the animals so inoculated had displayed symptoms of the plague and had eventually died. On post mortem examination the bacillus was found in their blood. Mice inoculated displayed symptoms of the disease in a few hours, and died in from two to three days. Swellings were found at the point of inoculation and the bacilli were discovered freely in their blood. Every animal which had been inoculated had succumbed, with the exception of pigeons, and the ex-

emption of the birds from the disease has not yet been explained by the Professor. As a rule it was found that the duration of the disease before it came to a fatal issue depended upon the size of the animals inoculated. Thus, mice were killed quickest and larger animals, such as guinea pigs and rabbits, lingered for a longer period, generally about four days. Every day, said the Professor, he took blood from living patients, examined it under the microscope, and found the bacilli, sometimes in very great numbers, sometimes very few. The same bacilli were always found after death in great quantities in the bubonic swellings and generally in all the internal organs. Any cultivation from any part of the internal organ always produced the same bacilli, which showed very clearly the intimate connection between the bacillus and the disease. The bacilli are rods with rounded ends and are stained easily by aniline dyes. They have very little movement and their growth is most prolific in the blood serum at the normal temperature of the body, under which conditions they develop luxuriantly. The Professor then went on to give technical details as to his experiments upon animals, with their food, and found that the animals developed plague and died, which indicated possible danger through the food supply. With the dust of infected dwellings the Professor also made some interesting researches. He obtained dust from infected houses before any whitewashing or fumigation had been done and conveyed it to the animals, with the result that some died of tetanus and one, a guinea pig, of plague. This important branch of the Professor's work is to be continued, the results at present not being conclusive. The fact, however, of one animal having died from the effects of dust shows the necessity for thorough disinfection. Many rats and mice have died in the colony spontaneously and he had found in their internal organs the bacilli in large numbers. The power of resistance to natural and chemical influences which the bacillus possesses was next dealt with. Exposure to the direct rays of the sun for four hours absolutely destroyed them. A temperature of 50 deg. centigrade destroyed them in a few minutes. With half or three quarters per cent. of carbolic acid in the cultivation the bacillus continued afterwards to grow in the incubator. With one per cent. of carbolic acid the growth stopped even after leaving it in the incubator for a week. With quicklime also the Professor had made some experiments. Cultivations with one half per cent. of quicklime grew sparingly and with one per cent. they ceased to grow. The Professor then proceeded to deal with the history of the disease, pointing out that until lately it had been supposed to have disappeared from the face of the globe, but this was an error, as the disease was endemic in South China. The close connection existing between the bacillus and the disease was shown by the fact that out of thirty patients examined he had obtained twenty-five positive results, and two of the cases unsuccessfully examined were proved not to be cases of plague at all. The question therefore arose whether diagnosis of the disease could not be made through the blood, but he confessed that it required a long bacteriological experience to detect the bacillus. From his investigations he had come to the conclusion that plague was a bacilli-infectious disease. Then came the question how the bacilli entered the human body. There were three principal ways, first by respiration, second by open wounds, and third by introduction through the alimentary canal. Examples of the first method of infection were abundant, and as regards the third the experiments upon animals seemed to pretty conclusively show that this was one way in which the disease could be contracted. Coming to the consideration of our local conditions, he said that whoever had once looked into an ordinary Chinese dwelling house could not fail to see that this was the natural happy hunting ground of the bacillus. The houses were unspeakably filthy and utterly unfit for human habitation. General hygiene, good drainage, a perfect water supply, and cleanliness in dwellings and streets were the principal things to be taken into consideration, both for cure and prevention. The sick should be perfectly isolated, and infected buildings and all things in them thoroughly disinfected; clothing should be specially disinfected by steam at 100 deg. centigrade, and where this was not available it should be exposed to the direct heat of the sun for several hours. All dead bodies should be covered with quicklime and buried ten feet deep. Mice and rats that have died of plague should be carried away with proper precautions. And as regards individual care the Professor said that we ought to keep away from plague patients and be particular as regards food and drink. In conclusion he explained that this was only a crude

incomplete contribution, that his experiments in many directions were very incomplete, but that he intended to pursue them further. On behalf of his Government, his colleagues, and himself he tendered heartiest thanks to the Government here, the medical men, and especially Dr. Lawson for the assistance cordially given.—*Daily Press*.

LATEST TELEGRAMS.

London, July 20.

The United States Government has withdrawn the troops from Chicago.

The Italian forces have marched on Kassala and carried the place by assault.

The Committee sitting on the Tariff Bill at Washington have been unable to agree.

London, July 21.

The SEVENTH RENEWAL OF THE ECLIPSE STAKES, of 10,000 sovs.; the second horse to receive 500 sovs., the nominator of the winner 500 sovs., and the third 100 sovs. out of the stakes; for then three and four years old; three year olds to carry 8st. 8lb., four, 9st. 6lb.; mares and geldings allowed 3lb.; any winner of a weight-for-age or weight-for-sex race value 500 sovs. to carry 4lb., of 1,000 sovs. 7lb., of the Derby, Oaks, St. Leger, Grand Prix de Paris, or any weight-for-age or weight-for-sex race value 4,000 sovs., 10lb. extra; Eclipse Stakes Course (about one mile and a quarter).

The *Novoe Vremya* publishes an article on the Korean affair, in which it says that Russia ought to side with China against Japan; at all events to endeavour to localise the effects of the possible conflict and protect her own interests.

"SPECIAL" TELEGRAMS TO "JAPAN MAIL."

Nagasaki, July 23, 12.55 p.m.

Fire is now raging in the Chinese Settlement at Shintchi, which it is rumoured is the work of an incendiary. The Japanese Fire Brigade and others in full force are hard at work extinguishing the flames and saving property. There was a previous attempt here only a few days ago at fire-raising.

6.25 p.m.

The fire has been extinguished, about twenty houses having been destroyed and a few damaged.

The Chinese here are closing up business, and the principal merchants are preparing to leave by the steamer *Wosang*.

Nagasaki, July 27.

Several cases have occurred at this port in which *soshi* have visited British ships with the object of intimidating coal coolies to the detriment of business, and last night a Japanese coal dealer was attacked in his own house and wounded.

[SPECIALLY TELEGRAPHED TO THE "JAPAN MAIL" FROM THE "N.C. DAILY NEWS."]

London, July 14.

The Italian Chamber has adopted a stringent anti-Anarchist Law in spite of the determined opposition of the Radicals and Socialists.

July 15.

A fresh shock of earthquake was experienced in Constantinople on Thursday, and further damage was done. There has been a renewal of the panic.

The extradition of Jabez Balfour from Argentina has been refused.

After conferring with the leaders of the strike, President Cleveland has appointed a commission to enquire into the Chicago troubles.

July 16.

An anarchist plot has been discovered in Toulon. The plotters intended to destroy the Arsenal and to burn the ironclad *Carnot*, now in course of construction.

The national fêtes in Paris were on a small scale this year owing to the untimely fate of the late M. Carnot.

Messrs. Ernsthausen, an Indian firm, have failed. The bankruptcy is attributed to jute failures in Dundee and the low prices prevailing for indigo.

Dr. Willatts, the accoucheur of the Duchess of York, has been made a baronet.

July 17.

The son of the Duke and Duchess of York was baptized by the Archbishop of Canterbury in the presence of the Queen, the Prince and Princess of Wales, the Duke of Cambridge, and other royalties.

The *Times* correspondent at Chemulpo says that fresh trouble has arisen in that locality. Owing to the recent rising in Korea, a number of Christians were killed and the French fathers menaced. He further stated that gunboats had been despatched for their protection.

[This is the first news we have received of this.]

The Russian press states that it is to the common interest of England and Russia to prevent war breaking out between China and Japan. As Russia is prejudiced in the matter, the Korean difficulty could be settled by the intervention of England alone.

July 18.

The son of the Duke and Duchess of York has been named Edward Albert Christian George Andrew Patrick David.

July 19.

The Government has withdrawn the Welsh Disestablishment Bill, the Registration Bill, and the Local Veto Bill. It proposes to pass the Evicted Tenants' Bill, and the Miners' Eight Hours Bill.

July 20.

It has been officially stated in Yokohama that the attack upon Mr. Gardner at Seoul has been overdrawn.

The *Times* says that the American Treasury is expected to soon order the resumption of coinage to a limited amount in silver dollars. President Cleveland reminds the Democrats that they are bound to fulfil their promise to free raw materials.

(FROM JAPANESE PAPERS.)

Kofu, July 26.

Hayakawa Sukeyu and Sasaki Kankichi, of this town, and five hundred of their followers have petitioned for permission to join the Japanese army in Korea.

Tientsin, July 25.

12,000 further Chinese soldiers are under orders to leave. The Chinese Government are said to be collecting troops in Anbi Province.

Fusan, July 26.

After the issue of a notification by the Governor of Taikin-fu to the effect that all Japanese subjects armed with weapons are liable to assault, some three Japanese residents are said to have been murdered. The Japanese therefore, are sleeping on the moor without putting up at the hotel.

Shimonoseki, July 25.

The Branch of the Bank of Japan received instructions last night to transmit money to the Sixth Army Division at Kumamoto.

Later.

Two military hospitals have been opened in the school buildings.

Nagoya, July 26.

An order has been issued requiring the members of the first and second class reserves in the Navy to report immediately at their headquarters.

Seul, July 23.

The fight between the soldiers of Japan and Korea at the time of the Tai Won-kun's entry into the Palace, finished at 7.40 a.m. to-day. Fifteen pieces of artillery were confiscated by the Japanese and over 1,000 small-arms. Two Japanese were killed and one injured, while seventeen Korean soldiers were killed and more than sixty wounded. The wounded Koreans

are receiving medical treatment at the Japanese Hospital.

Shimonoseki, July 26.

The *Sakata Maru* arrived here from Ninsen at 11 a.m. to-day. Nothing serious had occurred at Ninsen up to the time of her departure. One American, one British, one French, and one Russian men-of-war were then staying there. The *Sakata* brought some fifty disabled Japanese soldiers from Korea.

Tientsin, July 26.

It is stated that the northern fleet of China set out to lay torpedoes between Ryojunko and Sanzan island a few days ago.

Nagasaki, July 26.

Dr. Kitazato left here to-day at 7 p.m. for Kobe by the P. & O. *Verona*.

Niigata, July 27.

A detachment of troops stationed at Shibata barracks is to be dispatched to Sado.

Osaka, July 27.

Transactions on the Osaka Stock Exchange were suspended to-day by the Chief Director of the establishment.

Shanghai, July 27.

(Private telegrams received in Tokyo yesterday.)

Fighting has finally taken place, and China has declared war against Japan.

China is diligently preparing for war, and every care is being paid to successfully conduct affairs.

Tientsin, July 27.

It is learned on good authority that China intends to dispatch troops to Korea by land, and they are said to have already reached Uiju.

Shanghai, July 26.

Three Chinese war-vessels have left for Taiwan.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The local Chess Clubs are closed until the beginning of October.

SOLUTION OF PROBLEM No. 131.

WHITE.

- 1—K to Q Kt 2
- 2—Q to Q B 2 ch.
- 3—Q mates at B 5 or B 8

BLACK.

- 1—K x Kt
- 2—K moves

- if 2—B to B 3
- 3—Q to K R 2, mate
- if 1—B x Kt
- 2—B to B 3
- if 1—B to B 3
- 2—B x Kt
- if 2—B to K 2
- 3—Q to K R 2, mate.

Correct solutions received from Omega, W.H.S., E.D., Digamina, and J.D.

Mr. Balk, Champion of the Yokohama Chess Club, who left us in May for the Southern Hemisphere, writes from Sydney, 21st June, reporting his safe arrival there, and sending a correct solution of Problem 121 which he did *en mer*. He had already visited the Sydney Chess Club, was to form one of a team against Mr. Crane (the ex-champion of Australia) on the 22nd June, and he promises a further communication, which will be welcome when it comes.

PROBLEM No. 133.

By C. PLANCE, M.A., London.

BLACK.

WHITE.

White to play and mate in three moves.

STEINITZ.

We are glad to learn that the ex-Champion, though defeated, is not dismayed. A return match with Lasker is being arranged to come off in the winter, it will probably be played as before in Canada and the United States. It was at one time suggested that it should come off in London, but we believe that suggestion was abandoned; naturally if the stakes are provided in America it is but reasonable to suppose that the contest should be fought out in the Western Hemisphere. Should Lasker win the second pitched battle we presume Steinitz will rest on his well-earned laurels.

GAME No. 146.

Below follows the full score of the nineteenth and final game of the match recently played for the championship of the world:—

NINETEENTH GAME—QUEEN'S GAMBIT DECLINED.

WHITE.

Lasker.

NOTES BY W. STEINITZ, FURNISHED TO THE NEW YORK "RECORDER."

(a) Materially different from the eleventh game of the present match, where Black here continued B to Kt 5.

(b) Quite a new plan; with the object of bringing the Kt into more attacking play via K 2, but possibly a waiting defensive policy like B to K 2 is fully as good, especially as it leaves the king untrammelled.

(c) Hardly a commendable plan, as it weakens the centre. Far superior was Kt to K 4; 16—Q R to Q sq., R to K 2 (not Kt to B 5; 19—B x R, R x B; 20—Kt to B 3, followed by Kt to K 5 and P to Kt 4, with a winning attack); 19—Kt (Q 4) to Kt 5, Kt to K 5, with an excellent game.

(d) After this centre troubles increase for Black, mainly due to the strength of the adverse combined bishops, B to Q 2; 21—R to Q, B to K 2, preserved equality with greater ease.

(e) A fatal error, which utterly ruins his game. P to Q R 3 was now the only correct move for Black to preserve material equality, and by careful play on both sides the balance of position could have been maintained, since Black's pawns could have been well defended and White's broken pawn on the K's wing would have deterred him from adopting attacking measures.

(f) Also very bad. If anything were yet to be done, Kt to K 2, followed by P to K B 3, furnishes undoubtedly a much better defence. The weakness of the K P leaves a mark for the breaking in by White's combined forces, which soon renders resistance hopeless.

Now that the great duel is over, the veteran is continuing his cable-match with the Liverpool Chess Club and we give the games (with diagrams of the position) up to the latest advices which have reached us.

EXPORTS.

RAW SILK.

Our last issue was of the 20th instant, since which date settlements on this market are 724 piculs, divided thus: *Filatures*, 600 piculs; *Re-reels*, 99 piculs; *Kakada*, 25 piculs. Direct shipments have been 136 bales, making the total business for the week 850 piculs.

Market has remained steady, inclining upwards, but without any real change in quotations and at closing is perhaps a little less firm. Arrivals continue freely and the stock is now over 7,000 piculs.

The chief business has been undoubtedly for the United States, purchases for Europe falling off to some extent. We look for a quieter market, with some ease in prices, for advices from consumers are not of the best and it may be that holders will show themselves more anxious to sell during the coming month.

New Crop.—The *Filatures* now arriving from *Shinshiu* are declared to be of true *Shinshu* extraction. They do not show up very well in colour, but this probably is only a passing defect, and we look for an improvement in this respect when the factories get into full swing. With regard to *Kakada*, it seems true that in Fukushima Ken there will be a shortage; but native papers report that leaf is so plentiful, many growers will go in for the second crop and try to make up the deficiency that way.

There have been two shipping opportunities since we last wrote. The English mail *Ancona*, 21st instant, had 337 bales for Europe and the *City of Peking*, which left port yesterday, took 356 bales for the New York trade. These departures make the present export figures 2,960 piculs, against 758 piculs last year and 2,531 piculs at the same date in 1892.

Hanks.—A bale or two arrives each day, but nothing has been done for export, although native weavers have taken one or two small parcels from our market.

Filatures.—The bulk of the trade has been in this class and mostly in full sizes. Prices show no violent change, although it is reported that \$710 has been paid for a parcel of *Rokkoshu*. Other sales are only fractionally higher. Among the last prices paid are *Roku mon sen* and *Shiojokan*, \$700; *Choshinsha*, \$690; *Gakosha*, \$690; *Sai-shinsha*, \$690; *Kameisha*, \$680; *Rujokan*, \$675; *Hiranosha*, *Seven Stars*, \$570. *Kairossha*, \$667½; *Tonaga* and *Shameisha*, \$667½; *Choyosha*, and

Shimmaisha, \$665. Very little done in *Koshu* sorts. One parcel of *Kusanagisha*, second grade, noted at \$652. In fine sizes, a small business; *Sanshu*, \$700; *Yechu*, \$680.

Reels.—A small but steady business at unchanged prices. *Tortoise*, \$655; *Shiba*, \$640; *Ichimurashu*, \$625 and \$610 for second grade; *Bushu Kodama*, \$630.

Kakeda.—Arrivals are very small and the only transactions are two parcels of *Horsehead* at \$640. In other sorts, no business.

Stock, 27th July	7,100	3,150	3,750
Available supplies to date	10,250	4,400	5,700

WASTE SILK.

Settlements during the week are 750 piculs, divided thus:—*Noshi*, 159 piculs; *Kibiso*, 349 piculs; *Sundries*, 242 piculs. No direct shipments.

The list of sales has increased by the appearance of some large purchases of *Boseki-wata* and cheap *Kibiso*, which have been talked about for the last two or three weeks. There is very little doing in staple articles and prices are more or less irregular.

There has been no export during the week, the various shipping opportunities taking no Waste. The export to date therefore remains as last advised—1,058 piculs, against 155 piculs last year, and 1,082 piculs at the same date in 1892.

Cocoons.—They are coming in now every day but there is no talk of business at present. With regard to price, holders talk about 16 *ka*, which would give \$120 per picul for 75% yield.

Noshi.—Fresh purchases of new *foshu* have been done at \$67 and \$69, while old fibre of common quality has been taken at \$60 and under. A small parcel of *Hachioji* also noted at \$112½, with a little *Filature* at \$125.

Kibiso.—Something done in *Filature* at prices ranging from \$90 to \$100 for good quality; but the bulk of the trade has been in low *Bushu* costing \$22.

Sundries.—One small parcel of *Neri* noted at \$11, while the large purchases of *Boseki-wata* mentioned in our last have come into the list at \$20 and \$18.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout World.

A NOTIFICATION issued on the 1st inst. by the Minister of Communications states that he will not be responsible for the delivery of telegraph messages in China and Korea, or for the receipt of messages transmitted along the over-

There is no improvement in the general condition of the Import trade; in fact the declaration of war with China will probably have the effect of keeping back various would-be purchasers of imported goods, and only a hand-to-mouth business to supply immediate wants can be looked for until this Korean trouble is over. Some persons predict that the war is likely to last for years. This is improbable; but it may safely be reckoned to do great injury to the import trade so long as it lasts, and perhaps for some time after. There has been only a very small business in Yarus and Shirts; and Fancies and Woollens are also more or less neglected. The Metal trade is dull, only a few transactions having been put through in Bar and Pig Iron and in Tin Plate and Wire Nails. Nothing in the Kerosene trade to report, but there are further arrivals and an increased stock. Sugar is a drug in the market, and no offers are made at all for Browns, of which the stock is heavy. The Silk trade has totted up 1,000 piculs without reckoning direct shipments. Prices are steady, and good accounts of the crop have been received from numerous quarters. The business in Waste Silk has been small, and arrivals come in freely, while it is plain that more business could be done if holders accepted the offers made. The Tea trade has seen a fair amount of daily business at late rates, but the third crop leaf now on the market is not reported upon favourably for quality. Exchange has declined a point on the week, but rates are fairly steady and firm at the close.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUG. 4TH, 1894.

DEATH

On the 3rd inst., at Azabu, Tokyo, FUKI, daughter of Sen Tsuda, aged twenty years. Funeral at the residence of her father, August 5th, at 6 a.m.

SUMMARY OF NEWS.

The Tokyo Cotton Company will very probably be wound up.

A SPORADIC case of cholera was reported at Chitosecho, Yokohama, last week.

CAPTAIN SHIBAYAMA YAHACHI has been promoted to the rank of Rear-Admiral.

A HORSE succumbed to heat apoplexy in Main Street, Yokohama, on Thursday afternoon.

MR. HAGIWARA YOSHINORI has been appointed a Secretary in the Communications Department.

THE German steamer *Amigo* collided with the pier on Thursday night. Little damage was done.

Forty-five houses were burnt at Ezawa-mura, Minami-aizu-gun, Fukushima Prefecture, on the 30th ult.

THE Japanese match-manufacturers of Tokyo and Yokohama deem it advisable to form a Union.

THE accounts of the Yokohama Engine and Ironworks, furnished by the regular corres-

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The official announcement of a state of war by the Imperial Rescript issued on the evening of the 2nd instant, has been hailed by the nation with universal joy and enthusiasm. The fact is, a small section of the people had entertained more or less suspicion that the Government might, under certain circumstances, consent to peaceful mediation on the part of some of the European Powers. Such an apprehension has been constantly encouraged by the tone of the Progressionist organs. But now that war has been declared, there is no longer any doubt about the determination of the Government. However unfounded such an apprehension may have been, there is no doubt that it has existed in certain quarters. The metropolitan papers are now urging the Government not to stop till China shall have been completely humbled. We shall reproduce a few articles from the Tokyo papers.

The *Mainichi Shimbun* remarks that, although foreign wars have been undertaken by the Imperial House on more than one occasion, this is the first time that such a war has been deliberately commenced by the people. In 1873 Saigo and other powerful members of the Government strongly advocated the invasion of Korea, and their views had the sympathy of a large number of civil officials and of the whole of the army and the navy. But still the opposition of a few Cabinet Ministers crushed the enterprise easily, because the war policy had not the support of the people, or, speaking more correctly, because the people had not yet become a factor in politics. Similarly, the *Mainichi* ascribes the unsuccessful attempts of Japan in 1882 and 1884 to the fact that the Government of the time had not the support of the nation. Things are now—says the *Mainichi*—entirely different. The whole nation is at one with the Government; volunteer corps are organized in every locality throughout the country; contributions of money and in kind are pouring in from all parts of the country; the principal residents of Tokyo are taking measures for collecting a vast amount of money by way of voluntary contributions for the prosecution of war; in short, the heart of the whole nation is in the present undertaking. The authorities are told that their duty now is to prosecute the war with resolution and energy.

The *Hochi Shimbun*, like many of its contemporaries, thinks that the result of the war will be extremely beneficial to China. It will, says the *Hochi*, rudely awaken China out of her torpor of many centuries. At all events, Japan's object, continues our contemporary, is to go straight to Peking, and by the terms dictated to the Chinese Government to influence the future of the whole Chinese nation; for without going to such a length, it is considered impossible to secure the permanent peace of the East.

"After reducing the Chinese Government to submission, if it should prove incapable of inaugurating a new epoch of progress and improvement, or when there is danger of internal commotion or foreign intervention, Japan should take upon herself the responsibility of undertaking the reform of China, just as she is now doing in Korea." Such being the object of Japan, our contemporary urges the Government to prosecute war until China shall have been placed completely at the mercy of Japan. Thus Japan's sole ambition being to serve the purpose of permanent peace and progress in this part of the world, the *Hochi* thinks it is idle to speak of the cession of land and of war indemnity.

The *Kokkai* writes in a similar tone. Our contemporary also believes that the present war is destined to open a new chapter in the history of the East. It is, states our contemporary, the mission of Japan, as the most civilized nation in Asia, to undertake the reform, not only of Korea but also of China, and by leading

them in the right direction to resist the onward march of the aggressive Powers of the West. The successful prosecution of such a gigantic programme requires correspondingly large preparations. Four of the principal measures needed are mentioned by the *Kokkai*. First, the completion of national defence is considered to be of paramount importance. It may seem a little unpractical to talk of national defence, when war has actually commenced, but our contemporary contends that Japan must be prepared to continue hostilities for a number of years, and that it is necessary to take all possible steps to meet the vicissitudes of war. Our contemporary advises the politicians to give up their idle talk about the reassessment of the taxable value of land and the reduction of the land tax, and to direct their attention to the means of obtaining resources for completing the defence of the country. Secondly, hearty co-operation between the Government and the people is a thing of supreme importance. When the country is at war with a foreign State, there is no necessity to ask who or what party is in power; the nation should give its unstinted support to the Government. Thirdly, having assumed the responsibility of placing Korean independence on a sound basis, Japan must be prepared to station a sufficient force in the peninsula for a period of 15 or 20 years. Fourthly and lastly, the resolution having been taken to prosecute a mission that may require many years to accomplish, it is necessary that the people should engage with tenfold energy and perseverance in their respective occupations, so that the country may not lack the means to carry out its purpose. In short, the time has come, says the *Kokkai*, when the Japanese race is called to exert its utmost powers for the accomplishment of its national object.

The *Yiji Shimpō* thinks that the present dynasty in China is doomed to downfall before many years. Its present position is compared to that of the Tokugawa Government shortly before the Restoration. It was long before Japan was opened to foreign intercourse when China began to trade with European nations. From that circumstance, China ought to be more civilized than Japan, whereas in point of fact she is behind Japan and even Korea in civilization. But the course of events no longer permits the Chinese to indulge any longer their conservative tendencies, and even if they be incapable of spontaneous exertion, their regeneration will be undertaken by force applied from outside. The awakening of the people, thinks the *Yiji*, will be the signal for the fall of the Tsin Dynasty.

The news of the naval victory off A-San was received with universal joy and satisfaction. The enthusiasm excited by the intelligence was amply echoed by the vernacular press. While heartily joining with the people in rejoicing over the good news, the leading papers of the capital warn their readers against attaching too much importance to the first victory gained by the Japanese navy. They entertain no doubt that the final victory will be on the side of Japan both on land and by sea, but they remind their countrymen that in the course of war they must be prepared for mishaps to the arms of Japan. Excessive joy at a comparatively trifling success means want of confidence in the strength of the country's resources. Consequently these papers advise their readers not to attach extravagant importance to the reports of either victory or defeat.

There is a movement among the principal citizens of Tokyo to collect voluntary contributions toward the expenses of war. The originators count upon obtaining about 30 million yen. The project is highly praised by the vernacular press, with the single exception of the *Mainichi Shimbun*. The latter paper states that, although it highly appreciates the patriotic motives of the originators of the scheme, it cannot help strongly disapproving the step proposed by them. The money required by the country for the prosecution of war ought to be raised by the ordinary method

of taxation or national loans, and whatever measures are necessary for the purpose will be, says the *Mainichi*, approved by the Diet. Should the Government accept the money raised through private efforts, the result, in the opinion of our contemporary, would be prejudicial to the true interests of the country. While thus disapproving of voluntary contributions for the expenses of war, our contemporary believes that the people will have enough to do in collecting a fund for the aid of the families of the men fighting for the country, and also in contributing money to the Red Cross Society. Such are the views of our contemporary on the subject. The reasons why it is opposed to the project in question are not plain. Perhaps the principal reason is that, unless all expenditures required for the prosecution of war are regularly debated and voted by the Diet, it fears that there may be some irregularities in the disbursement of money by the Government. It is hardly necessary to add that such a carping tendency of mind is extremely rare even among the papers of the Opposition.

The issue of an Imperial Ordinance establishing a censorship of the press in regard to military and diplomatic matters, has evoked hostile comment from the majority of the papers. The better class journals acknowledge, with regret, that some of their contemporaries have been guilty of conduct highly injurious to the interests of the country, for they have not shown sufficient caution and judgment in publishing news about military and diplomatic affairs. The *Nippon* is perhaps most violently opposed to the step just taken by the Government. Our contemporary ironically advises the Government to stop all the papers in the country, and to make the newspaper business a monopoly of the State. In that case the Government will be saved the trouble of inspecting the papers, and will, moreover, obtain a new source of revenue. Such a course, says the *Nippon*, may be denounced as being unconstitutional, but then the Government even advocates the doctrine that the State has power to suspend the Constitution.

The *Nichi Nichi Shimbun* regrets the necessity of such an Ordinance at the present juncture. It is hard that some papers should suffer for the indiscretion of others, but public interests necessitate the measure in question. Our contemporary, of the one hand, strongly advises its *confrères* to exercise judgment in publishing whatever relates to State secrets; while, on the other, it reminds the authorities of the importance of exercising the censorship in a liberal and impartial manner.

The date of the general election having been fixed, the Opposition papers are calling upon the electors to return the advocates of a strong policy. In the opinion of these papers, the pursuance of the strong policy by the Government is due to the efforts of these men. Should the new House of Representatives be composed of men opposed to a strong foreign policy, these journals fear that the Government may slacken its energy in continuing the present war.

EDITORIAL NOTES.

THE BUDDHIST SUMMER SCHOOL IN MIKAWA. A CORRESPONDENT in Mikawa sends a sketch of the Buddhist Summer School established there, from which we learn that the venture has, despite wars and rumours of wars, proved very successful. No less than two hundred and twenty students had collected at Mikawa up to the 25th instant, among them being matriculates of the Imperial University, the First Higher Middle School, the Waseda Semmon Gakko, and the Law College of Mr. Fukuzawa's University, the Keio-Gijuku. Fourteen houses had been prepared for their reception, so that every one is comfortably lodged and there is no crowding. Buddhists all over the country having contributed funds to the school, each student is required to pay only the trifling sum of five sen a day for board and lodging. For recitations and lectures a fine *kyōka-hall* has been temporarily built,

war-vessels instantly advanced to meet these new arrivals, and found that although hoisting a foreign flag, the war-vessel belonged to the Chinese navy, while the transport had Chinese troops on board. These two vessels, notwithstanding the bunting they showed, fired upon the approaching Japanese ships, and a hot engagement began at once. Meanwhile, the *Tsing-yuen* and the *Kwang-yueh*, having received serious injury, steamed away, the former in the direction of China and the latter in that of A-San. The Japanese vessels, instead of pursuing then went to the assistance of the other Japanese warship fighting at a short distance off. The transport was soon sunk, while the warship, namely, the *Tsang-kiang*, hoisted a white flag. When the captured vessel had been taken possession of, one of the Japanese ships started to follow the *Tsing-yuen*, but the latter having a start of 30 or 40 minutes could not be easily overtaken. Consequently the pursuit was not successful. As to the *Kwang-yueh*, which fled in the direction of A-San, she is said to have been stranded and abandoned by the crew.

Concerning the *Higo-Maru*, about which much anxiety has been felt, the Tokyo News Agency states that the following telegram was received by the Government from Fusan at 10.40 a.m. on Tuesday:—"The *Higo-Maru* which left In-Chhôn on the 29th instant at 1.30 p.m., reached here to-day (31st) at 3 a.m." It is believed that this transport must have brought some news about land hostilities at A-San.

The Chinese Minister in Tokyo is said to have received on the 30th ultimo orders from home to leave Japan. The Japanese Government is believed to have sent similar instructions to its Representative in Peking on the 31st ult.

The *Mainichi Shimbun's* extra of yesterday contained a report that, according to latest advices from Fusan, the *Togaku-do* disturbance had broken out again in Chôl-la-do.

There is a general impression that fighting has been going on at several places since the 25th instant, but no definite news is yet to hand.

The *Nichi Nichi Shimbun* has received from its Fusan correspondent a telegram, dated July 31, 8.05 a.m., transmitting the following communication received by him from Sôul:—"The Tai Won-kun has appointed a special commission of reform, composed of Kin-koshu and other men of progressive opinions, and the work of internal reform is making steady progress. Thirty-five Russian and forty American marines have arrived at the Legations of their respective countries. The Korean Government has notified to the Chinese Representative at Sôul that Korea renounces all the existing treaties and agreements between Korea and China. This fact was at the same time communicated to the Representatives of the other countries in Sôul. The Chinese Representative in Sôul left for home on the 27th instant, and the Chinese Legation, Consulates, and residents in Korea have been placed under the protection of the British Consul-General." This intelligence must have been brought to Fusan by the *Higo Maru*, which arrived there early on the morning of the 31st ultimo.

It had been believed that the *Higo Maru* must have brought news of fighting at A-San. But it is now stated that operations on land having been, as some people say, commenced on the 29th ultimo, the *Higo Maru*, which left In-Chhôn at 1 p.m. on the above mentioned day, could not have brought any intelligence about these operations.

The *Yûji Shimpô* states that the Tai Won-kun has advised the King to recall Mr. Boku Yeiko and other political refugees connected with the abortive revolution of 1884, and that the King has sanctioned the measure. Some other papers mention that Mr. Boku will start for Korea on the 5th instant accompanied by his friend Mr. Shiba Shiro, an ex-M.P.

The *Chu-ô Shimbun* publishes a telegram, saying that several thousands of Chinese troops were landed at A-San on the night of the 24th instant.

Various rumours are circulated about the divorced Korean Queen. It is said that she

is now under the protection of the British Consul-General, while another story says that she is hiding herself somewhere in the vicinity of Nam-San. The *Hochi Shimbun* states that she is still residing in the palace, but that she is seriously ill with malarial fever.

The *Yûji Shimpô* reports that the inhabitants of Sôul are in great distress on account of the enormous rise in prices caused by the present political complications and by the entire stoppage of the transport of rice from the southern provinces.

The construction of a telegraph line between Sôul and Fusan has been found to be attended with more difficulty than was at first anticipated. The work was begun at both ends. According to the latest telegram from Fusan, it is stated that the line from Sôul has been constructed as far as Yôju. The work from Fusan is believed to have been completed to a little distance south of Tai-ku. More than half the distance therefore remains unfinished.

The *Hochi Shimbun's* extra of yesterday contained the following telegram from Nagasaki:—"According to a telegram from Fusan, there is a rumour at that place that on the night of the 29th instant the Chinese troops at A-San attacked the Japanese, that the Japanese army soon succeeded in completely defeating the Chinese, killing one-third of the latter and putting the rest to flight."

The same extra states that, in the opinion of the military authorities, there must have been a second naval engagement in Korean waters either on the 30th or 31st ultimo.

The following telegram dated Saseho, August 2nd, 7.15 a.m., is said to have been received by the Government in Tokyo:—"Our army gained a complete victory over the Chinese at Sông-hwan, putting the enemy to flight. The Japanese army began to march towards A-San at 7 a.m. on the 30th ultimo." No date is given for the fighting at Sông-hwan, but it is probable, judging from the context, that it took place on the 29th ultimo. Sông-hwan, is a post station a few miles to the east of A-San. From the fact that the telegram was sent from Saseho, it is evident that the news has been brought from Korea by a man-of-war. Perhaps the rumour said to have been current in Fusan about a great Japanese victory at A-San refers to the same engagement.

According to the *Nichi Nichi Shimbun's* correspondent, writing from Sôul under date of July 24th, the ultimatum on which the Japanese Minister addressed to the Korean Government on the 19th ultimo is said to have contained two points, first that the Chinese troops at A-San should be ordered to withdraw, and secondly, that the existing conventions between Korea and China should be renounced. Of these two points the Korean Government was requested to give a definite answer to the first in the course of the 22nd. On the night of that day the Korean Government is said to have made a very ambiguous reply. It is also stated that on the same night some Japanese troops were fired at by the Korean soldiers in the vicinity of the palace. The meeting between the King and the Tai Wôn-kun is said to have been extremely affectionate, many of the Japanese witnessing the scene being moved to tears. The *Nichi Nichi's* correspondent states at the end of his letter that there is no longer any fear of double dealings on the part of the Korean Government, and that all the reforms that are within the capacity of the Koreans will be carried out.

It has been stated that the foreign Representatives had audience with the King immediately after the collision between the Japanese and the Korean troops in Sôul on the 23rd ultimo. According to subsequent letters, it appears that the foreign Representatives, although they went to the palace, turned back on seeing the gate guarded by Japanese troops. They had been asked, it is stated, by the Ming politicians to repair to the palace and rescue them from the dangerous position they were placed by the Japanese Minister.

A hundred police constables in Tokyo have been ordered to proceed to Korea under the leadership of Police Inspector Takehisa Kokusai.

and three police sergeants. These constables are all known to be skilful swordsmen, and it is believed that under certain circumstances they may be organized into a *ballo-tai* (sword-corps).

The *Tokyo Asahi Shimbun's* extra of yesterday contained the following telegram:—"Fighting commenced at 8 a.m., on the 29th July. After five hours of hard fighting, the Chinese, who numbered about 2,700 or 2,800, were completely defeated, 500 or 600 of them being killed and wounded. The enemy fled in the direction of Hong-ju. A-San has been taken possession of by the Japanese troops. Several cannon and a countless number of other arms of war have been captured." This telegram is dated Fusan, August 3, 8.30 a.m., and is said to have been brought to that port by the *Shinano Maru*, which left In-chhôn on the 1st instant.

The following telegram, dated Shichi-gen (Japanese pronunciation), July 31, also published in the same extra, is said to have been sent to the War Office by Major-General Oshima, the commander of the Japanese army, and is more trustworthy: "Fighting commenced at 3 a.m. on the 29th, and after five hours all the fortresses of the enemy at Sông-hwan were taken by our troops. The number of the Chinese troops was about 2,800, of whom 500 were killed and wounded. On the Japanese side 5 officers and about 70 men were killed and wounded. The enemy dispersed in great confusion and fled in the direction of Hong-ju. Their object is perhaps to get on board Korean junks in the neighbourhood of Kun-san. Several regimental flags, four pieces of ordnance, and a quantity of other arms have been captured. We pursued the enemy and have seized their stronghold at A-San." There is a discrepancy of date between this telegram and the one published yesterday about the march of the Japanese from Sông-hwan to A-San. But the latest news must be considered nearest the truth. Shichi-gen seems to be a small village in the vicinity of A-San; it was evidently the headquarters of the Japanese General.

The *Nichi Nichi Shimbun* publishes a minute report about the sinking of the *Kowshing*, said to be based upon the statements made before the Japanese authorities at Saseho by the captain and navigator of that vessel. The ship left Taku on July 23rd. When she approached the island of Phung-do at 8.30 a.m., on the 25th, she was ordered by signal from a Japanese war-vessel to stop her course. The order was at once obeyed. She was then commanded to drop her anchor, which she also did. A boat carrying an officer then pushed off from the Japanese war-vessel toward the transport. The officer had an interview with the Captain of the transport, and demanded to see the books, which were at once produced. In reply to the questions of the Japanese officer, the Captain answered that the transport was named the *Kowshing*, that it was hired by the Chinese Government to transport troops from Taku to A-San, that the number of troops on board was about 1,100, that there was only a small number of rifles, that the quantity of coals on board was 200 tons, and that their fresh water could not last more than two days. The Japanese officer then asked the Captain whether he would navigate the ship to wherever might be designated by the Japanese war-vessel. The reply was of course in the affirmative. The officer then went back to the Japanese warship. The Captain of the transport requested the Japanese war-vessel by signals to send a boat. A boat was accordingly sent to the transport and the Japanese officer in command of it asked the Captain what he wanted. The latter explained that, although he was quite willing to obey the orders of the Japanese war-vessel, the Chinese officers prevented him from doing so, and asked to be allowed to take back the Chinese troops to Taku. The Japanese officer did not give an immediate answer to the Captain, but after going back to his ship signalled to him to leave the transport at once. The Captain answered that he was not permitted to do so. The Japanese war-vessel now hoisted a red flag, and repeated its demand to the Captain of the transport to leave his ship at once. Thereupon the Captain called

up the foreign officers on deck, and when the transport was fired at by the Japanese war-vessel, they jumped overboard, and swam toward an island. The Chinese officers had not only aimed rifles at the Captain, threatening to shoot him if he should attempt to leave the ship, but actually fired at him and his comrades when they had jumped into the sea. They were, however, rescued by a Japanese boat. These officers are said to be sincerely grateful for the kind treatment they have since received from the Japanese authorities. From this account it is apparent that there was nothing precipitate in the conduct of the Japanese war-vessel, and that the stupidity and the obstinacy of the Chinese troops are alone responsible for the sinking of the transport.

[FROM CHINA PAPERS.]

According to a telegram, the Fukien squadron, armed with heavy guns, left Foochow on the morning of July 24, its ostensible destination being the Loo Choo Islands.

The steamers engaged to take the detachment of 12,000 troops from Tongku to Korea were the *Hsinfung*, *Kuangchi*, *Poochi*, *Fungshun*, *Chintung*, *Feiching*, *Haeen*, *Kowshing*, *Toonan*, *Kungpai*, *Funching*, *Chiyuen*, *Meifoo*, and *Hyenik*, a Korean steamer.

The break in the cable across the Yellow River was repaired on Tuesday, July 24.

The *Hsinchi* arrived at Shanghai from Newchwang on the 25th July, not having carried any troops, as she is under charter. She left Tientsin on the 12th and Newchwang on the 22nd, and on Sunday, July 22, passed through a fleet of five China Merchants' vessels conveyed by a torpedo boat, en route to Korea, the *Hsinfung* being the leading vessel behind the torpedo boat. The others were too far behind to be distinguished and they would probably reach their destination at noon on Monday, the 23rd. There were no China Merchants' steamers at Chefoo.

It was publicly notified on July 27 that the export of rice from Shanghai is prohibited, the reason given being that the price of the cereal had increased so considerably lately. The notification does not interfere with rice to be exported under *huchao* or for the use of the troops and charitable purposes.

All was bustle at Taku last Sunday, says the *N.-C. Daily News* of the 27th ult., and the China Merchants' steamers and the others chartered by the Government to carry troops to Korea were busy shipping their live freight. The following vessels left on Sunday for Korea:—*Hsinfung*, *Kuangchi*, *Poochi*, *Iren*, *Fungshun*, *Haeen*, *Chintung* and *Feiching*. The *Kowshing* left on Monday and the *Liensheng*, *Hsinyu*, and *Kungpai* were to go on the next and following days. The *Feiching* had on board 1,000 men, so it may be judged from this how many were leaving altogether. Many of the so-called soldiers were coolies, and there was a difficulty in coaling the steamers owing to many of the coolies having enlisted. Among their weapons were bows and arrows and spears. Some of the vessels took ponies, which were loose about the deck, and in one case an animal fell down into the engine room. Many of the soldiers were mere boys.

"The latest report concerning the *Toonan*," says the *China Gazette* of Friday last, is that she has been in collision with the *Kowshing*. Three China Merchants' steamer, the *Hsinfung*, *Fungshun*, and *Haeen* arrived this evening from Tatung-kao, a small Chinese station north of Newchwang, where they have been engaged in conveying troops from Taku. They have seen nothing of the *Toonan* since Sunday when she was at Taku preparing to take in troops for Tatung-kao, and she is supposed to have left Taku yesterday morning. Not one of the three vessels which arrived this morning saw anything of a Japanese war-vessel." The next morning the *N.-C. Daily News* said that the *Toonan*, *Kungpai*, and *Hsinyu* left Taku on Wednesday evening, according to a C.M.S.N. Co.'s telegram, so that it can hardly be the *Toonan* that has been sunk.

The British gunboat *Archer*, the U.S.S. *Baltimore* and *Monaghan*, and German gunboats

Illis, the French gunboat *Lion*, the Russian gunboat *Mandjour*, and three Japanese men-of-war were at Chemulpo on the 20th ult.

Mr. Hennen, the British Consul-General at Shanghai, has received a telegram from the British *Chargé d'Affaires* at Tokyo, Mr. Paget, stating that the Japanese Government has undertaken to regard Shanghai as a Neutral Port.

The Shanghai papers assert that the sunken transport was conveying only 700 men to Korea. It is also stated that 50,000 men are to be landed at the Yalu river.

THE "NICHU NICHU SHIMBUN" AND THE "NOVOE VREYMA."

Commenting upon the telegram to the effect that the *Novoe Vreyma* declared that Russia ought to side with China against Japan, the *Nichu Nichu Shimbun* writes as follows:—"Reuter's telegrams have frequently proved incorrect. In the present case, what Reuter telegraphs is probably true. But as to the article itself, there is no doubt that it does not express the attitude of the Russian Government. The *Novoe Vreyma*, as we pointed out, cannot be regarded as an avowed organ of the Russian Government, and consequently the views now attributed to it must be regarded as its private opinion. At all events, it would be rash to conclude that the article in question echoes the sentiments of the Russian Court. The Emperor of Russia is known to be a votary of peace, and is actuated by the best motives toward this country in connection with the present complication. It is true the Russian Government offered its advice to Japan in the interest of peace in the East. We have not yet learned that Russia has taken any step to side with either China or with Korea against Japan. Should the Russian Emperor be, unfortunately, inclined to the same views as those advocated by the *Novoe Vreyma*, there would be no cause for Japan to be alarmed, for she has undertaken the present task with a firm determination to cope with any emergencies that may arise. We are, however, firmly convinced that the Russian Emperor does not entertain such an opinion, and we would advise our countrymen to pay no attention to the Russian journal's article."

ENGLISH NEWS.

The difficulty between England and Germany in connexion with the Congo Free State agreement seemed to be in a fair way towards settlement when the mail left. The exact nature of the settlement was not then known, but the *Saturday Review*, truculent as usual, was confident that British interests were to be pusillanimously sacrificed in consequence of the menaces of the Teuton.

The strip of land in question was, it seems, to be leased from the Congo Free State, not conceded in perpetuity to Great Britain; and, so it is said the German Government had not fully understood the nature of the transaction. *The Times* explains the matter as follows:—

Our Foreign Office was perhaps a little proud of having invented the application to international arrangements of the principle of leaseholds. In its delight it forgot that other people might put a wholly different construction upon its novel arrangements. As a matter of fact, Germany refuses to conceive of valid leasehold arrangements between State and State, at all events where one of the States in question is a mere creation of international agreement without intrinsic strength. In the lease of that strip of territory along her frontier she sees a concession of sovereign rights under a thin disguise; and as the concession of such rights in that quarter was exactly the thing which she steadfastly refused when it was openly sought, she was indignant at what looked like stealing a march upon her. In this country, however, the lease was accepted purely and simply as a lease. We did not conceive ourselves to have interposed any kind of barrier against Germany or curtailed in the slightest degree any right that she possessed. Her rights not being in the custody or under the control of the Congo Free State, it was

not supposed that we could acquire control by any agreement with that State. It is open to question whether a novel departure of this kind ought to have been taken without reference to other Powers. A lease of this kind differs essentially from a lease under municipal law, because its exact value and meaning can be settled only by international consent. There is a certain simplicity in the action of Lord Kimberley which, it must be confessed, invites misconstruction. We may even congratulate ourselves that Germany raised the question with so much promptness, because the Congo Free State as a landlord would have been utterly powerless to secure undisturbed possession to its tenant in the event of the transaction being denounced at some later period. Our leasing of territory to the Free State is a different matter, because there we are doing as we please with our own. Our superior rights cannot be derogated from by a limited delegation to the Congo Free State. Whatever may be said in the way of diplomatic criticism, the fact remains that the British Government did conceive of this lease from the Congo Free State as of an ordinary transaction between citizens under a common law, and, so conceiving it, did not suspect that Germany would take any other view. That is why the history of the previous negotiations suggested no thought of stirring up German resentment.

As we stated last week, the British Government is willing to enter with the French Government into a general review of all African questions pending between the two Governments, for the purpose of such an adjustment as would place on a better footing the relations of the two countries in connexion with African affairs.

In a French journal devoted almost exclusively to colonial matters, an attempt has been made to formulate those questions which the two Governments will have to discuss, and it may be useful to take note of this list, which, however, must not be assumed to be necessarily exhaustive. It contains the following 11 subjects:—

1. Delimitation of the Anglo-French boundaries to the north and east of Sierra Leone, which has been the subject of negotiations for nearly three years.
2. The Warina incident, where Captain Landy and Lieutenant Maritz lost their lives.
3. The frontier incident in the neighbourhood of the Mellacore.
4. Delimitation of the Anglo-French boundary in the *Hinterland* of the Gold Coast colony.
5. Delimitation of the spheres of influence of France and Great Britain between Dahomey and the Niger.
6. Settlement of the questions in dispute between Lieutenant Mizon and the Royal Niger Company, including the French demand for restitution of the vessels and merchandise seized by the company.
7. Determination of the British and French spheres of influence between Say and Barrawa.
8. The questions relating to Sokoto, Adamawa, and Bornu.
9. The difficulties that have arisen in consequence of the Anglo-Congolese treaty of the 12th of May, 1894.
10. Questions raised by the Anglo-Italian treaty of the 5th of May, 1894, with reference to Harrar.
11. The indemnity to French Roman Catholic missionaries in connexion with the disturbances in Uganda.

The *London Gazette* of June 19th, contains a formal notification that, in virtue of an agreement concluded between the late Sir G. Portal and Mwanga, King of Uganda, that country is placed under the protection of her Majesty. The protectorate comprises the territory known as Uganda proper, bounded by the territories known as Usoga, Unyoro, Ankoli, and Koki.

In the House of Commons on Friday, June 15th, Sir E. Grey said there was a general desire on the part of the European Powers to act in concert for the maintenance of the *status quo* in Morocco.

A Tangier telegram dated June 18th, says the British, French, and Spanish Ministers have been instructed by their Governments to recognize the new Sultan. Three British war-vessels have been directed to proceed to Tetuan. A courier who has reached Tangier from Fez says the population of that city decline to accept Abdul Aziz as Sultan, and are practically in a state of revolt. The Kabyles, also, generally refuse to recognize the new Sultan.

THE CAUSE OF THE WAR.

THAT war has actually broken out between the two chief Powers of the East unfortunately no longer admits of doubt. On the 25th inst. a naval engagement, particulars of which will be found in another column, took place off Phung-do, and it seems probable that hostilities on land began on the 27th inst. Under these circumstances a brief review of Japan's relations with China in connection with Korea during the last two decades, and a recapitulation of the recent disturbances in Korea that have culminated in war, will not be without interest.

To understand the first treaty between Japan and Korea we must recall an incident that occurred in 1873. In that year the Korean authorities at Fusan offered a gross insult to the Japanese official stationed at that port for the protection of the Japanese colony there. Count SOYEJIMA was then in China entrusted with a special mission on the part of Japan. Through this ambassador the Japanese addressed an enquiry to the Chinese government as to whether Korea was a dependency of China, adding that in this case Japan would require from China some amends for the insult offered by Korea to the Japanese official at Fusan. China, however, repudiated all responsibility for the acts of Korea, and thus in effect abrogated her claims of suzerainty over the latter country. In consequence of this, in the treaty between Japan and Korea signed in 1876, the latter was recognized as an independent state. A similar recognition of the independence of Korea obtained in the various treaties subsequently formed with this country by various western Powers. By the Chemulpo convention of 1882, Japan made a stipulation with Korea that the former Power should have the right to station troops in Korea for the protection of her own nationals in that country.

At the time of the disturbances in 1884, in which the late KIM OK-KYUN played such a prominent part, both China and Japan had troops stationed in Korea. By the treaty between Japan and China signed in 1885 it was agreed that China and Japan should simultaneously withdraw their troops from Korea; that if at any time, in consequence of disturbances in Korea, either Power should wish to send troops for the protection of its nationals resident in that country, notice of the intention to do so should first be given to the other; and that as soon as the disturbances had subsided the troops should be withdrawn. This agreement may be regarded as tantamount to the placing of Korea under the joint protection of China and Japan.

Korea is a country in which misgovernment and extortion have flourished luxuriantly for centuries, but under the recent MING administration a serious change for the worse had taken place. A change was

made by which the tenure of office of a local official, previously three years, was reduced to one. Since, therefore an official had to reap his harvest of plunder in one-third of the time, his rapacity was proportionately increased and the people groaned under their burdens. In the Spring of the present year what is known as the Togaku-to disturbance, a revolt of the long-suffering people against the extortionate officials, which had been smouldering for years, broke into flame, and rapidly assumed serious proportions. The MING politicians, in concert with Mr. YUAN, the Chinese resident, thereupon requested the Chinese Government to send troops to suppress the insurrection. China complied with the request, and—after the departure of the troops, be it noted—gave notice of the fact to Japan. Japan, also, having given notice of her intention to China, sent an army of four or five thousand men to Korea for the protection of her nationals in the event of disturbance.

Japan has for a long time considered with anxiety the possible consequences of Korean maladministration. She felt that the only possible way to make Korean independence a permanent reality would be a thorough reform of the system of government in Korea. It may be observed that among the Japanese public a strong sympathy was felt with the Korean insurgents, whom they regarded as actuated by genuine and serious grievances, and as demanding absolutely necessary reforms. Their hope was that the insurrection would not be suppressed by brute force, but that the insurgents might be pacified by the Korean Government's being persuaded to undertake the reforms indispensable to the welfare of the country. Japan was prepared to coöperate with China in carrying out these reforms, and gave notice of this fact to China. It was added, however, that if China would not coöperate with Japan, Japan would undertake the reforms alone. China replied by a refusal to coöperate with Japan in the reform of Korea, and by a request that Japan would withdraw her troops. With this request the Japanese Government refused to comply. On the contrary, the Japanese force in Korea has been strengthened. It is not known exactly how many soldiers the Government sent to that country, but the number certainly exceeds ten thousand.

In view of China's refusal to coöperate, the Japanese Government instructed its Minister, Mr. OTORI, to treat directly with the Korean Government on the subject of reforms. At first it appeared as if the Korean Government would be willing to undertake them, and a commission of three, subsequently increased to fifteen, Korean statesmen was appointed to carry them out. The commissioners held repeated conferences with the Japanese Minister, in which the details of the reform programme—financial, educational, military, and industrial

—were discussed; and the commissioners finally expressed themselves satisfied with the reforms proposed by the Japanese Government. Mr. OTORI then asked for their written consent. And now there came a complete reversal of policy on the part of the commissioners. Instead of giving in writing the compliance they had already given by word of mouth, they sent a communication in which all the proposed measures of reform were rejected in an insolent manner. At the same time, various high officials known to favour reform were summarily degraded. The cause of this sudden change of front is not definitely known, but it is generally believed that the previous compliance with the Japanese demands was merely an act of political finesse; that the Chinese Resident had assured the MING politicians that he would return to China and bring reinforcements to drive out the Japanese invaders; that the MING politicians, knowing that reform implied their own downfall, had feigned assent to the reform programme in order to secure time for Chinese intervention.

On the 19th inst. the Japanese Minister sent the Korean Government an ultimatum, the exact terms of which have not yet transpired. The MING politicians replied to this after a day or two by an insulting message, and Mr. OTORI thereupon went to the palace to seek a personal interview with the KING. On his way his escort was fired on by the Korean troops, a skirmish ensued which ended in the rout of the Koreans, and Mr. OTORI then entered the palace and had an audience with the KING. The KING expressed regret that the friendly advice of Japan had not been adopted by his Government. At his request an escort of Japanese troops was sent to attend the TAI WON-KUN, who shortly afterwards came to the palace, and was appointed Regent. It is stated that the KING wished to take this step more than a month ago, but that at that time the TAI WON-KUN was either prevented from coming to the palace by the MING faction, or was apprehensive as to his personal safety should he attempt to do so. It is believed that the KING is himself sincerely in favour of reform, but that his efforts in this direction have hitherto been thwarted by the MING politicians. His father, the TAI WON-KUN, is admittedly the leader of the party of reform.

China having refused to coöperate with Japan, and having, so the Japanese believe, intrigued with the MING politicians with a view to prevent Japan from herself undertaking the necessary reforms in Korean administration, the Japanese Government determined to prevent the landing of any more troops on Korean soil, for these troops would, they believe, be used in support of the MING faction and for the maintenance of the old abuses. Some Japanese war-vessels therefore in-

tercepted a Chinese transport, the troops on board of which were probably about to be landed in the Bay of Nam-Yang, and actual hostilities thereupon began.

THE "ARENA" ON JAPAN'S FOREIGN RELATIONS.

THE Boston *Arena* has renewed the familiar discussion about Japan's foreign relations. A correspondent, whose letter we publish elsewhere, refers to the subject and invites our criticism. We have not seen the *Arena's* article, but from the portions quoted by our correspondent there is no difficulty in perceiving that the writer labours under misapprehensions. With regard to the complaint that Japan's title to have her treaties revised has been arbitrarily held in abeyance for nearly 22 years by Foreign Powers, it must be frankly conceded that there is here ground for criticising the conduct of Western States. But we have always to remember, that a right to demand the revision of a contract at a certain time, and an obligation on either of the contracting parties to accept the terms proposed by the other, are radically different things. We do not imagine that any Foreign Government has ever denied Japan's right to demand revision, or its own obligation to consider the terms proposed by her. But compliance with those terms is another matter. In effect, the problem of Revision has been under discussion since 1872. But it is a problem of much difficulty, and although the delay in solving it has passed all reasonable limits, no person possessing an intelligent understanding of the conditions will venture to deny that much delay was inevitable. With which side the responsibility chiefly rests is a point that cannot now be discussed without reopening a controversy, the inevitably bitter tendency of which has been amply demonstrated by experience. Our own firm conviction is that history, when it comes to be impartially written, will endorse the views uniformly advanced in these columns; namely, first, that the best interests of all parties would have been served by disposing of the question of Revision with all possible celerity; secondly, that during the interval of Count INOUE's tenure of the Foreign Affairs portfolio, say, from 1880 to 1886, a settlement satisfactory to all the contracting parties could have been elaborated had the Foreign Powers shown a little more liberality and, above all, a little more practicality; thirdly, that after the failure of 1887, Japanese public opinion, becoming a new party to the controversy, greatly complicated the situation and so materially limited the range of the Japanese Government's possible concessions that Western States were justified in hesitating; and fourthly, that since 1890 the Foreign Powers have not shown any lack of liberality or sympathy, and cannot be

justly held responsible for the delay in evolving a solution. During the years when it was possible to obtain terms such as would have satisfied foreign scruples, this journal earnestly and unceasingly urged the advisability of seizing the opportunity. Since then we have recognised that the question lies beyond the sphere of useful newspaper discussion, and with regard to the *Arena's* method of reviving it, we can only say that the Boston magazine's information seems altogether antiquated.

The special cases adduced by the editor of the *Arena* are familiar to all residents acquainted with the history of the Settlements. In the opium affair there was apparently a miscarriage of justice, but the example is worthless unless it can be shown to be typical, and that it certainly is not. Whether the judgment delivered were legally right or wrong, it was unquestionably based on no unconscientious or partial rendering of the treaty or the law, and as for the competence of the official that rendered it, we have only to note that he is now one of HER MAJESTY'S Judges, a man of universally recognised integrity and ability. To cite an isolated instance of the kind under such circumstances can only have the effect of suggesting the absence of really weighty evidence.

The second illustration—that in which the *Chishima* and *Ravenna* figure—is simply a caricature. The editor of the *Arena* has been grossly misled in this instance—so grossly that the whole of his case becomes tainted. We can not attempt to enter into particulars. It may suffice to say, however, first, that there no question of lights at all so far as the *Ravenna* was concerned; secondly, that the commander of the *Chishima* did not suffer any intentional incivility; and thirdly, that the case has not been decided against the Japanese, being still *sub judice*.

As for "bands of sailors entering bath-houses and outraging women," we have never heard of a single authenticated instance, and our experience covers a period of 27 years. We may add that even assuming such a brutal disposition on the part of Western seamen, the thing would not be possible.

With regard to the American procuress who is supposed to have spirited away Japanese girls of good family, and to be pursuing her nefarious trade under the ægis of the United States Consul and in defiance of well attested charges preferred by the Japanese Police, we have no hesitation in denouncing the story as a falsehood. The United States Consulate protects no law-breaker. If such a woman exists, the Consulate knows nothing of her. Nor do we.

Consular jurisdiction is open to many objections, and is responsible for many grave abuses. But it assumes dignity and respectability in comparison with the errors and exaggerations of Mr. B. O. FLOWER's indictment.

CHINA AND JAPAN.

NOW that fighting has commenced between China and Japan, we may expect that events will move rapidly. The next news probably will be that the Chinese troops at A-San have been killed or taken prisoners. It is true that they have had plenty of time to entrench themselves strongly, and that their numerical inferiority ought thus to be fully compensated. But we do not for an instant believe that they will stand against the Japanese. The large Chinese re-inforcements that were to have been sent to A-San were evidently a part of the game of bluff played by China throughout. There has been an assured belief in Peking that the European Powers would never allow the situation to reach a belligerent stage, and in the confidence of that belief China has been allowing herself to talk very large. But Japan can not possibly consent to any settlement that leaves China exultant. The heart of this country is in the struggle. Its honour is thoroughly involved. Its best statesmen have embarked upon a course to retreat from which without substantial achievement would be political suicide. China has apparently failed to realise these things, and has consequently been anticipating that her professions of strong effort would be saved from the test of practice. Thus the twelve thousand men, currently reported to have left Tientsin a fortnight ago for A-San, seem to have had no existence except in rumour, and it is not unlikely that the twenty thousand braves said to have been summoned from every province of the Chinese empire are similarly mythical. But Japan cannot afford to regard all China's forces as men in buckram. It is tolerably certain that a considerable body has actually entered the peninsula from the north, overland, and, despite the vigilance of the Japanese navy, other corps might at any moment be disembarked at some point along the coast of the peninsula and marched to re-inforce the little army at A-San. It is, therefore, the plain military duty of the Japanese General in Korea to dispose of that army before it can be strengthened, and we look to receive, at any moment, intelligence that he has done so. Japan can not act with too much promptitude. The initiative is of immense importance. From that point of view every effort should be made to cripple or destroy the Chinese navy. Command of the sea would mean for Japan liberty to carry out without molestation her scheme of reform in Korea. It is not necessary for her to strike any blow at the heart of China. Her programme, we think, should be to secure herself in Korea, leaving to the Chinese the task of driving her out. Such a task is wholly beyond their strength, unless they can annihilate the Japanese navy and thus obtain a safe sea-route for the passage of their troops to the peninsula. The general public is

disposed to place much reliance on China's bulk and staying power. Excellent as these qualities may be, however, they are chiefly useful for defensive purposes, while, if Japan plays her cards wisely, the rôle assigned to China will be necessarily offensive. Thus considering the situation, we do not anticipate any protracted operations of war. The fighting on land will be limited for the present to a Japanese attack upon the Chinese troops at A-San, and the fighting at sea will depend very much upon the ability of the Japanese to discover the whereabouts of the Chinese ships; for we find it difficult to credit the latter with any special alacrity to seek an encounter. A few naval engagements—perhaps one or two—will be the signal for the dropping of the curtain at sea. The Japanese will win. They may, of course, meet with some mishaps. Torpedoes and big guns are weapons capable of occasionally deadly effects in any hands. But the final issue will be decided by discipline, dash, and devotion. After that opening chapter of warfare is finished, there may be an opportunity for renewed negotiation or even mediation. But for the moment the field is in the complete occupation of the fighters.

THE RECENT NAVAL FIGHT.

THE naval fight of the 25th ultimo is now subjected to criticism partaking of the character with which the foreign community is only too familiar. Japan can always be sure that by a section of the Yokohama press the worst possible construction will be put on her motives and the most radical process of detraction applied to her actions. The mere fact that in the combat of the 25th she managed to bring to the scene of the fight a force superior to that of her adversary, seems to be regarded by some folks as more or less discreditable to her, whereas the strategical management that contrived such a result is distinctly praiseworthy. Every commanding officer makes it a prime object to outnumber his foes at points of collision. That is a question of skill in distributing and disposing of the forces available. We observe, too, that not even the common justice is done of stating correctly the numbers of ships engaged on each side. There were three Chinese vessels besides the transport. With the exception of the captured vessel, however, uncertainty existed at first as to their names. The ideographs originally published to designate the ships subsequently underwent more than one alteration. It would now seem, however, that the names of the Chinese vessels were the *Tsao-chiang* (captured), the *Tsi-yuen*, and the *Kwang-yi*. The *Tsi-yuen* is probably the vessel whose name is usually written *Chi-yuen*. On that hypothesis she belongs to the Northern Squadron, and is a Stettin-built cruiser of 2,300 tons, speed 15 knots

armed with two 21 c.m., one 15 c.m., and nine machine guns, as well as torpedo-tubes. The *Kwang-yi* we can not clearly identify. Apparently she is one of the three "*Kwangs*" of the Southern Squadron, deck-protected steel and wood cruisers of 1,030 tons, speed 16½ knots and armed with three 4½ inch quick-firing and eight machine guns. The *Tsao-chiang* is a gun-boat of 950 tons, attached to the Northern Squadron. The Japanese ships engaged were the *Yoshino Kan*, the *Naniwa Kan*, and the *Hiyei Kan*. The *Yoshino* is a steel cruiser of 4,216 tons, capable of steaming 22 knots, and carrying four 6 in., eight 4.7 in., and 22 3pr. quick-firing guns. The *Naniwa* is also a steel cruiser of 3,709 tons, her speed 18 knots, and carrying ten guns, of which two are 28-ton Armstrongs. The *Hiyei* is a composite Armour-belted corvette of 2,200 tons with a speed of 13 knots, and carrying three 17 c.m. 3½ ton (Krupp), and six 15 c.m. guns. These vessels are evidently superior to the Chinese ships encountered by them, and from that point of view the result attained on the 25th ultimo is not very remarkable. But the fight seems to have been altogether a peculiar affair. The three Japanese ships left Jinsen (Chemulpho) for the purpose of meeting the *Yayeyama Kan*, a despatch vessel. Their course led them to the south of the island Kang-hwa, which lies off the position at A-San where the Chinese troops are stationed. The same day two Chinese men-of-war, the *Tsi-yuen* and the *Kwang-yi* steamed out of A-San for the purpose of meeting and escorting to that place the transport *Kowshing* and her convoy the *Tsao-chiang*. For some time past the Chinese men-of-war, on sighting a Japanese cruiser, have always cleared for action. It happened that the two Chinese ships, emerging from the narrow channel between Kang-hwa island and the mainland, sighted the Japanese ships steaming past the south of the island, and, whether by the accident of their route or by design, followed them, at the same time running out their guns and beating to quarters. The Japanese ships turned to meet their apparent pursuers, and, like them, cleared for action. Thereupon the Chinese vessels ran up a white flag above the Japanese ensign, and this signal of course induced the Japanese ships to approach peacefully. When the distance between the leading vessels had diminished to 300 metres about, one of the Chinese ships discharged a torpedo and opened fire, while the other commenced to make signals to a transport and its convoy, which just then hove in sight. An engagement of course ensued, the *Yoshino* and the *Hiyei* fighting against the *Tsi-yuen* and the *Kwang-yi*, while the *Naniwa* devoted her attention to the transport and its convoy. The convoy also showed a white flag above the Japanese colours, but this ruse being now understood, the *Naniwa* fired across her

bows and summoned her, as well as the transport, to heave to. The transport obeying, dropped her anchor, and the *Naniwa* sent a boat to which information was given by the Captain of the transport, an Englishman. After the boat had returned to the *Naniwa*, the latter signalled to the transport to get under weigh and follow the man-of-war. Captain GALS-WORTHY would have obeyed this order, but the Chinese declined to permit him, threatening him with death if he did so. He then signalled again to the *Naniwa*, intimating his inability to act, and received for answer a recommendation to leave the ship. He accordingly summoned his officers on deck, and when the *Naniwa* opened fire, they jumped overboard. The Chinese shot at them as they were swimming toward the shore, but they were safely picked up by the *Naniwa's* boats. The *Yoshino* and *Hiyei* had meanwhile come up, having put the two Chinese vessels to flight, and the *Tsao-chiang* surrendered. An attempt was now made to pursue the Chinese ships, but it being seen that one could not be overtaken before reaching the Chinese squadron at A-San, and that to follow the other would involve abandonment of the duty upon which the Japanese vessels had sailed, the chase was given up. With regard to the sinking of the transport, it would seem that the refusal of the Chinese soldiers to surrender rendered it impossible to board her, and that resort to big guns became necessary. She was not deliberately destroyed, but one of the *Naniwa's* 28-ton Armstrong's hit her a blow that disposed of her at once. It is very regrettable that the troops could not be saved, but what is to be done with 1,500 armed men who refuse to surrender?

COMING EVENTS.

GRADUALLY the warlike chapter lying immediately before us begins to unfold its pages. A-San will be the scene of a battle memorable in the history of the Orient. It will be the Thermopylæ of the East, for the contest will be waged both on sea and on shore. A-San is a place of great natural strength. On the sea-side, it looks over to an island by which the northern and southern approaches are narrowed into channels easily capable of torpedo defence. On the land side, it is assailable from one direction only, that of Heitaku. Curiously enough there is current in Korea a prediction that A-San will witness a struggle necessitating the northward flight of the Chinese EMPEROR, and that the present year will mark the downfall of the Li dynasty of Korea. A copy of the prophecy is said to have been in the hands of the Japanese Consul at Fusan for eight years. It speaks of the *Togaku-to*, an association then unheard of, and of other things equally in *gremio futuri* at the time the presage was conceived. Pro-

bably it has been working out its own fulfilment. Coming to sterner facts, however, we learn that the Chinese forces at A-San have been busily engaged strengthening the position. They have dug trenches, prepared obstacles, and laid mines, so that the task of storming the place must present great difficulties. Moreover, the 2,500 troops originally posted there have received re-inforcements swelling their number to the neighbourhood of six thousand. To carry a stronghold so garrisoned and powerfully protected by nature and skill, will certainly inflict heavy loss upon the Japanese. Further, we learn that the whole of the Chinese Northern Squadron, aggregating over 20 ships, have left Taku and sailed for A-San. Thus it appears that China, departing from her wonted tactics, is putting forth all her immediately available strength at the outset, and has accepted Korea as a battle-field. On the side of the sea, she plants her navy, to secure the line of retreat and a basis of supplies. On the side of the land, she is marching a powerful army across the northern frontier of Korea, to recover possession of Sŏul and effect a junction with the troops and the fleet at A-San. It will, on the other hand, be Japan's business to prevent such a junction, and she is setting about the work in grim earnest. Yesterday, the embarkation of another large force for Korea commenced. What may be the exact number despatched, it is not our province to say, but Japan is not proceeding in any half-hearted manner. An idea of her resources may be gathered when we say that she has a hundred and sixty thousand men now under arms, and that she can at any moment put into the field 320,000, of whom 150,000 would be armed with Murata repeating rifles, and the rest with single rifles. These men have all been well drilled, and are between 20 and 32 years of age. As for money, the Government has at its immediate disposition fifty million *yen*, and yesterday a meeting of the leading capitalists of the empire decided that a sum of eighty million *yen* should be voluntarily contributed to form a war fund. This unparalleled national effort provides a chest the potentialities of which, for the purposes of military operations in the Orient, may be fairly measured at fifty million pounds sterling. The present intention, we believe, is to march one Japanese army northward to encounter the Chinese coming across the Tumen, and another westward to attack A-San, while the Japanese fleet will engage the Chinese in the waters of the latter place or elsewhere. The naval battle will be of paramount importance. If China succeeds in crippling the Japanese fleet, she will be virtually mistress of the situation. If victory on the sea rests with the Japanese, China will be helpless. Our readers will see that we are on the eve of a great struggle. It is a struggle between

the Eastern representative of Western civilization and the Kingdom of bigotted conservatism. Our sympathies are necessarily with Japan.

THE "KOWSHING."

THE *Kowshing*, a British steamer belonging to the Indo-China Steam Navigation Company, having been sunk by Japanese war-ships, together with her freight of 1,500 Chinese soldiers, we naturally find journalists who profess to think that an outrage has been committed against the British flag. There can not be any question about the correctness of the principle that, in time of peace, the ships of a neutral Power are legally entitled to act as military transports for another Power. Thus, when the owners of the *Kowshing* agreed to charter her to the Chinese for the purpose of carrying troops, they were strictly within their rights, especially as the charter took place some time ago; that is to say, when war between the two empires of China and Japan may not have seemed inevitable. But it became perfectly obvious three weeks ago that any attempt made by China to re-inforce her troops in Korea could be dictated by one purpose only, namely, to conduct hostilities against Japan. There was no room for the slightest doubt upon that point. It is true that the original despatch of Chinese troops to the peninsula was with the object of quelling the insurrection there. But the object of their subsequent stay was to oppose Japan, and the object of their reinforcement was to strengthen the potentiality of opposition. It may be urged that Japan's action in sending a large force to Korea and in augmenting it from time to time, invited similar interpretation by China. We think so. At the outset Japan, like China, acted within her conventionally recognised right in despatching forces, but after it became clear that an agreement with China had grown very problematical, and that Japan's persistent pursuit of her programme of reform in the peninsula must provoke China's umbrage, the Middle Kingdom could scarcely have been censured had it interpreted this empire's preparations as directed against itself, and had it declared and acted upon its intention of so interpreting them. But it did not do so. From first to last it has allowed itself to be out-paced and forestalled at every point by Japan. No one, however, will be so fatuous as to claim that Japan, having displayed remarkable alacrity and foresight throughout, was bound to copy, at the supreme moment, China's dilatoriness and hesitation. The despatch of troops from Tientsin to Korea at any time after the 1st of July was a plain and unequivocal measure of warlike preparation against Japan, and it would be the veriest moonshine to pretend that Japan should have sat with folded hands, and suffered the Chinese

army at A-San to be re-inforced until it became a really formidable body. Judged by every principle of common prudence, not to speak of the test conclusive in such cases, national safety, Japan would have been mad to allow the unmolested passage of Chinese troops from Tientsin to A-San. Had she done so, she would subsequently have become the world's laughing-stock, and none would have jeered at her more uncompromisingly than the very critics who now condemn her promptitude. It did not matter in what kind of ship the Chinese soldiers were conveyed. To claim immunity for a vessel engaged in such an undertaking simply because her owners are English seems an extravagant proposition. Besides, there is the question, which side opened fire upon the other. The Japanese declare that in this respect the Chinese are responsible, and of course, if the Chinese conveying ships commenced hostilities, the nationality of the transport ceased at once to be a consideration of any moment whatever.

MIIKE.

IN an article recently published in these columns with reference to Japanese merchants in general and the Mitsui Company in particular, we noted incidentally that a book had been issued by the Mitsui Kozan Kaisha on the subject of the Miike Mine. This work is a handsome volume containing carefully prepared maps, a number of excellent collotypes, exhaustive statistics, and other matter bearing upon the principal coal mine in Japan. Hitherto foreigners have generally supposed Takashima to be the chief source of coal supply in Japan, but that is an erroneous idea based doubtless on the fact that the bulk of the Japanese coal exported came from Takashima. The truth is that the Miike Mine is much larger, and that, the northern mines excepted, Japan has no other supply of coal likely to last for any considerable time. This statement will probably surprise many of our readers. It has hitherto been a generally accepted notion that Japan possesses virtually inexhaustible stores of the mineral. Geological experts have told us as much, and in a British Consular Trade Report compiled a few years ago it was alleged that the whole of Kiushu was practically a vast coal-bed. We ourselves shared this belief until recently, but it now seems clearly established that the supply of coal obtainable from mines now in operation, other than those of Hokkaido, is very limited. A few years, probably from ten to fifteen, will see Takashima exhausted, and the same remark, more or less modified, applies to all the other mines in the south, Miike excluded. Miike is said to have a supply for forty or fifty years on the most favourable estimate. The area of deposit according to careful surveys

while two boats are kept on the adjacent river for the amusement of the students. The opening celebration was held on the 16th instant, and since then a number of famous Buddhist priests and laymen have arrived in Mikawa and lectured to large audiences. Among those that have lectured so far, we note Mr. Fujii Senaho, *bungakushi*; Rev. Emura Shuzan, noted for his skill in Buddhist apologetics; Revs. Maeda Eun and Ishikawa Ryoin, both specialists and preachers of note; Rev. Himemiya Daien, a leading Buddhist controversialist; Mr. Sawayanagi Masataro, *bungakushi*; Rev. Kato Gyo-kai, lecturer on the history of Buddhism; Rev. Murakami Sensho, a professor of the Imperial University and one of the most learned of Japanese Buddhists; Rev. Shimaji Mokurai, the Chrysostom of Buddhist priests; The Rev. Prof. Nanjo Bunyu, Max Müller's pupil; and Ouchi Seiran, one of the most ardent of Buddhist lay-propagandists. During their leisure hours, a number of the students have been visiting the neighbouring towns and villages, where they have held Buddhist lecture-meetings which have been largely attended. Particular success attended the addresses in Kamagori, Toyohashi, Okazaki, Gozu, Ushikubo, Fuso, Nishio, Katanohara, Hazu, Yokosuka, and Anjō. Great quantities of books and pamphlets, mostly relating to Buddhism, have been forwarded to the school by sympathisers, so that there is no lack of mental pabulum for the students.

DISAPPOINTMENT IN GROS.

ABOUT dusk on the 23rd ultimo little knots of countifish-looking people began to gather in the ground of the Kanda Myojin Shrine, in Kanda District. They all wore a most disappointed expression and talked earnestly and quietly among themselves. Towards eight in the evening the number of people had swelled to over one thousand. The police were notified and precautions taken to keep things in order; yet the crowd was very subdued, and as the night wore on marched away in the direction of the Sumida River, avowedly in quest of cheap lodgings. A little later some twenty or thirty of the men presented themselves at the Kanda District Police Station. They had, they stated, been the victims of a deplorable mistake. In connection with the hire of a certain number of coolies by the Government, some two or three inspectors or superintendents were to be engaged. Somehow or other, this command had been misconstrued to mean the hiring of two or three thousand coolies, and certain parties had gone to all the villages around Tokyo enlisting farm-labourers for this purpose, promising a bonus of fifteen yen down and a daily wage of fifty sen for the future. Over one thousand men soon accepted the proposal and walked to Tokyo, only to learn that those who had engaged them had been mistaken, and that only two or three first-class men were necessary instead of as many thousand. The disappointed men had by agreement thereupon met at the Kanda Myojin; nearly all had concluded to wend their way homeward after spending one night only in the metropolis. But they, the twenty men in question, were without funds and hence requested the assistance of the police in order to get back to their homes. This was granted, and the men started for their respective villages on the following day. It seems strange that so serious a misconception should have occurred and it is fortunate that the victims were orderly enough to return to their homes without making any disturbance. The vernacular press expresses great sympathy with the disappointed men, and assures them that their services will shortly be needed in very truth.

A CURIOUS FAMILY CEREMONY.

MR. ICHIJIMA TOKUJIRO, a member of the House of Lords, is a celebrated millionaire of Echigo, the total direct taxes paid by him amounting annually to no less than twelve thousand yen. A most curious custom has for very many years been kept up in the household of this gentleman, the observance consisting in the ceremonial worship of old straw-sandals (*waraji*). This may be justly claimed

as the queerest of all the queer ceremonies still kept alive in Japan, yet the family have a special reason for venerating cast off foot-gear of this description, they being the origin of the rise of the family from a condition of obscurity to its present opulent state. It seems that the founder of the house was a petty tenant farmer who was at one time so poor that he succeeded only by dint of the most arduous labour in making ends meet. After several years of a hand-to-mouth existence, he began to make straw-sandals in the brief intervals of his work a-field. To the surprise of the neighbours he made no attempt to sell the produce of his industry, but kept on adding to the slowly accumulating heap of sandals. For more than two years he spent every spare moment in this manner, and finally had so many sandals on hand that he had no more room to store them. He then hired a couple of junks—for his home was not far from the littoral of the Sea of Japan—and loading both with *waraji* set sail for Sado. On reaching the island the shrewd man applied to the official superintending the great gold-mine, begging that he might be permitted to present a lot of new sandals to the miners, in return for which he desired only to receive the old, worn-out foot-gear of the men. This innocent request was readily complied with by the officer in charge, and the farmer soon left for home with his junks laden with old sandals. So soon as he returned he set to work boiling the *waraji* given him, and was rewarded by gaining from them no less than forty *kwamme* (about 340 lbs.) of pure gold. This was the origin of that great fortune which the founder of the family bequeathed to his descendants. History does not tell us whether the superintendent of the mine was ignorant of the value of his exchange, or whether he thereafter put a stop to the export of old sandals; at all events the fortune of the Ichijima family stood on this footing, and every year since then the grateful members have performed a solemn ceremony in honour of old *waraji*.

THE MANIFESTO OF THE CONSTITUTIONAL REFORM PARTY.

THE Constitutional Reform Party has issued the following manifesto with respect to the Korean affair:—Perverse and ignorant and unable to discern the general tendency of the world, China is liable to violate the great principles of international intercourse and to derange the tranquillity of the Orient. When the recent disturbance began in Korea, China disregarding the Tientsin Treaty, treated Korea as its dependency, and instigated it to reject the reforms proposed by this Empire and further incited it to challenge this Empire to engage in war. These misguided actions on the part of China have not been without fruit, for blows have been exchanged between Korea and this country. China is entirely in the wrong in the present affair. Our army has justice on its side and its military ardour is highly excited. It is an easy thing, therefore, for our army to force its way into China, to dictate terms of peace under the walls of its capital, and to display the glory of our Empire. The time has indeed come for our country to settle the affairs of the Orient and to declare to the world the permanent policy of the Empire, for when will any such opportunity occur again. We are firmly persuaded that any one who, at this juncture, is inclined to seek temporary ease and to stand idle is not a loyal subject of Japan. He is not a true Japanese who is not ready to fulfil his national obligations on this tremendous occasion. Such being the tendency of the times the Constitutional Reform Party has made the following resolutions and expects the Japanese people to carry them into effect:—

- 1.—With a view to assert the rights and dignity of the Empire, funds for carrying on the war must be provided to the utmost capacity of the nation.
- 2.—The Constitutional Reform Party will not be satisfied with victory on the battle field, but will consider it necessary after the victory to maintain our rights and interests in the international conferences of the various Powers that will doubtless ensue.
- 3.—The Constitutional Reform Party will make it its object to oblige China to accede to various important provisions which the Empire regards as essential

for the perpetual maintenance of the tranquillity of the Orient and for the preservation of the rights, dignity, and interests of Japan, and for the perpetuation of Korean independence.

We may state that the Constitutional Reform Party is an important wing of the Opposition, and that it is led by such distinguished politicians as Mr. Kusumoto, the President of the last Diet, Messrs. Kawashima Jun, Ohigashi Giteau, and others of equal repute.

MR. KURINO, THE NEW MINISTER TO AMERICA.

THE sudden appointment of Mr. Kurino to be Japanese Representative in Washington has elicited various comments from the vernacular press. Our contemporaries inclined to connect it with the Korean affair. The *Shin Choya* says that it was chiefly through the earnest exertions of Count Inouye that Korea came to be regarded as an independent Power by Western nations. Among Western Powers the United States of America was the first to recognize the independence of Korea and to despatch a representative to Seoul. This step was taken by the United States chiefly on account of the exertions of an American gentleman, who, convinced of the justice of the views of Japan in the matter, had endeavoured by speeches and by contributions to newspapers to call public attention in the States to this important question. Mr. Kurino played a considerable part on this occasion, though whether in America or while at home we are not certain. Thus Mr. Kurino is regarded by this paper as being intimately connected with the problem of the independence of Korea, and his present appointment is considered to be necessitated by the present complication. In fact this sudden change of the Japanese Representative in Washington is supposed to have originated with Count Inouye. The *Shin Choya* does not profess to place any firm credence in the above statements, but congratulates Mr. Kurino on being entrusted with this important post at so critical a juncture.

Mr. Kurino, says the *Kokkai*, is a graduate of Harvard College. Since his return he has been appointed to one post after another in the Foreign Office, so that his connexion with that office is said to have lasted already above ten years. His present appointment is therefore regarded as being unusually well chosen, Americans are disposed to think well of aliens who, after having been educated in their country, get important positions after they return home. Mr. Kurino's connexion with Harvard will further conduce to his success, for many politicians and diplomats in the United States are alumni of that University.

THE POLICE AND THE TRAFFIC.

COMPLAINTS are made about the traffic at the south end of Water-street. Some time ago there was a jinrikisha stand outside the Water-street entrance to the Grand Hotel, which has been abolished by the Authorities, and the official board and stake were removed at the same time as the jinrikishas that obstructed the road. It was not long, however, before the jinrikisha men again converted the narrow thoroughfare into a stand, and now daily may be seen half-a-dozen of these vehicles opposite the hotel, which, with the same number often outside Deakin's, makes the road almost impassable. This state of things is a great danger to carriages and pedestrians, and if two traps met at this point a passage could not be effected without a collision. Perhaps when some aged person has been killed or a child is maimed for life the police will remember that the jinrikisha stand is abolished.

A TREACHEROUS JAPANESE.

THE *Nippon* and the *Yfyu* are surprised as well as indignant to learn from the information of the *Osaka Mainichi* that there is in their own country a man so utterly devoid of patriotism as to propose to procure for China a large supply of coal at this juncture. The man's name is Murase Jitsutaro, a youth just twenty years old. He is the eldest son of Mr. Murase Shobei,

clerk of a big silk firm in Kobe, in which establishment he himself was formerly employed as a book-keeper. He must have been guilty of some dishonesty, for he was soon obliged to run away to Hokkaido where he lived in disguise. Recently he was pardoned by his father and was allowed to return to Kobe. Now in Kobe there are many Chinese who, secretly commissioned by the Chinese Government, are endeavouring to get a supply of coal; but the native merchants are determined not to sell the article, which they think is sure to be sent over to China for the use of her war-vessels. Murase heard of the unsuccessful attempts of the Chinamen and he resolved to seize what seemed a splendid opportunity of gaining a large profit. The difficulty was how to approach the Chinamen with the proposal. At this juncture he heard of a Korean, said to be a spy of the Korean Government, living in the house of a certain gentleman of Kobe with whom he was acquainted, and he determined to make overtures to the Chinese through this Korean, whom he believed to be acquainted with them. Murase then began to frequent the house at which the Korean was staying, became acquainted with him in a short time, and then induced him to aid in the treacherous plot of supplying coal to the Chinamen. With help of the Korean he wrote a letter to a Chinese known to be eager to purchase a large quantity of coal, and leaving the Korean to open negotiations with the Chinaman he went to his native place, Nagahama, Omi, the better to conceal his project. But all his endeavours were to end in total frustration, for the master of the house where the Korean was lodged became aware of the plot and strongly remonstrated with the Korean concerning the impropriety of what they were intending to do. The Korean, who appeared to be less unprincipled than the Japanese, was soon convinced of the error of his ways and declared his resolution to take no part in such a business.

THE ENCORE NUISANCE.

An Italian impresario has discovered a way out of the "encore" difficulty that is not open to the objections made to Mr. Hermann Vezin's proposal that they should be forbidden by the public authorities (says the *Daily News*). The impresario in question controls a small operatic theatre in Milan, and he has absolutely forbidden his singers to repeat any of their songs; but at the same time he has placed the following notice in the vestibules:—"Those persons who wish for a repetition of any numbers from the opera, or of any part of the ballet dancing, are begged to hand in their names at the box office. At the end of the performance they will enjoy the encores demanded on paying for their seats over again." Since this measure was first adopted no one has availed himself of the privilege thus granted, and the performances have not been interrupted by persistent demands for encores.

COMMENDABLE HABITS.

DESPITE great efforts on the part of leading educationists to prevent girl pupils attending common schools from wearing fine clothes and running into luxurious habits, the custom is as prevalent as ever, especially among girls in their teens who are attending higher common schools. This is injurious alike to girls of well-to-do families and to those in straitened circumstances, since it affects the modesty of the former and prevents the latter from attending school for any long time. In not a few higher common schools of the capital there is an unwritten rule that girls about to graduate array themselves in similar suits of clothes on the day of the ceremony. That is a costly proceeding from the point of view of an ordinary family. It is said to be responsible for the fact that many of the girls are obliged to leave school before the time of graduation, or to absent themselves on the day of the ceremony; bitter alternatives doubtless. One is disposed to imagine that this rule would be observed with special strictness at the Noble's Girls School, but we learn that such is not the case. On the contrary, the girls at this school

make every endeavour to cultivate thrifty habits. This is said to be mainly due to the influence of the Director, Mr. Hosokawa Junjiro, who has taken assiduous care since his appointment to inculcate the importance of economy among noble ladies and other high personages attending the school. So well is his instruction observed that out of more than 340 pupils only a small percentage wear silk clothes, all the rest being dressed in plain cotton garments. Moreover, among that large number only two attend school in carriages and about 20 per cent. in *jinrikisha*, the others coming and going on foot. Those that come in vehicles are chiefly either very young girls or pupils that live a long distance from the school.

A DISTINGUISHED BUDDHIST PRIEST ON THE RELIGIOUS TENDENCY OF THE WORLD.

DOKI HORYU SHI was despatched last year to the World's Conference of Religions, held at Chicago on the occasion of the opening of the International Exposition in that city, as representative of the Shingon sect of Japanese Buddhism. After the close of the conference he travelled widely through Europe and India, only reaching home the other day. To welcome him, more than 200 priests and adherents of the sect held a meeting at the Maple Club, Tokyo, on the morning of the 23rd instant. The following, taken from the *Jiji Shimpō*, is said to be the gist of the speech which the distinguished Buddhist delivered on the occasion. The World's Religions meeting held at Chicago was undoubtedly undertaken with the motive of extending the influence of Christianity; but the result was contrary to the expectation of its promoters, for it only served the purpose of displaying the glory of Buddhism and of testifying to the world the superiority of the tenets of Buddhism to those of Christianity. As a result of this revelation the attention of the American people has been strongly directed towards Buddhism, leading to the erection of Buddhist temples and images in many places lying along coast of the Pacific. Anti-Christian societies, such as the Ethico-Moral Society of Atlas (?), have become suddenly influential. Mr. Doki was told by Mr. Joseph Cook that the Buddhists in the vicinity of Boston are now above twenty thousand in number. This distinguished priest is also convinced that the scholars of Europe have begun to perceive many new things about Buddhism, being enabled, in fact, to come in contact with the true features of this religion for the first time. He thinks that Christianity is now declining in Europe. It is only in England that a semblance of religious ceremony is observed, while in France, Germany, and other countries, Sunday is a day only for amusement. Philosophers now regard Christ as an imaginary personage, and even among the common people disbelief in Christ and Christianity is in vogue, and the unbelievers are looked upon as enlightened men. The reason why Christianity is still able to maintain itself is because it possesses numerous imposing edifices, and because it still holds its influence over old folks and women. Side by side with this gradual decay of Christianity in Europe, Buddhism is steadily gaining ground and there are many indications that it is going to replace Christianity. In the universities of England, France, and Germany, the lesser tenets of Buddhism (Shojio) are investigated, while many philosophers of Russia, France, and England, as well as British military and naval officers in the East, place their belief in the greater tenets (Daijio-Mahayana). Mr. Doki said that the foreigners who are attracted to Buddhism are led by faith, not by intellectual conviction. While staying in Paris he was frequently asked to pray; among the rest, by such a distinguished family as a certain Count's, a famous descendant of the House of Bourbon. The people of Europe indeed are eager for the coming of Buddhist priests of Japan, and they are regarded with such respect that whenever Mr. Doki gave papers on which one or two Buddhist texts were written by him, they were cherished with great care, and lithographic copies were taken and were distributed

to a select few. In Europe there are many translations of the texts of Buddhism, but not one of them is trustworthy; on the contrary, all are full of error. Consequently, should a Japanese Buddhist who is well versed in the doctrines of the religion and is earnest in the work of propaganda, go over to Europe, he would be sure to meet with warm welcome everywhere. An English gentleman who is an earnest believer in Buddhism asked Mr. Nanjiyo Fumio, through the medium of Mr. Doki, to despatch some Japanese priests to England. The venerable gentleman then spoke with severity of the apathy of the Buddhists of the East. He said that among the countless Buddhists found east of the Suez Canal there is not one who volunteers to undertake the important task of propagating the doctrine and of displaying the glory of this religion throughout the world. The priests of Asia are steadily degenerating. Both in China and in Japan they are lukewarm in their faith, are corrupt in conduct, and far from having energy towards diffusing Buddhism in other countries, they are even incapable of upholding it in their own countries. And yet the condition of the Occident is one most favourable to the spread of Buddhism, and every sincere Buddhist should exert himself to the utmost toward promoting the prosperity of his religion of his founder in Japan, toward reviving it in Asia, and lastly, toward extending its influence in the West.

With regard to the decay of religious belief both in the West and in the East the reverend gentleman is, notwithstanding certain humorous misconceptions, not far astray. This is essentially an unbelieving age. But as regards the spread of Buddhism in the West, he appears in part to mistake an interest that is purely philosophical for one that is religious, and in part to overestimate the importance of that curious refuge of decaying superstition known as Esoteric Buddhism.

A GIANT CURIO.

THE *Miyako Shimbun* speaks in enthusiastic terms of a certain work of art, of great age, now in Korea. This is the image of a dragon, most skillfully sculptured in soap-stone, the size being quite that of an ordinary dwelling-house. The huge figure is carved with special attention to details, and our contemporary does not hesitate to declare that its like is not to be found in any Eastern land. A Japanese of means contracted last month to buy this giant curio, the owner asking only three thousand yen for it. It was calculated that it would take between twenty and thirty thousand yen to transport the dragon to Tokyo, but once in the Japanese capital the intended buyer proposed to make a show of it and charge two or three sen for admission, by which he hoped to make a fortune in four or five years. However, owing to the present condition of affairs, the contract is broken off, though the *Miyako*, more than hints that, in the event of war, the dragon will fly across the sea to Japan after all. This great work of art is reported to be over five hundred years old. At the time of Hideyoshi's Korean expedition, the hero Kato Kiyomasa greatly desired to bring the monster back with him, but the ships of those days were not large enough to admit of this. He succeeded however in cutting off a small portion of the head, which he brought back with him and presented to the then Emperor Okimachi, at the suggestion of Hideyoshi. The *Miyako Shimbun* does not state in what part of the peninsula this work of art is to be found.

TARIFF RETALIATION.

PRIVATE advices received at Washington, says *Bradstreet's* of June 23, indicate that Spain has already put into operation her threatened retaliation upon the United States for the abrogation of the Cuba commercial treaty, whereby the sugar products of that country are admitted free into the United States in return for a material reduction in the rate of duty on exports from the United States. Mr. Harter, of Ohio, who makes this news known, has been inform-

ed that the Spanish government has ordered an increase of 24 per cent. in the duty on all classes of shipments from this country to Cuba, and that this new rate will take effect on July 1. The information came to him through an Ohio company, which is a large shipper of flour, and which has had a profitable market for this manufacture in the Spanish West Indies. Its Cuban correspondent has instructed it to ship no flour that cannot reach him by the foregoing date. As an easy remedy for this kind of retaliation, which is also threatened by Germany, there is suggested the attachment to the tariff bill of a provision doubling the rate of duty upon all articles coming here from any country which may increase existing rates of duty upon articles produced or manufactured in the United States.

THE DISCOVERY OF AMERICA.

COLUMBUS'S claim to have discovered America is thrown into the shade altogether by that advanced on behalf of China. According to Mr. F. J. Masters, writing in *The Overland Monthly* for June, the Chinese discovered America and founded its civilization 1400 years ago. "This view rests on the narrative of the Buddhist missionary Hwei Shan's sojourn in Fusang, as recorded in the 231st volume of the great Chinese Encyclopedia called 'Yuen-Kui-lui-han.' The country of Fusang is identified as a part of the American continent first by the statement that it is more than twenty thousand li to the eastward of the Kingdom of Tai Han, and secondly by the most characteristic feature of the country—the Fusang tree—which is clearly the Magney plant of Mexico or California. Further, some customs attributed to the people of Fusang are shown to have persisted in Mexico down to the time of the Spanish Conquest, and the author's attempt to identify Quetzalcoatl with the Buddhist missionary Hwei Shan appears to find a great deal of collateral support in the temples and religious observances of the Mexicans and their congeners. Quite apart from this narrative of Chinese influence on an already established race, the writer adduces a considerable array of argument in support of the view that the so-called aboriginal tribes of America, from Alaska to Peru, are, at least in great part, of Mongolian stock. Hwei Shan's narrative is familiar to all Chinese scholars, and, as early as 1761, an account of it was published by De Guignes, who tried to show that the Tai Han mentioned in the narrative is Kamschaka, and makes California the terminus of the journey of the Buddhist priests."

SUDDEN FALL IN THE VALUE OF SHARES.

A NUMBER of Tokyo journals, particularly the *Shogyo Shimpō*, note with alarm that the news of the naval conflict between Japan and China has created quite a panic in the share-market, contrary to expectation. It had been hoped that the announcement of a Japanese victory would arrest the steady downward progress of shares that has been so conspicuous during the last two months. Saturday's express served only to accelerate the downward rate of speed. Shares of the Kwansei, Sangu, and Ryomo railway lines fell at once two to three yen in value; the Tanko railroad bonds, which had been standing at 70.80 yen went down to 69.60 yen; while a similar fate befell the Bantan shares, hitherto regarded as the most stable investment in the market. These figures are of serious import, especially when we remember that Tanko shares were quoted at above 95 during the greater part of last year and at one time actually reached 106, with an almost immediate subsequent drop to 93. The general feeling in the share-market is one of great insecurity at present, and forced sales are the order of the day, thereby making things considerably worse than they were before. If this," says the *Niroku Shimbun*, "is the result of the supposed declaration of war only, what will happen in case of a few weeks of actual warfare?"

EXPORT OF BEANS PROHIBITED BY CHINA.

A TELEGRAM from Shanghai was received in Tokyo on the 2nd ult. stating that the

Chinese Government has forbidden the export of beans from Newchwang. From that simple message it is not yet clear whether China has absolutely forbidden the export of beans to any other country or whether the prohibition refers to Japan only; but in any case this step taken by China is regarded by the *Nichi Nichi* as affecting the interests of Japan in no small degree. The import of beans from Korea and China is now an important item in Japanese commerce. In 1886 the total did not amount to more than 5 million catties, but the quantity has enormously increased, so that last year it was more than 160 million catties, worth 3,440,000 yen in round numbers. Of that quantity, that which came from Newchwang preponderated over that from Korea, being in fact more than 120 million catties, valued at 2,600,000 odd yen. Still, last year was rather an unusual one, and several factors conducted toward augmenting the import of beans from Newchwang to such extraordinary figures. An uncommonly good harvest of beans in the Newchwang districts, as opposed to bad harvests in Japan and in Korea, resulted in this abnormally large import from Newchwang. This year the crop is fairly good in Japan, but there being small prospect of any import from Korea, it is apprehended that the prohibition of the export of beans from China will affect the market, for the Chinese beans are chiefly used here as manure.

THE JAPANESE ECONOMIC WORLD IN THE EVENT OF WAR.

THE *Hochi* has the following note concerning the prospective condition of the Japanese economic world in the event of war. Now that the outbreak of hostility is so imminent the *Hochi* thinks it no inconsiderable thing to investigate what policy the banks, with the Bank of Japan at the head, should pursue in the event of that contingency. The Bank of Japan should be firm and unshaken in the policy which it intends to pursue. It is said that the amount of specie kept in reserve in the strong boxes of the Bank has fallen to the level of 7 millions, and that the note-issuing capacity leaves a narrow margin of only a little above a million yen. The Bank is, however, determined, as well as thoroughly prepared, to keep up the policy which it has followed thus far, even if the country may be involved in war with China. Indeed, it will strive more assiduously than ever to accord all possible advantages to merchants and manufacturers. When it deems it necessary for the purpose, it may issue the notes beyond the ordinary limit, even by paying the interest of 5 per cent., which the Bank is obliged to do for any amount of notes issued beyond the prescribed limit. The Bank raised the interest on loans from the 26th instant. As to the other national banks, the *Hochi* hears that though some may be obliged in case of war to suspend business for a while, the rest of the banks are fully prepared for the emergency and will follow suit in this policy of carrying on their business.

PRIESTS IN THE ARMY.

THE preparations for war are now complete; military bands and coolies required in the camps being already despatched. One thing, however, remains which, though not necessary for the conduct of the campaign, is supposed to be indispensable when an engagement takes place. This is the services of the priests when the remains of the soldiers who have fallen on the field of battle are to be interred. Already Mr. Maruyama Sakura, an official of the Imperial Household, and a renowned Shinto priest, has gone over to Korea in his individual capacity, to be allowed to conduct the funerals of dead soldiers. Japanese young men not being considered particular about the service to be read at their funeral ceremony, one might suppose that either Shinto or Buddhist priests would serve the purpose so long as there are enough of them to fulfil the requirements. But this does not appear to be the case, according to the *Asahi*, especially with the troops despatched from Hiroshima, and they constitute the ninth part of the Japanese Army now in Korea. Our Tokyo contemporaries say that

the Shinshu sect of Buddhism is predominant in the district surrounding Aki and that the soldiers who are sent from this region to the Hiroshima Barracks are strongly impressed with the doctrines of Buddha. The *Asahi* therefore regards the presence of Buddhist priests in the camps as highly useful. During the civil war prior to the Restoration, and during the Satsuma rebellion, the aid of either Shinto or Buddhist priests was easily procurable when the remains of the soldiers killed in battle were to be buried. This, however, is impossible in Korea, and the priests of both creeds are urged by the Tokyo paper to apply to the Authorities for permission to attach themselves to the Army. In passing, we may give this statement from the *Shin Choya*, in connexion with the above. It must be remembered that in Japan even priests are not exempted from military service and so there are quite a number of soldiers who before they were enrolled wore the clerical robe, and also a still larger number of priests who have served in the army. Thus the *Choya* says that there are in the Theological Institution at Denzūin, Koishikawa, out of 250 priests' no less than 180 whose names are recorded in the list of retired soldiers. This must surely be an exaggeration; still there are doubtless among the 250 priests a certain number of ex-soldiers. Now we are told by this sensational paper that these warrior priests are so much imbued with the military spirit that they are impatient for the summons from the respective barracks under control of which they are placed, and that they are eager to emulate the military fame of such warriors as Benkei, Ichirai, and numerous other priests who in days gone by became soldiers.

YOKOHAMA NEWS.

IN obedience to the instruction of the Ministers of State for Home and Foreign Affairs to the local Governors, for the preservation of the safety of Chinese living in Japan, the number of constables on duty in the Settlement was increased on the 26th instant. Moreover, Chinamen of means who intend to carry on business as before have applied for special guards of Police, and already the Chuka-kaikan has secured six constables as a guard. It is said that many enterprising Japanese curio dealers of Tokyo, Yokohama, and the adjoining places proceeded to the Settlement on learning that the Chinese residents were about to start for home. Their hope was to get the curios and other effects of these Chinamen on easy terms, but they were disappointed, for they found that those who have started for home or were about to do so were mostly poor men who could not even afford to pay for their tickets themselves.

The rather romantic scheme of a certain portion of the community of Yokohama, to sell the common property and to contribute the money thus accruing to the war expenses, is not likely to be realized. Already there is another section which, though not absolutely disinclined to the idea, is disposed to suspect that it is only a stratagem of some wealthy members of the community who, taking advantage of the popular frenzy about Korean affairs, are secretly planning to purchase the property on easy terms. Thus the prospect of settling this standing difficulty appears to be as vague as before.

THE RECENT COLLISION AT WOOSUNG.

A VERY serious collision occurred at Woosung at 2.30 a.m. on Saturday, July 21, between the *Kachidate Maru*, outward bound, and the *Chingtu*, inwards. The former had crossed the bar and met the *Chingtu* abreast of the Harbour Master's Station, and they came into collision, the *Kachidate* striking the *Chingtu* a sliding blow on the port side abaft the bridge. The *Kachidate* has her bow smashed, the plates being torn away to port, carrying with them the port hawse-pipe and the stem, while the plates at the water's edge are all crinkled up. She had a full cargo on board, and only her collision bulkhead kept her forehold from filling. The *Chingtu* was cut into to a depth of several feet, a large number of her plates being knocked clean out of position and doubled up. The plates below

this are turned in, while the bridge is knocked out of position, her foreyard broken in two, and the saloon considerably damaged, the wood-work being in splinters; added to this she is leaking. Had it not been that she was so low in the water, and that her two steel decks broke the force of the *Kachidate's* blow, it is probable she would have been so badly damaged that she would have sunk. As a result of the collision, the *Roanoke* lost the tide and could not get over the Bar on Saturday morning, while the *Chingtu* bumped up against the *Anding* and did some small damage while backing out from the *Kachidate Maru*. Both vessels came up to Shanghai the next morning after discharging some of their cargo into boats, and are now in the hands of Messrs. Boyd & Co., Limited. The *Kachidate Maru*, says the *N.-C. Daily News*, was formerly the *Pallas*, and on her way out from home for the Mitsui Bussan Kaisha, to whom she is to be transferred in Japan. Mr. Brun was the pilot on board the *Kachidate Maru* at the time and the *Chingtu* was piloted by Mr. Getley.

MUTUAL PROTECTION.

As we have already announced, the Ministers of State for Home and Foreign Affairs despatched telegrams on the 25th ultimo over their joint signatures to the local Governors to cause them to assure the Chinese living in their respective jurisdictions that, even in case war should be declared against China, their safety shall receive the attention of the Japanese Government. The Chinese Government will take similar steps for the safety of the subjects of this country resident in China. The other day Mr. Okoshi, Consul-General, stationed in Shanghai, asked the Taotai of the place as to the safety of the Japanese living in the port, and he was informed that protection would be extended to them in case of war. The Chinese Representative in Tokyo appears, according to the statement of the *Nichi Nichi*, to have taken special pains in this respect and to have advised the Viceroy Li that the Japanese staying in Tientsin should be protected. Thus the prudent steps taken by the two Powers against the emergency are reciprocal. It is said that out of a similar consideration the Metropolitan Police began to station three constables to guard the Chinese Legation from the 25th instant. There is another parallel in the actions taken by the two Powers at this juncture. As already mentioned, the Chinese Consul in Yokohama has asked the American Consul in the same port to undertake the Chinese consular responsibility in the event of the Chinese Consul being obliged to leave Japan, and the American Government has given its consent. Precisely the same thing is said to have been done by Mr. Komura, Acting Minister of Japan in Peking, who has secured the consent of the American Minister to manage the business of the Japanese Legation in the case of war.

REMARKABLE SUICIDE.

Two youthful apprentices of a pawnbroker in Kojimachi District, Tokyo, had an altercation with each other on Sunday last, the younger one complaining that he was always being tormented by his senior. His angry remonstrances meeting with nothing but taunting replies, he said that he would kill himself and then his disembodied spirit should return to make his tormentor wretched. Not believing of course that the lad spoke in earnest, the elder replied that he might do as he pleased; he wasn't afraid of ghosts. The boy thereupon went into the godown and shut the door. An hour passed and then the elder lad went to call his companion, but found him dead. He had hanged himself by a rope attached to one of the larger cross-beams of the roof.

A COOL HAND.

DAIZABURO, son of Nomura of that ilk, is one of the coolest burglars on record. On the night of the 23rd ult. he unostentatiously entered the residence of a well-to-do farmer in Shirakomura, Saitama Prefecture, and by dint of persevering work managed to get together a net

little pile of some fifty-eight miscellaneous articles. Finding all this too much to carry off at once, he paid another domiciliary visit to a cooper in the vicinity and quietly abstracted four small tubs. Carefully loading these with what he had managed to scrape together in the first instance, he then set out for a wheelwright's in the same village, and with skill and precaution succeeded in "borrowing" a sizable pushcart. Piling his tubs on this vehicle, he concealed their contents by placing fresh vegetables on top, the greens for the purpose being hastily collected in a neighbouring kitchen-garden. When all was done, day was just breaking, and Daizaburo set off gaily for Tokyo with his booty, not a whit the worse for his night of toil and anxiety. Suspicion followed him, however, and he was finally arrested in Tokyo, three days later, just as he was engaged in selling the contents of the last remaining tub.

THE "AVERAGE WOMAN."

A CORRESPONDENT of the *Spectator* writes as follows:—

SIR,—I hold with your remarks about the "Average Woman" in the *Spectator* of June 16th. Coming home in a steamer from Colon, a passenger caught a fish, nearly famished, and put it in the binnacle. It sturdily stood on the compass, regarding us all as intruders—viz., the passenger, his family, and myself, who were eagerly looking on. We offered it food in abundance, but it would not accept it; the watching was far too important. It was darting its gaze here and there, inclined to suspect us as foes. A little while later the male fish was caught, and put in the binnacle too,—the one that was taken before being the female. The poor little waif was pleased with her mate. She nestled quite close to his side, all thought of the enemy gone. The duty of guarding them both was his, it appeared, which he did with exertion and will. She put her head under her wing, in perfect repose, and peacefully died in an hour. There was nought we could do to revive her. To have sent them away unrestored, would have insured them a worse death still. The male lived a day and then died. It was touching to witness the trust of the female bird, and the act of the male bird, too, in taking guard, though why, is a mystery to me; for all owe their birth to their mothers, whether animal or man. It is an instinct of Nature, I think, that the female trusts and the male protects.

Truly a pretty theory. But what about that large female spider, with which it is an instinct to seize and devour the smaller male, approaching incautiously with amative intent?

KAISEN.

THE ideographs composing the expression *Kaisen*, or "naval engagement," have given rise to a number of bad puns in the vernacular press. There are scores of Sino-Japanese words having the pronunciation *kai* or *sen*, albeit the ideographic writing is different in each case. We are told that as the "opening battle" (*kai* written *hiraku*) was a naval engagement" (*kai* written *umi*), there should be no difficulty in keeping up the victorious progress of Japan along the "ocean line" (*sen* written *sufi*). It was moreover probably due to some of the "sea deities" (*sen* written *shin*), who have always favoured Japan, that the first brush with China proved so fortunate for this Empire. Finally, the fact that Japan now holds the master hand in Korea shows that it is "impossible to send back" (*kaesenn*) the troops now in the Peninsula, no matter what China may say. This last is an atrocious pun.

TELEGRAPHS IN KOREA.

NOTHING is more remarkable about the present complication than the quiet, business-like manner in which everything has been managed by the Japanese. There has not been the slightest commotion or confusion. The mobilization of a hundred and sixty thousand men has proceeded as regularly and evenly as a long-established railway service. Not one instance is recorded of the men failing to report themselves. They have responded to the summons in every case without delay or excitement, and have been drafted off to Korea or assigned to their posts in Japan as though the huge work were a little every-day task. Two nights ago a large force moved out of Tokyo without attracting any apparent notice or causing the slightest stir. And now, as we write, over thirty transports are con-

veying soldiers by thousands to Korea, without hitch or seeming difficulty of any kind. Moreover, the troops already in the peninsula have been working steadily and industriously, so that the little Kingdom is already furnished with a very complete service of telegraphs. The last pole was to have been put up and the last wire stretched on the evening of the 1st instant. Thus a very substantial step of progress has already resulted from the Japanese occupation.

HEALTH OF THE TOKYO GARRISON.

IN connection with the expected outbreak of hostilities in Korea, much attention is at the moment being given to the health of the Tokyo Garrison, and in particular of those troops forming the Imperial Guard. On the whole, the general condition of the troops is very satisfactory; there are no epidemics, and the few cases of dysentery recorded within the last three weeks have one and all recovered. On the other hand, venereal complaints are unusually numerous. In the Military Hospital, out of two hundred patients no less than fifty, or one-fourth of the whole, are venereally infected. For this reason a regular crusade has of late been carried on against unlicensed prostitution, particularly in the Kanda and Shitaya Districts, scores of arrests having been made, and reeking dens of disease and filth completely abolished. Owing to the hard times, the numbers of unlicensed prostitutes are very large, and every possible precaution is taken by them to avoid police detection, fortunately, however, with small success. A recent raid resulted in the arrest of forty-three women in the course of one evening, and nearly all within hail of Ogawamachi, the longest thoroughfare in Kanda District. Diseases of the respiratory organs are not infrequent among the troops, and lung-complaints are almost sure to prove fatal in the long run. But, on the whole, the condition of the men is very satisfactory.

EMPTY SUMMER-RESORTS.

REPORTS from a number of the best-known seaside and mountain resorts show that the number of visitors is this year far below the average. Sokokura and Dogashima, in the Hakone Mountains, the favoured resorts of the middle-class of Tokyo and Yokohama, are almost deserted. Hakone itself is not much better off. Okitsu and Lake Biwa can boast of a few transient visitors only. Even Ikao is said to be far behind recent years in the number of its guests. This is attributed by the vernacular press to the fact that many military and naval officers are on active service, instead of being able to have their usual summer furlough; moreover to the tightness of the money market and the enormously high price of rice—6 *sho* 8 *go* as against over 9 *sho* at the same time last year.

THE CHINESE IN TOKYO AND YOKOHAMA.

ALTHOUGH stringent orders have been given to protect the life and the property of Chinese residents in Tokyo and Yokohama, numbers of the wealthier merchants have already set out for China, and, if we are to credit the statements of the vernacular press, a most uneasy feeling exists among those who have either elected or are compelled to remain in Japan. The *Miyako Shimbun* and several other Tokyo journals have amusing stories to tell in this connection, based probably on mere hearsay in most instances. Yet some of the incidents narrated appear to have been founded on fact. In Tsukiji, for example, the joint owners of a *tsu-fa* lottery have, it is reported, let their hair grow and cut off their queues, not to speak of adopting Japanese costume as well. This they did, relates the *Tokyo Asahi*, after having made repeated futile attempts to get adopted into some Japanese family. They are represented as being but slightly acquainted with the local vernacular, and their conversations on the subject of their own fears and the probable termination of the war are riddled with a keen sense of the ridiculous, albeit probably with inaccuracy. For the Chinese are by no means a timid race, despite which fact the *Miyako* narrates that a well-known Celestial in the Settle-

ment is frightened well-nigh into fits whenever he hears the tinkle of a newsvendor's bell and the well-known cry of *Gogai! Gogai!* But with Japanese patriotic pride standing as it does at present at over one hundred in the shade, one could hardly expect the vernacular press to write of the Chinese other than in a bantering style.

JAPANESE GARDENERS FOR NORTH BORNEO.

THE Government of British North Borneo has lately issued instructions to its agents in China, Japan, and Madras, to advertise in the local papers that they are willing to give assistance to a limited number of Asiatics of the gardener class who may desire to settle in the State. Tickets will be granted, the *North Borneo Herald* says, at a low figure which should be well within the means of any but the absolutely indigent, and on arrival in the territory each male adult may acquire five acres of land on a rental of twenty cents per acre per annum, and for the first six months the Government will make a monthly advance to pioneers settling on waste land of \$3 to each bachelor or \$6 to a married couple with children, which sums will have to be repaid before a title can be obtained to the land. The districts suggested by the Government as suitable for immigrants are Sandakan, Marudu Bay, and the Padas. Tapioca, arrowroot, and indigo may well receive attention from the settlers as not only being suitable to the climate but as yielding a rapid return while they cultivate something more durable such as Manila hemp, gambier, coffee, coconuts, or sago. The success attending the introduction of Chinese settlers to Kabun, China, in 1889, and to Kudat in 1883, under a somewhat similar scheme augurs well for the present project, and we hope it may be productive of good.

JAPANESE JINGOISM.

THE Japanese people are stirred to their depths by the present complication with China. The affair absolutely engrosses the attention of the people, high and low. So soon as matters assumed a serious complexion, petitions began literally to pour into the Central Staff Office from country localities asking permission to serve in the army. The leading signatories were generally *shisoku* who had seen active service on the occasion, either of the Restoration or of the civil war in Satsuma, and who had tried to preserve some semblance of the old military spirit by opening fencing schools. With these *shisoku* as a nucleus the young bloods of the respective localities, who are addicted to warlike sports rather than to the pursuit of peaceful studies, have organized a volunteer corps in each district, the members varying from several hundred to many as three thousand in number. Their object is to apply their skill in fencing to a practical purpose and to cut off, as they declare, the pig-tailed heads of Chinese. These petitions are not rejected but are kept in the Central Staff Office. There is, however, little belief that such offers of service will be accepted, the regular soldiers being considered ample for all purposes. Even at the time of the civil war in Satsuma it was with great difficulty that the Metropolitan Police were allowed to organize what was called *batto-tai*, or corps of swordsmen, for the subjugation of the rebels. A faint hope entertained by the petitioners is that the war with the Chinese may prove to be of a nature quite different from ordinary war in civilized countries, and thus the sword of the *samurai* may be thought efficacious under certain circumstances.

The nation is affected with a mania for war, and the indications of such a mood assume sometimes a comical aspect. A few days ago it was related that a certain boy in Mino wanted to go to Korea and decamped with a sum of money taken from his father's till. Similar stories of juvenile patriots have appeared in several newspapers, which, on each occasion, have not failed to use them as means of inspiring patriotism and courage among grown-up folks. The spirit has infected even the fair

sex. We read, in the latest issue of the vernacular press, of a maid in Hyuga who asked the Divisional Headman to obtain permission for her to go to Korea. The Headman advised her to abandon her intention and she went home much dejected. It were endless to detail such instances, but we may give one that is connected with Mr. Otori, the Japanese Representative in Korea. Everybody knows how Mr. Otori, with Viscount Admiral Enomoto, espoused the losing side during the war of the Restoration, and how, after having fought in the north-eastern part of the main island he joined the Viscount's party at Hakodate and was at last obliged to surrender to the Imperialists. The majority of those that fought under him are dead, many of them having fallen on the battle field. But there remain even to-day some 300, and it appears that they have petitioned the Authorities for permission to proceed to Korea to act as a body-guard to their former leader, Mr. Otori.

* * *

The more thoughtful portion of the community are behaving in a worthier manner. They think it more conducive to their country's cause to supply means wherewith to support the army, and they have begun to contribute money in proportion to their means, or articles for the use of the troops in the peninsula. In a previous issue we referred to this subject. The applicants at that time did not amount to more than fifty. But since then the number has greatly swollen. We read in the pages of the vernacular papers every day the names of fresh applicants whose contributions have been accepted. In the *Jiji's* issue of the 31st, alone we count the names of some 100 applicants. The list will doubtless grow rapidly, for several leading gentlemen in Tokyo and also in the country localities have begun to take an active part in the worthy scheme and are inviting public co-operation. Thus far the highest contribution is that of Mr. Homma, a well-known millionaire of Sakata, who has applied for mission to contribute 10,000 *yen*. Neither the Shinto nor the Buddhist priests are idle. They are performing what they consider their proper part in the affair. The priest of the Toyokuni Shrine in Osaka, a shrine dedicated to the spirit of Hideyoshi, has prepared hundreds of thousands of amulets, on each of which is written a poem composed by Hideyoshi when he was engaged in his abortive attempt to subjugate Korea. Elsewhere the priests are holding services to invoke the aid of Buddha that success and honour may fall to the arms of Japan.

SENTENCE OF A COURT-MARTIAL.

TAKAHAMA CHOKICHI, a sergeant of the Osaka Barracks, has been sentenced to nine years penal servitude on the charge of murdering his colleague, Sergeant Oyama. The relations between the two appear to have long been unfriendly, Takahama always entertaining a grudge against Oyama on account of the latter's parade of superior attainments. On the 3rd of April last, that is, on the occasion of the national holiday in memory of the Emperor Jimmu, after having taken refreshments at the Non-commissioned Officers Club in Barracks, Takahama returned to his quarters and set himself to clean his rifle. Oyama was close by, engaged in practising penmanship. When Takahama had finished cleaning the rifle, he placed it on the table at which the other was writing. This act incensed Oyama and the some angry words were exchanged. Takahama then left the room and repaired to the quarters of a sergeant, close by. When he returned to the first room he found the door locked from inside by Oyama. Failing to induce Oyama to open the door, Takahama grew highly excited, and, seizing a bench, began to batter the door with it, the result being that he smashed some of the panels. The door was then unlocked by Oyama, but when asked why he had locked it in the face of Takahama who had to get ready to go on duty, he did not even deign to reply, but instantly sprang upon the other and gripped him by the throat. Takahama resisted, and struggled for some time, but Oyama proved the stronger

and Takahama was at last forced down on the bed and throttled. Seeing his antagonist in a semi-suffocated condition, Oyama loosened his grip, and sneered at the other's fear of losing his life. Takahama replied that he did not care for his life, whereupon the other took the rifle from the table and inserting a cartridge that remained from shooting exercises carried on a few days before, aimed at Takahama. The latter jumped aside, and thereat Oyama renewed his taunts, and declaring that the other's cowardice was now established, replaced the rifle on the table. Takahama, burning with rage, now seized the loaded rifle and asked Oyama, in his turn, whether he was ready to stand up for the shot. Oyama replied that being a *shisoku* he did not fear a bullet if Takahama dared fire at him. Thereupon Takahama shot him in the throat, and hastily fled from the place. Oyama died of the wound, and Takahama has now been sentenced to nine years' penal servitude. We take these particulars from the *Asahi Shimbun*.

A LITTLE UNFORTUNATE.

ADOPTION is perhaps more widely practised in Japan than in any other country of the world. Yet children are frequently taken into a family not so much with the intent of rearing them as heirs or representatives of the family name, but to be employed as servants without a wage. In the latter case the adopted one is often treated with great severity or even downright cruelty, which, as coming from their parents, they are compelled to bear in patience. A flagrant instance of such cruelty, attended with fatal result, occurred about the 20th of the present month in Shitaya District, Tokyo. A married couple, childless, and living in straitened circumstances, adopted last year a little girl of five years of age. Keeping no servant, they made the unfortunate child do all the domestic work, such as cleaning the rooms, boiling the rice, and even drawing water. Despite all this hard labour, this little body was terribly maltreated by her adopted mother, the floggings she received being sometimes so severe and her agonised screams so loud as to call forth the remonstrances of the neighbours. Early the other day, the child was told to take some vegetables out of the pickle-tubs, and in so doing had the bad luck to cut her hand severely, the blood spurting into the tub. This aroused the fury of her vixenish mother, who seized a long bamboo pipe and broke it across the child's back, not satisfied with this, she took a thick pole and continued the rain of blows, the little girl screaming with the pain. One of the neighbours then stepped in and proposed locking the child up in a closet, as the screams were disturbing everybody. Her tormentress improved on this suggestion and wrapping the child up in a heavy wadded quilt, to drown her cries, stuffed child and quilt into the receptacle for wood and charcoal beneath the kitchen floor. The cries soon stopped and the incident was forgotten in a chat with the neighbour. About an hour after the woman suddenly remembered what she had done and drew the child out of the hole. But the little girl was out of the reach of her malice and done for ever with tears and pain. Horrified at the situation, the murderess sent for medical aid and every attempt was made to resuscitate the body but—one is tempted to add, fortunately—without success. The police soon put in their appearance and no less than six arrests were made in connection with the murder, for it was nothing else. The woman and her husband—he connived at her cruelty—are now in custody, and it is to be hoped that exemplary punishment will be meted out to the criminal.

UNTOWARD FATE.

STRANGE cases often come before the law courts and remarkable histories are sometimes revealed. The case of Okura Sankichi, recently convicted of having stolen some articles of clothing which had been hung out to dry in a private garden in one of the Tokyo urban districts, is noteworthy as showing to what depths some of the great *honourai* of pre-*Meiji* days have fallen.

Okura is the son of one of the wealthiest *hata-moto*, his father having enjoyed, prior to the Restoration, an annual income of several thousand *koku*. When the crash came the family was left penniless, and Okura, who is now forty-seven years of age, was compelled to look out for some means of subsistence. Thanks to friendly aid he was enabled to go to Russia where he spent three years among the chief cattle-breeders. On returning to Japan, in spite of an excellent knowledge of the Russian language, he found no opening, and shortly afterwards emigrated to Hokkaido. Provided with insufficient means, he was unable to make any headway, and things went from bad to worse. His few friends grew tired of assisting him. Finally, he came back to Tokyo. A man of fine presence, a skilful athlete and possessed of all the old *samurai* spirit, he was too proud to beg. Being unable to obtain employment of any congenial kind, he began to starve, and spent several months in a most destitute condition. It was this that led him to steal, his first offence against the laws being immediately detected. The *Myako Shimbu*, in commenting on his case, believes him to be more sinned against than sinning. Social conditions were against him, and it is at bottom the duty of society to provide for just such cases. Our contemporary touches here upon a vast subject which has long engaged the attention of economists. We cite the case merely as exemplifying the ruin that has befallen the fortunes of a rich *samurai's* family,—a ruin that has resulted in the almost total disappearance of the proud offspring of that proud class, the knight-bannerets of the Tokugawa regency.

THE SETTLERS IN THE KURILES.

ACCORDING to the *Fiji Shimpō*, four parties proceeded from Etup last summer to pass the winter in the more northern islands of the Kurile group. Five, not of Lieutenant Gunji's party, settled in Ebujima, nine in Shaskotan, seven in Shumushiri, and one in Baramoshiru. The settlers in Shumushiri and those in Ebujima have passed through the winter without any accident, but those on the two other islands have all died. This vast difference in the fate of the different parties is said to be entirely due to the relative caution taken by the settlers on ordinary days. Thus the five settlers in Ebu-jima never ceased to work hard, so that they have succeeded in obtaining above seventy fox-skins. Nor was the party which, under the leadership of Lieutenant Gunji, settled in the more northerly island of Shumushiri, less industrious. During the winter they worked in the open air with the interruption of only two days, so that they obtained more than one hundred foxes and about ten seals. Now of the nine settlers in Shaskotan, five were lost: by having put out in a boat to hunt and fish, while the surviving four appear to have suffered death by having slept in a close shut room with a burning brazier. Again the solitary settler in Baramoshiru appeared to have simply confined himself to observing the climatic conditions of the island, and to have mostly remained inactive in the hut he prepared for himself. This inactivity soon began to tell against his health, so that he became affected with *kakke* in the early part of February, as shown in the diary he left behind, and died of it in the latter part of March.

The *Ketnai Zasshi* has something to say on the doings of the Lieutenant's party. In fact the sober minded editor of that economic journal was altogether opposed to the expedition; still as it was undertaken amid the acclamations of the enthusiastic, the editor felt the Lieutenant was bound to put to practise the idea to which he had committed himself. Mr. Taguchi, therefore, advised the Lieutenant, when the party had encountered a serious accident along the northern coast of the main island and several of his followers had manifested an intention of deserting the party, to push forward to his destination like a man. Now the results of the experiment have been made public, revealing a lamentable state of affairs.

The Lieutenant is advised to give up his adventure and to return home. He has made a meritorious attempt, though at a painful cost, to colonise the Kuriles. As to a rumour that the Government intends to extend its help towards this enterprise of settling in the Archipelago, it must be denounced decidedly. Should it be found really necessary to settle in the islands for the sake of securing the defence of the coast, the matter should be undertaken on a national basis; but there is no need of extending the Government protection towards the enterprises of individuals who have settled here simply for the sake of their private interest.

PRESS CENSORSHIP.

THE following Imperial Ordinance was issued yesterday:—

IMPERIAL ORDINANCE.

We, in view of urgent necessity, in accordance with advice of Our Privy Council and in conformity with the Eighth Article of the Imperial Constitution, hereby sanction and promulgate a measure relating to newspapers, magazines, and other publications.

(Sign Manual.)

(Great Seal.)

(Countersignatures of Ministers of State.)

Imperial Ordinance No. 134.

When it is proposed to insert in newspapers, periodicals, or other publications items of intelligence relating to military or foreign affairs, such items must be submitted for previous examination by the administrative officials.

The administrative officials mentioned in the preceding article shall be selected by the Minister of State for Justice.

Violations of the above shall render publishers, editors, printers, authors, and compositors, liable to a penalty of minor imprisonment for from one month to two years, and to a fine of from 20 to 300 *yen*.

The law relating to repeated offences shall not be applicable in respect of this Ordinance.

This Ordinance shall go into operation from the day of its issue.

JAPANESE VICTORY IN KOREA.

ACCORDING to telegrams forwarded from Saseho at 7.15 a.m. on the 2nd instant, the Japanese troops gained a signal victory over the Chinese at a place called Sōng-hwan, and advanced against the entrenched camp at A-San on the 30th ultimo at 7 in the morning. On what day the battle was fought at Sōng-hwan the telegram does not say, but presumably it was the 29th. Information previously received in Tokyo indicated the 29th or 30th as the probable date of the assault upon A-San. This forecast tallies exactly with the intelligence now telegraphed. It is evident that the Japanese are operating with the utmost celerity. The commencement of hostilities was the naval fight off Gusan on the 25th ultimo. News of that event cannot have reached the head-quarters of the troops before the following day. Yet on the 29th we find them delivering an attack against the Chinese lying entrenched at a place some twenty miles distant. That is decidedly quick work. It indicates a state of readiness that can not be too highly eulogized. Well equipped, well disciplined, full of pluck, and ably led, the Japanese will make a record in this the first war undertaken by them for three hundred years.

THE JEWS.

In a recent reference to the Suez Canal, the *Mexican Financier* pays a high compliment to the memory of the late Mr. Disraeli, whom it describes as the "greatest English Minister of the century." Our contemporary continues:—"Over 100,000 Jews have immigrated into the Holy Land within the last seven years, and it is probable that this race will once more populate the land of their ancestors. Whoever writes the history of the world a thousand years hence, will have to give much space to the influence of the Hebrew race on human affairs. In our day, the control of the world's finances is largely in the hands of this highly intellectual people, and in addition to the money-power, the rich Hebrews control the Press of Europe to a remarkable extent. In the arts, especially in music, and in every branch of literature, this gifted people have left an in-

effaceable mark. The average life of the well-to-do Hebrews is ten years longer than that of other members of the white race, and this is due to their superior hygienic habits, and to the sturdy constitutions transmitted by ancestors who also observed strict sanitary precautions. The marvellous success of the Hebrew race has awakened the sharpest jealousy among the masses of the European nations, for the last thing men forgive is superiority of any kind. But an intelligent observer, however much he may dislike the Jews, cannot but acknowledge that the upper class Jews are a wonderful people. Persecution has only sharpened their faculties and made them stronger mentally and physically. Inter-married with the aristocracies of Europe, the higher-class Jews are only repeating what they did in their matrimonial alliances with the proudest noble houses of Spain to which they gave their richly dowered daughters in former times. Jewish blood flows in the veins of the haughtiest European aristocrats, and some of the great captains who accompanied William the Conqueror into England were Hebrews, a fact abundantly attested. From these Hebrew warriors, enlisted under the banner of the Conqueror, some of the most renowned families of England trace their descent. To come down to modern times, Lord Rosebery, Prime Minister of England, is allied to the Rothschilds by his marriage with Miss Hannah Rothschild, who died a few years ago. And it was Disraeli, a Jew of the Jews, and boasting of his superiority to the "sub-nosed English," who was their greatest and most imperial-minded Premier, the favourite of their Queen."

THE LATE PROFESSOR ROSCHER.

A NOTABLE figure in the field of economic science has passed away in the person of Professor Wilhelm Roscher, who died recently at the age of seventy-six, and to whom the origin of the so-called German historical school of economics has usually been traced. Professor Roscher was a teacher of economic science for half a century, first for a few years at Göttingen, and for the rest of his life at Leipzig. The strongest statement by Professor Roscher of the principles of the historical school were made in his earlier writings, and his late works, while abounding in historical matter, have not done so much in the direction of transforming economic science as his earlier writings seemed to foreshadow. The dead teacher, however, had a wide audience, and his historical investigations in the field of economics have certainly exercised important influence upon the younger generation of economists, not only in Germany, but also in other countries, including the United States, where a translation of one his works has been in use as a text-book.—*Bradstreet's*.

ENTERTAINMENT TO BLUE-JACKETS.

THROUGH the courtesy of the British and American Naval Surgeons at Yokohama, Mr. and Mrs. E. J. Moss entertained the convalescents now in Hospital, upon the lawn of their residence, No. 101 Bluff, on Thursday afternoon. Assembling shortly before four o'clock, the men sat down to a substantial tea, and then in the cool of the afternoon a musical entertainment was given by various friends of the hospitable hosts. Some capital comic songs were also given by Mr. Burke, of the British Navy—several in character. The gathering dispersed about 7 p.m., after the singing of a verse of the British National Anthem, amid ringing cheers for Mr. and Mrs. Moss.

RAILWAY IN KOREA.

JAPANESE capitalists have decided to apply for permission to build a railway in Korea from Fusan to Sōul, and thence northward to connect with the Siberian line at Vladivostok. They purpose asking for a guarantee of 8 per cent. from the Governments of Japan and Korea, and they express themselves entirely sanguine about the issue of the project.

WAR DEFINITELY.

On Wednesday the Japanese Government conveyed to the Representatives of the Treaty Powers

an intimation that a state of war exists with China, and we believe that a proclamation from the Sovereign will speedily follow. This step differs in one important particular from an ordinary declaration of war. An ordinary declaration signifies that from the moment of its issue a state of war commences, whereas the procedure adopted by the Japanese Government conveys no definite announcement of the time when the state of war commenced.

CARRIAGE ACCIDENT.

ABOUT four o'clock on the afternoon of the 29th ult. while Mr. Tao, a translator in the Chinese Consulate, Yokohama, was being driven in a two-horsed carriage along Sakuragicho, Ichome, to pay a visit to Mr. Megata, President of the Yokohama Custom House, at the latter's official residence, the horses suddenly took fright and bolted down to the Sakuragawa. The carriage was fortunately prevented from falling into the water through being caught by a post. Mr. Tao, who appeared none the worse for the mishap, got into a *furukisha*, and paid his intended visit to Mr. Megata. The horses both received injuries, but no damage was done to the carriage.

DEATH OF A CHINESE DIPLOMAT.

THE *N.-C. Daily News* regrets very much to announce that H. E. Hsueh Fu-ch'eng, ex-Chinese Minister to Great Britain, France, and Italy, who returned to China with his family by the last French mail but one, and who had but just received permission from the Throne to visit his native town of Wusieh, died suddenly on Saturday evening, July 21st, at 10 o'clock, at his temporary quarters in the Temple of the Queen of Heaven, North Honan Road. His Excellency and family were to have started for Wusieh on the 22nd, having sent their baggage, which filled twenty-two cargo-boats, onward to Wusieh in charge of as many servants.

OFFICIAL APPOINTMENTS.

It is gossiped that Mr. Kato Komei, Chief of the Revenue Bureau in the Finance Department, has been appointed a Japanese Envoy Extraordinary and Minister Plenipotentiary, and has received the additional appointment of Chief of the Political Business Bureau in the Foreign Department, which has been vacated by the promotion of Mr. Kurino to be Japanese Representative at Washington. Mr. Megata, President of the Yokohama Custom House, has been transferred to the position vacated by Mr. Kato. Mr. Megata continues to hold his previous office in conjunction with his new position.

SUPERVISION OF NEWSPAPERS.

On Thursday's *Official Gazette* contains an Imperial Ordinance requiring the inspection by the authorities of all information connected with diplomatic affairs or military subjects which is intended to be inserted in newspapers, magazines or other publications.

Another Imperial Ordinance appearing in this morning's *Official Gazette* is to the effect that all Japanese subjects, with the exception of civil and military officers and persons commissioned by the Government, are prohibited from proceeding to Korea without Government permission.

WATER ON THE BLUFF.

OWING to the long-continued spell of dry weather the water in many wells on the Bluff has almost given out, and the precious fluid is now being obtained from the Settlement at two and a half cents a bucket.

COMMUNICATIONS.

THE telegraph from Shanghai to Tientsin is interrupted. That is inconvenient so far as concerns the Japanese *Chargé d'Affaires* in the Chinese capital. He can not receive instructions by wire to withdraw. As for the Chinese Government, they are not likely to hand him his passports, for that would be equivalent to a

declaration of war, and China does not affect declarations of war. She finds her account in anomalies such as a "state of reprisals." Of course many persons will conclude that the interruption of the line is official. We do not think so. There appears to be a genuine break-down.

CABINET MEETING.

AN extraordinary meeting of the Cabinet was held at the Palace on the 2nd inst. in the presence of H.I.M. the Emperor. There were present all the Ministers of State, with the exception of Mr. Mutsu, Minister of Foreign Affairs. Count Yamagata, President of the Privy Council, also attended the meeting.

AN INCIDENT IN MAIN STREET.

THE lot of the ordinary Japanese cart-horse is not a happy one, his daily portion being a maximum of hard blows with a minimum of food, consequently it is not surprising that sometimes he succumbs to this combination of circumstances and the heat. Such a case occurred yesterday when a pony with a cart-load suddenly collapsed opposite No. 72, and in spite of drenching with water was unable to recover and had finally to be carted away.

THE NEW BRITISH MINISTER.

THE Hon. P. LE POER TRINCH is to leave Vancouver by the steamer of the 6th instant, and may be expected in Japan on the 18th. The exceptional expedition shown by the new Minister in coming to his post, will probably induce Mr. de Bunsen to defer until the autumn his return to Japan, according to his original programme.

THE NEW FRENCH REPRESENTATIVE.

On Wednesday the new French Representative was received in audience by the Emperor and presented his credentials.

Mr. Kurino, the new Japanese Minister to America, was admitted to an Imperial audience on Wednesday.

THE CHINESE MINISTER.

THE Chinese representative leaves Tokyo on the 3rd instant. His heavy baggage was sent off a few days ago. He has not been as successful diplomatically as his predecessor, Lord Li, but then Lord Li was an exceptional man.

MR. MUTSU.

THE Minister of Foreign Affairs, Mr. Mutsu, say the *Tokyo Asahi*, has been prostrated by sickness, and Count Inouye, Minister of Home Affairs, will be appointed to take charge of the Foreign Office on behalf of Mr. Mutsu.

THE GENERAL ELECTIONS.

IN Tuesday's *Official Gazette* appears an Imperial Ordinance announcing that the next general election of members of the House of Representatives will take place on the 1st of September next.

THE CHINESE CONSULATE.

THE flag of the Chinese Consulate was hauled down on Thursday, and the archives conveyed to the U.S. Consulate-General. The documents filled five large cases.

RAILWAY COLLISION.

A collision occurred Thursday morning between two trains at the junction of the Akabane line near Shinagawa. One train was considerably broken up and the engine smashed, and some damage sustained by the other. The former, it is said, was a goods train. The line was soon cleared, and no injury to life or limb is reported, but two down trains from Tokyo had to be made into one through the delay.

FIRE IN THE SETTLEMENT.

Shortly after 3.30 Thursday morning fire broke out in an outhouse at the rear of the premises occupied by Messrs. Che San Bros. and the Bible

House, No. 60, which is used as sleeping quarters by some fourteen Chinese. An alarm being quickly given, Superintendent Morgan was soon on the spot with the two steamers, stationing the Relief at the fire-well at No. 76, and the other in front of the Catholic Church. When the brigade arrived on the ground the fire had not yet communicated with the main building, and, had water been at hand, the flames might have been confined to the place of origin. As it was, the main building soon caught fire, and in an incredibly short space of time the back of the house was a mass of flames, and Mr. and Mrs. C. G. Wilson, who occupied the upper flat, barely had time to escape, the staircase being on fire. Meanwhile, the conflagration had obtained a strong hold, and notwithstanding the streams of water poured in by the two steamers, the upper storeys were gutted before the flames could be controlled. The hydrants were practically useless, there being no head of water, and as it appeared a mere waste of water to use them they were disconnected, leaving the two fire engines to do the work. Mr. Wilson is a heavy loser, being uninsured, his large stock of scientific instruments being destroyed. The premises and their contents are insured. The Chinese occupants of the outhouse state that they were awakened by one of their friends in the main building and barely escaped in the clothes they were. There was a very strong smell of kerosene in the vicinity of the outhouse and near entrance to the main building during the time of the fire, and may still be detected in passing. The premises destroyed are the Bible House, and Messrs. Che San Bros.' printing and stationery office.

KOREAN AFFAIRS.

On Sunday the Japanese Government received the following telegram from Fusan:—"On the 25th instant, a naval fight took place off Phung-do. A Chinese transport with 1,500 troops on board was sunk, and another Chinese war-vessel, the *Tsao-kiang*, was captured. The *Sei-yen* (靖遠) fled to China and the *Ko-itsu* (廣乙) to A-San." The telegram does not mention either the number or the names of the Japanese vessels engaged in the fight. The captured Chinese vessel belongs, as does the one which fled to A-San, to the Southern Fleet. The former is stated to be a gunboat of 700 tons. Phung-Do is a small island near the entrance of the Bay of Nam-yang.

It seems that a mail steamer which left Inchon on the 24th ultimo has arrived at Ujina. But the ship does not appear to have brought any news about the rumoured action between Japanese and Chinese war-vessels off A-San on the 23rd instant. Nor does any report seem to have been brought home about any further hostilities on land. But a number of private letters were brought by the packet. Evidently it is from one of these letters that the *Nichi Nichi Shimbun's* correspondent at Shimonoseki has telegraphed to Tokyo a detailed account of what took place in Soul on the 23rd instant. According to this telegram, it appears that the Japanese Minister and the Tai Won-kun did not go to the palace simultaneously and in the same party, as originally reported. Mr. Otori seems to have been the first to repair to the palace. In front of the Kyong-pok Palace, a part of the armed escort was drawn up, when they were unexpectedly fired at by the Korean troops from within the walls of that palace and of another called Un-yon. The fighting lasted for about 15 minutes, with one cavalry soldier killed and two foot soldiers wounded on the Japanese side, and seventeen killed and seventy wounded on the Korean side. All the Korean troops in the precincts of the palace fled in every direction. The wounded Koreans are said to have been attended to by the doctors of the Japanese Red Cross Society. Among the wounded Koreans there are reported to be several officers. After the fighting was over, Minister Otori entered the palace and had an audience with the King, who, as already stated, expressed sincere regret that the friendly

advice of Japan had not been adopted by his Government, and he declared his entire satisfaction with the representations submitted to him on the occasion by the Japanese Minister. Shortly after the entrance of Mr. Otori into the palace, the Tai Won-kun also arrived there, escorted by Japanese troops. These troops, it is stated, were placed at his disposal by the request of the King. The King had a conference with the Tai Won-kun in a separate apartment, when the latter is believed to have assured the King that, in order to maintain Korea's independence, it was absolutely necessary to introduce thorough reforms in the Government. The telegram further states that the Japanese Minister took troops with him on his visit to the palace, because it was reported that there was an unusual commotion there.

A telegram dated, Seoul, July 23rd, 2.20 p.m., and said to have been received in Tokyo at 5.30 p.m. on the 27th, mentions that the fighting ceased at 7.40 a.m.; that 50 cannon and over 1,000 rifles were captured by the Japanese; that two Japanese were killed and one injured; and that the Tai Won-kun entered the palace at 1 p.m. This telegram is said to have been received by the Japanese Government.

A similar telegram is published in the *Nichi Nichi Shimbun*, which professes to have received it from its correspondent at Seoul. It is a singular circumstance that a telegram should have taken more than 90 hours to travel from Seoul to Tokyo. This mystery remains unsolved.

The *Yiji Shimo's* telegram states that the following telegram was received from Shanghai by a certain mercantile house in Tokyo on the morning of the 27th ult.:—"Hostilities have commenced, and the Chinese Government has declared war against Japan. China is making energetic efforts for war, and manifests extraordinary caution and circumspection in every respect."

The same paper publishes the following telegram dated Tientsin, July 27, 10 a.m.:—"China's plan is to march troops into Korea by way of Wi-ju. According to a trustworthy authority, the Chinese troops are believed to have arrived in the vicinity of Wi-ju. This report seems to be worthy of attention."

The *Nichi Nichi Shimbun* publishes the following telegram dated Tientsin, July 26, 6 p.m.:—"The Northern Fleet is reported to be laying torpedoes at the entrance of the Gulf of Pe-chili."

"On the 21st instant, the Chinese Government mobilised the *Seiji* troops at Tientsin, Taku, Hokku-to, and Shin-jo, and they were massed together in the neighbourhood of Chefoo with the *Giji* and *Keiji* troops from Wei-Hai-Wei and Tai-len. These troops, 8,500 strong in all, left for Korea the following day on board 13 transports, some of which are foreign bottoms, under the escort of 15 vessels of Northern Fleet. These troops, it is reported, will be landed both at Tai-Dong-gang and at A-san."

"General Lien Eifuku, who has been petitioning the Government to be allowed to take part in war, has received instructions to be ready at any moment to assume warlike duties."

The report that the Chinese Minister was to start for home on the 28th ultimo, is premature. This erroneous news originated in the fact that the wives of the members of the Legation and the student-interpreters went home on that day, and that the Minister and Secretaries have packed their movables. It is now stated that the Chinese Minister has received a telegram from Peking, telling him not to leave until the withdrawal of the Japanese *Chargé d'Affairs* at Peking.

Concerning the naval engagement of the 25th ultimo, it is stated that the firing was begun by the Chinese vessels, and that the Japanese warships had no alternative but to fight. The firing is said to have commenced at about 7 a.m. and to have lasted for an hour and 20 minutes. The Chinese transport that was sunk had hoisted a white flag, but having again commenced resistance, it was fired at by the Japanese. The captured gunboat, the *Zsang-Kiang*, belonged

to the Northern Fleet, not to the Southern, as originally reported. This vessel was brought to Saseho on the 28th instant, together with 82 captives, of whom 3 are said to be Europeans. Its tonnage is 950 tons, not 700 as at first reported. The names of the Japanese war-vessels that took part in the action are not given, but their number is stated to have been three. The *Sei-Yen* which fled to China is said to have fought very bravely. It is also stated that the Japanese war-vessels sustained little injury.

It is believed by well-informed persons that operations on land against the Chinese at A-San began on the 27th ultimo, a date, it may be remembered, that we foretold a few days ago.

The *Yiji Shimo's* telegram, said to have been received on the 28th ultimo, is as follows:—"The Chinese troops are evacuating A-San. Their purpose seems to be to proceed to Phyong-yang by a circuitous route."

Telegrams dated Seoul, July 23rd, are now appearing in the Japanese papers. According to them, it is stated that the Queen has been divorced; that Ming Sishun and a few other leading members of the Ming faction have been sentenced to banishment to various islands; that the leaders of the Independent Party, who had been imprisoned a few days before, were released from confinement and appointed to high positions; that Mr. Otori was invested by the King with sole authority to undertake the reforms; and that an edict was issued announcing that it is the King's pleasure to appoint to office men of talent no matter what their social status may be. As to the Queen, we may add that she was previously divorced in 1883, when the Tai Won-kun was called to the head of the Government. She was however, reinstated by the intervention of the Chinese Government.

The report that China had declared war was premature. According to the *Yiji Shimo*, the mistake originated in the mistranslation of a telegram, which was in English, stating that the Chinese Government was making active preparations for war.

Letters describing the skirmishes of the 23rd ultimo in Seoul have just been published by the Tokyo papers. Upon the whole they confirm the information already obtained by wire, but they also contain a few new items. One is that a second skirmish took place at 2 p.m. on the same day. The Eastern Garrison of the capital, stationed in the neighbourhood of the Eastern Gate, having refused to surrender, a party of Japanese troops marched against them, and after keeping up a fusillade for a short time, the Koreans took to their heels, leaving their weapons and ammunition behind them. The casualties were twenty killed and many more wounded on the Korean side, and only one wounded on the Japanese side. According to the *Mainichi Shimbun's* correspondent, the Japanese troops captured on this occasion, 17 guns, 1,500 rifles, 13 cavalry ponies, and a large quantity of Korean coins.

Another correspondent says that the total number of killed on the Korean side in the morning's skirmish was more than thirty-five, and that five of them were Chinese in Korean uniforms.

The arms captured by the Japanese troops on the 23rd ultimo are said to include a large number of excellent rifles. These, it is believed, had been sent to the Korean Government by China.

That a part of the Japanese troops at Yong-san marched in the direction of A-san on the 23rd ultimo has already been reported. We are now informed by the *Yiji Shimo's* correspondent that another detachment left on the same day in an opposite direction for Pha-ju, a prefectural town on the Phyong-yang road, about twenty miles from Seoul.

The *Tokyo Asahi Shimbun's* In-chhōn correspondent has telegraphed as follows from Fusan:—"The new Cabinet has been organized by Kim Koshu and eight other members of the Progressive party. The Tai Won-kun has assumed the office of Regent, and Gyo Inchu has been appointed Chancellor."

According to a report said to have been received in Tokyo on the 29th ultimo, the arrival

of fresh reinforcements has increased the number of the Chinese troops at A-san to 6,000, with 36 guns. But we doubt the truth of this.

The telegraphic line between Fusan and Chonju is said to have been re-opened, but the line between the latter place and Seoul is still interrupted. The mail service between Fusan and In-chhōn is suspended, the last packet that left In-chhōn being the *Kisogawa*, which sailed thence on the 26th instant.

The Minister of Communications has given notice that he has received an intimation from the Chinese Government to the effect that no messages in cipher will be accepted from Japanese for transmission along Chinese lines.

The Chinese war-vessel that fled to China after the recent naval engagement in Korean waters is said to be *Sai-Yen* (濟遠), and not *Sei-Yen* (靖遠) as hitherto reported.

Various rumours are current, but in most cases they appear to be mere fabrications. The News Agency predict that we may at any moment expect news of a fight at A-san between the Chinese and Japanese forces. Now that hostilities have actually commenced, the Japanese have doubtless lost no time in assuming the offensive against the Chinese encamped in Korea. They would be showing conspicuous lack of resolution and promptitude if they did not hasten to dispose finally of that phase of the situation.

The Chinese vessel captured by the Japanese on the 25th ultimo appears to be an unarmed despatch boat. She was built, if we remember aright, at Foochow several years ago, and being a wooden ship not capable of steaming more than 8 knots, her power of resisting capture was, of course, as small as her capacity to evade it. Her presence can not have been for purposes of escort; she must have been serving simply to preserve communications. We are still without information as to the fate of the troops in the transport that was sunk. It would have been the duty of the Japanese to save as many of the men as possible, but circumstances may have prevented anything of the kind.

It may be well to warn the public against basing any conclusions on the names of Chinese men-of-war as rendered by the vernacular press. A confusion between two such words as *Chin-yuan* and *Chun-yuan*, for example, may mean a great deal.

The Japanese papers state that the Chinese cruiser which retreated to A-san after the naval fight off Phung-do, has been captured by the Japanese ships, as her crew deserted her upon their arrival at A-san.

The following account of the naval engagement off A-San, supplied by the Tokyo News Agency, is stated to have been received from a trustworthy source. At 2 a.m. on the 25th ultimo, two Chinese war vessels, *Tsing-yuen* and *Kwang-yueh*, which had been lying for several days at In-Chhōn, put to sea. Two hours afterwards, three Japanese war vessels also set out from the same port to ascertain the state of things in the neighbourhood of Nam-Yeng. Nearing the island of Phung-Do, at a little past 7 o'clock, they perceived at a distance the two Chinese warships advancing towards them, and when the two squadrons approached each other, the Chinese, instead of saluting the Japanese vessels, one of which was a flagship, were observed to have their guns run out and their men at quarters. The Japanese war vessels, on making this discovery, quickly effected preparations for an emergency. The Chinese soon afterwards opened fire and the challenge was at once accepted by the Japanese, whose shells soon began to tell upon the Chinese ships. The latter, after a short time, ran up the Japanese ensign over a white flag, and this being regarded as a declaration of surrender, the Japanese ships approached within a distance of about 300 metres, whereupon the *Tsing-yuen* treacherously discharged a torpedo against one of the Japanese ships and at the same time recommenced firing. The Japanese vessels were equal to the occasion. They returned the fire vigorously. While these things were in progress there hove in sight another ship and a transport, both flying the flags of neutral power. One of the Japanese

the first sign of a crisis, cheques are scrutinized with great care. The banks feeling the first symptoms begin to contract their loans and raise the rate of discount, and at the same time hoard their coin. The depositor removes his deposits if possible. Trust, and other companies call for more money. The result is a currency famine the length and breadth of which no one can forecast. Thus credit has its perils as well as its marvellous advantages.

The large ready money holdings of France per capita is one reason for the ease with which she paid the German war indemnity and meets current crises.

The amount of money which a nation needs cannot be readily determined. That amount depends upon the extent to which the people resort to barter, or credit instruments (though these two lie on the opposite sides of money development, and upon the rapidity of circulation). "A nimble siphon is better than a slow shilling," is true in some cases in economic finance.

The movement known as the fall of silver, or the rise of gold, was predicted fifteen or more years ago by Prof. Wolowski. A little later Dr. Eduard Suess of Austria did the same, even more accurately. There is no blinking or denying the fact that gold is very scarce, and its supply is not likely to be greatly augmented in the near future. Geologists and mineralogists agree that the world's supply of the yellow metal is being rapidly exhausted. The recent active demand for gold has stimulated gold mining so that some old abandoned mines are being re-opened, but no great product is gained.

NO. III.—THE WORLD'S STOCK OF SILVER AND GOLD.

	Gold.	Silver.	Gold All money per Capita.	Silver per Capita.
Present Stock	\$3,581,000,000	\$4,041,000,000		
The United States	504,000,000	511,000,000	9.01	24.34
Great Britain	551,000,000	200,000,000	14.47	13.45
France	800,000,000	700,000,000	20.59	40.56
Germany	600,000,000	321,000,000	12.18	16.28
Russia	350,000,000	600,000,000	9.22	7.26
The Rest of the World	780,000,000	2,143,000,000	.80	1.00

We have tried to briefly point out:

1.—That the so-called fall of silver is also and largely a rise in gold.

2.—That this is proven by the general fall of prices on domestic products in gold-using countries, while silver-using countries have suffered no great general fall in prices.

3.—That the gold used in the money systems of the world is being lost to some extent by abrasion and by accident;

4.—That the military preparations of Europe have retired some \$600,000,000 of the world's gold;

5.—That the gold used in the arts and industries absorbs, according to Soetbeer, the entire current product of the mines;

6.—That a part of this is forever lost to the channels of money, while a part may, in great stress, be recovered to money use;

7.—That the growth of population, trade, and the opening of new lands demands some increase of the volume of money;

9.—Finally that the production of gold has remained practically stationary, until the very recent rise in the price of gold stimulated production.

If the foregoing is true, what is the cause of this state of affairs? The answer is in two words, "Politics," "Speculation."

The politician is after votes and looks with small respect upon the work of the economist. This condition of affairs has been foretold both in Europe and America for the past quarter of a century, but the politician is after votes and in general his attitude toward all these questions is determined by votes. There are exceptions, but they only prove the rule. The only course of reform is a grand educational crusade educating the people till they shall compel the politician to hear and heed.

The miseries of the present situation will increase till a remedy comes it is to be feared in tumult and greater distress.

England holds uncounted millions of stocks and bonds of all nations. The creditors demand gold and get it. But they will not always get it. They have killed the goose that laid the golden egg. The fatal cut has been made and silver must sooner or later come back to the world's money supply. How much deeper things must sink no one can foretell. As you will see by Chart No. 2 it requires in the United States ten pounds more of cotton to pay a gold debt of one dollar than it did twenty years ago. All debts more than five years old have nearly doubled in value, and each of you in purchasing a book on Political Economy, for example, must lay down two yen for every dollar of the catalogue price.

Eight hundred millions of the human race use silver, chiefly, and they have been obliged to double their silver remittances to all foreign countries in payment of debts. If these questions could be taken out of the hands of the politician and speculator and their allies, the world be speedily settled. The success of England, owing largely to other causes than the use of gold, has intoxicated the world and indirectly wrought much harm.

THE REMEDY, BIMETALLISM BY INTERNATIONAL AGREEMENT.—Japan is in a unique position to lead the whole East in this matter. Let her invite the United States, China, Mexico, and other countries to unite in demanding the re-habilitation of silver. Push steadily on to this end. Enter into correspondence with bi-metallic leagues over the whole world. Send delegates now and then from this Society to Conferences and Conventions in other parts of the world. By this, incidentally trade and commerce will be fostered and sound finance developed.

Study diligently and thoroughly the effect of the silver movement on prices. It is gratifying to know that it is being done.

The limits of time forbid my imposing upon your good humour by a citation of authorities and statistics. Lest their absence in the body of this paper may seem gross carelessness on my part I now mention the name of some used in preparation.

Suess, Soetbeer, Andrews, Woolcott, Leech, Eckels, Giffen, Spahr, Bland, Sidgwick, Walker, Denslow, and others.

Again thanking you for your kindly attention and this honour, I am happy to wish your Society the highest success attainable, the leadership of this people in safe economic paths.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT).

Chicago, July 2nd.

In the case of a Japanese named Shibata Saito, who made application for naturalization before the U.S. Circuit Court at Boston, Judge Colt has handed down a decision, that, as the Japanese are of the Mongolian race, they come within the scope of the Chinese Exclusion Act, and are, therefore, not eligible to citizenship.

Rev. M. S. Vail and family are guests of Dr. and Mrs. Henry B. Ridgeway, of the Garrett Biblical Institute, Evanston, Ill. Prof. Vail was instructor of Greek in that institution before he went out to Japan.

Mr. W. Q. Judge, at one time in Japan, and now General Secretary and Vice-President of the Theosophical Society, has gone to London to attend a convention of the European section. There the Executive Committee, of which Col. Olcott, as President of the Society, is Chairman, will put Mr. Judge on trial "on the charge of the misuse of the names and the hand-writing of the Mahatmas." This charge is preferred by "some Hindoo Theosophists of India." Obviously, some steps should be taken to prevent the credulous public from being imposed upon in this Mahatma business!

The latest advices from Hawaii tell of some changes in the Constitution as proposed by the Executive Council. The property qualification of Senators, for instance, is to be reduced from \$3,000 to \$1,500, and the income qualification from \$900 to \$600. This change met some opposition on the ground that it would enable natives to become members of the Upper House. Provisional President Dole is to be declared President of the new Republic without the formality of a vote. It is quite probable that the Constitution will be adopted on the Fourth of July. The ex-Queen has sent protests to all foreign diplomats and requested them not to recognize the new Republic. All except the British Minister returned her protests unnoticed.

The National Republican League has been in session at Denver, Colorado, and has passed the usual series of resolutions in which silver meets defeat. W. W. Tracy, of Illinois, was re-elected President.

The Democrats have selected a Philadelphia Editor, named William M. Singler, as the man to be defeated for Governor of Pennsylvania; have nominated a good Statisticket in Illinois, including Franklin MacVeagh, of Chicago, U.S. Senator; and have put up Spencer O. Fisher for Governor in Michigan and Hon. E. F. Uhl for the long term, and ex-Lieut. Gov. John Strong for the short term in the U.S. Senate. The custom of making nominations for the Senate in the State Convention is evidently growing in popularity.

Thomas A. Edison is suffering from a severe illness which seems to have been brought on by exposure to extremes of temperature after hard work. He was also injured somewhat in the spine by a fall from a chair.

A cyclone which swept over Southern Minnesota and South Dakota left a record of twelve or more deaths, most of which were in vicinity of Sleepy Eye and Pipe-stone, Minn., and Huron, S.D. A big fire in the "Woodruff Stores," in Brooklyn, caused about \$1,000,000 of damage and loss of life.

The trial to settle the question of Prendergast's sanity has made rapid progress the past week, and will probably come to a close in a few days. The date of execution has again been postponed—from July 2 to July 13.

The waifs of Chicago, about 10,000 in number, enjoyed a picnic the other day in Jackson Park. They had plenty to eat, no end of fun, all sorts of games and races with prizes,—all provided by popular subscription.

The "Derby," with its \$20,000 prize, was won by "Lucky" Baldwin's bay colt, called "Itey El Santa Anita" in 2.36. John S. Johnson, of Syracuse, has lowered the bicycle mile record to 1.56. Yale won both the Varsity and the Freshmen boat races at New London, Conn.

This is "Convocation Day" at the University of Chicago, and will be celebrated on the campus. The attendance during the past quarter has been 755, a large gain over the same quarter of last year. The prospects of the summer quarter are good, and tend to show that the plan of keeping the University open all the year is feasible. It must be remembered, that this is not merely a "Summer School," but it is the summer session, no different from that of any other quarter, of a big University.

Success, as usual, has crowned the efforts of the University to raise a fund of \$1,000,000 for purposes of general equipment. On Saturday, the last day of grace (June 30), Mr. S. B. Cobb, the donor of Cobb Hall, subscribed the last \$15,000; and a little later an extra \$5,000 came in from another source. The University authorities may possibly rest during the summer; but by Fall they will probably be entering upon another active campaign to raise \$1,000,000 more!

This letter is written to go on the *Peru*, scheduled to leave 'Prisco on the 9th inst., and has an allowance of an extra day for the overland trip; but it may be delayed *en route*, and fail, to make connections. The boycott of Pullman cars was instituted on Tuesday, June 26th, and has developed into a very serious state of affairs, the outcome of which is awaited with great anxiety. Railroad companies, with contracts to carry Pullman cars, naturally declined to cut off third sleepers and diners at the behest of the American Railway Union. The result was, that, as switchmen refused to move trains with Pullmans attached, and as firemen deserted the engines, travel was seriously impeded, and on some roads has been entirely suspended. The Illinois Central, the Grand Trunk, the Santa Fe, the Northern Pacific, the Chicago and Northwestern, the Chicago and Eastern Illinois, the Wisconsin Central, and the Chicago, Rock Island and Pacific have fared the worst; but all roads have been affected more or less seriously.

In several places the strikers have used force to cut Pullman cars from trains and run them on the side-track. At Cairo, Ill., there has been for several days a blockade on the Illinois Central; at Hammond, Ind., there was a blockade, only broken yesterday through fear of the militia; at Battle Creek, Mich., there is a blockade on the Grand Trunk; in fact, at all terminal and divisional points on many roads, there is a serious stoppage of travel and traffic. The detention of mail trains at several points, and the tampering with roads operated by courts through the hands of receivers, will get the strikers into difficulty with the U.S. Government. Riotous acts, such as derailing or ditching trains, will also call for legal redress.

The shippers of perishable goods, such as fruit, vegetables, meat, etc., are naturally making serious complaints. Inasmuch as many roads decline to receive such freight, much of it is a total loss. The price of such commodities is rising.

A few roads (the Mobile and Ohio, for example), having surrendered and taken off all Pullman cars, are now unmolested; but yet the "sympathy" idea has spread, so that even roads running Wagner cars are in trouble. The Knights of Labour are in sympathy with the strike, and other labour organizations are likely to be drawn into the war. "Dictator Debs," President of the American Railway Union, is bound to have a bitter fight; and the railroad managers have combined for self-defence. Deputy Marshals are being sworn in by the hundreds here in Chicago; and, in counties where the war in on, the Sheriffs are increasing their forces. Last night Governor Altgeld ordered out three companies of the Illinois National Guards to Danville and three to Decatur; and U.S. regulars have been ordered to Trinidad, Colorado, to protect Santa Fe trains.

Thus far the East and the South have been affected only indirectly, and Chicago has been the centre of the fight; but it is impossible to tell where or when it will end.

This contest between the railroad companies and railroad employes has completely put in the shade the miners' strike and the industrial armies. Of the latter Frye's division has reached Washington, and other "armies" have not been reported for a week. It is now said that the needy Coxeyites at the Capital are "in a pitiable plight from want of food," and are besieging their Congressmen for assistance to get back home.

R. G. Dun and Co. report that, in spite of the great railroad war, trade, though still dull, is "changing for the better;" and crop bulletins from Illinois, Iowa, Minnesota, Missouri, and Ohio, promise good crops of corn and wheat.

General Carlos Ezeta, ex-President of the Republic of Salvador, has found refuge in New York City.

THE RED BRIDAL.

BY LAYCADIO HEARN.

Falling in love at first sight is less common in Japan than in the West; partly because of the peculiar constitution of Eastern society, and partly because much sorrow is prevented by early marriages which parents arrange. Love suicides, on the other hand, are not infrequent; but they have the particularity of being nearly always double. Moreover, they must be considered, in the majority of instances, the results of improper relationships. Still, there are honest and brave exceptions; and these occur usually in country districts. The love in such a tragedy may have evolved suddenly out of the most innocent and natural boy-and-girl friendship, and may have a history dating back to the childhood of the victims. But even then there remains a very curious difference between a Western double suicide for love and a Japanese *fōshi*. The Oriental suicide is not the result of a blind, quick frenzy of pain. It is not only cool and methodical; it is sacramental. It involves a marriage of which the certificate is death. The twin pledge themselves to each other in the presence of the gods, write their farewell letters, and die. No pledge can be more profoundly sacred than this. And therefore, if it should happen that, by sudden outside interference and by medical skill, one of the pair is snatched from death, that one is bound by the most solemn obligation of love and honour to cast away life at the first possible opportunity. Of course, if both are saved, all may go well. But it were better to commit any crime of violence punishable with half a hundred years of state prison than to become known as a man who, after pledging his faith to die with a girl, had left her to travel to the Meido alone. The woman who should fail in her vow might be partially forgiven; but the man who survived a *fōshi* through interference, and allowed himself to live on because his purpose was once frustrated, would be regarded all his mortal days as a perjurer, a murderer, a bestial coward, a disgrace to human nature. I knew of one such case—but it is not good to talk about! I would rather try to tell the story of an humble love affair which happened at a village in one of the eastern provinces.

I.

The village stands on the bank of a broad but very shallow river, the stony bed of which is completely covered with water only during the rainy season. The river traverses an immense level of rice-fields, open to the horizon north and south, but on the west walled in by a range of blue peaks, and on the east by a chain of low wooded hills. The village itself is separated from these hills only by half a mile of rice-fields; and its principal cemetery, the adjunct of a Buddhist temple, dedicated to Kwannon-of-the-Eleven-Faces, is situated upon a neighbouring summit. As a distributing centre, the village is not unimportant. Besides several hundred thatched dwellings of the ordinary rustic style, it contains one whole street of thriving two-storey shops and inns with handsome tiled roofs. It possesses also a very picturesque *ujigami*, or Shinto parish temple, dedicated to the Sun-Goddess, and a pretty shrine, in a grove of mulberry-trees, dedicated to the Deity of Silk-worms.

There was born in this village, in the seventh year of Meiji, in the house of one Uchida, a dyer, a boy called Taro. His birthday happened to be an *akunichi*, or unlucky day,—the seventh of the eighth month, by the ancient Calendar of Moons. Therefore his parents, being old-fashioned folk, feared and sorrowed. But sympathizing neighbours tried to persuade them that everything was as it should be, because the calendar had been changed by the Emperor's order and according to

the new calendar the day was a *kitsunichi*, or lucky day. These representations somewhat lessened the anxiety of the parents; but when they took the child to the *ujigami*, they made the gods a gift of a very large paper lantern, and besought earnestly that all *hades* should be kept away from their boy. The *kannushi*, or priest, repeated the archaic formulas required, and waved the sacred *gohai*, paper cut to represent spirits, above the little shaven head, and prepared a small amulet to be suspended about the infant's neck; after which the parents visited the temple of Kwannon on the hill, and there also made offerings, and prayed to all the Buddhas to protect their first-born.

II.

When Taro was six years old, his parents decided to send him to the new elementary school which had been built at a short distance from the village. Taro's grandfather bought him some writing-brushes, paper, a book, and a slate, and early one morning led him by the hand to the school. Taro felt very happy, because the slate and the other things delighted him like so many new toys, and because everybody had told him that the school was a pleasant place, where he would have plenty of time to play. Moreover, his mother had promised to give him many cakes when he should come home.

As soon as they reached the school,—a big two-storey building with glass windows,—a servant showed them into a large, bare apartment, where a serious-looking man was seated at a desk. Taro's grandfather bowed low to the serious-looking man, and addressed him as *Sensei*, and humbly requested him to teach the little fellow kindly. The *Sensei* rose up, and bowed in return, and spoke courteously to the old man. He also put his hand on Taro's head, and said nice things. But Taro became all at once afraid. When his grandfather had bid him good-by, he grew still more afraid, and would have liked to run away home; but the master took him into a large, high, white room, full of girls and boys sitting on benches, and showed him a bench, and told him to sit down. All the boys and girls turned their heads to look at Taro, and whispered to each other, and laughed. Taro thought they were laughing at him, and began to feel very miserable. A big bell rang; and the master, who had taken his place on a high platform at the other end of the room, ordered silence in a tremendous way that terrified Taro. All became quiet, and the master began to speak. Taro thought he spoke most dreadfully. He did not say that school was a pleasant place: he told the pupils very plainly that it was not a place for play, but for hard work. He told them that study was painful, but that they must study in spite of the pain and the difficulty. He told them about the rules which they must obey, and about the punishments for disobedience or carelessness. When they all became frightened and still, he changed his voice altogether, and began to talk to them like a kind father,—promising to love them just like his own little ones. Then he told them how the school had been built by the august command of His Imperial Majesty, that the boys and girls of the country might become wise men and good women, and how dearly they should love their noble Emperor, and be happy even to give their lives for his sake. Also he told them how they should love their parents, and how hard their parents had to work for the means of sending them to school, and how wicked and ungrateful it would be to idle during study hours. Then he began to call them each by name, asking questions about what he had said.

Taro had heard only a part of the master's discourse. His small mind was most entirely occupied by the fact that all the boys and girls had looked at him and laughed when he had first entered the room. And the mystery of it all was so painful to him that he could think of little else, and was therefore quite unprepared when the master called his name.

"Uchida Taro, what do you like best in the world?"

Taro started, stood up, and answered frankly, "Cake."

All the boys and girls again looked at him and laughed; and the master asked reproachfully, "Uchida Taro, do you like cake more than you like your parents? Uchida Taro, do you like cake better than your duty to His Majesty our Emperor?"

Then Taro knew that he had made some great mistake; and his face became very hot, and all the children laughed, and he began to cry. This only made them laugh still more; and they kept on laughing until the master again enforced silence, and put a similar question to the next pupil. Taro kept his sleeve to his eyes, and sobbed.

The bell rang. The master told the children they would receive their first writing-lesson during

the next class hour from another teacher, but that they could first go out and play for a while. He then left the room; and the boys and girls all ran out into school-yard to play, taking no notice whatever of Taro. The child felt more astonished at being thus ignored than he had felt before on finding himself an object of general attention. Nobody except the master had yet spoken one word to him; and now even the master seemed to have forgotten his existence. He sat down again on his little bench, and cried and cried; trying all the while not to make a noise, for fear the children would come back to laugh at him.

Suddenly a hand was laid upon his shoulder; a sweet voice was speaking to him; and, turning his head, he found himself looking into the most caressing pair of eyes he had ever seen,—the eyes of a little girl about a year older than he.

"What is it?" she asked him tenderly.

Taro sobbed and sniffled helplessly for a moment, before he could answer: "I am very unhappy here. I want to go home."

"Why?" questioned the girl, slipping an arm about his neck.

"They all hate me; they will not speak to me or play with me."

"Oh no!" said the girl. Nobody dislikes you at all. It is only because you are a stranger. When I first went to school, last year, it was just the same with me. You must not fret."

"But all others are playing; and I must sit in here," protested Taro.

"Oh no, you must come and play with me. I will be your playfellow. Come!"

Taro at once began to cry out loud. Self-pity and gratitude and the delight of new-found sympathy filled his little heart so full that he really could not help it. It was so nice to be petted for crying.

But the girl only laughed, and led him out of the room quickly, because the little mother-soul in her divined the whole situation. "Of course you may cry, if you wish," she said; "but you must play, too!" And ah, what a delightful play they played together!

But when school was over, and Taro's grandfather came to take him home, Taro began to cry again, because it was necessary that he should bid his little playmate good-by.

The grandfather laughed, and exclaimed, "Why, it is little Yoshi,—Miyahara O-Yoshi! Yoshi can come along with us, and stop at the house awhile. It is on her way home."

At Taro's house the playmates ate the promised cake together; and O-Yoshi mischievously asked, mimicking the master's severity, "Uchida Taro, do you like cake better than me?"

III.

O-Yoshi's father owned some neighbouring rice lands, and also kept a shop in the village. Her mother, a *samurai*, adopted into the Miyahara family at the time of the breaking up of the military caste, had borne several children, of whom O-Yoshi, the last, was the only survivor. While still a baby, O-Yoshi lost her mother. Miyahara was past middle age, but he took another wife, the daughter of one of his own farmers,—a young girl named Ito O-Tama. Though swarthy as new copper, O-Tama was a remarkably handsome peasant girl, tall, strong, and active; but the choice caused surprise, because O-Tama could neither read nor write. The surprise changed to amusement when it was discovered that almost from the time of entering the house she had assumed and maintained absolute control. But the neighbours stopped laughing at Miyahara's docility when they learned more about O-Tama. She knew her husband's interests better than he, took charge of everything, and managed his affairs with such tact that in less than two years she had doubled his income. Evidently, Miyahara had got a wife who was going to make him rich. As a step-mother she bore herself rather kindly, even after the birth of her first boy. O-Yoshi was well cared for, and regularly sent to school.

While the children were still going to school, a long-expected and wonderful event took place. Strange tall men with red hair and beards—foreigners from the West—came down into the valley with a great multitude of Japanese labourers, and constructed a railroad. It was carried along the base of the low hill range, beyond the rice-fields and mulberry groves in the rear of the village; and almost at the angle where it crossed the old road leading to the temple of Kwannon, a small station-house was built; and the name of the village was painted in Chinese characters upon a white signboard erected on the platform. Later, a line of telegraph poles was planted, parallel with the railroad. And still later, trains came, and shrieked, and stopped, and passed—nearly shrieking the Buddhas in the old cemetery off their lotus-flowers of stone.

The children wondered at the strange level and

strewn way, with its double lines of iron shining away north and south into mystery; and they were awe-struck by the trains that came roaring and screaming and smoking, like storm-breathing dragons, making the ground quake as they passed by. But this awe was succeeded by curious interest,—an interest intensified by the explanations of one of their school-teachers, who showed them, by drawings on the blackboard, how a locomotive engine was made; and who taught them, also, the still more marvellous operation of the telegraph, and told them how the new western capital and the sacred city of Kyoto were to be united by rail and wire, so that the journey between them might be accomplished in less than two days, and messages sent from the one to the other in a few seconds.

Taro and O-Yoshi became very dear friends. They studied together, played together, and visited each other's homes. But at the age of eleven O-Yoshi was taken from school to assist her step-mother in the household; and thereafter Taro saw her but seldom. He finished his own studies at fourteen, and began to learn his father's trade. Sorrows came. After having given him a little brother, his mother died; and in the same year, the kind old grandfather who had first taken him to school followed her: and after these things the world seemed to him much less bright than before. Nothing further changed his life till he reached his seventeenth year. Occasionally he would visit the house of the Miyahara, to talk with O-Yoshi. She had grown up in into a slender, pretty woman: but for him she was still only the merry playfellow of happier days.

IV.

One soft spring day, Taro found himself feeling very lonesome, and the thought came to him that it would be pleasant to see O-Yoshi. Probably there existed in his memory some constant relation between the sense of lonesomeness in general and the experience of his first school-day in particular. At all events, something within him—perhaps that a dead mother's love had made, or perhaps something belonging to other dead people—wanted a little tenderness, and he felt sure of receiving the tenderness from O-Yoshi. So he took his way to the little shop. As he approached it, he heard her laugh, and it sounded wonderfully sweet. Then he saw her serving an old peasant, who seemed to be quite pleased, and was chatting gaily. Taro had to wait, and felt vexed that he could not at once get O-Yoshi's talk all for himself; but it made him a little happier even to be near her. He looked and looked at her, and suddenly began to wonder why he had never before thought how pretty she was. Yes, she was really pretty,—more pretty than any other girl in the village. He kept on looking and wondering, and always she seemed to be growing prettier. It was very strange; he could not understand it. But O-Yoshi, for the first time, seemed to feel shy under that earnest gaze, and blushed to her little ears. Then Taro felt quite sure that she was more beautiful than anybody else in the whole world, and sweeter, and better, and that he wanted to tell her so; and all at once he found himself angry with the old peasant for talking so much to O-Yoshi, just as if she were a common person. In a few minutes the universe had been quite changed for Taro, and he did not know it. He only knew that since he last saw her O-Yoshi had become divine; and as soon as the chance came, he told her all his foolish heart, and she told him hers. And they wondered because their thoughts were so much the same; and that was the beginning of great trouble.

V.

The old peasant whom Taro had once seen talking to O-Yoshi had not visited the shop merely as a customer. In addition to his real calling he was a professional *nakodo*, or match-maker, and was at that very time acting in the service of wealthy rice-dealer named Okazaki Yaichiro. Okazaki had seen O-Yoshi, had taken a fancy to her, and had commissioned the *nakodo* to find out everything possible about her, and about the circumstances of her family.

Very much detested by the peasants, and even by his more immediate neighbours in the village, was Okazaki Yaichiro. He was an elderly man, gross, hard-featured, with a loud, insolent manner. He was said to be malignant. He was known to have speculated successfully in rice during a period of famine, which the peasant considers a crime, and never forgives. He was not a native of the *kens*, nor in any way related to its people, but had come to the village eighteen years before, with his wife and one child, from some western district. His wife had been dead two years, and his only son, whom he was said to have treated cruelly, had suddenly left him, and gone away, nobody knew whither. Other unpleasant stories were told about him. One was that, in his native western province, a furious mob had sacked his house and his godowns, and obliged him to fly for his life. An-

other was that, on his wedding night, he had been compelled to give a banquet to the god Jizo.

It is still customary in some provinces, on the occasion of the marriage of a very unpopular farmer, to make the bride-groom feast Jizo. A band of sturdy young men force their way into the house, carrying with them a stone image of the divinity, borrowed from the highway or from some neighbouring cemetery. A large crowd follows them. They deposit the image in the guest-room, and they demand that ample offerings of food and of *sake* be made to it at once. This means, of course, a big feast for themselves, and it is more than dangerous to refuse. All the uninvited guests must be served till they can neither eat nor drink any more. The obligation to give such a feast is not only a public rebuke; it is also a lasting public disgrace.

In his old age, Okazaki wished to treat himself to the luxury of a young and pretty wife; but in spite of his wealth he found this wish less easy to gratify than he had expected. Various families had checkmated his proposals at once by stipulating impossible conditions. The Headman of the village had answered, less politely, that he would sooner give his daughter to an *oni* (demon). And the rice dealer would probably have found himself obliged to seek for a wife in some other district, if he had not happened, after these failures, to notice O-Yoshi. The girl much more than pleased him; and he thought he might be able to obtain her by making certain offers to her people, whom he supposed to be poor. Accordingly, he tried, through the *nakodo*, to open negotiation with the Miyahara family.

O-Yoshi's peasant stepmother, though entirely uneducated, was very much the reverse of a simple woman. She had never loved her step-daughter, but was much too intelligent to be cruel to her without reason. Moreover, O-Yoshi was far from being in her way. O-Yoshi was a faithful worker, obedient, sweet-tempered, and very useful in the house. But the same cool shrewdness that discerned O-Yoshi's merits also estimated the girl's value in the marriage market. Okazaki never suspected that he was going to deal with his natural superior in cunning. O-Tama knew a great deal of his history. She knew the extent of his wealth. She was aware of his unsuccessful attempts to obtain a wife from various families, both within and without the village. She suspected that O-Yoshi's beauty might have aroused a real passion, and she knew that an old man's passion might be taken advantage of in a large number of cases. O-Yoshi was not wonderfully beautiful, but she was a really pretty and graceful girl, with very winning ways, and to get another like her, Okazaki would have to travel far. Should he refuse to pay well for the privilege of obtaining such a wife, O-Tama knew of younger men who would not hesitate to be generous. He might have O-Yoshi, but never upon easy terms. After the repulse of his first advances, his conduct would betray him. Should he prove to be really enamored, he could be forced to do more than any other resident of the district could possibly afford. It was therefore highly important to discover the real strength of his inclination, and to keep the whole matter, in the mean time, from the knowledge of O-Yoshi. As the reputation of the *nakodo* depended on professional silence, there was no likelihood of his betraying the secret.

The policy of the Miyahara family was settled in a consultation between O-Yoshi's father and her stepmother. Old Miyahara would have scarcely presumed, in any event, to oppose his wife's plans; but she took the precaution of persuading him, first of all, that such a marriage ought to be in many ways to his daughter's interest. She discussed with him the possible financial advantages of the union. She represented that there were, indeed, unpleasant risks, but that these could be provided against by making Okazaki agree to certain preliminary settlements. Then she taught her husband his rôle. Pending negotiations, the visits of Taro were to be encouraged. The liking of the pair for each other was a mere cobweb of sentiment that could be brushed out of existence at the required moment; and meantime it was to be made use of. That Okazaki should hear of a likely young rival might hasten desirable conclusions.

It was for these reasons that when Taro's father first proposed for O-Yoshi in his son's name, the suit was neither accepted nor discouraged. The only immediate objection offered was that O-Yoshi was one year older than Taro, and that such a marriage would be contrary to custom,—which was quite true. Still, the objection was a weak one, and had been selected because of its apparent unimportance.

Okazaki's first overtures were at the same time received in such a manner as to convey the impression that their sincerity was suspected. The

Miyahara refused to understand the *nakodo* at all. They remained astonishingly obtuse even to the plainest assurances, until Okazaki found it politic to shape what he thought a tempting offer. Old Miyahara then declared that he would leave the matter in his wife's hands, and abide by her decision.

O-Tama decided by instantly rejecting the proposal, with every appearance of scornful astonishment. She said unpleasant things. There was once a man who wanted to get a beautiful wife very cheap. At last he found a beautiful woman who said she ate only two grains of rice every day. So he married her; and every day she put into her mouth only two grains of rice; and he was happy. But one night, on returning from a journey, he watched her secretly through a hole in the roof, and saw her eating monstrously,—devouring mountains of rice and fish, and putting all the food into a hole in the top of her head under her hair. Then he knew that he had married the Yama-Omba.

O-Tama waited a month for the results of her rebuff,—waited very confidently, knowing how the imagined value of something wished for can be increased by the increase of the difficulty of getting it. And, as she expected, the *nakodo* at last re-appeared. This time Okazaki approached the matter less condescendingly than before,—adding to his first offer, and even volunteering seductive promises. Then she knew she was going to have him in her power. Her plan of campaign was not complicated, but it was founded upon a deep instinctive knowledge of the uglier side of human nature; and she felt sure of success. Promises were for fools; legal contracts involving conditions were traps for the simple. Okazaki should yield up no small portion of his property before obtaining O-Yoshi.

VI.

Taro's father earnestly desired his son's marriage with O-Yoshi, and had tried to bring it about in the usual way. He was surprised at not being able to get any definite answer from the Miyahara. He was a plain, simple man; but he had the intuition of sympathetic natures, and the unusually gracious manner of O-Tama, whom he had always disliked, made him suspect that he had nothing to hope. He thought it best to tell his suspicions to Taro, with the result that the lad fretted himself into a fever. But O-Yoshi's stepmother had no intention of reducing Taro to despair at so early a stage of her plot. She sent kindly worded messages to the house during his illness, and a letter from O-Yoshi, which had the desired effect of reviving all his hopes. After his sickness, he was graciously received by the Miyahara, and allowed to talk to O-Yoshi in the shop. Nothing, however, was said about his father's visit.

The lovers had also frequent chances to meet at the *uyigami* court, whither O-Yoshi often went with her stepmother's last baby. Even among the crowd of nurse-girls, children, and young mothers, they could exchange a few words without fear of gossip. Their hopes received no further serious check for a month, when O-Tama pleasantly proposed to Taro's father an impossible pecuniary arrangement. She had lifted a corner of her mask, because Okazaki was struggling wildly in the net she had spread for him, and by the violence of the struggles she knew the end was not far off. O-Yoshi was still ignorant of what was going on; but she had reason to fear that she would never be given to Taro. She was becoming thinner and paler.

Taro one morning took his child brother with him to the temple court, in the hope of an opportunity to chat with O-Yoshi. They met; and he told her that he was feeling afraid. He had found that the little wooden amulet which his mother had put about his neck when he was a child had been broken within the silken cover.

"That is not bad luck," said O-Yoshi. "It is only a sign that the august gods have been guarding you. There has been sickness in the village; and you caught the fever, but you got well. The holy charm shielded you: that is why it was broken. Tell the *hannushi* to-day: he will give you another."

Because they were very unhappy, and had never done harm to anybody, they began to reason about the justice of the universe.

Taro said: "Perhaps in the former life we hated each other. Perhaps I was unkind to you, or you to me. And this is our punishment. The priests say so."

O-Yoshi made answer with something of her old playfulness: "I was a man then, and you were a woman. I loved you very, very much; but you were very unkind to me. I remember it all quite well."

"You are not a Bosatsu," returned Taro smiling despite his sorrow; "so you cannot remember anything. It is only in the first of the ten states of Bosatsu that we begin to remember."

"How do you know I am not a Bosatsu?"

"You are a woman. A woman cannot be a Bosatsu."

"But is not Kwan-ze-on Bosatsu a woman?"

"Well, that is true. . . . But you love me, you say; and a Bosatsu cannot love anything except the Kyô."

"Did not Shaka have a wife and a son? Did he not love them?"

"That was very bad, even if Shaka did it. But I don't believe all those stories. . . . And would you have me, if you could get me?"

So they theorized and argued, and even laughed betimes: it was so pleasant to be together. But suddenly the girl became serious again, and said:—

"Listen! . . . Last night I had a dream. I saw a strange river, and the sea. I was standing, I thought, beside the river, very near to where it flowed into the sea. And I was afraid, very much afraid, and did not know why. Then I looked, and saw there was no water in the river, no water in the sea, but only the bones of the Buddhas. But they were all moving, just like water."

"Then again I thought I was at home, and that you had given me a beautiful gift-silk for a *kimono*, and that the *kimono* had been made. And I put it on. And then I wondered, because at first it had seemed of many colours, but now it was all white; and I had foolishly folded it upon me as the robes of the dead are folded, to the left. Then I went to the homes of all my kinsfolk to say good-by; and I told them I was going to the Meido. And they all asked me why; and I could not tell them."

"That is good," responded Taro: "it is very lucky to dream of the dead. Perhaps it is a sign we shall soon be husband and wife."

This time the girl did not answer; neither did she smile.

Taro was silent a minute; then he added: "If you think it was not a good dream, Yoshi, whisper it all to the nanten plant in the garden: then it will not come true."

But on the evening of the same day Taro's father was notified that Miyahara O-Yoshi was to become the wife of Okazaki Yaichiro.

VII.

O-Tama was really a very clever woman. She had never made any serious mistakes. She was one of those excellently organized beings who succeed in life by the perfect ease with which they exploit inferior natures. The full experience of her peasant ancestry in patience, in cunning, in crafty perception, in rapid foresight, in hard economy, was concentrated into a perfect machinery within her unlettered brain. That machinery worked faultlessly in the environment which had called it into existence, and upon the particular human material with which it was adapted to deal,—the nature of the peasant. But there was another nature which O-Tama understood less well, because there was nothing in her ancestral experience to elucidate it. She was a strong disbeliever in all the old ideas about character distinctions between *samurai* and *heimin*. She considered there had never been any differences between the military and the agricultural classes, except such differences of rank as laws and customs had established; and these had been bad. Laws and customs, she thought, had resulted in making all people of the former *samurai* class more or less helpless and foolish; and secretly she despised all *shisoku*. By their incapacity for hard work and their absolute ignorance of business methods, she had seen them reduced from wealth to misery. She had seen the pension-bonds given them by the new government pass from their hands into the clutches of cunning speculators of the most vulgar class. She despised weakness; she despised incapacity; and she deemed the commonest vegetable seller a much superior being to the ex-Karo obliged in his old age to beg assistance from those who had formerly cast off their foot gear and bowed their heads to the mud whenever he passed by. She did not consider it an advantage for O-Yoshi to have had a *samurai* mother: she attributed the girl's delicacy to that cause, and thought her descent a misfortune. She had clearly read in O-Yoshi's character all that could be read by one not of a superior caste,—among other facts, that nothing would be gained by needless harshness to the child; and the implied quality was not one that she disliked. But there were other qualities in O-Yoshi that she had never clearly perceived,—a profound though well-controlled sensitiveness to moral wrong, an unconquerable self-respect, and a latent reserve of will power that could triumph over any physical pain. And thus it happened that the behaviour of O-Yoshi, when told she would have to become the wife of Okazaki, duped her stepmother, who was prepared to encounter a revolt. She was mistaken.

At first the girl turned white as death. But in another moment she blushed, smiled, bowed down, and agreeably astonished the Miyahara by announcing, in the formal language of filial piety, her readiness to obey the will of her parents in all things. There was no further appearance even of secret dissatisfaction in her manner; and O-Tama was so pleased that she took her into confidence, and told her something of the comedy of the negotiations, and the full extent of the sacrifices Okazaki had been compelled to make. Furthermore, in addition to such trite consolations as are always offered to a young girl betrothed without her own consent to an old man, O-Tama gave her some really priceless advice how to manage Okazaki. Taro's name was not even once mentioned. For the advice O-Yoshi dutifully thanked her stepmother, with graceful prostrations. It was certainly admirable advice. Almost any intelligent peasant girl, fully instructed by such a teacher as O-Tama, might have been able to support existence with Okazaki. But O-Yoshi was only half a peasant girl. Her first sudden pallor and her subsequent crimson flush, after the announcement of the fate reserved for her, were caused by two emotional sensations of which O-Tama was far from suspecting the nature. Both represented much more complex and rapid thinking than O-Tama had ever done in all her calculating experience.

The first was a shock of horror accompanying the full recognition of the absolute moral insensibility of her stepmother, the utter hopelessness of any protest, the virtual sale of her person to that hideous old man for the sole motive of unnecessary gain, the cruelty and the shame of the transaction. But almost as quickly there rushed to her consciousness an equally complete sense of the need of courage and strength to face the worst, and of subtlety to cope with strong cunning. It was then she smiled. And as she smiled, her young will became steel of the sort that severs iron without turning edge. She knew at once exactly what to do,—her *samurai* blood told her that; and she plotted only to gain the time and the chance. And she felt already so sure of triumph that she had to make a strong effort not to laugh aloud. The light in her eyes completely deceived O-Tama, who detected only a manifestation of satisfied feeling, and imagined the feeling due to a sudden perception of advantages to be gained by a rich marriage.

It was the fifteenth day of the ninth month; and the wedding was to be celebrated upon the sixth of the tenth month. But three days later, O-Tama, rising at dawn, found that her step-daughter had disappeared during the night. Taro Uchida had not been seen by his father since the afternoon of the previous day. But letters from both were received a few hours afterwards.

VIII.

The early morning train from Kyoto was in; the little station was full of hurry and noise,—clattering of *geta*, humming of converse, and fragmentary cries of village boys selling cakes and luncheons: *Kwashi yoros! Sushi yoros! Bento yoros!* Five minutes, and the *geta* clatter, and the banging of carriage doors, and the shrilling of the boys stopped, as a whistle blew and the train jolted and moved. It rumbled out, puffed away slowly northward, and the little station emptied itself. The policeman on duty at the wicket handed it to, and began to walk up and down the sanded platform, surveying the silent ricefields.

Autumn had come,—the Period of Great Light. The sun-glow had suddenly become whiter, and shadows sharper, and all outlines clear as edges of splintered glass. The mosses, long parched out of visibility by the summer heat, had revived in wonderful patches and bands of bright soft green over all shaded bare spaces of the black volcanic soil; from every group of pine-trees vibrated the shrill wheeze of the *tsuku-tsuku-boshi*; and above all the little ditches and canals was a silent flickering of tiny lightnings, zigzag, soundless flashings of emerald and rose and azure-of-steel,—the shooting of dragon-flies.

Now, it may have been due to the extraordinary clearness of the morning air that the policeman was able to perceive, far up the track, looking north, something which caused him to start, to shade his eyes with his hand, and then to look at the clock. But, as a rule, the black eye of a Japanese policeman, like the eye of a poised kite, seldom fails to perceive the least unusual happening within the whole limit of its vision. I remember that once, in far-away Ōki, wishing, without being myself observed, to watch a mask-dance in the street before my inn, I poked a small hole through a paper window of the second story, and peered at the performance. Down the street talked a policeman, in snowy uniform and havelock: for it was midsummer. He did not appear even to see the dancers or the crowd, through which he walked

without so much as turning his head to either side. Then he suddenly halted, and fixed his gaze exactly on the hole in his *shoji*; for at that hole he had seen an eye which he had instantly decided, by reason of its shape, to be a foreign eye. Then he entered the inn, and asked questions about my passport, which had already been examined.

What the policeman at the village station observed, and afterwards reported, was that, more than half a mile north of the station, two persons had reached the railroad track by crossing the rice-fields, apparently after leaving a farm-house considerably to the northwest of the village. One of them, a woman, he judged, by the colour of her robe and girdle, to be very young. The early express train from Tokyo was then due in a few minutes, and its advancing smoke could be perceived from the station platform. The two persons began to run quickly along the track upon which the train was coming. They ran on out of sight round a curve.

Those two persons were Taro and O-Yoshi. They ran quickly, partly to escape the observation of that very policeman, and partly so as to meet the Tokyo express as far from the station as possible. After passing the curve, however, they stopped running, and walked, for they could see the smoke coming. As soon as they could see the train itself, they stepped off the track, so as not to alarm the engineer, and waited, hand in hand. Another minute, and the low roar rushed to their ears, and they knew it was time. They stepped back to the track again, turned, wound their arms about each other, and lay down cheek to cheek, very softly and quickly, straight across the inside rail, already ringing like an anvil to the vibration of the hurrying pressure.

The boy smiled. The girl, tightening her arms about his neck, spoke in his ear:

"For the period of two lives, and of three, I am your wife; you are my husband, Taro Sama."

Taro said nothing, because almost at the same instant, notwithstanding frantic attempts to halt a fast train without air-brakes in a distance of little more than a hundred yards, the wheels passed through both, cutting evenly, like enormous shears.

IX.

The village people now put bamboo cups full of flowers upon the single grave-stone of the united pair, and burn incense-sticks, and repeat prayers. This is not orthodox at all, because Buddhism forbids *fôshi*, and the cemetery is a Buddhist one; but there is religion in it,—a religion worthy of profound respect.

You ask why and how the people pray to those dead. Well, all do not pray to them, but lovers do, especially unhappy ones. Other folk only decorate the tomb and repeat pious texts. But lovers pray there for supernatural sympathy and help. I was myself obliged to ask why, and I was answered simply, "Because those dead suffered so much."

So that the idea which prompts such prayers would seem to be at once more ancient and more modern than Buddhism,—the idea of the eternal Religion of Suffering.—*Atlantic Monthly*.

IN H.B.M. COURT FOR JAPAN.

Before JAMES TROUP, Esq., Assistant Judge.
August 1st.

THE BOYCOTTING OF MESSRS. SAMUEL SAMUEL AND COMPANY.

His Honour the Assistant Judge was engaged all this morning in hearing a claim brought by Kobayashi Tomitaro against Mr. W. F. Mitchell (of Messrs. Samuel Samuel & Co.,) to recover \$76.18, the balance due for certain goods, three shelves—but really cabinets—alleged to have been supplied by the former to the latter. Neither side were represented by counsel, both parties to the suit attending in person.

Defendant said he did not admit any part of the claim. He did not receive the goods from plaintiff. He, defendant, was a partner in the firm of Messrs. Samuel Samuel, and he understood that the claim was brought to recover from the firm.

Kobayashi Tomitaro, the plaintiff, deposed to being a dealer in miscellaneous goods, living at No. 4, Ichome, Bentendôri. Duty cautioned he said—On the 13th February of this year the goods were delivered at No. 27, the offices of Messrs. Samuel Samuel. There had been no special order in regard to them. Hara Ryôichirô visited my shop on the 13th of February and finally settled about the price of the goods. The transaction was conducted the same as on previous occasions when Hara Ryôichirô called to buy miscellaneous articles for the firm. He had called about the same goods before, but the price

was not fixed till the 13th. The goods were three shelves—cabinets—two small and one large. The price for the three was fixed at 90 yen, including case and packing, but afterwards the case and packing were supplied by the firm, so a deduction was made. Hara Ryoichiro was a person who bought goods for Messrs. Samuel Samuel. He was a servant of the firm, but not at present in their employ. I heard that he left on the 28th February. To my knowledge I think he was in the employ of Messrs. Samuel Samuel for ten months previous to February of this year. Hara Ryoichiro is not at present in Court. I had sold to Hara Ryoichiro the same kind of cabinet three or four months before. It was paid for in the office of Messrs. Samuel Samuel. Other cabinets and frames supplied by me had been paid for by Mr. Tanaka, of Messrs. Samuel Samuel.

Defendant—I should like to ask plaintiff whether at the time he supplied these three cabinets he was not under a sealed obligation to the Guild of Fancy Goods Merchants, not to supply our firm with goods?

Plaintiff—No, I was not under a sealed obligation to the Guild.

Defendant—He actually signed a document promising not to sell goods to our firm—for what reason did he sign it then?

Plaintiff—Because the Guild was making a fuss about the selling of goods to Messrs. Samuel Samuel.

Defendant—Then he admits that he signed the document?

Plaintiff—I fixed my seal to a document promising not to do business with Messrs. Samuel Samuel. His Honour—On what date was this done?

Plaintiff—It was, I think, last year.

Mr. Mitchell—Last November?

Plaintiff—I am not sure.

Defendant—Did he give Mr. Hara Ryoichiro a receipt for ¥76.18, acknowledging payment of these goods, of which this is a copy (copy produced)?

Plaintiff—No, I did not. I did not receive the money.

Defendant—Did he or his lawyer accept a promissory note for that amount from Mr. Hara?

Plaintiff—I do not know anything about that. I did not receive a promissory note for that amount.

Toyoda Yunokichi, a carpenter, cautioned, said:—On on a snowy day in February I went to No. 27 and mended three cabinets which had been injured in parts. I went at the request of Mr. Kobayashi. I only remember that two cabinets were small and one was large.

Mr. W. F. Mitchell, defendant in the case, sworn, said—At the time that the alleged transaction took place, the plaintiff was under an obligation, which he admits, to the General Guild of Fancy Goods' Dealers, not to supply my firm with merchandise, and consequently we could not have done business directly with him. We were, however, buying and shipping goods through Mr. Hara Ryoichiro, who had formerly been an employé of the firm, but was not so in February. He was then buying goods on his own account. We purchased these cabinets from him and duly paid the cost to him. I regret to say that I cannot produce him as a witness as his whereabouts is not known. He is not in Yokohama or Tokyo. I have, however, obtained from his family a copy of a receipt for the money, which I have handed in. In order to produce the original receipt it will be necessary for the Court to move for its production through the Japanese authorities. We received the goods from Hara Ryoichiro and paid him for them. He ceased to be in our employ and bought goods on his own account in November, when the Guild refused to do business with us. He did not draw salary after that time. He may have drawn salary till the end of the month of November, but I cannot swear to that until I refer to my books. During February he was certainly not drawing salary; I am not quite certain as to the date when the boycott began, but if it started in November then he certainly was not drawing salary in January. He may have bought goods on the firm's account from the plaintiff before the boycott. The plaintiff had no notice from the firm that Hara Ryoichiro had ceased to an employé. The firm had notice, through the Guild, that he would cease to do business with the firm. This notice was given before the end of the year. The notice was withdrawn some time in May of this year.

His Honour said—I have sufficient materials before me to render substantial justice in the case. The plaintiff has admitted that he signed the document published by the Guild of General Traders declining to supply goods to Messrs. Samuel Samuel & Co., and he thinks that this document was sent to them last year. Then I have the statement of defendant, a partner in the said firm, that the Guild of General Traders in November of last year, sent the firm a document stating that

the Guild would do no business with the firm. Plaintiff was one of those who signed the document, so I can but take it that the Guild were acting in the capacity of his agents in the matter of this boycott. I therefore cannot see, in face of this document, that plaintiff can bring a claim against defendant for the price of goods which he declined to supply him with, and which defendant acknowledges were bought of a third party. Defendant has acknowledged that plaintiff was never notified that this third party had left the employ of the defendant upon the issue of the Guild's document; but after the issue of that document by the Guild, acting as plaintiff's agents, I cannot allow plaintiff to set up a claim to recover from defendant the value of goods supplied to a third party, even if he did not know that that party was not in the employ of defendant. The evidence laid before me this morning is sufficient to justify me in dismissing the claim.

THE NEW ORIENTAL BANK.

Pursuant to the direction of the Hon. Mr. Justice Vaughan Williams, under whose supervision the winding up of the bank is being conducted, a meeting of creditors of this bank was held at Winchester House on 20th inst., for the purpose of considering the report, dated November, 1893, issued by the Committee appointed on behalf of the creditors to advise with the liquidator, and which report was circulated among the creditors in December, 1893, and of determining what action, if any, should be taken thereon. Mr. S. P. Low, a member of the Committee, under instructions from the Judge, occupied the chair. There was a large attendance.

The CHAIRMAN, in opening the proceedings, said that neither he nor any of the members of his firm were creditors of the Bank, but owing to its failure they came to represent many of the creditors. At one of their meetings the creditors placed him on the committee which was appointed to consult with Mr. Welton, the liquidator, from time to time as to what was best to be done. Subsequently reports were prepared by the committee and submitted to the Judge, who thought it highly necessary that the creditors should be called together to consider them, and also that it would be desirable for a member of the committee to take the chair. No reflection, however, was cast upon Mr. Welton by this proceeding, and they were acting as the Judge directed. The reports were afterwards placed before the Board of Trade, and eventually the opinion of the law officers of the Crown was taken on them. He had read the opinion, which was not handed to him "in confidence" at the time, but afterwards when he wanted to see the case he could not get it; and, as they were aware, it was of little use having an opinion unless one had the case also, for one knew that an opinion was very much based on the way in which a case was submitted. He had not been much surprised at receiving a communication subsequently, informing him that the opinion which he had seen was private and confidential, and therefore he could not submit it to the creditors. He was, however, requested a few days ago to attend before the Registrar with regard to the matter, when it was represented to him that it would be very desirable for him to state exactly to the meeting what he was empowered by the Judge to mention to them. He would ask them to consider that the statement he was about to read was not in his own words, but that they had been dictated to him as those which he ought to submit to the meeting. "Since the committee sent in their report, considerable delay has taken place in determining whether any and what action ought to be taken thereon, but the Judge authorises me to state that neither the committee nor the liquidator, Mr. Welton, is responsible for that delay. I am authorised also by the Judge to state that a case has been laid by the Board of Trade before the law officers as to the liability of the officers of the company referred to in the report, with the result that an opinion has been recently obtained that a claim against certain of those officers to contribute to the assets of the company can be maintained, but that in some cases the claim has become statute-barred. The case in question is, however, regarded by the Board of Trade as a confidential document, and the Board has therefore refused to allow the committee to see the case. Under these circumstances the creditors may think it desirable to take a legal opinion themselves." (Hear, hear.) It appeared to him (the chairman) without trying to dictate to the meeting for one moment as to what they should do, that the case was in a nutshell. It was this—whether they had sufficient confidence in the committee to empower them to take such steps as they might think desirable to

obtain an opinion based on a case put before counsel on the reports. Of course, this would entail some amount of expense. It was for the creditors to ask any questions they desired to put, or to propose any resolution, but, failing that, it had been arranged that one of the committee (Mr. Blair) should submit a resolution, and it would be for the meeting to determine whether they would accept it. He might state that Mr. Blair had done more than any of the committee to investigate the circumstances of the failure of the bank and the causes that led to the deplorable state in which it was found.

A CREDITOR inquired whether any of the parties who were implicated were "worth powder and shot."

The CHAIRMAN replied that it was rather an awkward question, but he had no doubt that if an action were brought and were successful, money would be obtained. In answer to other questions, the Chairman said he feared that the Public Prosecutor would not take the case up. The Board of Trade could only act in a matter of that sort—he believed he was stating the fact—when there was a compulsory and not a voluntary liquidation. The meeting was not called to consider whether it was desirable to prosecute the directors, there being no imputation of fraud or criminality against them. The simple question was whether civil law they were liable for the dividends or anything that had been paid out of capital.

Mr. BLAIR stated that the report which had been circulated among the creditors contained the result of a great deal of investigation which had been made by Mr. Low and himself, with the assistance of the liquidator and officers of the bank. It gave the history of the institution, the circumstances that led to its downfall, the mismanagement which there had been, the enormous advances that were made upon improper or insufficient security at home, and the very singular state of matters at two or three of the branches abroad. In the course of the investigation the question naturally arose whether the directors were in any way responsible for some of the advances that had been made. That was a question which he was not prepared to give any opinion upon, and he was not sure that any opinion had been vouchsafed by any legal authority. The committee in the report had expressed the opinion that no real profits were earned by the bank for some years, while "profits" were distributed among the shareholders. In effect, that amounted to this—that the profits which were distributed were taken out of the coffers of the bank, thus lessening the fund which ought now to be in the possession of the bank in order to reduce its liabilities, and that being the case, whether the directors or others were not bound to replace this money, to restore the dividends they had distributed. He thought this was a point which the creditors might wish to be carefully considered by counsel on their behalf, apart altogether from the Board of Trade, and they should be guided by the opinion of counsel as to whether they had legally a claim and by the consideration whether it was worth prosecuting a claim, and, if so, against whom. These were matters which the creditors might safely leave to the committee who had so far advised with the liquidator concerning them. He concluded by proposing the following resolution:—"The meeting, having considered the committee's report, resolve that the questions raised or indicated therein be left to be prosecuted, compromised, or settled, as the committee shall advise, and authorise the committee to take such legal assistance, at the expense of the liquidation, as they shall think proper, and furthermore recommend the learned Judge under whose supervision the liquidation is carried on that he appoint one of the members of the committee, Mr. S. P. Low, to be an additional liquidator."

A CREDITOR asked whether it was not the fact that the first liquidator of the company was the former auditor.

The CHAIRMAN replied that this question had undoubtedly occupied the mind of the Judge, and at their recent interview his Lordship authorised him to state that he had up to the present received very considerable assistance from Mr. Welton, that he was perfectly satisfied with the way the liquidation had gone on, and that if no proceedings were taken it would be very unfair to remove him. His Lordship, however, also considered that if proceedings were to be taken it would be absurd for the liquidator to have to inaugurate the proceedings himself. In order, therefore, to tide over this matter, the Judge thought that it would be well for one of the committee to become joint liquidator with Mr. Welton. He (the speaker) certainly did not seek the appointment. If the resolution were passed, all that he should do would be to see that a proper case was submitted to counsel and a proper opinion obtained, and then if the committee thought it was desirable to take further

proceedings he would do his best to bring those proceedings to a successful termination. So far as the question of remuneration was concerned, he thought he might state that whatever the result might be it would not make a farthing difference in the dividend paid to the creditors, because if the matter were to last for two or three years an arrangement had been made by which the expense, within a few hundred pounds, would be paid by Mr. Welton out of his remuneration.

Mr. JAMASON, who said he thought they were all very much indebted to Mr. Low, seconded the resolution.

Replying to other questions as to the amount of money misapplied, the Chairman said it was a difficult question to answer, but speaking on his own part, and not as a lawyer, he maintained that for some matters some one was liable, and someone ought to be made to refund. He again repeated that there was nothing to justify a criminal prosecution, but that some one was civilly liable if an action were brought.

A SHAREHOLDER asked if it were true that the Melbourne manager of the bank really went insane, and heavy losses were made in consequence. The CHAIRMAN said that that was so. The money was absolutely gone, and the man had since died in a lunatic asylum.

Mr. BROOKES, in a lengthy speech, advocated the placing of the whole matter under official control, and endeavouring thereby to get the Board of Trade to take action against the late Directors. He further alluded to a circular that had been received, offering certain terms to the creditors for the remainder of their assets, or asking them to state other terms. He (the speaker) had refused to do so—(hear, hear)—and he dare say others had no doubt done the same.—(Hear, hear.) He would very much like to know by whose authority Mr. Welton had issued such a circular.

Mr. HAWKSLEY (the solicitor), in reply, stated that that gentleman had proposed was, in effect, that the liquidation, which hitherto had been voluntary under the supervision of the Court, should be continued by a compulsory winding up under the direction of the Court. That subject, however, was discussed at the time of the bank's failure; and at a meeting held directly the doors were closed, at which creditors to the amount of £1,500,000 were represented, a resolution was unanimously passed in the interest of the creditors, and of the creditors alone, that the liquidation should be voluntary, and not compulsory. It was open to any creditor to apply to the Court for a compulsory winding up, just as—under the Act passed in 1890—it was open to the Board of Trade, if the latter thought fit, to apply, through the Official Receiver, to the Judge for a compulsory winding up. The Board of Trade, however, had not applied. In the opinion of the Judge the best course for the creditors was to continue Mr. Welton as liquidator. If, too, the concern were put into compulsory liquidation, the expenses would not be altered, and they were a first charge on the assets.

A CREDITOR suggested that the Committee should obtain this legal opinion and then call them together again.

After some discussion upon the respective liability of the late directors of the company, it was pointed out by Mr. WELTON that several of them had since died, and that four of them only came into the company at a comparatively recent period, and ought not, therefore, to be objects of indignation of the creditors, namely, Messrs. Ferguson, Spence, Shaw, and Sir W. Marsh.

The CHAIRMAN remarked that any legal opinion, even if it recommended action being taken, would have to receive the sanction of the Judge before it could be acted upon. As to the circular issued by Mr. Welton it was that gentleman's own individual action, and the committee took no part in it.

Mr. WELTON said that the circular was intended to discover the wishes of the creditors, and so soon as he found out what those wishes were he at once bowed to them.

The resolution was then put and carried, with two dissentients.

The CHAIRMAN subsequently said it was hoped that another dividend would be paid early in 1895.

Votes of thanks to the chairman and committee closed the meeting.—*L. and C. Express.*

The Japanese Government have just placed a large order for armour plates with Messrs. Cammell and Messrs. Vickers, Sons, and Co. (Limited), of Sheffield. The plates are for the two battleships about to be built in England, the total weight being something like 6,000 tons. The plates are to be all steel and "Harveyed" according to the process recently adopted by the Sheffield plate makers. Delivery will begin in two years when the ships will be ready for plate.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, July 27.

Sir Ed. Grey, Parliamentary Secretary of the Foreign Office, has announced that in compliance with the request of England, the German, Russian, French, and Italian Governments have instructed their representatives to support the efforts of Great Britain to prevent war between Japan and China in Korea.

London, July 28.

The following is the result of the Liverpool Cup (Handicap):—

Son of a Gun	1
Bushey Park	2
New York (?)	3

The Evicted Tenants' Bill has passed the second reading by a majority of thirty-two.

London, July 31.

Sir Edward Grey has made no offer of mediation, but Great Britain, in concert with the other Powers, has advised friendly counsels at Peking and Tokyo in the interests of peace.

The House of Lords has passed the Budget.

London, August 3.

England and Russia are desirous of acting in complete accord with regard to diplomatic action in attempting a settlement of the conflict between Japan and China.

Sir Edward Grey has received divergent accounts with regard to the *Kowshing* affair, and the Government will await the facts before taking any action in the matter, but in the meanwhile Japan has offered reparation.

"SPECIAL" TELEGRAMS TO "JAPAN MAIL."

Nagasaki, July 29, 9.20 p.m.

Another fire occurred at midnight in the Chinese quarter at Hirobata. About twelve stores were burnt. The cause is at present unknown, but the feeling is general among the public that it is probably the work *soshi*. Gen-darmes are parading the Settlement for the protection of residents.

Nagasaki, July 30, 5.50 p.m.

The transport that was sunk in the engagement off Chemulpo on the 23rd inst., is reported to be the British steamer *Kowshing*. The troops on board mutilated, and refused to allow the captain (Galeworthy) to proceed to the Japanese men-of-war to arrange terms. The captain jumped overboard and was shot in the neck by a Chinese soldier, but was afterwards rescued by a Japanese boat and taken to Sasebo.

Nagasaki, July 30, 7.03 p.m.

It is rumoured here that the *Higo Maru* has been lost, but that all on board were saved.

Nagasaki, August 1.

News received here by the *Higo Maru* positively confirms the loss of the *Kowshing*. Mr. Henicker, the passenger, was rescued after being four hours in the water, and altogether 150 Chinese were picked up. The *Kowshing* is now reported to have been sunk by a torpedo fired from the *Nantwa Kan*.

Nagasaki, August 1, 3.4 t p.m.

It is reported that the *Kowshing* has arrived at Shanghai slightly damaged by shot, but the Japanese here still insist that the transport that was sunk in the late affair was the *Kowshing*. It is believed here that two transports of somewhat similar name have been engaged in carrying troops.

The *Higo Maru*, reported lost, has just arrived here.

The *Genkai Maru* has been converted into an armed cruiser.

The *Yayeyama Kan* is under repairs. The damage she sustained was caused by her being struck by a shell which failed to explode.

Otaru Maru, Japanese steamer, 1,507, Trennt, 31st July.—Otaru, General.—Nippon Yusen Kaisha.
Mercury (13), cruiser, Captain W. Fawkes, 1st August.—Otaru.
Golden Fleets, American schooner, 131, J. B. Laurie, 2nd August.—Ruk Island, Wood and Cocoanuts.—Captain.
Meiji Maru, Japanese steamer, 1,010, Nakao Masakiyo, 2nd August.—Toba 1st August, Stores.—Lighthouse Department.
Oceanic, British steamer, 3,808, W. M. Smith, 2nd August.—San Francisco 17th July, Mails and General.—O. & O. S.S. Co.
Bentomond, British steamer, 1,754, A. W. S. Thomson, 3rd August.—London via ports, General.—Corries & Co.
Salazie, French steamer, 4,016, A. Paul, 3rd August.—Marseilles via ports, 30th June, Mails and General.—Messageries Maritimes Co.

DEPARTURES.

Fuyo Maru, Japanese steamer, 875, Eden, 27th July.—Mojji, Ballast.—Mitsui Bishi Sha.
Emma and Louise, American schooner, 78, Mockler, 28th July.—North Pacific, Sealing Gear.—G. B. Barber.
Ozus, French steamer, 2,500, Dupont, 28th July.—Shanghai via Kobe, Mails and General.—Messageries Maritimes Co.
Strathleven, British steamer, 1,588, Cormack, 29th July.—Hakodate, General.—Nippon Yusen Kaisha.
Yokohama Maru, Japanese steamer, 1,298, Swain, 29th July.—Hakodate via ports, General.—Nippon Yusen Kaisha.
Gwalla, British bark, 1,399, Thos. Young, 30th July.—Portland, Oregon, Ballast.—Order.
Empress of China, British steamer, 3,003, R. Archibald, 30th July.—Hongkong via ports, Mails and General.—Frazar & Co.
Asagao Maru, Japanese steamer, 1,580, H. Walter, 31st July.—Kobe, General.—Nippon Yusen Kaisha.
Saikio Maru, Japanese steamer, 1,350, Conner, 31st July.—Nagasaki and ports, Mails and General.—Nippon Yusen Kaisha.
Lawang, German steamer, 1,578, F. Von Binzer, 31st July.—Hamburg via ports, General.—Simon, Evers & Co.
Aikoku Maru, Japanese steamer, 1,067, Furukawa Yaichi, 1st August.—Hakodate, General.—Oyie.
Tacoma, British steamer, 1,661, V. Perkes, 1st August.—Tacoma, Wash., via Victoria, B.C., Mails and General.—Dodwell, Carill & Co.
William F. Babcock, American ship, 2,029, Robt. J. Graham, 1st August.—San Francisco, 3,735 tons Tea.—Southern Pacific Co.
Sendai Maru, Japanese steamer, 1,034, T. Sakai, 1st August.—Shimonoseki, General.—Nippon Yusen Kaisha.
Amigo, German steamer, 1,043, A. Bendisien, 2nd August.—Kobe, Sugar.—Flint, Kilby & Co.
Otaru Maru, Japanese steamer, 1,507, N. Trennt, 2nd August.—Otaru, General.—Nippon Yusen Kaisha.

Mercury (13), cruiser, Captain W. Fawkes, 3rd August.—Korea.
Alderley, British steamer, 1,640, Nicholas, 3rd August.—London via ports, General.—Butterfield & Swire.
Geo. S. Homer, American bark, 1,267, C. Hemeon, 4th August.—Hongkong, Ballast.—Order.

PASSENGERS.

ARRIVED.

Per British steamer *Empress of China*, from Vancouver, B.C.:—Mrs. M. Baxter, Captain W. Crawford, Miss S. E. Easter, Mr. Charles Holland Freeman, Mr. J. C. Faries, Bishop Galloway, Miss Gertrude Howe, Mr. R. Krishna, Mr. K. P. Lee, Miss C. J. Linda, Mr. C. P. Nelhi, Mr. R. Matsugata, Dr. and Mrs. McCandless and two children, Miss C. C. Murray, Mr. and Mrs. W. T. Payne, Mr. F. Salinger, Miss E. R. Scidmore, Miss Todzu Sugiy, Mr. A. J. de Silva e Souza, Rev. J. and Mrs. Stockmeyer, Mr. D. W. T. Tuckey, Mr. J. Tulloch, Mr. W. B. Van Ingen, Mr. W. J. Van Patten, Mr. Chas. S. Van Patten, Rev. W. W. Watson, Dr. and Mrs. S. H. Wainwright and infant, and Mr. and Mrs. A. R. Whittier in cabin; 3 passengers in second class, and 75 passengers in steerage.

Per British steamer *Verona*, from Hongkong via ports:—Mr. A. Callarito, Mrs. Findlay, Misses Findlay (2), Master Findlay, Miss Fulford, Mr. W. T. Thornton, Mr. A. Wilkes, Mr. E. H. McFarland, Miss McFarland, Mr. G. Holmes, Mr. D. Farquharson, Miss Townley, and Mr. J. C. S. Rashleigh in cabin.

Per British steamer *Tacoma*, from Hongkong via ports:—Mr. F. L. Pollard, Mr. E. W. Blodgett, and Miss Hara Asa in cabin; and 3 Japanese in steerage.

Per British steamer *Oceanic*, from San Francisco:—Dr. Paul Fitzsimmons, Mrs. Fitzsimmons and child, Miss M. Cosgrane, and Mr. Lew Wai Chan in cabin. For Hongkong:—Mr. G. W. H. Wheeler in cabin.

Per French steamer *Salasia*, from Marseilles via ports:—Mr. Yamanouchi, Mr. K. Bando, Mr. O. Nagase, Mr. R. B. Yambe, Mr. Van der Arend, Mr. Kothoff, Mr. D. C. Neave, Mrs. D. C. Neave, Mrs. Shiraiishi Onme, Mr. Buyck, Mr. Pogliano, Mr. Rustan and child, Mr. Annamite, Mr. Terrigi, Mr. Ducrot, Miss L. E. Hughes, Miss S. J. Mo, Mr. Hean Tong, Mr. Eynard, Mr. J. Northey, Mr. Dufardin, Mrs. Renton, daughter, and amah, Mrs. Buchheister and 3 children, Mr. Buchheister, Mr. Hennen, Miss Marter, Miss Hennen and amah, Mr. H. Ein, Mr. Tamiton, Mr. C. Heune, Mrs. and Miss MacFarlane, Mrs. MacFarlane, Mr. Scharpf, Mr. Brendenstien and boy, Mr. G. A. Shaw, Mr. W. C. Walshe, Mr. J. H. Moule, Mr. W. H. Moule, Mr. Komatsu, Mr. J. Tallers, Mr. W. H. Tallers, Miss Waters, and Mr. Pardo in cabin.

DEPARTED.

Per French steamer *Oxus*, for Shanghai via Kobe:—Mr. C. W. Dimock, Mr. J. H. Heinlein, Mrs. McCarthy, Mrs. H. P. Wadman, Mr. and Mrs. Guy Maine and child, Mr. Lee Yeting, Mr. T. Kazamaki, Mr. E. A. Christoffeloz, Mr. H. Bernard, Mr. and Mrs. Ho Det Say and 4 children, Mr. and Mrs. Lo Jo Sm and 3 children, Mr. Liang Lefong, Mr. Woo Pachine, Mr. A. Vogel, Mr. Le Baird, Mr. James, Mr. J. Ste. Marie Famine, and Mr. Bartorn in cabin; and 22 passengers in steerage.

Per British steamer *Empress of China*, for Hongkong via ports:—Mrs. Wong, Miss Wong, Master and Miss Wong, Mrs. She, Mrs. Yuen, Master Yuen, Mr. de Cunha, Captain Goddard, Mr. and Mrs. Graumauer, Mr. and Mrs. Matherson, Mr. J. J. Keswick, Mrs. J. J. Keswick, four children, and 2 nurses, Miss Barker, Mr. S. L. Chin, Mr. Li Ja Day, Mrs. Goddard, Mr. H. W. Sale, Mr. and Mrs. Craddock, Mrs. Wilson and child, Mr. Chatham, Rev. H. Loomis, Rev. Mr. and Mrs. Stockmeyer, Miss Murray and Mrs. Baxter, Mrs. Harive, Mr. F. H. Loring, and Rev. Mr. Turner in cabin; Mr. Lo Ling Soong, Mr. Huang Me Sung, Mr. Ching Yuen Ting, Mrs. Yung and family, Mr. Lo Ken Ling, Master Lo Ken Ling, Mr. Wong Loon Yuen, Mr. Yu Long Chang, and Mr. P. Ross in second class, and 20 passengers in steerage.

Per Japanese steamer *Saikio Maru*, for Nagasaki via ports:—Mr. and Miss Cabeldn, Captain A. Thomsen, Mr. Lino J. Sa, Mr. M. Raspe, Mr. H. Kumagai, Mr. James Ellerton, Mr. Pakenham, Mr. R. Stainton, Captain R. Tippet, Mr. Kessler, Mr. S. Oishi, Mr. C. Matsun, and Mr. T. Takeda in cabin; Mr. and Mrs. Nagai, Mr. and Mrs. Emme, Mr. and Mrs. Kawakami, Messrs. Pyne, Lafadio Hearn, and Shiirne in second class, and 105 passengers in steerage.

Per British steamer *Tacoma*, for Tacoma, Wash., via Victoria, B.C.:—Dr. D. Macdonald, Professor R. Dittich, Messrs. C. H. McGee, Albert Muller, C. R. Clow, Chas. Leith, and James Franks in cabin; and 17 passengers in steerage.

CARGOES.

Per French steamer *Oxus*, for Shanghai via Kobe:—Raw Silk for Europe, 206 bales; Waste Silk for Europe, 48 bales. Treasure for Shanghai, \$447,800; for London, \$36,000.

Per British steamer *Tacoma*, for Tacoma, Wash., via Victoria, B.C.:—

	PACIFIC COAST.	TEA.	NEW YORK.	CHICAGO.	CANADA.	CITIES.	TOTAL.
Shanghai	865	2,811	5,980	2,048	553	43,151

Total	170	—	—	170

	RATES.
Tea	14 cent. per lb. gross.
Silk	3 cents. per lb. gross.
Measurement	Gold \$16 per ton.

LATEST COMMERCIAL.

IMPORTS.

The Import market generally is in a most unsatisfactory state. The Korean difficulty and consequent war with China seems to monopolize attention to the exclusion of business. Yarn—Very feeble market with retail sales at quotations. Shirtings—No trade such as is usual at this season. Fancies very dull with small sales, and Woollens are stagnant.

COTTON PICKER GOODS.

	PER POUND.
Grey Shirtings—8½ lb, 38½ yds, 31 inches	\$2.40 to 3.00
Grey Shirtings—9 lb, 38½ yds, 31 inches	2.60 to 3.40
T. Cloth—7 lb, 24 yards, 32 inches	1.60 to 1.90
Indigo Shirtings—12 yards, 41 inches	1.70 to 2.35
Prints—Assorted, 24 yards, 30 inches	1.75 to 3.75
Cottons—Italians and Sateens black, 30 inches	0.16 to 0.21
Valents—Black, 35 yards, 28 inches	0.85 to 0.95
Victoria Lawns, 12 yards, 42-3 inches	0.85 to 1.00
Turkey Reds—2.0 to 2.4 lb, 24/25 yards, 30 inches	1.60 to 1.75
Turkey Reds—2.8 to 3 lb, 24/25 yards, 30 inches	1.80 to 2.10
Turkey Reds—3.8 to 4 lb, 24/25 yards, 32 inches	2.35 to 2.75
Turkey Reds—4.8 to 5 lb, 24/25 yards, 33 inches	2.95 to 3.15

WOOLLENS.

	PER YARD.
Flannel	\$0.47 to 0.45
Italian Cloth, 30 yards, 32 inches	0.35 to 0.40
Italian Cloth, 30 yards, 30 inches	0.30 to 0.35
Medium	0.25 to 0.30
Common	0.15 to 0.20
Mousseline de Laine—Cape, 24 yards, 31 inches	0.15 to 0.24
Cloths—Pilot, 51 lb 56 inches	0.35 to 0.50
Cloths—Pranlon, 54 lb 56 inches	0.60 to 0.65
Cloths—Union, 54 lb 56 inches	0.40 to 0.70
Blankets—Scarflet and Green, 4 to 38 lb	0.45 to 0.54

COTTON YARNS.

	PER POUND.
No. 14/24, Ordinary	\$37.00 to 37.50
No. 16/24, Medium	37.50 to 38.00
No. 18/24, Good to Best	38.00 to 39.00
No. 16/24, Reverse	39.00 to 40.00
No. 28/32, Ordinary	40.00 to 41.00
No. 28/32, Medium	41.00 to 42.00
No. 28/32, Good to Best	42.00 to 44.00
No. 32/40, Medium to Best	42.00 to 44.00
No. 32/40, Two-fold	44.00 to 51.00

METALS.

Quiet and dull. A few sales of Bar Iron at a reduction on former prices. Wire Nails also moving to some extent but top quotations must be reduced. Tin Plates have sold in small lots at quotations, and Pig Iron at \$1.60. Stocks all round appear to be more than ample.

	PER POUND.
Flat Iron, 1 inch	\$3.35 to 3.40
Flat Bar, 1 inch	3.45 to 3.50
Round and square up to 1 inch	3.45 to 3.50
Iron Plates, assorted	3.60 to 3.75
Sheet Iron	4.70 to 4.85
Galvanized iron sheets	9.40 to 9.60
Wire Nails, assorted	6.00 to 6.25
Tin Plates, per box	5.80 to 6.00
Pig Iron, No. 3	1.60

KEROSENE.

Further arrivals from New York have increased the stock. No sales of any moment.

having enough bought for their immediate requirements. Market quiet but prices steady.

Chester	\$1.70 to 1.74
Cornet	1.67½ to 1.70
Davis	—
Russian Anchor	1.67½ to 1.70
Russian Moon	1.65 to 1.67½

SUGAR.

No life in the market. Browns—Heavy stock and some of the Chinese dealers are said to have left the port leaving their affairs in foreign hands. Very little doing at quotations. White—Market quiet, but prices well maintained.

	PER PICUL.
Browns Takao	\$4.60 to 4.65
Brown Manila	5.80 to 5.90
Brown Daiton	3.40 to 3.45
Brown Canton	3.70 to 4.40
White Java and Penang	7.20 to 7.40
White Refined	7.60 to 9.90

EXPORTS.

RAW SILK.

Our last issue was of the 27th July, since which date settlements on this market are 1,007 piculs, divided thus:—Hanks, 10 piculs; Filatures, 748 piculs; Re-reels, 234 piculs; Kakeda, 15 piculs. Direct shipments have been 136 bales, making the total export business of the week 1,150 piculs.

Market has remained steady, without any change in quotations, and during the last day or two more business has been done, Europe and the United States both sharing in the trade. Arrivals continue on a free scale and the present stock approaches 8,000 piculs.

Holders are willing to sell, but without showing much anxiety, although some of them evidence a desire to be moving a little faster. During the week we have had one or two attempts to push up prices, but these have not succeeded and in the event holders have accepted last week's rates.

New Crop.—Advices from the north are incomplete, but from all the provinces to the south and west arrivals are plentiful. No further news from Kakeda districts beyond what we said last week.

It is too early yet to estimate the effect on our market of the war between Japan and China. Some of the trade seem to have the opinion that further on Japanese holders will be glad to sell their silk at a reduction, as the country will be in want of money to prosecute the war. Whether this be true or no, the future must decide. At present the market is steady, if not firm, at our quotations.

There have been two shipping opportunities since we last wrote, the French mail *Oxus*, 28th ultimo, taking 206 bales for Europe and the *Tacoma*, which left on the morning of the 1st instant, had 170 bales for the New York trade. These departures make the present export figures 3,335 piculs, against 1,347 piculs last year and 3,188 piculs at the same date in 1892.

Hanks.—The stock is increased by small supplies, and a parcel of *Chichibu* has been settled, but the price has not yet transpired; the contract, it is said, having been made up country.

Filatures.—There has been a fair daily trade in these, Europe taking both fine and full-sized Filatures to a good extent at quotations. The American market has also operated to a fair amount in the same class of silks—Shinshu Filatures, full size. Among the latest sales are *Rokkoshu*, \$710; *Tenrushi*, \$700; *Nikoshu*, \$690; *Rufokan*, \$675; *Kaimaisha*, \$680; *Toaisha*, *Hivanosha*, *Hakusuru* and similar chops at \$670; *Tokasha*, \$665. In fine sizes the trade has principally run upon fair to good quality, costing from \$670 to \$700.

Re-reels.—Some revival in demand just lately and prices paid for the outgoing United States mails are as under:—*Fine Girl*, \$655; *Tortoise*, \$655; *Asashi*, \$650; *Shorushu*, \$620.

Kakeda.—The only transaction completed has been a parcel of *Horsehead* at \$635. Better quality like *Daruma* are quoted \$665, but without finding buyers.

made by the Government in 1882 and 1883, is 3,758 acres, and the total quantity of the mineral 85½ millions of tons. But only two seams are capable of being economically worked. The first averages from 8 to 20 feet in thickness, the mineral in it being remarkably uniform in quality and without any inter-stratified bands of shale. The second lies from 6 to 10 feet below the first and averages 6 feet in thickness, but the coal, being of inferior quality, is only in limited demand for local consumption. Thus the capacity of the mine may be said to be confined to one seam and with an annual output of some 600,000 tons, it is improbable that any appreciable quantity will remain at the end of 40 years. Coal has been extracted at Miike ever since 1468, but the working was of a desultory character, the chief, if not the only, use of the mineral being for salt works on the shores of the Inland Sea and Shima-bara Gulf. In 1873 the newly centralized Government purchased the mine for 40,000 *yen* and employed it principally as a means for utilizing convict labour until 1876, when the management was transferred to the Mitsui Company. By their enterprise great improvements were speedily effected, the output and the general prospects being thus so much improved that in 1889 the Government felt justified in offering the property for sale at a reserve price of 4,000,000 *yen* and the Mitsui Company became the purchasers for 4,550,000 *yen*. Seven months later the great earthquake of 1889 seriously injured the mine, rendering one of the principal shafts temporarily unworkable. It was on account of this catastrophe that the Mitsui Company petitioned to be exempted from paying a portion of the purchase-money. The nature of their claim has already been explained in these columns, and its justice endorsed. We may add here that the publication of the excellent volume now under review, illustrating as it does the enterprise and thoroughness of the great firm, should constitute a fresh title to public consideration. The point of special interest, however, is that of the Empire's coal supply. Hokkaido may contain immense deposits, but it seems to be now clearly established that the quantity of the mineral offering in the rest of Japan will at the present rate of excavation most be exhausted in 40 or 50 years at Half a century is as a day in the lifetime of a nation. If Japanese mine-owners are wise they will not lose a moment in abandoning the reckless competition that throws upon foreign markets at ruinously low prices this important national asset.

A microbe discovered in the atmosphere by Wehmer, a Hanoverian botanist, is reported to have the property, in pure cultures, of converting sugar into a substance identical with citric acid. From eleven parts of sugar six parts of acid were obtained so readily that the revolutionizing of the citric acid industry is predicted.

DR. KITASATO'S REPORT.

WE publish elsewhere Dr. KITASATO'S interesting and valuable report on the plague. It may be remembered that a few weeks ago, when Dr. KITASATO despatched a telegram to the effect that the cause of the plague had been discovered, we expressed some doubts as to the propriety of his making such a statement as this only a few days after the commencement of his investigations. To that opinion we adhere, and the cautious and judicial tone of the document now under examination makes us wonder the more at the unscientific precipitancy exhibited in sending the previous telegram. Let us now, however, put this question of the telegram on one side, and turn to consider how much has been actually established by Dr. KITASATO'S investigations. As we pointed out in the article already referred to, in order to prove that a specific micro-organism is the cause of a specific disease, five conditions must be established. First, the malady must have distinct and constant features, so that it can be clearly identified; the peculiar features of the oriental plague have been known for many centuries, and a brief description of them will be found in the latter part of Dr. KITASATO'S paper. Secondly, the micro-organism must be clearly distinguished from all other known forms by its size and shape, by its staining properties, and above all by the peculiarities it exhibits in a pure cultivation; this condition has been fully satisfied by Dr. KITASATO'S investigations. Thirdly, the organism must occur in the blood or the tissues in every case of the disease; there were one or two exceptional cases in which Dr. KITASATO was unable to detect the presence of the bacillus in the blood on microscopical examination, but it appears (though the report is not quite clear on this point) that the presence of the bacillus in the blood was proved in these cases also by cultivation experiments. The exceptions were, at any rate, so few, that, though they require explanation, they can hardly be said to invalidate the general conclusion. Fourthly, the organism must not occur in the human body except in cases of the disease; this condition is fulfilled, for the bacillus discovered by Dr. KITASATO has never been hitherto recognized, and has by him been found only in patients affected by or recently convalescent from the plague. Fifthly, the inoculation of a pure cultivation of the organism must give rise to the disease; by Dr. KITASATO'S careful inoculation experiments on animals this condition has been completely satisfied.

In many aspects, of course, the bacillus of the plague requires fuller investigation than there has yet been time to make. One of the most important questions to attempt to answer is whether the bacillus is purely parasitic, or whether, as seems probable considering the natural history

of the plague, the organism grows outside the body under certain as yet undiscovered conditions, and that it is by a kind of miasma from this growth that infection usually occurs. Thus it is possible that, under certain atmospheric conditions and within particular limits of temperature, the bacillus is able to grow within our houses on the nutritive medium supplied by those accumulations generically known as "dirt." Under these circumstances the best way of stemming an epidemic of the plague would be cleanliness, and free admission of sunlight to the interior of the houses, for sunlight has been shown to be deadly to the plague bacillus. But these are mere suggestions, of no value until controlled by rigid scientific investigation. What we have to do at present is to congratulate Dr. KITASATO, and the world, upon a great discovery.

IMPERIAL RESCRIPT.

[TRANSLATION.]

WE, by the Grace of Heaven, EMPEROR OF JAPAN, seated on a Throne occupied by the same dynasty from time immemorial, do hereby make proclamation to all Our loyal and brave subjects as follows:—

We hereby declare war against China, and We command each and all of Our competent authorities, in obedience to Our wish and with a view to the attainment of the national aim, to carry on hostilities by sea and by land against China, with all the means at their disposal, consistently with the Law of Nations.

During the past three decades of Our reign, Our constant aim has been to further the peaceful progress of the country in civilization; and being sensible of the evils inseparable from complications with foreign States, it has always been Our pleasure to instruct Our Ministers of State to labour for the promotion of friendly relations with Our Treaty Powers. We are gratified to know that the relations of Our Empire with those Powers have yearly increased in good-will and in friendship. Under the circumstances, We were unprepared for such a conspicuous want of amity and of good faith as has been manifested by China in her conduct toward this country in connection with the Korean affair.

Korea is an independent State. She was first introduced into the family of nations by the advice and under the guidance of Japan. It has, however, been China's habit to designate Korea as her dependency, and both openly and secretly to interfere with her domestic affairs. At the time of the recent civil insurrection in Korea, China despatched troops thither, alleging that her purpose was to afford succour to her dependent State. We, in virtue of the Treaty concluded with Korea in 1882, and looking to possible emergencies, caused a military force to be sent to that country.

Wishing to procure for Korea freedom from the calamity of perpetual disturbance, and thereby to maintain the peace of the East in general, Japan invited China's coöperation for the accomplishment of that object. But China, advancing various pretexts, declined Japan's proposal. Thereupon, Japan advised Korea

to reform her administration so that order and tranquillity might be preserved at home, and so that the country might be able to discharge the responsibilities and duties of an independent State abroad. Korea has already consented to undertake the task. But China has secretly and insidiously endeavoured to circumvent and to thwart Japan's purpose. She has, further procrastinated, and endeavoured to make warlike preparations both on land and at sea. When those preparations were completed, she not only sent large reinforcements to Korea, with a view to the forcible attainment of her ambitious designs, but even carried her arbitrariness and insolence to the extent of opening fire upon Our ships in Korean waters. China's plain object is to make it uncertain where the responsibility resides of preserving peace and order in Korea, and not only to weaken the position of that State in the family of nations,—a position obtained for Korea through Japan's efforts,—but also to obscure the significance of the treaties recognizing and confirming that position. Such conduct on the part of China is not only a direct injury to the rights and interests of this Empire, but also a menace to the permanent peace and tranquillity of the Orient. Judging from her actions, it must be concluded that China, from the beginning, has been bent upon sacrificing peace to the attainment of her sinister object. In this situation, ardent as Our wish is to promote the prestige of the country abroad by strictly peaceful methods, We find it impossible to avoid a formal declaration of war against China. It is Our earnest wish that, by the loyalty and valour of Our faithful subjects, peace may soon be permanently restored and the glory of the Empire be augmented and completed.

Given this 1st day of the eighth month of the 27th year of *Meiji*.

(His Imperial Majesty's Sign-manual.)

Countersignatures of the Minister President of State and of the other Ministers of State.

DR. KITAZATO'S FIRST REPORT ON THE PLAGUE.

The following is the report of Dr. Kitazato Shibasaburo who, together with Dr. Aoyama Tanemichi, Professor in the Medical College of the Imperial University, was despatched some time ago to investigate the nature of the Plague that prevailed in Hongkong:—

Having been ordered in company with Dr. Aoyama Tanemichi to investigate the nature of the Plague that prevailed in Hongkong, we arrived here with Messrs. Okada, Clerk of the Home Department; Miyamoto Shuku, assistant in the Hospital connected with the College of Medicine; Ishigami Kyo, assistant of the Laboratory of Infectious Diseases; and Kinoshita Seichu, student of the College of Medicine, and immediately began our investigations. I intended to submit a joint report in co-operation with Dr. Aoyama, but unfortunately he and Surgeon Ishigami were attacked by the plague, and both are now under medical treatment on board the *Hygeia*, a floating hospital, in the port. My report deals therefore solely with my own investigations. I hope, however, that as soon as Dr. Aoyama recovers we shall be able to co-operate in the production of a fuller report.

To Count INOUE, Minister of the Interior.

By KITAZATO SHIBASABURO,
Medical Expert of the Home Department
and *Igakuhakushi*.

Hongkong, July 15th, 1894.

P.S.—I wish to state here our gratitude to the Government officials of the Colony of Hongkong

and the medical experts in the employ of the colony for the cordial kindness and facilities accorded to us in pursuing our investigations.

FIRST REPORT ON THE INVESTIGATION INTO THE CAUSE OF THE PLAGUE.

In the early part of this year (1894) the plague began to prevail in Canton, in the southern part of China. In the month of May, the disease spread to Hongkong, where it raged with great violence, and where it is still far from extinguished. It was on June 5th, 1894, that our party left Tokyo to prosecute the investigation, and we arrived in Hongkong on the 12th of the same month. We wished to study the bacteriological, pathological, and clinical features of the disease. The two latter were undertaken by Dr. Aoyama, while the bacteriological part of the research fell to my share. As soon as we reached Hongkong we, through the medium of the Imperial Consulate stationed in the port, conveyed the purport of our arrival to the Government of Hongkong, and soon after were introduced to Dr. Ayres, Colonial Surgeon, and Dr. Lawson, Assistant-Medical Officer of the Government Civil Hospital. Dr. Lawson, who was extremely kind from first to last, informed us that he would give us all possible facilities in the prosecution of the investigations, and through his kindness we were allowed to establish our laboratory in one of the rooms of the Kennedy Town Hospital which has been recently established. It was on the 16th of June that we were able to start the work of investigation in that place.

On the very first day of the investigations we were able to examine the body of a plague patient. Prof. Aoyama made the *sectio cadaveris* and I examined the glandular swellings, and the blood from the heart, lungs, and spleen, under the microscope, and discovered in abundance a particular species of bacillus. As the body was not examined until 11 hours after death, I could not be confident if this bacillus had any definite connexion with the plague. Still I cultivated it in *agar-agar*; and I also inoculated some mice with fragments of spleen. On the same day I obtained some blood from the finger tips of a patient who was suffering severely from the disease, and examined it under the microscope. Here again I found the same species of bacillus as before. The bacillus absorbed aniline dyes more strongly at its two ends than in the middle, and was provided with a capsule, and altogether bore much resemblance to the bacillus found in fowls affected with chicken-cholera.

On the 18th, examining microscopically cultures in blood serum from the blood of living patients and from various organs of those dead from the disease, I found in large numbers the same bacillus as before. Only the rods were somewhat longer than those discovered in the blood, and the middle part was as susceptible to the dyes as the ends were. The bacillus cultivated in this way was, by way of trial, inoculated in mice, guinea-pigs, rats, rabbits, and pigeons.

The two mice which were inoculated on the first day of investigation with the blood obtained from the spleen died, and when dissected the site of inoculation presented watery swellings, while in it and the internal organs the same bacillus was discovered. The various animals inoculated with the bacilli from the *agar-agar* died, with the singular exception of pigeons, in from one to four days, according to their size; while the anatomical and microscopical examinations made on them did not differ in result from those already described in the case of the mice. The particulars relating to the experiments conducted on these animals will be given later. I got every day some blood of the plague patients and examined it under the microscope, and though the bacillus described above was invariably found, the quantity was never uniform, in some cases it was abundantly found, in others only two or three specimens. But in the glandular swellings, spleen, liver, lungs, brain, and intestines, and also the blood from the heart, examined in fifteen bodies, the bacillus was always found abundantly, and when cultivated in *agar-agar* the same bacillus grew. When the contents of the lymphatic glands and a piece of spleen were smeared upon cover-glasses,

stained and examined microscopically, the bacilli were seen in enormous numbers. In the spleen the bacillus was discovered forming several distinct colonies. The bacillus existing in the glands and internal organs was found to be stained more strongly by aniline dyes in the middle than that found in the blood; and yet when cultivated in the blood serum and examined, the bacillus taken from the blood and that taken from the tissues did not differ in their manner of growth, thus showing that the two must be identical.

Thus, judging from the fact that when the contents of the glands and the blood taken from the internal organs and finger tips of the plague patient are cultivated in *agar-agar* the same species of bacillus is invariably obtained, I am led to believe firmly that that particular species of bacillus must have an intimate relation with the disease. With regard to the anatomical symptoms of the patients who succumbed, Prof. Aoyama will in due course give a minute report, but to give here the important changes, the most conspicuous are the swelling of the lymphatic glands, the enlargement of the spleen, while the connective tissue around the swollen lymph glands is oedematous, of a dark red colour, and exudes a thin, gelatinous secretion. The animals upon which I conducted experiments presented the same appearances, and in the site of inoculation a similar secretion was exuded as from the peri-glandular tissue of the human patients.

I shall next proceed to a brief descriptive report of the bacillus. The bacillus is discovered in the blood, lymphatic glands, spleen, and other internal organs of the plague patients, is rod-like in shape, and its two ends are somewhat blunted. It can be stained with the ordinary aniline dyes, the two ends being more easily stained than the middle part, especially in the case of bacilli obtained from the blood. It is provided with a capsule, which is distinctly seen at times, but not so at other times. The bacillus obtained from the spleen is stained best by methylene blue. Whether it is possible to apply Gram's method of staining has not yet been determined. The organism is very slow in motion, and, in the incubator, it grows even in the liquid *agar-agar*, where it brings about a slight turbidity. The bacillus is most prolific in its growth in blood serum at the normal temperature of the human body, and develops most luxuriantly after 24 to 48 hours. The culture has a gray colour slightly tinged with yellow. It does not liquify the blood serum. This organism grows well in *agar-agar*, and especially in *agar-agar* with glycerine. The colony of the bacillus presents a whitish gray colour, and when exposed to the direct rays of the sun emits a bluish hue. When examined under the microscope, it is circular, but the border of the colony is irregular. When the colony is yet in the first stage of development, the whole presents an appearance resembling spun glass, but as it grows on and some time elapses, the central portion forms itself into a thick layer. When a bit of this culture is taken and examined under the microscope after staining, several bacilli are found jointed, presenting an appearance as if the cylindrical bacilli were joined together; but when examined more closely there is no doubt as to the bacillus being rod shaped. In trying the cultivation by incision in *agar-agar* with gelatine (5/10), it was found that at normal temperatures the bacillus grows after one or two days in the direction of the incision, presenting a filamentous dust-like appearance. On the surface of the pabulum its growth made an appearance very rarely if at all. Now whether the bacillus can liquify the ordinary gelatine *agar-agar* could not be ascertained, as the heat of Hongkong did not allow the use of the ordinary gelatine *agar-agar*. The point shall be tested later. Culture on potato at normal temperatures did not succeed, though for ten days ample precaution was taken, but when the inoculated potato was placed in the incubator the bacillus grew slowly in one or two days, presenting a gray hue and also a dry appearance. The temperature needed for the growth of the bacillus on potato was found

to be from 37° C. Spore formation has not been observed.

Of the animals on which I conducted experiments, those that were susceptible of inoculation were mice, rats, guinea-pigs, and rabbits. When those animals were inoculated with the cultivated virus or with the blood, the contents of the lymphatic glands, a fragment of the internal organs, or the contents of the intestines of a plague patient, the animals, according to their size, contracted the symptoms of the disease in one or two days. Their eyes began to secrete tears, they became inactive, lost appetite, and crouched in a corner of the cage. Their temperature rose as high as 41.5° C., and after from two or five days from the time of the inoculation they manifested some spasmodic movements and then died. One thing should be noted in this connection, namely, that the animals experimented upon in Hongkong were all small, a guinea-pig weighed from 100 to 150 grammes and a rabbit from 200 to 250 grammes. Should an animal of larger size be experimented upon it may preserve its life for a longer period. On dissecting the animals subjected to experiment the site of inoculation presented a watery swelling, exuding a thin, reddish, gelatinous secretion. At the same time the liver was much enlarged and sometimes the lymphatic glands were found swollen. In the internal organs the existence of the bacillus was proved beyond dispute. In short the anatomical appearance of these animals resembled very much those found after death in cases of anthrax and malignant odema. Pigeons appear to be exempt from infection. On inoculation of a rat and a guinea pig with a pure culture, the same results were obtained, the animals died in one or two days and the bacillus was found in their internal organs.

Next I took some dust from an infected house and experimented upon the animals repeatedly, with the result that one or two died of tetanus, and only once a guinea pig developed the plague and died. The same form of bacillus as that found in the plague patients was discovered in the internal organs of the animal. This experiment, however, requires repetition. In Hongkong, I found mice and rats that had dropped down dead in plague-stricken houses, and I found in the internal organs of all of them the same form of bacilli.

I took the contents of the lymphatic glands abounding in the bacillus and smeared it on several sterilised cover glasses. A part I left in the room with a temperature of from 28 to 30° C. and exposed to the air, while the other I exposed directly to the sun. From these I inoculated culture-media every hour for the period of six days. I found that of those left exposed to the air those that were left so for a period varying from one to thirty-six hours began to grow after the lapse of two days, while those that were thus exposed for four days did not present a trace of growth even after one week from the time of inoculation. Those that were directly exposed to the sun were found to be entirely killed after an exposure of three or four hours. Experiments with the bacillus cultivated in the blood serum afforded the same result as that above described.

When the bacillus cultivated in a fluid medium was put into water and heated for 30 minutes at a temperature of 80° C. it was killed. It was also killed in a few minutes when heated at a temperature of 100° C.

I cultivated the organisms in a fluid medium and then placed them in the incubator for two or three days. When they had grown well I mixed with three cultivations carbolic acid to the strength of one-half per cent., three-quarters per cent., and one per cent. respectively, and left these cultivations in a room of normal temperature, after thorough admixture. Every hour I took a few drops of the mixture and, after transplanting them in fresh liquid agar-agar, placed them in the incubator. The results were as follows:—The cultivation with 0.5 and 0.75 per cent. of carbolic acid and left for one hour at the normal temperature of the

room exhibited a growth in the incubator after two days, while that containing 1 per cent. and left for one hour did not grow even after the lapse of one week. In the same mixture with 0.5 per cent. of carbolic acid the bacilli failed to grow even after one week when it was left in the room for above two hours. It is needless to say that when the percentage of the acid was greater the organisms did not grow at all.

With lime water used in the same way I obtained the following results. The liquid that held the bacilli in cultivation and that was mixed with 0.5 per cent. of lime water barely succeeded in growing when the duration of the exposure to the normal temperature of the room was two hours. With 1 per cent. of lime water no growth was made. Even when the percentage of lime water was 0.5 the organisms completely lost the power of growth when the mixture was left for three hours in the room.

The experiments with these two agents and also with others require to be prosecuted still further.

I shall next proceed to make some general observations on the disease. It is recorded in history how during the 14th century the plague raged in the two continents of Europe and Asia, and how innumerable human beings fell victims to its attack. Since then it has prevailed in various parts to a limited extent, but the prevalence gradually ceasing men came to think that the plague must have disappeared from the earth. Such, however, was not the case, for even to the present day it lay hidden in China and made its appearance year after year on a limited scale in the south of China and Yunnan. This year it appeared in Canton, then spread to Hongkong, and 75 to 80 per cent. of those who were infected died. We had the good fortune to meet with this opportunity and, with the aid of modern scientific methods, to carry on investigation into the cause of the disease that has hitherto been wrapped in darkness. The principal symptoms of the plague as observed by us are as follows:—After the incubation, varying from 3 to 5 days (in some cases much longer, even 8 days in one), high fever, and swelling of the lymphatic glands accompanied with pain take place, (the swelling taking place either simultaneously with fever, or after it). These swellings generally appear first in the femoral lymphatic glands, and subsequently spreads to those in the groin, the arm-pits, and the neck. The tongue becomes covered with a whitish gray or blackish fur, and the patient suffers also from severe headache, delirium, and, sometimes, vomiting and diarrhoea, which two latter symptoms occasionally accompany the disease in its severe form. The patients generally succumb after two or three days. When the patients are so fortunate as to fight successfully against the disease, the fever begins to abate after about a week and there is a gradual progress toward recovery. The glands commonly suppurate, thus protracting the illness. The disease affects both young and old of both sexes. In the blood of the plague patients the existence of the bacillus of the specified kind is almost constant though its numbers are liable to vary much. Out of the 30 patients that I examined I obtained positive results with 25 of them; but of the remaining five two were found on subsequent examination not to be plague patients. To ascertain the existence of the bacillus in the blood is extremely difficult at times, for we may sometimes detect only a few bacilli in several specimens. Consequently, if we trust to microscopic examination alone, and do not at the same time make cultivation experiments, it would be well-nigh impossible in many cases to state with confidence the existence or non-existence of the organisms. On the contrary, the bacilli are always found in large numbers in the lymph glands, in fact the quantity is as great as if they had been specially cultivated. The difficulty in this connexion is that it is extremely difficult to obtain the contents of the glands from a living animal. As to the question whether the examination of the blood furnishes a diagnostic test, I may answer that in eight or nine cases out of ten it may do so, only it

requires the highest bacteriological skill in the examiner.

Of the infectious diseases caused by bacilli, the existence of a micro-organism in the blood of human beings has been proved in the two cases of spleen fever and relapsing fever. (I do not include here the plasmodium found in the blood of malaria patients.) And now the existence of a bacillus of the undermentioned description has been newly discovered in the blood plague patients.

1.—This bacillus is only found in the blood, the lymph, and the internal organs of patients affected with the plague.

2.—In no other disease has this kind of bacillus ever been discovered.

3.—When the bacillus is inoculated in other animals appearances similar to those presented by human bodies are found after death.

From the foregoing statements it is sufficient to prove that the specified bacillus must be the cause of the plague and that this is an epidemic disease caused by micro-organisms. How the bacillus enters the human body must be next dealt with. With regard to this question, I should say that there are three ways of entry, respiration, open wounds, and digestive organs. Instances of the first two have been frequently observed, though this point requires further elucidation; but of the entry of the virus through the digestive organs no example has yet been seen. Still, judging from the facts that the bacilli were found in the intestines of the patients and also that the food experiments carried out upon animals gave positive results, the digestive organs must be considered as one of the modes of entry.

With a few exceptions, the plague patients in Hongkong were Chinese, especially those in the Chinese colony at Tai-ping-shan. It is said that the dust that has been left unremoved for more than ten years in their dwellings accumulates to a depth of above a foot. The houses are indescribably filthy and abominable and are quite unfit for human habitation. Any one who visits the place can not but think it the nursery of the plague.

How to cope with the disease is a most important point to consider. As precautions, we ought to observe the ordinary sanitary rules, must have efficacious sewers, a supply of pure water, and clean dwellings and streets. When the disease breaks out the patients must be rigidly isolated, the furniture of the infected houses must be thoroughly disinfected with carbolic acid or lime water of 2 per cent. strength before being removed elsewhere, while clothing must be placed in steam disinfecting apparatus and heated and kept for an hour at a temperature of 100° C. Should the suitable implements not be available then the clothing must be exposed to the direct rays of the sun for several hours. Inexpensive articles had better be burnt. After the foregoing precautions have been taken the floors and walls of the rooms must further be cleaned with lime water or carbolic acid.

The excreta of the patients must be thoroughly disinfected by mixing with lime water, while the bodies of the dead must either be cremated after lime water has been applied or must be buried at least 3 metres deep. The bodies of mice or rats that have dropped dead in any house must be burnt or buried.

One thing that should be noted in this connexion is that the patients must be isolated from healthy persons for at least a month after recovery, for even in persons who are apparently restored to normal health the bacillus is liable to be detected for some time (above three weeks) in blood and lymph.

As for individual precautions, we should keep aloof from the patients and from the infected houses, and should be careful about food and drink. Whether the plague can be warded off by artificial inoculation is a matter requiring investigation. The statements given above are confined simply to the salient points in the matter, but I hope after further investigations to submit a more minute report.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE FIRST VICTORY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—No foreign resident of Tokyo could have failed to be touched by the ardent patriotic joy exhibited in the streets so soon as the extras containing an account of the Japanese naval victory near A-san circulated the welcome news. I happened to be passing through a number of the larger thoroughfares in the course of Saturday afternoon and experienced a sympathetic thrill at the sight of the popular joy. Even staid citizens joined in the shout of *Nippon Teikoku Bannai*; hats were tossed up in the air, and students were simply wild with glee, several of them in the little park at one side of Kudan Hill performing an extemporary war-dance, to the unbounded applause of a huge crowd of spectators. Yet everything was orderly and as quiet as might be. The Chinese in Tsukiji and elsewhere kept themselves well out of sight, though they need not have feared molestation. Irrespective of the facts of the case, one can not help wishing this country, the most civilised and Europeanised nation of Asia, a continuance of the success thus inaugurated.

Yours, etc.,

Tokyo, July 29th, 1894.

W.

JAPAN AND CHINA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is amusing to note how some of the newspaper writers here and in China are working themselves into a white heat over the doings of the selfish Japanese; and in these sultry dog-days too, when, with the thermometer at 100°, all of us are red hot anyhow. One might think from the virtuous sounding prattle of these knights of the quill, that they are quite ignorant of what our own western nations have done and are daily doing. Look at America:—what "sweetness and light" in her treatment of the red man. Take England:—does not her history during the past 150 years present a record of Christian charity and love? With what a golden hand, forged of material chopped in solid chunks out of "the Golden Rule" does she girdle the world. Do we blame England for this? Not I. More power to her elbow! Her actions though based on selfishness have made for good and the right always. For we live in a world in which the condition of all life from man to mosquito, is still

The good old rule, the simple plan,
That they may take who have the power
And they may keep who can.

So let us have no twaddle about Japan's action in Korea. An end to hypocritical rot! She has as much right there as England has in Egypt.

Japan represents progress along the right lines in the East. China is the personification of inert, contented ignorance, and of superstitious aversion to every new thing. China is the owl of the Orient, that sits blinking at the sun, praying for darkness. No wonder that the absurd, mouldy old owl receives an occasional prod, now from England, now from France, now from Japan.

As to what Japan may or may not gain by her present action, that is a different question, on which the opinion of not one of us in a hundred is worth two straws.

Yours truly,

ZUYDER ZEE.

Yokohama, July 28th, 1894.

CONTRACT V. PROFITS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I beg to call to the attention of your readers a phase of Japanese hotel-keeping recently brought to my notice, in the belief that publicity is the only cure for such a state of affairs.

About June 15th, two American ladies with their guide came to the Nikko Hotel, Nikko, for a short stay, but meeting there some friends, decided to take a cottage for two or three weeks. Both the ladies in person and their guide made a definite oral agreement with the hotel-manager by which they were to have a suite in one of the adjoining cottages for two weeks, commencing June 26th. The rooms were taken absolutely from that date and the price agreed upon. Feeling perfectly secure of their accommodation, they left for Tokyo to attend the fête of the opening of the River Sumida on the 21st instant, and remained in town several days, meanwhile notifying the manager by letter of their intended return to Nikko before the 26th. From the

terms of this latter the manager could certainly have held them liable. They returned on the afternoon of the 26th, and were informed by the manager that their rooms were then occupied by three ladies who had taken them with the understanding that they should vacate them on that date. Whereupon our two ladies waited for this to be done, meanwhile contenting themselves with inferior accommodation at the back of the house. The three ladies in possession, who I regret to say were also Americans, promptly declined to move and threatened that, if forced to do so, they would go to a rival hotel. These ladies were members of a party which included a gentleman of official position, whereas our two ladies had returned to Nikko, without their guide and alone. When the latter, after three days of waiting, demanded their rooms and taxed the manager with not fulfilling his contract, he calmly answered that if he turned out the present occupants he would lose three guests at least and only gain two. There did not seem to be the slightest idea on his part that, as a hotel manager, he could have any other standard of conduct than the ratio of profits, and apparently he had no conception of the obligation of contracts. Of course, as to the new-comers and their successful stratagem of jingling the money-bag close to the ears of cupidity, the less said, the better; no gentleman with knowledge of the facts but would at once have yielded possession, but these amiable little divergencies from the male standard of ethics are not to be held too strictly against the fairer sex. I may say in passing, that the leader of the usurping triumvirate was a middle-aged lady, all gray hair, smiles, and benignity. In one point, however, they deserved our admiration, if not for the position they had assumed, at least for their adroitness in maintaining it. For never did feminine diplomacy attain a more artistic finish than in the attitude of almost obtrusive cordiality adopted in public by the benevolent lady toward the unfortunate victims of their wiles, which itself would have placed the recipients in a most ungracious light if the latter had pressed their just claim to its lawful conclusion, while, at the same time, it was circuitously brought to the attention of the manager that the loss of their patronage might also involve that of the official gentleman before mentioned.

But although these sidelights on diplomacy may amuse us, the bulk of the censure should fall on the manager, who was the real culprit. May I ask whether all the inn-keepers of Japan feel free to disregard their contracts whenever it is to their pecuniary interest to do so, or is this sort of annoyances more apt to happen to ladies travelling alone? In either case, disapproval of such conduct cannot be too strongly or publicly expressed.

GEORGE D. MUMFORD.

July 29th, 1894.

IN THE INTERESTS OF VERITY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the July number of the *Arena*, Boston, the editor, B. O. Flower, has an article entitled "Justice for Japan," in which are some statements that are quite new to me, and regarding the truth of which I am very sceptical.

My impression is that the editor has drawn his conclusions from sources that are very much prejudiced. However, I believe that he will not hesitate to correct any of the statements contained in the article, if proof can be furnished that they are wrong, as the *Arena* is undoubtedly a great journal, and the editor is both fair and liberal.

Below I give a few extracts from the article with the names of the authors of the quotations used by Mr. Flower.

After speaking about the Treaty and the conditions under which it was made with the U.S., the editor quotes Mr. Hirai "an eminent Japanese scholar," as follows:—"It is also stipulated that either of the contracting parties to this treaty, on giving one year's previous notice to the other, may demand a revision thereof, on or after the first of July, 1872. Therefore, in 1872 our government demanded a revision; and since then we have been constantly requesting it, but foreign governments have simply ignored, making many excuses." Continuing, he next quotes the same gentleman as saying, "We have no judicial power over foreigners in Japan, and as the natural consequence we are receiving injuries, legal and moral, the accounts of which are seen constantly in our native papers. As the western people live far from us, they do not know the exact circumstances. . . . If you closely examine with your unbiased mind that injuries we receive you will be astonished. Among many kinds of wrongs there are some which were utterly unknown before and are entirely

new to us heathen, none of whom will dare to speak of them even in private conversation."

Next, Mr. Flower condenses several cases from reports furnished by Mrs. A. E. Cheney to show how cruelly Japan suffers under Consular jurisdiction. 1. An Englishman in the seventies imported opium in direct violation of the treaty stipulations with Great Britain, but as an English officer named Wilkinson ruled that the opium might be imported provided the duty was paid, the case was dropped and the English government evaded the question. 2. "One night in 1892 an English vessel disregarding the marine law, sailed forth without ship lights. It ran into a new Japanese man-of-war which was entering the Inland Sea. The latter vessel sank almost immediately, most of her crew being drowned. The captain with difficulty saved himself, by means of a rope thrown him from the English vessel. He informed the ship's officers that he was the captain of the sunken man-of-war, whereupon, instead of receiving kindness, he was placed in the third cabin and brutally neglected. Japan brought a suit with the usual result—she lost her case." I suppose that this is an account of the *Chishima-Ravenna* affair, although it is new to me.

The third case is that of band of sailors entering bath-houses and outraging women, which, says Mrs. Cheney, is not uncommon.

The fourth and last instance cited declares that an American procuress came to Japan, and one by one the fairest daughters in many of the most highly respectable families disappeared, until about fifty girls were taken away, when evidence was procured abundantly sufficient to condemn the woman; but she "has lived safely in Japan for five years," and from the tone of the article I should judge that Mrs. Cheney thinks that the said woman stills lives in Yokohama. Mr. Flower says that there is no question about the truthfulness of the cases cited above.

I hope, however, there is a great deal of doubt; not so much about the fact whether the things ever happened or not, although I hope that they did not but the charge of official connivance is one that I do not wish to believe. The remainder of the article is quite vigorous, as might be imagined from the above premises.

In the closing page the writer represents Japan as a country having compulsory education, speaks of the great advance made in the last few years, and makes a strong appeal to the New World to recognize the rights and desires of Japan without delay. I hope that you will find space for a little criticism of this article, especially the part relating to the fact that Japan has waited since 1872 for the U.S., and I suppose England also, to revise the treaties or give their consent to revision.

Begging to be excused for trespassing without permission, I am,

Yours most respectfully,

U. G. MURPHY.

92, Minami Buhei Cho, Nagoya,
July 23, 1894.

A CORRECTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your paper of the 25th July, I find a notice about a farewell banquet given to "Mr. Seibel, a German instructor in the Military College." May I be allowed to tell you that there is no Mr. Seibel in the Japanese service? The gentleman in question is a high officer of the German General Staff, Major Baron von Gruntschreiber. This gentleman has not only been "instructor" in the Military College, but he held the very important position of adviser to the War Department, and the services rendered by him in this position are highly appreciated by the Government of this country.

Since you are always very careful in pointing out the merits of any Englishman in the Japanese service, I think you would not have had too much difficulty in picking up the true name of a German gentleman who held such a prominent position as Major Baron von Gruntschreiber did.

I am, Sir, your obedient Servant,

L. L.

Tokyo, July 28th, 1894.

The wound made by the removal of the tumour from the German Emperor's cheek is said to be healing in a perfectly satisfactory manner. Remembering the disease of which his father died, and how often it is hereditary, there was more grounds for anxiety in his case than in that of most people troubled in the same way. That anxiety is now relieved, as it is very improbable that the wound caused by its extraction would have healed so easily if there were anything "malignant" in the growth which has been dis-

THE YOKOHAMA ENGINE AND IRON WORKS, LIMITED.

The adjourned annual general meeting of the Yokohama Engine and Iron Works, Limited, was held on Wednesday afternoon in Kiel's Building. There were present Messrs. J. F. Lowder (in the Chair), J. Rickett, J. Dodds, C. Giussani, C. B. Bernard, W. R. Bennett, and G. C. Charlesworth (Secretary).

The CHAIRMAN announced that the meeting had been adjourned in consequence of a quorum not being in attendance the day before. If their rules had required a quorum at an adjourned meeting, then again that day they would have been unable to do any business, but fortunately a quorum was not necessary at this meeting. The report and accounts of the Directors for the past year, he suggested, should be taken as read. They were now open for discussion or to be otherwise dealt with.

Mr. GIUSSANI proposed, and Mr. J. RICKETT seconded, the adoption of the report accounts.—Carried.

REPORT.

Annexed hereto is a statement of Accounts, as shown by the Balance Sheet and Profit and Loss Account, duly audited, for the year ended the 31st May, 1894.

The debit balance of Profit and Loss on the 31st May, 1893, was \$16,995.75
The debit balance of Profit and Loss on the 31st May, 1894 ... 16,142.84

Showing a reduction during the year of ... \$ 852.91

The Liabilities of the Company on 31st May, 1893, were ... \$12,174.75

The Liabilities of the Company on 31st May, 1894 ... 42,559.43

Showing a reduction during the year of ... \$10,515.52

It will also be seen that there has been paid for interest during the past year a sum of ... 3,313.70

Giving a total of ... \$26,742.51

These figures are extracted for the purpose of showing at a glance what would have been the net profits divisible among the shareholders of the Company, but for its indebtedness to the New Oriental Bank Corporation, and also the steady if slow progress made towards the liquidation of that indebtedness.

Your Directors offered to compromise this debt by a cash payment of \$25,000; but the offer was rejected by the Liquidator of the Bank, and they have therefore no alternative but to go patiently on satisfying liabilities out of earnings until the former are extinguished. They regret again to have to report that their efforts to expedite the accomplishment of that object by a sale of the Kobe property have not yet met with success.

In accordance with the Articles of Association, Messrs. Johnstone and Lowder retire from the Board of Directors by rotation, but they offer themselves for re-election.

Messrs. Keil and Fraser also retire, but are eligible for re-election as Auditors.

J. F. LOWDER, } Directors.

G. CHARLESWORTH, Secretary.

We have examined the foregoing accounts, and compared them with the books and vouchers of the Company, and find them to be correct.

D. FRASER, } Auditors.
O. KEIL, }

Yokohama, July 9th, 1894.

The CHAIRMAN—There is one further piece of business before us, and that is the re-election of

Directors. Mr. Johnstone and myself retire, but offer ourselves for re-election. I may say that it occurred to me yesterday to make a suggestion from the Chair, that as the present state of the Company's affairs were such as they are, three Directors were quite sufficient, and that therefore there was no necessity to re-elect the retiring Directors; or, if it was considered necessary to elect them, to move that the number of Directors be hereafter fixed at three instead of five. I may also mention that a gentleman was present yesterday with a motion of a like nature, which he would have presented to the meeting. Since then, however, I have taken the opportunity to consult our rules, and I find that such a motion would not have been in order. Unless notice of the business to be brought before the meeting in previously given, to bring forward a motion of such a nature unannounced would be out of order. Now, if it is considered necessary to reduce the number of our Directors' notice must be given of the motion and it can be brought forward at a special shareholders' meeting, or it can be brought forward at our next meeting if duly given notice of. I have made these remarks with no intention to evade discussion, but rather to explain the situation and thus prevent useless discussion. I think, therefore, that it will be better to re-elect the retiring Directors, to-day; even if not re-elected they must still continue on the board, there having been no other nominations. As it is customary to re-elect the retiring Directors, I shall be glad of some one will move, *pro forma*, the re-election of the retiring Directors of your Board.

Mr. GIUSSANI proposed the re-election of the retiring Directors, Messrs. Johnstone and Lowder.

There being no objection, the motion was declared carried.

Mr. RICKETT asked if there was any rule as to the number of Directors necessary; he had forgotten the rules for the moment.

The CHAIRMAN—Yes, there are two rules. Rule 68 refers to the election of Directors, while Rule 69 says the maximum number may be seven and the minimum five; four to form a quorum.

Mr. DODDS—And if any reduction in the number is deemed necessary then due notice must be given before the calling of a meeting of shareholders.

The CHAIRMAN—Yes.

Mr. RICKETT said that there was one objection to reducing the number of Directors. It was found very difficult to form a quorum sometimes when five Directors were on the Board; if the number was reduced to three, he feared that very often two might meet and the third would have another engagement. Otherwise he would give the proposal his support.

Mr. GIUSSANI said he should support such a proposition merely on the question of saving expense.

The CHAIRMAN—If any such motion is brought forward I can assure you that, personally, my sympathies will be with it. If the number is reduced to three, then two will form a quorum—the rule would be altered in that respect. Besides, it is the duty of Directors to meet and transact the business with which they are entrusted by shareholders.

M. DODDS inquired how long a notice was required of an alteration in the Rules.

The CHAIRMAN—Twenty-one days. You see such a motion would naturally be very important, and therefore due notice should be given to shareholders so that all that can be said for and against it on either side, may be said. In regard to the matter of expense, that can be easily achieved, it is simply not to vote any remuneration to your Directors.—(Laughter.)

The meeting then separated.

MESSRS. LANGFELDT AND COMPANY, LIMITED.

The half-yearly general meeting of shareholders in Messrs. Langfeldt and Company, Limited, was held on Monday afternoon in Keil's Building, Main Street. There were present, Messrs. O. Keil (in the Chair), J. F. Lowder, A. Langfeldt, H. Grauert, T. Meyerdirks, A. Egli, C. Weinberger, and J. Feicke (Secretary).

The CHAIRMAN said that as the report and accounts had been in the hands of shareholders for a week past, he had no doubt that the figures were familiar to all present. He would therefore ask one of the shareholders to propose the adoption of the report and accounts.

Mr. A. LANGFELDT moved that the report and accounts be taken as read and adopted.

Mr. GRAUERT seconded.

The CHAIRMAN—Does that include the declaration of a dividend of 8 per cent.

Mr. LANGFELDT—Yes, that is included. The motion was then carried.

The Statement of Assets and Liabilities, and the Profit and Loss Account for the half year ended the 30th June, 1894, accompany this Report.

The Net profit for the half year, including balance brought forward from the 31st December, 1893, and after providing for General Expenses, Directors' and Auditor's fees, Interest, Depreciation, and Losses, amounts to ... \$8,620.66

which it is proposed to apply as follows:—

In payment of a Dividend of 16 per cent.

per annum ... \$8,000.00

Balance to be carried to new account ... \$ 620.66

\$8,620.66

Mr. Thos. S. Baker, having returned to Yokohama, has resumed the office of Auditor at the invitation of the Directors.

According to Article 85 of the Articles of Association the Amount of the Directors' Fees for the year ending June 30th, 1895, will have to be settled at this meeting.

O. KEIL, } Directors.

O. KEIL, } Directors.
J. F. LOWDER, }

J. FRICKER, Secretary.

I have examined the foregoing accounts and compared them with the vouchers of the Company, and certify them to be correct.

T. S. BAKER, Auditor.

Yokohama, July 23rd, 1894.

The CHAIRMAN—Well, gentlemen, I have little to say to-day. Thanks to the efficiency and zeal of your employés, we have not only been able to make ends meet, but have declared a dividend. I can promise for the future that our prospects are very good, and we may look forward to as favourable a half-year ending in December as the passed has been, and I hope that each successive half-year will be as good. Indeed, I cannot see why we should not hold the hope with confidence. Since we have got down to the lowest point in exchange, I think that we need have no further fear of those terrible changes up and down which we experienced since two years ago, and therefore it is easier to foresee what to do to be able to calculate a profitable outcome of our transactions. Two years ago, it was all a matter of chance, and I can tell you that it was simply good luck that enabled us to declare a dividend at all then. There is, therefore, every hope of a prosperous future before us. The other business before us to-day is the settling of the amount of Directors' fees for the year, from now till June, 1895.

Mr. GRAUERT proposed that the Directors' fees be the same as in the previous year.

Mr. LANGFELDT seconded.—Carried.

The CHAIRMAN said the fees were \$1,100 per annum.

Mr. LANGFELDT proposed a vote of thanks to the managing and other directors.

Mr. WEINBERGER seconded.—Carried.

The CHAIRMAN in acknowledging the compliment expressed the pleasure he felt at that mark of confidence. He could assure shareholders that their directors had always done the best they could, and he hoped they would continue to do so. The dividend warrants were ready that day.

WHY IS GOLD SCARCE?

The following paper was read before the Tokyo Economic Association at the occasion of its recent dinner in Fujimi Ken, by Mr. J. O. Spencer, A.M., Ph.D., Instructor of Political Science and Political Economy in the Tokyo Anglo-Japanese College, Aoyama, Tokyo. Publication was requested by members of the Association and others.

I have been honoured by your officers with an invitation to address your body for a few moments this evening on a subject that is to-day attracting more attention than any other, and the answer to which is fraught with fateful consequences to uncounted millions of our fellow human beings now on the earth, and also to millions yet unborn; to those in the full noonday of nineteenth century civilization as well as to those who are just struggling from African jungles to the first faint rays of something better than they have hitherto known. It affects the prince and the pauper, the millionaire and the daily labourer, the artist, the teacher, the philanthropist, and in short, men in every walk of life and in every land under the sun. I have no apology therefore, Honorable President and gentlemen, for offering my little contribution to this great problem.

And now to answer our question, we may say that gold is scarce because its supply is naturally very limited. But this does not help us much. It is equivalent to saying that it is scarce because there is not plenty of it, a statement that few will deny and which indicates absolutely no progress.

Before proceeding to the general discussion, we will restate what is commonly known as Gresham's Law, with certain modifications (made by an economist whose name we do not recall) necessary to make it scientifically correct. That law as usually stated is, "The cheaper will drive out the dearer money." This is not exactly true, for two metals of unequal value may circulate side by side, or coins of the same metal but of different weight and fineness may circulate together, so long as the

full monetary needs of the community demand both the more and less valuable coins. It is only when there is a resort to withdrawal of coin for export or hoarding that so-called "picking" takes place to any great extent. This circulation of the cheaper and dearer metal side by side is taking place to-day in the United States. Of course gold is flying away, but many causes are operating to produce that result.

When we say "Silver is cheap" we generally mean that silver as compared with gold is cheap in terms of gold. It is just as true to say that gold is dear in terms of silver, and before we shall have finished we hope to prove that gold is not only dear as compared with silver, but is dear as compared with commodities in general. It becomes then, of considerable importance to determine whether gold has risen or whether silver has fallen, or, as is very probably the case, both these things have happened at once.

The most convenient, and, on the whole, the most reliable test is to compare the prices of domestic manufacture in gold-using countries, with the same sort of manufactures in silver-using countries. Just now we have the very remarkable phenomenon of a general fall in prices in gold-using countries, while prices in silver-using countries are not generally lower, but are probably a little higher than heretofore. There are some exceptions to this generalization, owing to local or transient causes, but one of the most remarkable facts of modern times is the continued fall in prices, as measured by gold, for the past twenty years, and the movement is probably not yet ended.

Forty products of general consumption were found to have fallen in their gold prices in almost the same ratio that silver has fallen in its gold price. This is partly accounted for by cheapened processes of manufacture, but these cheapened processes were being developed for half a century before the fall in prices began. The fall in prices dates almost exactly from the act of Germany in throwing out silver.

(Charts Nos. 1 and 2, showing the fall in price of silver, and the corresponding fall in gold price of three typical commodities in the United States:—Maize, Wheat, and Cotton. The first is largely used for food of animals, and its price practically determines the price of beef and pork. The next is the standard bread-stuff, and in a great measure determines the cost of living, though less so than formerly. The last is king in the manufacture of common fabrics and to a great degree determines the cost of clothing.)

There is no more intricate or profitable economic study now pending, than this very one of general average prices in gold and silver-using countries. Japan is very favourably situated for a careful and accurate application of these facts and figures. One reason for this favourable situation is that Japan is practically self-supporting so far as food products are concerned, and there is almost no immigration to affect the question, while emigration has not, as yet, reached large proportions. Moreover Japan is almost exclusively a silver-using country. But this much aside. I cannot refrain from expressing the hope that this department of statistics will be investigated and the results given to the world.

You are all perfectly familiar with the silver movement and the general scramble for gold which began early in the seventies. It is an old and a dreary tale, and as one nation of Europe after another unloaded its silver and demanded gold the purchasing power of that metal rose higher. In this it was only following the law of supply and demand. If there had been no other demand for gold, this alone would have brought about a very decided advance in its price, but of late large demands have been made by all the nations of Europe for gold to lock up in the military chests. It is understood, as Mr. Goschen, late Chancellor of the Exchequer in England, remarked, that the next war will be commercial as well as military, and so each nation is providing gold reserves of enormous sums, as well as war ships and military defences. This gold has been drawn from China, Japan, and the United States. It is not definitely known how much has thus been absorbed, but Dr. Eduard Suess in his recent work "The Future of Silver," estimates this sum at \$600,000,000, or about one-fifth of the entire gold stock of the world. Such is the insane scramble for gold to settle some frontier question, or to define some boundary.

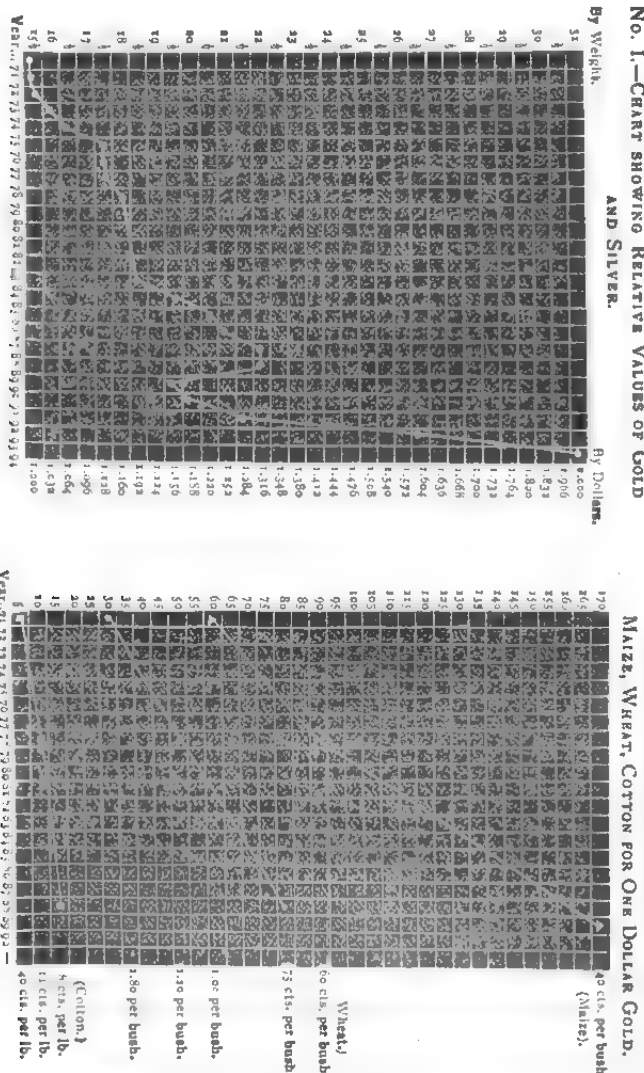

Another remarkable fact is the increased demand for gold in the arts. One rather modern use of the precious metal is in dentistry, where several millions of dollars are annually used and permanently absorbed, as it all sooner or later finds its way to the grave. The industrial use of gold may be classified as follows:—

I. That which is permanently absorbed and cannot be returned to monetary use. For example the gold used in dentistry, fine wall papers and other mural decorations, plating and gilding of picture frames, books, jewellery, table ware, pottery, &c.

II. That which by a greater or less crisis might be largely called back to monetary uses, for example, rings, pins, and other solid jewelry, watches and solid plate. Soetbeer, the great German authority on this subject, estimates the total industrial use of gold at the entire current product of the mines for the past ten years. That is to say, no gold has been added to the world's stock of money for ten years, but on the other hand the yellow money has been diminished by abrasion of coins, by hoarding, and by accident. In 1891 Mr. Goschen of England called for \$2,000,000 to recoin worn Victorians. The loss from this cause is about \$2,000,000, per annum, a large sum to be permanently and annually lost. Limits of time prevent our going farther on this line at present.

Monometallists and bi-metallists of all shades of opinion are agreed that the growth of population, the increase of industry, the extension of commerce to new lands, and the opening of Oriental nations all unite in demanding a gradually expanding volume of money. All are equally agreed that the full measure of this expansion is not required, in coin, as bank cheques, drafts and other forms of credit in part take the place of metal money or its equivalent. But it is to be noted that instruments of credit cannot wholly take the place of coin. The use of credit is not expanding to any great degree, as shown by the London Clearing House; for in 1870 it cleared 6,077,000,000 sterling and in 1887 it was almost the same figure. For this reason, among others, it is said by one that the demonization of the white metal is "Much the most flagrant and disastrous rupture of natural law ever committed by the action of states, not excepting any legislation in the history of mercantilism."

In fact if the instruments of credit are used in an excessive degree without a coin backing, the perils of crises are greatly increased. At

WASTE SILK.

Settlements for the week are 353 piculs, divided thus: Cocoons, 17 piculs; Noshi, 191 piculs; Kibiso, 145 piculs. No direct export this week.

Supplies are coming in freely and when added to the old stock give, as present supplies on the market, 13,500 piculs; for which there seems to be very little demand. Dealers report that the native silk spinners are paying much better prices for fibre than shippers offer, and are making the attempt to hold the market firm in consequence. Whether they will succeed in this for very long, is open to question.

The French mail *Ozma*, 21st ultimo, had 82 bales for Europe and the present export figures are 1,308 piculs, against 160 piculs last year and 1,232 piculs at the same date in 1892.

Cocoons.—Stock has doubled during the interval, but no business has as yet transpired. Holders stand to their guns but will have to reduce their prices before shippers operate. There have been some small purchases of *Kusumai*, old fibre, at \$7.

Noshi.—Very little enquiry for new *Yashu*. Further purchases have been made in old fibre at from \$45 to \$60 per picul.

Kibiso.—A fair trade has been doing in good quality *Filature*, prices ranging from \$103 to \$108. One purchase of common *Hachoji* noted at \$23.

Mawata and *Sundries*.—Nothing done.

A DELIGHTFUL MOUNTAIN RESORT.

THE most delightful Mountain Resort in the Hakone District is the KAIKATEI, at KOWAKI-DANI, which is admitted by the Medical Faculty of Tokyo and Yokohama to be the Sunniest, Breeziest, and most healthful spot accessible to Foreigners in the Hakone District, standing alone and delightfully situated upon the mountain side, free from every suspicion of bad drainage and malaria, with a cool and constant breeze in the hot summer weather, and a view not to be equalled in the neighbourhood for variety and extent.

The BATHS are filled with a constant and never-failing supply from the HOT MINERAL SPRINGS just above the Hotel, the medicinal virtues of which are too well-known to need recapitulation. It is sufficient to say that whereas Visitors find many of the hot springs enervating those at Kowaki-dani are distinctly invigorating.

One of the features of the Kaikatei is the detached Suites of Apartments, where perfect quiet and privacy can be secured. This arrangement for invalids and convalescents from the Tropics is a great desideratum, as being entirely removed from the Dining Room, Billiard Room, Bar, and Baths, while all are connected by covered passages.

To a Liberal Table are added an excellent Cuisine and good attendance, supplemented by a large variety of Wines, Spirits, and Malt Liquors of the very best kinds.

For the amusement of Guests, a fine English Billiard Table, by Burroughs and Watts, has been added to the Establishment, as well as Archery, Quoits, and other Games, and Ponies for riding over the hills and a Yacht for sailing on Hakone Lake can be hired.

Visitors to Kowaki-dani who bring a rod with them will be shown the haunts of the speckled Trout, a nice stream of several miles in length being within easy walking distance of the Hotel; Hakone Lake is also well stocked with a variety of fish, including salmon, and the Fishing is FREE; while Entomologists will find rare and valuable specimens in the surrounding hills, and the Flora of the district is extremely interesting to the Botanist.

Apartments may be secured by Letter or Telegram, and Special arrangements made for the conveyance of Visitors and Baggage from the Tramway Terminus at Yumoto, by addressing

Y. HOSHINO,
KAIKATEI, KOWAKI-DANI,
HAKONE.

BOARDING HOUSE FOR MISSIONARIES & OTHERS.

MISS H. G. BRITTAN, 2, Bluff, Yokohama, will be happy to receive and accommodate Missionaries and others during their stay in Yokohama.

TERMS:—One Dollar and a Half per Day Children under Twelve Half Price.

February 18th, 1893.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a ton, spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 2st, 1890.

MONEY & TRADE,

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

"MONEY AND TRADE" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY AND TRADE" is THE JOURNAL for Investors, Speculators, Manufacturers, and Traders.

"MONEY AND TRADE" is a thoroughly up-to-date Weekly Record of all Monetary, Trading, and Business Matters. Bankers, Manufacturers, Merchants, Storekeepers, and Wholesale Buyers all over the world say it is indispensable.

"MONEY AND TRADE" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Shipping, Trading, Manufacturing, and Trust Companies are fearlessly and impartially criticised in "MONEY AND TRADE."

"MONEY AND TRADE" enjoys a very large circulation, not only in Great Britain and Ireland, but also in all Foreign markets where English goods are sold; and, as it goes direct into the hands of the wholesale and retail buyers, it offers unique advantages to advertisers.

THE MONTHLY FOREIGN AND COLONIAL EDITION is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

YOKOHAMA: SATURDAY, AUG. 11TH, 1894.

SUMMARY OF NEWS.

THE plague is now almost stamped out of Hongkong.

DAIKAN-ZAKA, or Hegt's Hill, is being widened half way up.

H.M.S. *Redpole* has returned from her cruise in the Behring Sea.

THE value of salt obtained in Japan during 1893 is set down at yen 3,584,093.

H.I.H. THE CROWN PRINCE will return to the Capital from Numazu about the 14th inst.

THE Chinese exodus from Yokohama continues; over a thousand have left during the week.

THE ravages of dysentery in Kagoshima, Kumamoto, and Nagasaki are increasing in severity.

THE progress of reform in the Korean internal government is said to be progressing favourably.

MR. KURINO, the newly appointed Minister to the United States, left for his post on Tuesday.

IT is stated that the Fifteenth National Bank has decided to contribute yen 1,500,000 towards the military chest.

THE merchants and bankers of Yokohama have decided to strongly advise their Chinese em-

ployees to comply with the terms of the recent Imperial Ordinance and to register themselves.

FOUR houses were destroyed by fire in Isesaki-cho on Monday night. An overturned lamp was the cause of the outbreak.

A JAPANESE *belle* was knocked down by a train near Uyeno on the evening of the 6th inst. His feet were badly crushed.

THE B division yacht *Daisy* placed another win to her credit on Saturday, taking the trophy presented by Mr. Muraour.

H.I.H. Prince Kanin Kotohito, an Ensign of Cavalry, has been appointed an Instructor in the Military Riding School.

THE wife and daughters of the late Kim-Ok-kyun were lately removed from prison, where they have been kept for a long time.

AN attempt at double suicide was made in Yokohama on the 6th inst. The parties were very young and are expected to recover.

MR. MUTSU, Minister for Foreign Affairs, has been staying at the villa of Mr. Hara Zenzaburo, at Honmoku, for the benefit of his health.

THE thunderstorms at the close of last month did very extensive damage, beside killing many men and women. Cattle also suffered severely.

THREE fires were promptly extinguished in the native quarter of the town on Tuesday night. They are supposed to have been the work of incendiaries.

THE war news is scanty. The Chinese fleet is said to be lying up in Chinese harbours, while the Chinese troops have been driven out of Söng-lwan and A-san.

MR. SHIMAZU MAGOROKU, owner of a coal mine at Mizumaki, Onga District, Fukuoka Prefecture, has applied for permission to supply gratis 100,000 *kin* of coal for military purposes.

SOME slight rain-showers fell in Yokohama on Wednesday, none lasting longer than a few minutes. On Thursday evening a heavy gale set in and rain fell for nearly twenty-four hours.

H.I.H. PRINCE Arisugawa Taruhito gave a farewell dinner on the 6th inst. to Major Baron von Gratschreiber, who shortly leaves for home, the term of his engagement in Japan having expired.

THE British *Chargé d'Affaires* in Tokyo has officially intimated to the Japanese Government the intention of Great Britain to maintain neutrality during the war between Japan and China.

AS a consequence of the war in Korea, Japanese swords of ordinary descriptions have greatly increased in value. A rise of over forty per cent. is reported as compared with the ordinary rates.

THE Authorities propose to prohibit the export of rice, coal, and certain other articles from Japan during the war between this country and China. The Chinese Government has prohibited the export of food-stuffs from China.

THE Osaka Mint struck gold and silver coins to the following amounts during July last:—5-yen gold pieces, yen 110,000; 1-yen silver pieces, yen 2,980,000; 20-sen silver pieces, yen 83,400; and 10-sen silver pieces, yen 8,500.

SOME sailors of the Nippon Yusen Kaisha having provoked the enmity of the hatoba coolies, the

latter assembled a few nights ago and proceeded to Kanagawa, armed with swords and bludgeons, to seek revenge. In the end four of the coolies were arrested and a stack of lethal weapons was confiscated by the police.

IT is stated that H.I.H. the Empress, who has been staying at Hayama, Kanagawa Prefecture, for some time, will return to Tokyo on the 19th inst.

THE English mail, which was transferred to the steamer *Hongay* ■ Hongkong, has taken a long time to reach Japan. The delay was explained on Thursday, when news reached Yokohama that the *Hongay* had got into a typhoon while coming up the Formosa Channel and had to seek shelter.

WHILE fully appreciating the patriotic feelings of those Japanese subjects who wish to organize volunteer corps, the Emperor advises his subjects that all those not enrolled in the army or navy will be serving the best interests of the Empire by continuing steadfastly to pursue their ordinary occupations.

AN Imperial Rescript affording protection and security to the lives and property of Chinese residents in the Treaty Ports has been issued. All those Chinese desiring to continue in Japan must register themselves at the respective Kencho, while certain discretionary powers are conferred on military and other officials in regard to granting future right of residence.

THE French Chamber of Deputies has passed a bill for punishment of incitement to anarchy and for the suppression of anarchist propaganda in the press. Mr. Sydney Charles Buxton, Parliamentary Secretary to the Colonial Office, in reply to a question in the House of Commons in regard to the military contribution of the Straits Settlements, stated that the matter was receiving the special consideration of the Treasury, and that there was every reason to hope for a speedy conclusion of the matter. The *Novoe Vremya* states that Russia will never permit the occupation by Great Britain of Port Hamilton, whereby that Power would be enabled to create a new Gibraltar, dangerous to the Russian Navy and menacing to Russian possessions in the East. Sir Edward Grey has stated that the Japanese Government has promised that no warlike operations shall be undertaken by its forces against Shanghai or the approaches to that port; and China has also agreed that the approaches to Shanghai shall not be obstructed. Combatants will have no right to interfere with neutral vessels unless an effective blockade has been duly notified. It will be impossible to define contraband of war, but it will not be for combatants to decide what is to be held as contraband of war regardless of the rights of neutrals.

THERE is not much to be said about the Import trade. Japan being at war with China, many buyers of foreign Imports fight shy of business, and the commerce between the two countries has also been already affected, while added to this in the account are a tight money market and a high rate of interest. Yarns, Piece-goods, and Metals are stagnant. In the Kerosene trade prices have advanced, but not in consequence of actual transactions so much as a strong market in the capital and probable short supplies in the interior, and this in the face of fresh arrivals and a heavy stock. Nothing doing in Sugar. In the Silk trade there has been a small daily business and a fair amount of enquiry. Prices are steady and arrivals come in freely. There is very little now doing in Tea. Exchange has been steady, and rates close

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The war engrosses the attention of the Japanese public, so that scarcely any other question is discussed by the vernacular press. All the papers are urging upon the Government the necessity of striking a prompt and decisive blow at China. We will quote one or two of the representative articles on the subject. The *Hochi Shimbun* calls upon the nation to understand the situation in its true aspect. Many of our countrymen, it says, are apt to think that nothing can be easier than to conquer China. Our contemporary has no manner of doubt that Japan will be ultimately victorious, but it observes with good reason, that too many Japanese take a dangerously light view of the struggle upon which the country has entered. It is a struggle for life or death; either China must be reduced to a condition of complete helplessness, or Japan will have to be placed in a similar predicament. Should the war be terminated before striking a deathblow at China, there would certainly, in the opinion of the *Hochi*, be another disastrous war in a few years. China is convinced of her inferiority to the European Powers, and can lightly bear any defeat from them. But her attitude towards Japan is essentially different; she regards this country with intense hatred and disdain; she thinks herself very much stronger than the "little upstart Empire of Japan." Under such circumstances, she cannot submit to be beaten by Japan with as much equanimity as in the case of a defeat by an European Power. Consequently, in order to secure the permanent peace of the East, the Middle Kingdom, says the *Hochi*, must be reduced into such a state of helplessness that she will be unable for many years to come to attempt retaliation. Such being the case, Japan must be prepared to put forth all her energies and to run every hazard to encompass her object. The Japanese nation is, therefore, advised to enter upon the struggle with a sense of the solemn gravity of the issues at stake.

The majority of the Japanese papers insist that Peking should be promptly and directly attacked. The *Yiji Shimpō*, however, thinks that Peking is not the only point at which the greatest injury can be inflicted upon the colossal body of the Middle Kingdom. The plan suggested by our contemporary is that simultaneously with the destruction of the naval station at Wei-hai-wei, troops should be marched by way of Wi-ju into Manchuria, and possession should be taken of the region from which the present Dynasty in China originally came, and which is still considered to be of great importance by the rulers in Peking. Under these circumstances occupation of this part of the country may be, in the opinion of our contemporary, as effectual in bringing China to terms as the taking of Peking. In the same article, our contemporary observes that there are some persons who advocate the cessation of war as soon as the Chinese shall have been driven out of the Korean peninsula, and the withdrawal of the Japanese troops from that country, leaving there an adequate force to meet possible emergencies. Such an opinion is strongly disapproved by the *Yiji* for two reasons. They are first, that such a policy would entail upon Japan the inconvenience and expense of repelling the never ceasing attempts of China to pour troops into the peninsula; and secondly, that Japan's national dignity having been injured by China, this country can not stop the war until it shall have completely humiliated the enemy. Such an opinion, if it really exists, must be confined to an extremely insignificant section of the Japanese public; at all events no such idea has ever been ventilated by our Japanese contemporaries. The *Yiji* may perhaps refer to a recent article in these columns advising Japan to leave China to undertake the impossible task of driving her out of Korea.

The manner in which the Japanese journals have welcomed the recent Imperial Ordinance relating to the status of the Chinese residents, and the pains they take to advise their countrymen

to treat the Chinese with kindness and generosity must be considered as an expression of the sentiments entertained by the educated classes in this country. But the tone of these papers differs very much when they turn to discuss the manner in which the warlike operations should be carried on against the Chinese. In dealing with an enemy so universally known for treachery and faithlessness as the Chinese, it is not, says the *Mainichi* for instance, either necessary or safe to stick to the enlightened rules of modern International Law. Reference is made to the treacherous conduct of Li Hung-chang towards General Gordon at the time of the Taiping Rebellion, and our contemporary thinks that the haughty disdain with which he rejected the offer of a large reward from the Chinese Government, though no doubt principally attributable to his disinterested chivalry was probably influenced in some measure by the idea that to receive money from such a faithless nation would be a disgrace to a true man. With such an enemy it would be dangerous to adhere to the rigid practices of enlightened warfare.

The question of Korean reform receives a considerable amount of journalistic attention. The work of reform seems to be proceeding steadily and smoothly. But there seems to be little doubt that the Korean officials will be incapable of carrying out the reforms in practice, without the assistance of competent Japanese advisers. There is already talk of the employment by the Korean Government of a large number of Japanese for various administrative purposes. There is a rumour that Count Goto will be appointed chief of the Japanese staff, and that he will be accompanied not only by his immediate followers but by several members of the Radical party. The report seems doubtful, but it has been taken up with unnecessary seriousness by some papers. They of course disapprove of the idea of Count Goto going over to Korea as the head of his followers.

The *Yiji Shimpō*, writing on this subject, observes that it is absolutely necessary for Korea to rely upon the assistance of the Japanese for successfully carrying out administrative reforms. The Japanese, continues our contemporary, have no selfish motives in assisting Korea at the present juncture. But from the natural character of the Japanese, it is not improbable that the radical and thorough going manner in which they will carry out the reforms, may provoke the opposition of the privileged classes in Korea, for the results of the reforms will be beneficial more to the people at large than to the favoured few. This dissatisfaction will, however, be but temporary, and the time will soon come when the salutary result of the measures recommended and carried out by the Japanese will make the Korean nation sincerely grateful to their disinterested friends. The *Yiji* does not enter into the details of the reforms to be carried out in Korea, but it lays special importance upon education. Without educating the rising generation of the Koreans in the spirit of modern civilization, the work of reform, says the *Yiji*, will never take root in Korea. The Korean Government is advised not only to send promising young men to Japan to be educated there, but to establish schools in its own country.

The *Nichi Nichi Shimbun* is glad that the work of reform is making steady progress under the Regency of the Tai Wōn-kun. The present situation in Korea is compared to the Japanese revolution of the 7th century, which consisted in the remodelling of the political, literary, and social system of the country on the pattern of Chinese institutions. In the present instance, the changes in Korea are to be fashioned after the Japanese system. The revolution of the 7th century, as well as that of 1868, is open to the criticism of having attached too much importance to the appearance of things, and this fact is brought to the earnest consideration of the new Government in Seoul. The *Nichi Nichi* notices, with much concern, that there is already a tendency on the part of the Korean Government to strive at the completeness of systems on paper, and to disregard practical convenience and utility. This statement is supported by the

fact that the new Cabinet comprises several unnecessary Departments, such as Education, Agriculture and Commerce, and Public Works. The affairs apportioned to these Departments may be conveniently placed in charge of the Minister of Home Affairs. What is required in Korea is not the perfection of official organizations but a thorough reform of the spirit of the administration. The Korean statesmen and their Japanese advisers are referred to the example of the revolution in Hawaii. The Hawaiian statesmen are very practical, and they divided the business of the country into a few departments only. Our contemporary also seems to think that the work of reform would make better progress, if the matter were placed in the hands of a few persons only, instead of submitting every measure to the deliberation of a large number of commissioners. In conclusion, our contemporary dwells upon the subjects of industrial and fiscal reforms. Of industrial reforms the most important are the establishment of the postal and telegraph system, and the construction of railways. The best policy for Korea would be to entrust these undertakings to the hands of a trustworthy foreign Government or to private persons enjoying the confidence of such a Government, on condition that the business should be handed over to Korea after a certain length of time. Of fiscal reforms, the most important is the question of coinage. Instead of wasting time and money by attempting the manufacture of new coins, Korea is advised to use Japanese silver and nickel pieces. In order to facilitate the use of Japanese money, the Japanese troops and officials in Korea are recommended by the *Nichi Nichi* to distribute these coins wherever they go in the peninsula. Our contemporary thinks that a slight coercion by the Japanese troops will be sufficient for the success of this desirable measure.

The Tokyo papers are urging the Government to place the Japanese coolies in Korea under strict control. Nothing is to be feared from the troops, but the coolies, a large number of whom are in Korea, it is to be feared, may work incalculable mischief, unless they are kept under rigid discipline.

The feeling with which the Japanese public regards the criticism of the majority of the foreign press in the country, has found unmistakable expression in the columns of the Tokyo papers. The papers are justly indignant at the recklessly hostile manner in which Japan's conduct at the present juncture is discussed by foreign journalists in the Settlements. The *Nippon* urges the Government to take direct measures to prevent these newspapers from disseminating such statements. According to the *Nippon* the Treaties do not deprive the Government of the power of taking active measures in a case of this kind. The Government certainly has the power to prevent the dissemination of these newspapers in the interior. Our contemporary, we may add, refers to the *Japan Gazette* by name.

EDITORIAL NOTES.

KOREAN AFFAIRS AND RAILWAY CONSTRUCTION. Various special preparations have become necessary both on Government and private railways in connection with the Korean affair. On Government railways, cars and waggons have been inspected, and those that were thought defective for the conveyance of troops and ammunition are now undergoing repair with all possible speed. Some lines at certain stations are also to be reconstructed in order to enable long trains to pass each other with ease, while in some stations where hitherto a train used to run in and out in the reverse direction, a new line is to be specially laid so that the train may continue on a direct course. Thus, from the neighbourhood of the glass factory at Shinagawa a line to the length of about one mile is going to be specially laid as far as the station of Omori, and the work was already started in the latter part of last month. The new line will be com-

pleted in three weeks or so, and then the troops that get into the cars at the Aoyama Parade Ground may proceed to Yokohama direct without going to Shinagawa as before. A similar inconvenience is now felt at the Yokohama Station, and preparations are going forward for the construction of a new line from Kanagawa to Hodogaya. In Nagoya similar arrangements have already been made. On private railways, the Kōbu Railway Company is constructing a new line of about a mile long, extending from its line to the Aoyama Parade Ground. Again, on the Sanyō Railway, the Government has begun to construct a temporary line, of about five miles in length, from Hiroshima to Ushima; while certain arrangements are also said to have been made at the Sendai Station for the convenience of the troops of the city.

WAR AND ITS INFLUENCE ON COMMERCE.

THE influence of the present war on the commerce between Japan and China is freely discussed by the vernacular press. The gross annual value of the trade between these two countries amounts on an average to twenty-five million *yen*, of which exports constitutes a little less than a third. This trade is virtually stopped by the present war, and its consequences, direct and indirect, on the economy of Japan must be considerable. The principal articles imported from China are sugar, raw cotton, beans, rice, hemp, and so forth, while those that are exported from Japan are yarn, marine products, matches, coal, etc. Sugar is indeed an important item in the trade with China, the value of the import last year being above three million *yen*; fortunately, the sugar season being almost over, this year's trade will be little affected. Rice is an insignificant item, the import last year having amounted to only about 140,000 *yen*; but beans and cotton are more abundantly imported. Now is just the season for the import of beans, while September and October are the months in which cotton is usually brought into Japan. The import of cotton amounted last year to as much as 8½ million *yen*. Japanese spinners have recently been purchasing large quantities of cotton from China, especially since the recent great appreciation of gold, and so the stoppage of the supply of this raw material from China must affect the spinning industry of this country to an alarming extent. In fact, spinners appear to be most unfavourably placed in connexion with the war, for while on the one hand they are precluded from getting their raw material, they lose, on the other, the Chinese market for the disposal of their goods. It is believed that the factories will be obliged for the time being to stop the running of the machines during the night and to confine the work to the day time. This state of things has affected the stock market, where the shares of spinning companies have fallen in a much greater degree than those of other companies, the shares of the Kanagafuchi Spinning Factory, for instance, having fallen 24 *yen* from May 1st to August 1st. Of the marine products that go to China, seaweed occupies the foremost place. But the Kōbun firm of Hokkaido has never prospered, and while it was struggling to establish its business on a firmer basis, the present disturbance has overtaken it, so that it has been obliged to discharge its weed collectors—whether the company will be able to survive the present crisis remains to be seen. The match manufacturers again have been subjected to continued hardships since the derangement of the money market, and the additional injury they have sustained from the closure of the Chinese market for the import of their goods has obliged not a few of them to give up their business altogether.

The effect upon shares and bonds is even more alarming:—In the latest report of the Tokyo Stock Exchange we find the following statement. Owing to the increasing tightness of the money market, prices began to fall in the early part of June, and the decline was suddenly accelerated about the 5th, when, owing to the greater urgency of the state of affairs in Korea, it began to be generally expected that the Japanese

Government was going to despatch troops. Great apprehension prevailed among the capitalists, so that men strove to sell off the shares they had in hand, of whatever kind they were, with the result that the fall in the value of securities was still more pronounced. This depressed state of the market continued to exist till the end of the month. The following table shows the decline during the last two months:—

	May 1st. <i>yen</i> .	August 1st. <i>yen</i> .	Fall. <i>yen</i> .
Nippon Suiko Shares.....	313.50...	305.00...	1.50
Specie Bank Shares	238.00...	222.00...	16.00
Nippon Railway Shares...	102.50...	94.50...	8.00
Kwansei Railway Shares..	58.40...	45.80...	12.60
Tanko Railway Shares...	79.00...	68.20...	10.80
Tokyo Railway Shares...	133.00...	120.00...	13.00
Nippon Steamship Shares	68.30...	66.00...	3.90
Overland Transportation Shares	29.20...	25.30...	3.90
Kanagafuchi Spinning Shares	66.00...	42.00...	24.00
Tokyo Stock Exchange Shares	298.00...	208.00...	90.00
Redemption Loan Bonds	110.20...	104.25...	5.95
Navy Loan Bonds	109.80...	103.80...	6.00
Railway Loan Bonds.....	109.80...	103.50...	6.30
Five per cent Capitalized Loan Bonds.....	106.00...	102.80...	3.20

Since writing the above, we learn from the vernacular press that the transactions between the Chinese residents in Yokohama and the native merchants have suddenly assumed a brisk aspect in these last two or three days, the Chinese having bought both marine and land products to the extent of above 100,000 *yen*. This sudden activity manifested on the part of merchants was due to their prudent consideration that now that war has actually broken out between the two countries they may not be able to effect transactions in future. As the result of this the market exhibited a rise of from 10 to 20 per cent. The native merchants could not derive as much profit as they might have had they kept in stock any large quantity of goods. But they have sold off all the stock in hand and are eagerly waiting for fresh shipments. Whether this state of things will continue is, however, doubtful.

THE PRISONERS OF WAR.

ABOUT the three foreigners who, says the *Asahi*, were taken prisoners, together with the Chinese when the *Tsao-chiang* was captured, some differences of opinion is said to have arisen in the Foreign Office. One party is of opinion that they should be treated in the same way as the Chinese, but this is opposed by the other party. The latter holds that at the time of the naval engagement off A-San, neither Japan nor China had yet declared war, nor had the countries to which those foreigners respectively belong yet declared neutrality, and the recent naval fight may therefore be considered as having occurred while they were being peacefully employed by the Chinese Government. As such they should not be regarded in the light of the subjects of the belligerent Power. The latter opinion is said to have at last prevailed, and it is believed that the prisoners are to be delivered to the consuls of the respective countries stationed in Japan. It is in connection with that important business, says the Tokyo journal, that Mr. Suyematsu, Chief of the Legislative Bureau, has started for Nagasaki.

The *Hochi Shimbun* has a queer proposal to make about the disposal of the Chinese prisoners. Gratefully surprised to find that they were not going to be slaughtered as they had at first expected, but that on the contrary, they receive better treatment than they were accustomed to when they were at large in their own country, the Chinese appear to be rather pleased than otherwise at having been made prisoners. This want of spirit in Chinese soldiers is not a novel thing, for it was amply proved on the occasion of the Japanese expedition to Formosa some time ago, when the prisoners were glad enough to mix with the Japanese coolies and to work with them if only a small wage was promised them. Consequently, to detain those prisoners till the end of the war

and to employ them in work disconnected with warfare, in strict accordance with international law, should be regarded as foolish. Rather they should be sent back to their homes, when the shameless wretches would not fail to speak in high terms of the treatment they had enjoyed while they remained in Japan as prisoners, and then those who hear of this would be only too desirous to taste the same pleasure to fight with any ardour when the two armies are brought face to face, so that the first thing they would do would be to throw down their arms and to run into the Japanese quarters as self-surrendered prisoners. An ingenious, if somewhat far-fetched hypothesis.

THE RAIGO-JI.

THE celebrated Raigo Temple of Omi was founded by Denkyō Daishi in the year-period Yenriaku (782-805 A.D.), during the reign of the Emperor Kammu. It was at first named Jizokyojin, but was given its present appellation several centuries later when it was restored from decay by Yokogawa Sentoku. It enjoyed the patronage of the Emperors Ogimachi and Goyōji, and since then the Temple came to be famed as one specially patronized by the Court of Kyoto. Unlike other temples of similar antiquity, the Raigo-ji remains intact from the ravages of the civil wars that devastated the surrounding districts, and its building therefore dates farther back than eleven hundred years. Most of the treasures of the temple are in a good state of preservation, not a few of them being either autographs or paintings by Emperors, distinguished Court officials, scholars or priests of former times. Since the commissioners of the Temporary Treasury Board of the Imperial Household Department visited the Temple some years ago and were struck with admiration at the rare treasures preserved in the Temple, its fame has been widely spread, and many connoisseurs go there to see them. Mr. Nakai, now Governor of Kyoto, took great interest in the preservation of the treasures when he was the Governor of Omi, and presented a sum of 500 *yen* for repairing them. Among the treasures the autographs or pictures by many of the sovereigns of olden time, such celebrated priests as Denkyō, Jichin, Kōbo, and so forth, and by Kanaoka and Michizane, are said to be found, besides many pictures by celebrated Chinese painters. They are to be aired for several days to preserve them from insects, and will be accessible for everybody to see,—a rare opportunity.

The temple has advertised through the vernacular press that the airing of the treasures will last for ten days ending on the 27th instant, and that any person will be permitted to look at them on payment of 10 *sen*. It is said that a steamer will ply during that period between Ōtsu and the front of the Temple four times a day.

DOUBLE SUICIDE.

A most determined attempt at double suicide was made in the Yoshiwara early on Monday morning, the story subsequently elicited by the police being a terribly sad though unfortunately not infrequent one. Oyasu, the woman in the case, is the daughter of a very poor farmer living in Hyōgo Prefecture. She was last year, at the age of sixteen, betrothed to a young man of Kagoshima, himself poor but of respectable parentage. During a short absence of the fiancé, the father of the girl, pressed by want, sold her to a procurer in Tokyo, the girl unwillingly consenting for her father's sake. Arrived in this city she immediately informed her lover, Yoshisada, of the fearful fate that had befallen her. Yoshisada came at once up to Tokyo, and passed night after night with her, thus preventing other guests from molesting his wretched affianced. Finding no way of raising the sum necessary to release her from bondage, the two young people resolved to die together, at about 3 a.m. on the 23rd ult., they took a large dose of morphine. Yoshida was found dead the next morning and Oyasu in a dying state. There is, it is said, no hope of her recovery. But what a strange state of so-

ciety where such things can be; and how fearful the despair must have been that led the young people to their death. It is one of those cases where suicide seems venial and even praiseworthy.

ANOTHER AFFRONT TO JAPAN.

In *Judge* of July 7th there are some drawings illustrating "Our Glorious Fourth from the Japanese Point of View." The Fourth of July, by-the-by, seems to afford as much pabulum to the comic papers of the States as the Derby Day does to those of England—and in each case they serve us out year by year a large helping of "Resurrection Pie." We do not, however, wish to find fault with the humour of the pictures in *Judge*, and to criticise them as works of art we are perhaps incompetent. We wish, however, to point out that from the ends of their pigtails to the soles of their wooden shoes the "Japanese" in the pictures are all Chinamen. The present war will, perhaps, go far to make the public of western countries understand that China and Japan are not different parts of the same country.

THE WORD-MINT.

It is by means of certain lewd newspapers of the baser sort that various abominations wishing to pass themselves off as words creep into our language. The following cutting from an American journal introduces us to a word with which we have indeed been familiar for many years, but which we now for the first time see promoted to the dignity of print:—"It appears likely that the bike will soon be established as a regular adjunct of the Chicago Post-office. A few days since the Postmaster of that city made a test of the relative speed of the bike and the regular means of transit in the city. Several messages, each for delivery on the same route, were entrusted to two messengers. One of them was to use a bike and the other was to get about with the street-cars and the elevated road. The bike came out a clear victor. The bicycle man made his route in two hours and forty-minutes and the other was forty minutes behind him." Before long, we suppose, we may expect to see also *biker* and *bikess*. The tendency to abbreviate words is doubtless useful in the long run. Thus we are glad to say *cab* and *curio* in place of *cabriolet* and *curiosity*. But many a desirable result can be obtained only at considerable cost, and at present *bike* is a painful experience.

A more serious experiment in word-coinage is *merognostic*. How many of our readers, we wonder, know what a merognostic is. The word was coined as a kind of counterblast to the word *agnostic*, itself a neologism.

The origin of the word *agnostic* was as follows. There was a party, a few years ago, at the house of Mr. James Knowles, the Editor of the *Nineteenth Century*. Among those present were Mr. Herbert Spencer and Mr. Huxley. Conversation turned upon the question of man's power to obtain knowledge of the existence of a God, a future life, and other things beyond the domain of sensual experience. It appeared that a word was needed to describe the position of those whose attitude with regard to all problems beyond the bounds of experience was one of suspense, and who regarded enquiries in such directions as trivial and probably futile. Some one suggested the word *agnostic*, meaning literally "one that does not know;" and the word thus coined has taken a permanent place in our language.

Merognostic came into being in a somewhat similar way. Mr. Joseph Cook was at the house of Mr. McCosh, the well-known theistic philosopher. Mr. Cook questioned him as to the possibility of coining a word representing the position of the man who asserts only that he knows in part, and does not claim that he knows everything, concerning God's existence and attributes, and other kindred matters in religion and philosophy. Mr. McCosh thought of Paul's famous phrase, "I know in part," and asked what was the Greek word used in this text.

The word is *μέρος*. Mr. McCosh then suggested coining the word *merognostic*, to mean the man who knows in part. The word thus aptly coined has found its way into the new Standard Dictionary, and the following extract is given as an illustration of its meaning:—"It is not true that we know everything. Nor is it true that we know nothing. It is true that we know in part. Between gnosticism and agnosticism stands the sound philosophy of merognosticism. A cautious and well-informed man will be neither a gnostic nor an agnostic, but a merognostic."

This position seems to us hardly logical. Surely, with regard to the question of the existence of God, one must either be gnostic or agnostic—one must either believe that one knows that God exists, or believe that one does not know that God exists. There is no middle course. It seems to us that the "merognostic" position is amusingly described in May Kendall's book, "That very Mab." In speaking of agnostics, she says that there are two kinds, the hard-shelled agnostic and the soft-shelled agnostic. Now surely a merognostic is either a theist, in which case he had better continue to use the older and shorter word—or else he is a soft-shelled agnostic.

NOTIFICATIONS ISSUED BY THE DEPARTMENT OF COMMUNICATIONS.

THE Department of Communications has issued the two following notifications over the signature of Count Kuroda:—

An announcement has been received from China to the effect that private messages for transmission by telegraph lines in the ownership of the Chinese Government, shall be limited to messages in ordinary English or figures included in recent telegraphic codes, and that have a definite meaning. Messages despatched direct to Shanghai or Amoy over the cable shall not come under this category.

With regard to telegrams despatched to China or to Korea and those that are to be transmitted over the inland telegraphs of China or Korea the Department will not accept for the present any responsibility in the event of mistakes, delay, or non-transmission. Those that go directly to Shanghai or Amoy or Eusan shall not be included in the above.

ANOTHER FORGERY STORY.

ANOTHER gang of forgers, this time five men, have been arrested by the Metropolitan Police. From about January to March of the present year, forged five *yen* and one *yen* convertible notes, so well executed as to deceive the eyes even of professional clerks, were frequently detected in Tokyo. This led the Metropolitan Police to institute a strict watch for the offenders. In the middle of May a rumour reached the sharp ears of the detectives that a certain robber had received a Chinese trunk from the dwelling of one Harada living in Asakusa, and that the trunk contained several bundles of counterfeit five *yen* and one *yen* notes. This awakened the suspicions of the police, and Harada and a man named Nagai, who was living in the same house, were brought before the Shita Police Office and examined. Harada simply averred that he had been entrusted with the trunk for purposes of safe-keeping, and since there was no evidence of his having either forged or uttered the notes, the police, though persuaded that the two really knew more than they chose to tell, could not extend the purview of the law beyond sentencing Harada to confinement for only ten days, Nagai being at the same time suffered to go unpunished. They were, however, marked as suspicious characters, and becoming aware of this vigilant attention paid by the police to their movements, contrived to elude observation and effect their escape, so that, for some time, their whereabouts was entirely unknown. Toward the latter part of May several forged convertible notes of strikingly good workmanship were again detected in Tokyo. The police at once concluded that they must have come from the hands of the two men, and that the knaves were lying concealed somewhere in Tokyo. These hypotheses were soon confirmed, for the detectives discovered that Nagai was living in Tokyo in a street of the Ushigome district, with his wife and children, and that he had constant meetings with another man in Asakusa. Moreover, evidence was procured of his associating with his former confederate

Harada. Nagai was also observed to frequent the shop of a certain engraver and printer in Ushigome, in whose house Harada and another person were seen holding secret meetings. The Police thought that, under the circumstances, they were justified in arresting the whole coterie. Haste was necessary, for Nagai seemed to know that he was watched. The entire gang were accordingly arrested at different places on the 3rd instant. The suspicions of the detectives were then amply justified, for in the house of the engraver, sixteen metal plates and other appliances used in forging the notes were discovered, together with 100 forged five *yen* notes and more than 500 one *yen* notes. It is said that the forgers had already uttered some 3,500 *yen* notes and 4,500 one *yen* notes. The notes they had chosen to counterfeit were the five *yen* upon which is engraved the figure of Sugawara Michizane, and the one *yen* having a representation of Daikoku on it. The public are warned to be careful in receiving notes of these kinds.

ATTEMPTED DOUBLE SUICIDE IN YOKOHAMA.

A DOUBLE suicide was attempted in Yokohama on the 6th inst. The participants were the eldest son of Ishikawa Katsuye, living at Kanda, Tokyo, named Tetsujiro (25), a coolie, who has been staying at a cheap inn at Miyoshicho, Yokohama, owned by Takenonchi Sukeji, and a girl, named Naka (18), a daughter of the inn-keeper. These people fell in love with each other, and upon this being discovered by the parents of Naka, the girl was sent to Tokyo, to the house of a relative, and Tetsujiro changed to another inn at Yokohama. Naka was lately recalled to Yokohama by her parents, and her intercourse with the lover was soon revived. The youth intended to make the girl his wife and his intention was communicated to her parents, but they refused their sanction. The couple, therefore, agreed to decamp from Yokohama, and the resolution was put into effect on the 5th inst. They passed the front of a police box at Otamachi about three o'clock in the morning, however, and their suspicious appearance attracted the attention of the police, who immediately stopped them. Examination proved that they were decamping from the town. The girl was thereupon returned to her parents, who closely confined her to the house. Early the next morning Tetsujiro stealthily broke into Naka's house and upon gaining access to her, the pair determined to commit suicide, preferring life together in the next world to a separated existence in this. Tetsujiro accordingly made two deep gashes in Naka's throat with a knife, and then cut his own throat in three places. The wounds in neither case were fatal, and with medical assistance both are expected to recover.

REPRISALS.

CHINA has forbidden the export of articles of diet to Japan. Now, says the *Fiji*, these things being necessities of life international law expressly forbids any belligerent power from prohibiting their export to another. Only in the case of munitions of war one party may forbid its export to the other; but for this no such special step as taken by China need be taken, for according to the provisions of international law, a neutral Power is not allowed to export such articles, and whenever this restriction is attempted to be broken the ships and the goods they convey run the risk of being seized. The procedure of China is quite useless, for the rice imported from China is of inferior quality, only fit to be used by the poor. It is never fit to be given to soldiers or seamen whose health should be cared for with great precaution. Thus the step taken by China in this affair is against the accepted principles of international intercourse, and Japan is therefore perfectly justified in retaliating. As a retaliatory measure the *Fiji* suggests the prohibition of the export of coal to China, which it considers as attended with this important advantage, namely, the infliction of a great obstacle to the free operations of her Navy. Coal, like food, is not legally a prohibited article in time of war, still if considered from the actual fact that coal is indispensable

to China for the carrying on of war, while the rice from that country is not used as food in the Japanese Army, the prohibition of the export of coal to China may be justified even from the military standpoint alone, and not as a retaliatory measure. The question is whether the object aimed at may be attainable. The *Yiji* thinks it possible, for though coal may be sent to Hong-kong as before and may thence be transmitted to Tientsin or other naval depôts, such roundabout carriage would not only be followed by an unusual rise of price, but with the still graver disadvantage of the supply being uncertain and tardy. Moreover, even a neutral Power would forbear to undertake such a thing, for it would not fail to awaken the displeasure of Japan, to the detriment of her future smooth relations with this country.

The price of coal is expected to fall in consequence of the fact that, apprehensive of an emergency, merchants are on the one hand refraining from exporting it, while on the other they, from patriotic considerations, have agreed together not to sell to any single foreigner above 1,000 tons. Virtually therefore, the commodity is to be disposed of to Japanese only, and the result has already manifested itself in the market. Thus the Karatsu coal has in the last few weeks fallen 13 per cent. in value. It is said that the reason why it does not fall much more is that the freight is unusually high owing to the scarcity of ships.

ANARCHISM IN FRANCE.

THE following, from an American paper of the 8th ult., are the details of the measure referred to in our telegrams in this issue as having been passed by the French Chamber of Deputies:—

A special Cabinet Council, presided over by Premier Dupuy, was held to-day. There was a complete discussion of the anti-anarchist measures decided upon by the council of Ministers the day after M. Carnot's murder. These measures will be introduced in the Chamber to-morrow and the Government will insist upon their being adopted before the close of the session.

They provide for the removal to the correctional tribunals for trial of offenders who hitherto have been sent to the assizes for trial before juries. Among the offences covered by the Ministers are incitement through the press to outrage or crime, and speeches advocating theft, murder, robbery, incendiarism, crimes against the State, and the defence of such crimes. The publication of reports of anarchist trials is forbidden under heavy penalties.

The reason for dispensing with jury trials in the cases of persons charged with the above offences is that the juries have always hesitated to convict because the Assize Judges are empowered to inflict the heaviest sentences.

THE PROSPECTS OF THE RICE HARVEST.

It is commonly believed that the rice crop of Japan will not fail in consequence of drought, and it is said that the harvest of the year promises well. In the Kwanto district, that is the provinces lying east of the Hakone Pass, Kozuke, Shimosa, Musashi, and Shimozuke seem likely to yield a good harvest, but the reverse is the case in the Chiba district, Awa, and Sagami. Of the latter three, the worst appears to be Chiba, where owing to the dearth of water, in four acres out of every ten the rice shoots have not been planted out. Awa and Sagami have no particular influence on the whole result as they are not rice producing districts of any consequence. In Tottori and Mikawa about 20 per cent. of the rice fields could not be planted, but the condition changes considerably for the better when we come to Owari and Ise, both of which are important rice districts. The provinces lying around Kyoto promise equally well, perhaps better. In Shikoku many of the rice fields suffered somewhat, but the injury is anticipated to be far less than that of crops cultivated in dry fields. In Kyushu, Kumamoto, Miyazaki, and Fukuoka many fields have suffered somewhat, but, on the whole, the harvest of that island may not be much worse than the average. In Chugoku the prospect is good, while coming to the Hokurikudo districts and further on to the north-eastern portion of the Main Island, the harvest is expected to be unusually good this year. On the whole, write

the *Nichi Nichi*, the harvest is expected to amount to about 40 million *koku* this year. Should this prophesy of our Tokyo contemporary not prove false, we must pronounce the harvest uncommonly good, for, turning to the Annual Statistics, we find that during the eleven years ending in 1892, the only years in which the yield rose above the level of 40 million *koku* were 1892 and 1890.

This prediction of the *Nichi Nichi* must be considered correct by the frequenters of the Rice Exchanges, for the quotations, which had risen to an extraordinary figure during the last few weeks, have begun to fall. The rise was mainly due to the result of the public agitation in connection with the Korean trouble, and was therefore artificial to a great extent, the reflection that the despatch of troops to a foreign land does not in any manner affect the total consumption of the staple, and the intelligence from the country reporting the prospect of a good harvest, having damped the ardour of those who were inclined to purchase, with the consequence that the market has begun to grow more and more inactive. On the morning of the 6th instant the business began at a quotation of 9.33 *yen*, but towards the afternoon it fell little by little so that at the end of the day the quotation was 9.08.

AN INTERNATIONAL ATHLETIC CONTEST.

On July 16th at Oxford the athletic competition between the Universities of Yale and Oxford took place. Of the nine events, five were won by Oxford, three by Yale, and one was a tie. Of the three events that fell to Yale, two, putting the shot and throwing the hammer, were won by the same man—Hickok.

A "Fourth of July Celebration" led some of the Yale men into slight difficulty a few days before the sports. On July 10th they were charged in the police court with letting off fireworks in High Street, Oxford, on the Fourth of July. The fact was admitted, but the accused stated that they were not cognizant of the law, and that they desisted when warned by the police. They were released upon payment of costs.

U.S. CONSULAR FEES.

OVER the signature of the United States Consul-General, the following has been issued dated August 9th, 1894:—

The United States Mint assay value of the Japanese Silver Yen has been officially fixed, until further notice, at Forty-nine and three-tenth cents (\$0.493) in United States Currency, at which rate all fees paid at this office will be received. Invoices should be made out in Silver Yen. In accordance with the foregoing, the following tariff of fees is established:—

	Yen.
For Invoice Certificate.....	5.08
For Extra Copy of Invoice.....	4.06
For Currency Certificate.....	2.03
For Landing Certificate.....	5.08
For Bill of Health.....	5.08
For Endorsement to Bill of Health.....	1.02
For Personal Effects Certificate.....	1.02
For Emigration Manifest.....	.51

To avoid delay in transacting business at this office, persons paying fees are requested to present the exact change.

THE "TENKYO MARU."

THE *Yiji-Shimpo* says that the *Tenkyo Maru*, a Japanese-owned sailing vessel of 1,148 tons burden, which left Fukuyama, Hokkaido, on the 21st of June last with a cargo of timber for Tientsin, and which has not been heard from since her departure from Hakodate, is now reported to have been captured by the Chinese. A telegram, which arrived at Yokohama on the 5th inst., announces that a Japanese sailing vessel loaded with railway sleepers, which had put into Taku, has been captured by the Chinese. After some investigations the ship was allowed to leave the port, but her cargo was confiscated.

PREMATURE MOURNING.

WE read in the Shanghai papers that nearly all the shipping and hulk flags in the river were at half-mast on the 30th ultimo, owing to the sad end of the officers of the *Kowshing*. It is curious

that such a firm conviction should have existed as to the death of Captain Galworthy and his officers. The *North-China Daily News*, writing on the 31st ultimo, said:—

Of one thing there is no doubt; all the foreigners on board were drowned or shot, among them being Mr. von Hanneken, the builder of the Wei-hai-wei forts, who, it is said, was going over to Korea to superintend the erection of forts, and the Japanese were so vindictive that to make sure of killing him, they killed all whom they could reach.

It will be an agreeable surprise to the people of Shanghai to learn that the men they prematurely mourned for are safe and sound, having been rescued by the Japanese, and the fact may teach the *North-China Daily News* the value of scrutinizing before publishing the strange stories brought to it of Japanese vindictiveness and so forth.

THE RECENT GALE IN NAGASAKI.

A VIOLENT gale swept over Nagasaki Prefecture on the 24th ult. The wind commenced to rise about 8 o'clock in the morning, and by midday had developed into a violent gale, only sinking down some four hours later. A large amount of damage was done during the tempest, but no full reports have yet been received from the Prefecture. The following is a brief return of damage caused in the town of Nagasaki and the Nishi-sonoki, Minami-takagi, and Kita-takagi Districts:—15 persons drowned, 2 persons injured, 25 houses, including the Town Office and an elementary school, completely overthrown, 61 houses partly blown down, 183 houses damaged, 57 boats wrecked, 9 persons missing. Much damage was also done to fences, stone-walls, trees, etc.

MANIFESTO OF THE RADICAL PARTY.

THE following is an epitome of the manifesto of the Radicals. A political party owes its existence to a certain fixed principle, and a party that lacks this foundation is like a man devoid of conscience. And yet there are many so-called parties that are defective in this very essential point, as witness the coalition between the followers of the Constitutional Reform Party and the Conservatives, the combination between the Anti-mixed Residence advocates and those maintaining the very opposite, and the league between the Strict Enforcement Party and the Progressionists who are, after all, the advocates of a moderate policy towards foreign countries. The reason the Radical Party has attained its present prestige is solely because it has fought against oppression, and because it has firmly upheld its principles and has pursued its objects with sincerity and undivided attention. The Party will continue to pursue the same policy in the future. The programme which the Party had at first pursued in connexion with the Diet was chiefly negative, and was confined toward effecting re-arrangements in the Administration, retrenchment of its expenses, reduction of land tax, and so forth. Seeing that the obstinacy of the Government and the ignorance of the House of Peers stand in the way of the successful and speedy introduction of those reforms, and convinced at the same time of the importance of carrying out other reforms that are now needed, the Party has decided to adopt at the same time a positive policy with regard to such affairs as commerce, navigation, the Navy, colonization, iron founding, and so forth. Especially will the attention of the Party be directed to the Navy and navigation, thinking that to attain the leadership in the East and to diffuse the national influence throughout the world the Navy should be strengthened so that it may be enabled to protect the national commerce and to carry out projects of colonization. Now that the nation is engaged in war with China, everybody should forbear from creating any dissension in the interior and should strive to present an attitude of cordial and earnest union of the people towards the foe. The Party therefore will refrain from any contest with the Government and will defer these matters to some other occasion. What the Party expects from the Government in this juncture is the utmost retrenchment of its internal expenses, and the appropriation of the money thus saved toward

war expenses; while after the war is ended the same retrenchment should be maintained and the military and naval equipment of the Empire should be made complete. The programme of the Party, that the Navy should be considerably strengthened, was based on mature reflection on the part of the Radicals, and though the increase of strength desired by the Party is far from being accomplished, still the adherents of the Party are of opinion that their efforts have not been entirely without effect. For the Navy has already proved itself to be of great service, and so long as an efficacious Navy exists in the country no hostile fleet can enter the Japanese waters and inflict an injury on the coasts. The strengthening of the Navy is indeed the question of paramount importance, to be followed by attention to commercial and colonial affairs. Now is just the time to establish the national policy and to enhance the national influence. The backward development of the Orient is primarily due to the imperfect prevalence of the principles of freedom and democracy, and a party which rests on the basis of democracy and liberal principle, as the Radical Party does, has a very grave and important position. Now when a general election is about to take place, the nation is engaged in the tremendous task of war with a foreign Power, and so it is incumbent upon those who uphold liberal principles to return a Party capable of organizing an efficient Diet equal to the present emergency. It is requisite that no irresponsible action should be suffered to invite another dissolution, as in the last session of the Diet. The urgent business of the State must now be considered in a spirit of mutual forbearance and coöperation.

THE "SPECTATOR" ON THE SITUATION.

On the eve of the Franco-Prussian War, the London *Spectator*, always gently oracular, said something like this:—"With France in the field, it is impossible to predict defeat, or even disaster. But history never halts, or history is on Prussia's side. Therefore, disaster or defeat is not probable for Prussia either." The London journal's ideas about the Korean complication somewhat similar:—

We can hardly suppose that Russia and England will permit a war between China and Japan; but the chance of one is coming very close. The Government of Korea has been oppressing its Japanese settlers, and the Japanese, who have a right to send troops there, have landed six thousand men, taken possession of the capital, and demanded certain "fiscal reforms." The Chinese, who also have a right to send troops, are rolling forward a small army just to see what the Japanese are about, and the idea at Shanghai is that the two armies will come into collision. That would not matter but that Korea is full of fine harbours, and most tempting both to Russia and Great Britain, and they will probably try to preserve the *status quo*, and prevent Korea from falling to either China or Japan. If it comes to a fight, the Chinese will probably win on land, but they may sustain disasters at sea, which will render them willing to accept a compromise.

The forecast here contained as to the results of a fight between the two Powers is as wide of the mark as the *Spectator's* morality is quaint. There would be no reason, says our contemporary, in effect, why Japan and China should not fight about Korea, but truly Korea has such nice harbours that to see them in possession of another nation would be very tantalizing to England and Russia. Therefore the two big European Powers will probably act as guardians of the peace. That is delightful. "We don't care a straw about your cutting each others' throats, but the prize of victory must not be anything particularly delectable that we may wish to appropriate ourselves whenever we're good and ready."

THE FIGHT ON THE 25TH ULTIMO.

Now that full information is forthcoming about the naval engagement on the 25th ultimo, it is seen that the Chinese ships made a miserable fight. There were four Chinese vessels, namely, three fighting ships and a transport. Of the combatant vessels one was captured; another was so terribly battered that she had to be run ashore in Caroline Bay and abandoned; and at third succeeded in reaching Wei-hai-wei. The

transport was sunk. Concerning the ship that escaped to Wei-hai-wei, the *N.-C. Daily News* says:—

One warship has returned from the engagement bearing every sign of having fought gallantly. She has reached Wei-hai-wei in safety, but bearing also every proof of the hideous perfection of modern destructive science. The guns and crews were blown to pieces, the forward barbettes was smashed to atoms, and blood and destruction were everywhere.

In return for all this, what was the injury suffered by the three Japanese ships? One shell penetrated into the engine-room of the *Naniwa Kan* and, failing to explode, did no hurt to anyone. We do not think that such a glaring disparity of results has ever been recorded in a naval fight. It is true that the Japanese ships were far superior to the Chinese in every respect. Still, the latter carried big guns, which, had they been served with any degree of skill and resolution, ought to have produced some impression. One hit however, was the sum total of their achievements in more than an hour's fighting, and that was an abortive hit, owing to bad ammunition. Of course bad ammunition does not mean bad gunnery, but it does mean bad equipment or careless inspection. Every trained artillery officer knows that fuzes are among the parts of a gun's equipment demanding the closest and most frequent scrutiny, and if shells fail to explode, that is no better excuse for defeat than it would be to explain that the guns themselves had rusted and become unserviceable. Apparently we are forced to infer from the fight on the 25th ultimo that modern ships and guns are virtually useless in Chinese hands. It was the very first occasion on which ships of that class manned and officered by Chinese came into action, and the result was simply miserable.

A CHINESE ACCOUNT.

The Chinese account of the fight on the 25th ultimo, when the *Tsao Kiang* was taken and the *Kowshing* sunk, is worth reproducing:—

A fight took place on Wednesday between the Chinese twin-screw steel cruiser *Chi-yuen*, 3 guns, 2,300 tons and 2,800 h.p. and a Japanese man-of-war, in Korean waters. The engagement commenced in the morning, and according to the Chinese accounts, lasted some four hours. At the commencement the Chinese sailors refused to work their guns, but on five of them being shot by their own officers, the others fought so well that they raked the Japanese fore and aft and carried away his bridge, killing the Japanese Admiral; but the Japanese picked off all exposed persons on the *Chi-yuen* and exploded a shell on her deck killing a lieutenant and men working one of the guns. The *Chi-yuen's* own steering gear was carried away and her forward guns disabled, but she steered with her twin screws and replied to the Japanese with her after gun with such effect that the Japanese surrendered, hoisting the dragon flag over a white flag, but before the *Chi-yuen* could take possession, several Japanese men-of-war hove in sight and the Japanese rehoisted his flag, and the *Chi-yuen* made all haste to get away and succeeded in reaching Wei-hai-wei for repairs. There is no doubt that she was badly damaged. On Thursday night a fleet of nine Chinese men-of-war, in fighting trim, left Wei-hai-wei to revenge the disaster to the *Chi-yuen*.

CONTRIBUTIONS.

PATRIOTIC enterprises to raise money either for the war fund or to provide comforts for the soldiers and the seamen stationed in Korea have now become universal throughout the country. Ladies of the highest rank are actively engaged in this patriotic cause, and we now learn from the vernacular press that, inspired by Prince Arisugawa and other princes of the Blood, who are solicitous to send comforts to the men who are despatched to Korea, several ladies of title and others have issued circulars to their female friends to ask for their contributions toward the scheme they have in contemplation. The disposal of the fund thus raised will be left to the care of Viscount Yamao, High Steward to Prince Arisugawa, and those to whom the circulars have been forwarded are requested to send their replies to the Viscount before the 10th instant. Among the names of the originators we find eight princes (not of the Blood),

fifteen marchionesses, wives of the Ministers of State, and many other distinguished ladies.

The Tokyo Industrial and Commercial Club has also started the same project, and the names of contributors to the first installment have been advertised in the newspapers. The money raised in this first installment is 577 yen, Messrs. Okura Kibachiro and Murata Kichigoro, who have contributed 100 yen apiece, being at the head.

The Navy has followed the example of the War Department and has established a Contribution Office. Mr. Takemiya Naikai, member of the Tokyo City Assembly, has submitted a letter to the Chairman of the Assembly, Mr. Kusumoto, urging him as to the advisability of providing for the maintenance of the families of the soldiers or seamen, inhabitants of the metropolis and on the retired list, who, in connection with the present trouble, have been ordered to rejoin the army or the fleet.

It is said that the contributions to the War Department have amounted up to the 1st instant to a sum of 50,000 yen in round numbers. The contributions in articles consists mostly of tobacco, straw sandals, and towels.

ANNIVERSARY.

On the occasion of the twenty-fifth anniversary of the establishment of the submarine telegraph with the Far East the Hongkong General Chamber of Commerce telegraphed as follows:—"The Hongkong General Chamber of Commerce begs to offer its congratulations to the Telegraph Companies on the occasion of their twenty-fifth anniversary of telegraphy with the Far East, and is pleased to have the opportunity of wishing them a long and continuous career of prosperity." To this Sir John Pender replied as follows:—"Your telegram of congratulation on the occasion of the celebration of our 25th anniversary is peculiarly gratifying to me, coming as it does from the merchants of Hongkong, whom it always has been, and will still be, our desire to serve."

GO SEIKEN.

The *Asahi Shimbun* and other papers state that Go Seiken, the Chinaman whose name is so well remembered in connection with the assassination of Kim Ok-kyun, is now employed as a cook in the Chinese Legation, his work being merely nominal. It was he who accompanied the ill-fated Korean to Shanghai, suddenly disappearing immediately after the murder. What relation he had with the matter is not known. Still, querulously interpolates the *Asahi*, it is unbearable that a man of his calibre, who must have been in the secret and connived at the act, is employed by and under the protection of the Chinese Legation in Tokyo.

DEATH OF A BANK COMPRADEORE.

Six of the principal Chinese residents met at the Settlement Police Station on Sunday night to discuss matters relative to the status of the Chinese in Yokohama. While the discussion was going on, it was noticed that the Compradore of the Chartered Bank of I. A., & C., one of the party, was growing drowsy. His friends endeavoured to arouse him, but their attempts proving futile he was removed home. He rallied under treatment, but died at 11.30 the same night from an attack of apoplexy.

COLLISION AT SEA.

A COLLISION took place between the *Tomamaye Maru* and the *Kaiyeki Maru* off the light-house at Iwatsubo, Takashima-gun, Hokkaido, on the 1st inst. at 2 a.m. The former steamer sank. The passengers and crew were rescued by the *Kaiyeki*, but the cargo went to the bottom along with the vessel.

MR. HIRANUMA AT HIS OLD TRICKS.

SOME time ago Mr. Hiranuma Senzo, the Yokohama money lender, raised an action for fraud in the Tokyo Local Court against Baron Yamazaki, and Judge Yamaguchi, who was bribed

by the plaintiff, kept the peer in custody for over sixty days. Judge Yamaguchi was then acting as Chief Preliminary Judge of the Local Court. The case was finally handed to the other Preliminary Judge, who soon discovered that the Baron was guileless, and he at once ordered his release. The Baron has now brought an action for false accusation against Mr. Hiranuma.

YOKOHAMA RICE EXCHANGE.

THE dispute existing between the promoters and supporters of the Yokohama Rice Exchange, which was projected by three different organizations, and the establishment of which was only lately permitted in consequence of a union of these parties, has again assumed a very serious aspect. The distribution of shares is said to be the cause of the trouble. About ten o'clock on the night of the 1st inst. fifty rice merchants of Kanagawa and suburbs entered the Exchange building at Hattasakicho and loudly demanded a settlement from the officers. The two leading promoters, Messrs. Karobe Yohachi and Okazaki Yasubei, received the party and answered questions laid before them by the interviewers, who, not satisfied with the replies, began to behave in a disorderly manner. The police were finally called in and the discontented visitors were put out. The rice dealers left the place murmuring greatly. They soon proceeded to the office of the Yokohama Guild of Rice Merchants at Hagoromocho, where they partook of cups of *sake*, and then becoming greatly excited set out to attempt another interview with the officers of the Exchange. They were prevented, and were dispersed by the police.

THE DOCTRINE OF TWO-FOLD TRUTH.

IN our own time, when reason and revelation are in conflict, our modern apologists endeavour to "harmonise" the contradictions by obscuring them in a cloud of words. The method was not unknown to the Scholastics, the orthodox among whom employed it in defence of their faith. One of the most notable of these was Peter the Lombard, Bishop of Paris in the twelfth century. In his *Liber Sententiarum* he collected various contrary opinions concerning the doctrines of religion, and, by subtle distinctions in the definition of the terms used, he endeavoured to harmonise the contradictions. His work was for centuries a city of refuge for the hard-pushed theologian, and might be studied with profit by many a modern apologetic divine.

Opposed to this class of thinkers we find those who waged a bold fight for liberty of thought, and who endeavoured to escape the censure of the Church by the ingenious doctrine of two-fold truth. Few people realise the width and the depth of the freethought movement in Europe in the thirteenth and fourteenth centuries. But the Church being omnipresent and all-powerful, the unorthodox had in some way to make their peace with the ecclesiastics. The doctrine of two-fold truth took its rise at the University of Paris. The Crusades, a glorious manifestation of the strength of ecclesiastical Christianity, had the unfortunate effect of undermining faith in those ideas from which the Crusading enthusiasm sprang. Christian warriors hurled themselves upon the East, and the East revenged itself by sending Arabian Philosophy and Byzantine logic to sap the foundations of Christianity. During the first half of the thirteenth century, strange doctrines began to be heard from the professorial chairs in Paris. In 1247, one Jean de Brescain, reproved by the bishop for his errors, explained that he had maintained the condemned doctrines not as "theologically," but only as "philosophically" true. Twenty-five years later we find that, obviously in consequence of the spread of Averroistic ideas, the resurrection, the creation of the world in time, the changeableness of the individual soul, and other important Christian dogmas, are denied in the name of philosophy, while it is at the same time admitted that all these doctrines are "true according to the Catho-

lic faith." But that the real attitude of the freethinkers was one of antagonism to Christianity, and that the theory of two-fold truth was merely a subterfuge, is shown by some of the doctrines that were visited with the censures of the Church: "Nothing more can be known because of the science of theology." "The Christian religion prevents us from learning anything more." "The only wise men in the world are the philosophers." "The teachings of the theologians are based upon fables." It is not surprising that the Church retaliated on the freethinkers by founding the Inquisition, for, agreeing with Tertullian that "philosophy is the parent of all the heresies," and holding honestly the dogma that error was visited by eternal punishment, it was in truth an act of mercy on the part of the Church to stifle philosophy by the strongest argument at their disposal—fire.

And yet even after the Inquisition was founded free-thought continued to flourish, and above all in Italy, the very stronghold of the Church. It continued to shelter itself under the doctrine of two-fold truth. One of the most noteworthy of the Italian freethinkers was Petrus Pomponatius, a university professor, extremely popular among his students—for the students, it appears, preferred unorthodox professors. When a new professor was appointed, one of the first questions the students wished him to discuss was that of the immortality of the soul, and the popularity of Pomponatius suggests that the Christian view of the matter was not that most acceptable to the students. In his work on the immortality of the soul, published in 1516, Pomponatius adopts a very respectful attitude towards the Church, but he none the less boldly discusses "eight great difficulties" in the doctrine of immortality. We have not space to discuss all the points put forward by Pomponatius, but we shall allude briefly to one or two.

One of the commonest arguments for immortality in the time of Pomponatius (and we seem to have met with it also at a more recent date) runs as follows:—Since all religions maintain immortality, then if there is really no such thing, the whole world is deluded. Pomponatius replies that this after all is not such a serious matter as might at first sight appear. For we must remember that there are three religions, those of Moses, Christ, and Mahomed: they are either all three false, in which case the whole world is deluded; or else at least two of them are false, in which case the majority is deluded. Spiritual apparitions are explained by Pomponatius to be the delusions of the excited fancy or the deceptions of priests. Those that imagine themselves to be "possessed" are really sick. Pomponatius also deals with the statement, frequently urged in defence of a belief in immortality, that sinners deny it, while wise and good men believe it. Pomponatius vigorously combats this idea. Many wicked men, he says believe in immortality and in eternal punishment, but are carried away by the strength of their passions. On the other hand, some of the greatest and wisest men have held the soul to be mortal. He gives many names, and among others, "our own countrymen, Pliny and Seneca." But in the last chapter of his work he expresses submission to the judgments of the Church. Since there are no natural proofs of immortality, it rests solely on revelation. More than two centuries later Hume concludes an essay on immortality with almost the same words, but expressed after Hume's manner in an ironical form. Since, he says, reason is unable to persuade us that the soul is immortal, so much the more must we be thankful that this truth is established by revelation. And yet in England in the eighteenth century Hume did not venture to publish what Pomponatius had freely given to the world in Italy in the sixteenth. By the urgent advice of his friends Hume's essay on the Immortality of the Soul was cut out from the volume in which it was to appear, and it was not published till some time after his death. Hume had not, apparently, as much con-

fidence in the doctrine of two-fold truth as had Pomponatius.

Pomponatius exposed as freely as Hume some of the other logical difficulties in the dogmas of Christianity. He criticises the Christian idea of God, and asks, as many have asked before and since, how we are to reconcile the doctrine of the omnipotence, the omniscience, and the goodness of God with that of the responsibility of man. Suppose that I have the choice between two courses of action, one good and the other bad: if God is omniscient, he knows what I am going to choose; if God is omnipotent, the power that makes the choice is his, not mine; how then can I be responsible for the choice? And if God is good, how can he punish me for a sin that he has foreseen from all eternity, and that was committed in virtue of one of his own omnipotent acts of will? Pomponatius also attacks the belief in miracles, and tells us that the efficacy of relics depends upon the imagination of the credulous, and would be just as great if the relics were the bones of a dog. We know what this bold thinker would say of the faith-healing exhibitions of our time.

Some have been disposed to blame Pomponatius for taking refuge in the doctrine of two-fold truth. We must not judge him harshly: "Let him that is without sin among you cast the first stone." How few there are that do not modify their views more or less to suit the society of which they form a part. Who among us would be found to possess the magnificent courage of Bruno, who, when sentenced to the stake for refusing to recant his heretical opinions, looked his judges calmly in the face and said, "I suspect you pronounce this sentence with more fear than I receive it." But the martyrdom of Bruno has made his fame immortal, while Pomponatius, as a philosopher perhaps the greater of the two, is almost entirely forgotten. For to Bruno Truth was One.

A SUGGESTION FOR THE BENEFIT OF KOREA.

THE *Yiji Shimpō* makes a new suggestion for the welfare of Korea. It is to induce the inhabitants of Japan and Korea to intermarry. This, considers the *Yiji*, is no novel thing, but is warranted by the old usage of the two countries, especially of Japan, where Koreans were freely allowed to naturalize themselves and settle. There are many families in Japan avowedly descended from these Korean settlers, the families that go by the name of Hata, for instance, being unmistakably of Korean descent. The *Yiji* is of opinion that at least two or three per cent. of the inhabitants of Japan must have Korean blood in their veins. The Koreans are most closely allied to the Japanese, and if the experiment of intermarriage has been attended with such success in Japan, there is no reason why a similar result should not follow the same process on Korean soil. The insufficient intercourse between the two countries and the increasing divergence of their manners and customs have since tended to set up a barrier between the two. But now Japan is to play the part prescribed to it by Heaven, of diffusing the light of civilization through the Orient, friendly relations between Japan and Korea are destined to become more and more intimate. At this juncture, it is conceivable as well as important for the permanent interest of Korea to revive the old practice of intermarriage and to fuse the two races into a homogeneous whole, for, so long as the improvement be confined to outward, conventional points, it must be impossible for that country, the inhabitants of which are intellectually inferior to the Japanese, to march hand in hand with Japan in the progress of civilization. Such a radical improvement of the Koreans is indeed of paramount importance, for competition in international relations is becoming keener throughout the world, and this competition is only too likely to be followed with that between different races. When such an occasion arrives, the Japanese, who occupy the leading position in the Orient, should extend their assistance to their allies and should, by preserving the vitality of the Oriental races, contest for supremacy in

the arena of the world. That things will come sooner or later to such a pass is evident from the general tendency of the world, and the assimilation of Japanese and Koreans would be simply a preparation for that gigantic struggle. The multiplication of the Japanese people is remarkable, and it seems that Heaven has endowed them with the mission of assimilating others.

RAISING OF A NATIONAL LOAN.

THE Government is contemplating, says the *Hochi*, the raising of a loan to defray the war expenses, and the matter will, it is believed, be made public in a few days, as the Emperor's sanction has been obtained and the matter has been discussed by the Privy Council and been gone through. As to the amount and the rate of interest nothing is yet clear, but the *Hochi* hears that the first application will be for fifty million *yen* or so, while the interest will be merely nominal, the loan being a patriotic loan, so to say.

The same journal has an observation to make in this connection. It is uncertain whether the loan is to be raised from the peers only or from the public at large; the interest will, it is believed, be 3 per cent. The loan being patriotic, the peers would be most glad to furnish the amount required, provided it be within their capacity. This however, thinks the *Hochi*, is doubtful. The Treasury will therefore be obliged to fall back upon the general public. But here a difficulty is likely to arise about the rate of interest, for, whereas the Treasury would not offer more than 5 per cent., the people would probably be unwilling to invest their money unless the rate is above 6 per cent., seeing that the market price of the Redemption Loan Bonds has already fallen below par. Should the Treasury therefore undertake to raise the loan from the public at large at such a low rate of interest as is said to be contemplated the attempt would very probably fail. The Treasury is therefore advised to refrain from taking such a step, and to rely for the present upon the reserves in the Treasury. The reserves in the Treasury are in no wise small, and can readily provide for an extraordinary disbursement of 15 to 20 million *yen*. Under the circumstances, the step believed to be contemplated by the Treasury is considered inadvisable in the present condition of the market, especially as the time of the opening of the Diet is drawing very near.

POST OFFICE NOTIFICATIONS.

THE Minister of State for Communications issued on Saturday a notification to the effect that the Japanese Post Offices at Tientsin and Chefoo will be closed until further notice.

Another notification is also issued to the effect that postal money orders to be delivered in British India through the Hongkong Post Office, which were temporarily stopped, will be transmitted after this date. The amount of percentage deducted—to be paid at the Hongkong Post Office for the Indian Post Office—is $\frac{1}{100}$ of the amount of any Order.

ENGLAND AND THE KOREAN AFFAIR.

THE *Nippon* says that Great Britain has intimated to the Chinese Government, through her Representative in Peking, her intention of maintaining a neutral position in connection with the war between China and Japan, and the same intimation is said to have been made to the Japanese Government through her *Charge d'Affaires* in Tokyo about the 3rd inst.

PORTUGAL AND THE KOREAN TROUBLE.

THE *Nichi Nichi Shimbun* says that the Portuguese Government has intimated to the Japanese Government the intention of that country to maintain a neutral position during the war between Japan and China.

DISCOVERY OF COAL.

THE discovery of a rich coal seam was lately made at Kimuri-mura, Kami-Mizu-uchi District,

Nagano Prefecture. The number of the seams is five, occupying an area of 2,308,250 *tsubo*, and each is over eight feet in thickness. The mineral is said to be of a superior quality, and smokeless. Mr. Matsumoto Keijiro, on behalf of the other discoverers, has arrived in the capital on business connected with the commencement of mining operations.

UNITED STATES SILK IMPORTS.

THE following are the imports of Raw Silk at the Ports of New York and the Pacific Coast:—

June, 1894.	Bales.	Lbs.	Value.
New York	764	191,442	450,710
Pacific Coast Ports ...	1,397	193,447	676,183
	2,161	384,889	1,126,893

The following are the imports of Waste, Noils, and Cocoons in the same period:—

New York	274	83,150	31,720
----------------	-----	--------	--------

SEVERE STORM IN SOUTH DAKOTA.

A TELEGRAM from New York, alleged to have been received in Tokyo by a private resident on the 6th inst., says that a violent hail-storm swept over South Dakota on the night of the 5th inst. Over three hundred houses and churches were overthrown during the gale, and more than one hundred and ninety persons were killed or wounded. A great number are reported missing.

"THE LAW'S DELAY."

OF this an American court has recently furnished an instance that would have surprised Hamlet himself. In Nebraska a man was convicted of theft, and sentenced to a year's imprisonment. A new trial was asked for, and in due time the Supreme Court decided that the prisoner was entitled to a new trial. But the man had already served out the sentence and had been discharged!

STREET IMPROVEMENTS.

A LONG desired improvement is now in progress on the Daikanzaka, more familiarly known as Hegt's Hill. The approach to the Central Bluff is being widened by some six feet along the whole frontage of No. 74, and will be carried further down as opportunity presents. The bank will be strengthened by a strong wall of stone on that side and a better drainage arrangement will also be carried out.

NEW JAPANESE MINISTER TO ITALY.

MR. NAKAJIMA, Japanese Minister to Italy, was released from his post on the 7th inst., and the position given to Mr. Takahira, Japanese Resident in Holland, who is now promoted to the rank of Envoy Extraordinary and Minister Plenipotentiary. Mr. Nakajima has been made an Imperial Nominee in the House of Peers.

THE GALE.

THE gale is now blowing strongly from the south-east, having veered round from the north during the night. Heavy rainfalls at frequent intervals, while other indications are apparent that we are experiencing here the tail-end of a typhoon.

PORTUGAL AND THE CHINA-JAPAN WAR.

IN obedience to instructions from the Portuguese Government, its *Charge d'Affaires* in Tokyo has intimated to the Japanese Government that Portugal will maintain strict neutrality during the war between China and Japan.

THE MILITARY HEAD-QUARTERS.

By an extra of the *Official Gazette* on Sunday, it was announced by an Imperial Order signed by the Ministers of State for War and for the Navy, that the military Head-quarters, hitherto established at the General Staff Office, had been removed to the Imperial Palace.

HELPING THE RED CROSS SOCIETY.

THE Red Cross Society of Switzerland has contributed 2,000 francs towards the funds of the Red Cross Society of Japan. The intention of the foreign Society was wired to the Japanese Society, and the President of the latter organization has sent a telegraphic message of thanks to the foreign association.

KOREAN AFFAIRS.

According to later telegrams, it seems that the final fall of A-San into Japanese hands took place on July 30th, the day after the battle of Sōng-hwan. The Director of the Post Office at Fusan is reported to have wired to the Department of Communications as follows:—"There was fighting at A-San on the 29th and the 30th of July. The Chinese army was completely vanquished, and the Japanese troops have already commenced a return march to Sōul." It is not likely that all the Japanese troops left A-San so soon after their victory. If the report that the Chinese fled in the direction of Hong-ju be true, it would have been necessary to send a sufficient force in pursuit of them.

The following account of the battle at Sōng-hwan is published in the *Nichi Nichi Shimbun*, based on the latest telegram:—"Our army was drawn up in battle array at Chbi-won, while the Chinese troops were posted at Sōng-hwan and Phyoŋ-thaik. Now between the two armies lay a tract of rice swamp through which flows a small river. Our troops fought very hard with this river between themselves and the enemy, but it being very difficult to cross this stream under fire a party was despatched by way of Chik-san, so as to make a flank attack on the Chinese. The Chinese were not prepared for this move, and they were easily put to flight." The number of Chinese engaged in this fight is stated to have been 2,800. Nothing is known about the strength of the Chinese army at the head-quarters at A-San. But it is surmised that at least an equal number must have been stationed there. From the circumstance that the defeated Chinese fled in the direction of Hong-ju, it is probable that there was at the time no Chinese war-vessels in the Bay of Nam-ŷang.

Concerning the Chinese war-vessel *Koitsu*, which escaped into the Bay of Nam-ŷang after the naval engagement of the 25th ultimo, it is stated that she was burned by her crew, probably to prevent her capture by the Japanese.

There are rumours of a second naval engagement, but no report has been received by the Authorities. The first and second Naval Reserves have been called out in the districts west of Osaka.

The *Yiji Shimpō's* Sōul correspondent, writing under date of the 26th ultimo, gives the substance of the representation said to have been personally made to the Korean King by the Japanese Minister shortly after the recent reorganization of the Government. It is in the following strain:—"The reorganization of your Majesty's Government, and the endeavours which are now being made to effect administrative reforms, betoken an advance in the direction of civilization. But what has thus far been accomplished is only a preliminary step; the real work is yet to be undertaken. Under the circumstances, it is my earnest prayer that the task of reform may be prosecuted with unflinching zeal and perseverance. All the offices from that Prime Minister down to the lowest should be filled by men of real ability, irrespective of birth or family. Another point of great importance is that the principal officials of State should be invested with considerable discretionary powers. What the ordinary Ministers of State cannot decide themselves, they should refer to the Prime Minister, and only when the latter is unable to deal with it the matter should be referred to Your Majesty's personal judgment. The present system of submitting all affairs of State, however trifling, to Your Majesty's personal consideration, is calculated to cause much inconvenience and delay in the conduct of business. Concerning the reforms which are about to be introduced, I sincerely hope that they will be elaborated on the basis of the programme I recently had the honour of explaining to Your Majesty. On minor points I refrain from expatiating, it being my hope that the details of reform will be worked out in conformity with the customs and practices peculiar to the country. I must respectfully call Your Majesty's attention to one more sub-

ject, a subject to which I would fain avoid making any allusion. I refer to the necessity that all interference of the ladies of Court in politics should be strictly prohibited. In my country, as in all other civilized countries, the Household Department is strictly kept apart from politics. This is a measure absolutely necessary for the permanent prosperity of Your Majesty's dynasty." At the time this representation was made, the Queen, it is stated, was seated behind the King. His Majesty is said to have warmly thanked Mr. Otori for his kind advice.

Concerning the Queen, reports are not agreed. It has hitherto been authoritatively reported that she was divorced and deprived of rank. It is now stated by some correspondents that she is still residing in the Palace as Queen. The latter report as yet lacks authoritative confirmation. Possibly she may not have been divorced, but reduced to the rank of a Court Lady.

The Japanese army sent against the Chinese at A-San, is said to have been attended by three Korean military cadets, two sub-officers, and ten men. Of the privates, five are said to have deserted while on the way.

The work of reform is now being daily considered by Sixteen Commissioners, under the Presidency of Kim Koshu. Their deliberations are attended by the Regent in person. Animated discussions are not uncommon, but things are said to be moving on the whole quite smoothly.

On Monday the Authorities supplied the press with an account of the Naval engagement off the island of Phung-do. It is on the whole nearly identical with the version recently reproduced in these columns from the *Nichi Nichi Shimbun*. There are, however, a few details which were omitted in the earlier report. The names of the Japanese warships that took part in the engagement, have, for instance, been given out officially for the first time. They are the *Yoshino Kan*, the *Naniwa Kan*, and the *Akitushima Kan*. In the former narrative it was stated that the Japanese vessels were on their way from In-chhön, when they encountered the Chinese. It is now reported that they were going to that port. The firing is said to have been kept up with great energy for a space of an hour and twenty minutes. The sinking of the transport *Kowshing* took place at 1 p.m., that is nearly five hours after she was first stopped by the Japanese war-vessel *Naniwa*. There was not a single person injured on board the Japanese men-of-war. The *Kowshing* had on board two General officers, four Colonels, ten Lieutenants, 1,100 men, and ten field-pieces.

According to the latest reports from Korea, it is stated that, since the defeat off Phung-do, the Chinese war-vessels have entirely deserted Korean waters, where, consequently, the Japanese war ships are ranging free and triumphant.

The latest Korean intelligence has been brought by the mail packet *Tagonoura Maru*, which arrived at Fusan on the afternoon of the 4th instant, leaving In-chhön at 6 a.m. on the 2nd. According to her report, things are quiet both at In-chhön and Söul. It is also reported that the munitions of war taken at A-San had already been transported to In-chhön, where they were heaped up in huge "mountains."

The *Chu-o Shimbun* publishes the following telegram from its correspondent at Moji, under date of August 5th, 2.30 p.m.:—"The 2,000 Chinese troops sent from Chefoo are believed to be encamped at Hong-ju together with the 1,000 who fled there after their defeat at A-San." This telegram is doubtful, at least we have not yet heard that there were Chinese troops so far south as Hong-ju, nearly thirty miles from A-San.

The Tokyo News Agency forwards us the following telegram, dated Shanghai, August 5, 3 p.m.:—"This evening a war-vessel and a transport with troops densely packed will leave Taku, their destination being probably Chhöl-do." Chhöl-do is an island off Wt-ju.

No news of hostilities either on land or sea has reached Tokyo. The greater part of the Japanese army that recently vanquished the Chinese at Söng-hwan and A-San, is believed to have turned back for Söul either on the 1st or the 2nd instant. So it must have reached the

Korean capital on the 5th at the latest, and the Japanese troops are believed to have left Söul about that date to meet the Chinese army which is marching upon the capital from the north. The vanguards of the two armies must have already encountered each other somewhere between Söul and Ph्योंg-yang. Consequently important news is hourly expected in Tokyo. The exact number of the Chinese troops that are marching from the north is not known, but their strength is believed to be not less than 10,000, some people even putting it at 15,000.

The work of administrative reform is stated to be making steady progress. According to the *Nichi Nichi Shimbun's* Söul correspondent, writing under date of July 31st, the new Official Organization about to be promulgated is said to be modelled after the Japanese Government. The affairs of state are to be distributed among the eight Departments of Home Affairs, Foreign Affairs, Military and Naval Affairs, Justice, Finance, Agriculture and Commerce, Education, and Public Works. These Departments are to be presided over by Ministers of State, who collectively constitute the Council of State presided over by a Minister President. Upon the promulgation of the new official organization the following appointments, it is believed, will be announced:—Kim Oko-shu, Minister President of State; Li Yoshun, Minister of Military Affairs; Gyo Inchu, Minister of Public Works; Ming Etateu, Minister of Education and Finance; Kim Sokang, Minister of Agriculture and Commerce; Boku Teiyo, Minister of the Household and of Home Affairs; and Kim Inshoku, Minister of Foreign Affairs. Who will be appointed Minister of Justice is not known, but perhaps Mr. Boku Eiko, who left Tokyo on the 5th instant, will be chosen for the post.

The seventeen Commissioners of Reform are said to be daily meeting in the palace. The subjects under discussion at the date of the correspondence from which we are quoting, were the establishment of an independent Korean era (the Chinese era having hitherto been used), the despatch of Ministers Plenipotentiary to foreign countries, the abolition of slavery, the repeal of the law prohibiting priests from entering Söul, the abolition of the custom requiring officials to shut themselves up in their houses during the long period of mourning, the prohibition of illegal imprisonment of people by officials, and so forth.

At the instance of Li Yoshun, about, it is believed, to be appointed Minister of Military Affairs, the Commissioners of Reform are said to have decided that the Korean King should in future bear the title of the Emperor of Great Korea. It is not yet known whether this decision will be approved by the King and the Regent. Li Yoshun is a grandson of the Tai Wön-kun and is stated to be a young man of remarkable sagacity.

The correspondent mentions that Hong Tjyong-ou, the murderer of Kim-Ok-kyun, recently called at the Japanese Legation but was refused admittance.

The proposal that the Queen should be divorced, which constituted one of the principal points in the Tai Wön-kun's original programme of reform, seems not to have been carried out, for the Queen is still residing in the palace and appearing on State occasions.

The Korean Government is said to be considering the project of raising a foreign loan for the construction of railway lines between Söul and Fusan, and Söul and In-chhön.

An official telegram has been received at the Foreign Office, from Mr. Takahira, Japanese Minister to Holland, to the effect that Holland will maintain a strict neutrality in the war now proceeding between China and Japan.

The spirit actuating the new Government may be gathered from the proclamation recently issued, assuring the people that the Japanese troops would never commit any act of pillage, and ordering them to afford all facilities to those troops. The above proclamation is reported to have been dated in a new chronological style, instead of adopting the Chinese style as previously.

The *Mainichi Shimbun's* extra of yesterday gives some particulars communicated by its

Korean correspondent of the battle fought at Söng-hwan on the morning of the 30th ult. The Japanese Army took up its position in a pine forest some six thousand metres away from the enemy's entrenchments. It was decided to march against the enemy at 11 o'clock midnight of the 29th ult., by dividing itself into two wings, right and left. By thirty minutes to one on the morning of the 30th, the march of the two wings was completed. At about 40 minutes past the musketry discharge began and was kept up for 35 minutes, when the Japanese charged with fixed bayonets. The Chinese army had planned to assault the Japanese under cover of darkness and the two armies suddenly came into collision about midway between the respective camps and the firing was opened at a short distance of from 25 to 50 yards. It was the right wing that was engaged in this close contest, for the left wing led by General Oshima was moving more slowly and had by that time arrived at the pine forest in front of Söng-hwan. The Chinese were soon driven back to their entrenchments, with a loss of about 70 men. There is a little river called An-Söng that runs from the site of the Japanese camp to Söng-hwan. The Chinese had partially destroyed the bridge over the river and had, moreover, constructed a dam lower down, thus causing the river to overflow its banks. This caused the death of about 15 Japanese soldiers belonging to the storming division, and to the commissariat, who fell in unawares and where drowned. In the meanwhile the left wing quartered in front of the enemy's camp began to fire field pieces at the enemy, who were soon obliged to desert the second entrenchments constructed at the upper part of the hill, and joined those who were defending the works thrown up at the foot. The enemy fired at the Japanese but the shells failed to explode and not a soldier was injured by the enemy's cannonade.

Then the right and left wings began, as had been planned, to march against the enemy, firing at the latter as they proceeded. A severe contest ensued and when the two divisions were about 100 approach the enemy's camp a detachment of the left wing was despatched behind the hill at the foot of which the enemy was entrenched, and having ascended it from behind suddenly began to rush down the hill. The enemy thus attacked from the three sides were no longer able to hold their ground and the camp was taken just at 6 o'clock in the morning of the 30th. When the Japanese army entered the camp all the Chinese troops had fled, apparently in great confusion, for arms, provisions, etc., were left behind. Even the Commander-in-Chief and his second in command left their important documents and their caps behind them. The three divisions of the Japanese army now came together in the camp and waving the regimental standard in the direction of Japan gave three cheers for the Emperor. The prizes taken in the camp were five pieces of cannon, a quantity of powder, fifty or sixty old spears, and an abundance of clothing and provisions. Leaving the camp under the care of a small detachment, the main body began to pursue the fleeing enemy, another detachment having been already sent from the first to oppose the retreat. Till about five in the afternoon, the noise of artillery was heard without interruption, causing the death of more than 300 Chinese. Another detachment was despatched towards A-San under the command of Lieut.-Colonel Takeda soon after the fall of Söng-hwan. This advance guard reached A-San at 3 in the same afternoon, but only to find that the Chinese were all gone. At noon of the 31st, the main body joined the advance guard at A-San and encamped in the quarters deserted by the Chinese. The arms, ammunition, and provisions were plentiful enough to load more than ten Japanese junks. This was done promptly, and it was arranged that, re-loaded on bigger Korean vessels at Paik-du-jin, situated on the gulf of Nak-Yang, the prizes should be transported to Chemulpho. The Chinese had laid several mines in the vicinity of A-San, but they all failed to explode.

The Tokyo News Agency reports as follows about the Chinese war-vessel known as having fled toward A-San after being engaged with the Japanese ships near Phung-do, on the 25th ult.:—On the morning of the 27th ult., the *Takachiho* and the *Maya* lowered their boats and proceeded to inspect the condition of the Chinese warship. She was found stranded on the bar at the western inlet of Caroline Bay. On close examination, the magazine was seen to be torn open, thus causing a great part of the body of the ship to be filled with water. The wooden portion was moreover burnt away, while at a point about two-thirds of the vessel's length from the bow she was broken in two. The corpses of the crew were lying in heaps beside the guns on the starboard side, and the conning tower was virtually shattered. Within it was the corpse of an officer standing. He may have been the captain of the ship. On the lower deck indications were discerned of many other bodies, but they could not be clearly seen owing to the deck being under water. The guns from the Japanese vessels must have hit the ship with deadly precision, for even in the part standing out of the water more than ten penetrations were visible. Three of the boats were found stranded along the shore. The survivors must have landed by them. A 12-centimetre gun found on the upper deck appeared to be serviceable.

We take the following from the *Nichi Nichi*:—Fusan, 4 p.m. of the 6th instant:—On receipt of the news of the defeat of the Chinese at A-San, the Chinese troops, more than a thousand in number, stationed in Chong-ju completely dispersed, whither it is not known. There is a hope that the dispersion of this force may enable the telegraph to become again serviceable. It is said that the dispatch of a party of the Metropolitan Police under Inspector Takehira to Korea, whither they started by the last train of the evening of the 6th inst., is owing to the necessity of increasing the police force in the peninsula, since Japanese who are not soldiers are gradually going there in greater numbers. Minister Otori urged the expediency of the step, and the authorities complied with his request.

Shanghai, 7.10 a.m. 7th instant:—The Chinese war-vessel *Chi-yuen* sustained a grave damage in the naval engagement near Phung-do on the 25th ult., but it is learned from good authority that her repairs have not yet been begun. When the King of Korea learned that 13 Korean soldiers wounded in the skirmish on the 23rd ult., were receiving kindly treatment from the Japanese surgeons, his Majesty directed that his cordial thanks be conveyed to the medical department of the Japanese army.

The patients sent back on board the *Fuji-gawa Maru*, which reached Saecho on the 5th instant, are all coolies, and among those that came home next day on the *Tagonoura Maru* there was one soldier who had been wounded in the skirmishes in Söul. This is the first instance of a wounded soldier having been brought back to Japan.

The account of the battle at Söng-hwan on the morning of the 29th ult. and the occupation of A-San on the following day require some additions and rectifications.

The following is taken from a report sent by one of the Japanese officers who took part in the battle, to a certain officer in Tokyo.

The left wing started from camp at 12 o'clock on the night of the 28th ult., while the right wing set out two hours afterward. At five minutes past 3 on the morning of the 29th, the latter found themselves under heavy fire at a place about 700 metres distant from the bridge of An-Söng. But the enemy was driven away by 10 minutes past 4. At half-past 5 this regiment started toward Söng-hwan, which it attacked from the north-west. The defenders of the post could not stand against the Japanese charge, and fled in the direction of A-San at about 8 o'clock, leaving 4 cannon, many small arms, about 90 tents, and some ammunition. The left wing arrived at Söng-hwan at 20 past 5 and at once opened fire from the north-east. The Chinese had constructed breast-works on the elevation behind the central portion of the

entrenchments, and strove to hold their ground against the advancing Japanese. At 20 past 7 the left wing stormed the place with its whole force and carried it at half-past 7. The Chinese troops defending this part were encamped in five divisions. They fled, leaving behind them several standards, much camp equipage, many stands of arms, and ammunition. The Japanese then began to pursue the enemy, the right wing reaching A-San at 4 p.m. of the same day. The left wing encamped that day at some distance away from A-San, which place it did not reach until early on the morning of the 30th. The Chinese that fought with the Japanese are estimated to have been about 3,500, the casualties of the enemy were about 500, and the killed and wounded on the Japanese side aggregated 70.

We take the following from a report in the *Asahi*. The situation of Söng-hwan was especially well adapted for defence, for the whole district consists of wet rice-fields and swamps, with a small river running through, and there is only one road leading to Söng-hwan.

The plan of the Chinese must have been to retreat toward Chhön-an in case of defeat, but the Japanese were prepared to prevent this, and it was with the view of intercepting their retreat toward Chhön-an and driving them toward A-San that the retreating Chinese were attacked from their left. The Chinese evidently placed no faith in the forts constructed by themselves, at A-San: they dispersed without taking the ordinary roads. The Chinese are indeed skilled in the art of running away. As they fled they generally cast off their uniforms and donning the clothes of Koreans made the best of their way to what they considered safe places. The directions toward which they fled are unmistakably indicated by the cast-off uniforms. Even the Vice-commander of the Chinese troops appears to have been tempted to avail himself of this method, for his uniform was left behind in camp. The Chinese artillery accomplished some credible feats. They showed themselves highly skilled in the use of small arms. Both General Oshima and Lieut.-Colonel Fukushima narrowly escaped being hit. The plan of the Japanese army to drive the Chinese toward A-San and to exterminate them there, was disappointed, for the advance guard that reached A-San on the afternoon of the 29th had a skirmish only with some fifty Chinese soldiers, evidently left to guard the place, on the night of the 29th. That was the sole encounter between the two armies at A-San. Among the things taken at A-San was a quantity of ammunition, besides about 700 bags of rice each holding 7 to. Before the Japanese army left A-San the forts were totally destroyed, so as to prevent the place from being again occupied by the Chinese. On receipt of a report that the Chinese fugitives had re-assembled in the Sin-chhang district it was at first proposed to march thither, but that idea was abandoned on reflection, the fugitives being regarded as a mere rabble without any capacity to fight.

The *Nichi Nichi* gives the following express from Saecho, dated 3 p.m. of the 8th instant:—Captain Galsworthy and other officers of the *Kowshing* have sent a letter from Nagasaki to the Staff Office of the Admiralty here, signifying their gratitude for the cordial protection extended to them since the loss of the vessel.

The News Agency has received the following from Fusan, dated 11.40 a.m. of the 8th instant:—The Japanese troops returning to Söul on the 5th instant, were warmly welcomed by Representatives of the King, by the Japanese Minister, and by the Japanese residents in the capital. In the evening the King gave a banquet in the Court in honour of the Japanese officers.

The Chinese soldiers dispersed at the battle of Söng-hwan are rumoured to have proceeded homeward by land through Chhung-jn. The capital is very quiet. The above news was brought by steamer from Chemulpho and was then transmitted by wire from Fusan.

The same Agency has received another message from Shanghai, dated half-past 11 a.m. of the 8th instant:—"More than 2,400 Chinese troops arrived at Taku yesterday. They are the newly levied volunteers."

The following information is from the *Nichi Nichi*:—

Fusan, morning of August 9th:—The military telegraph has been constructed to-day as far as In-dong district at the south, from one end, while from the other it extended on the 8th as far as Chhung-ju, thus leaving only about 20 ri to be completed.

Shanghai, 8.15 a.m., 9th inst.:—The Acting Minister, Mr. Komura, and the Japanese Consul at Tientsin will start for home on the 11th instant. Several native papers state that a telegram despatched from Shanghai on the morning of the 8th instant to a certain quarter in Tokyo conveys the news that the admirals of the Southern and Northern fleets have disagreed in their council and that the Admiral of the former is much discontented.

The *Nichi Nichi* is more particular and states that the opinions of the Chinese Navy have become divided, one party advocating an offensive policy and the other wishing to confine itself to a defensive. The latter has gained the ascendancy and so the Chinese squadron that was lost sight of since it steamed out of Wei-hai-wei some days ago, must have taken shelter in the Gulf of Pechili.

The *Hochi* states that an agreement has been made among the war-vessels of neutral Powers, so that in future they will extend succour to vessels of either belligerent that have been vanquished by their adversaries and are helpless. At present the duty falls on the French man-of-war *Lion*, but the *Porpoise*, the *Wolf*, and others will undertake this task in turn. The *Yiji Shimpo* says that, according to a telegram lately received by the Authorities from the Japanese Consul at Hongkong, the Chinese Government discontinued to light the two light-houses at Saracen and Anpin in Formosa, and at one more place which can not be identified.

The *Kokumin* says that the Japanese Consul at Shanghai received notice on the 27th ult. from the Chinese harbour-master to the effect that a torpedo has been sunk inside the northern outlet of the Yang-tse-kiang, and that a ship that intends to enter the river should take the southern channel.

The *Nichi Nichi* gives the following express from Nagasaki, under the date of 10 a.m. 9th instant:—Captain Galsworthy, of the *Kowshing* is said to have applied to the British Consul in Nagasaki for a Marine Court of investigation to enquire into the loss of the *Kowshing*.

The Tokyo News Agency informs us that the killed on the side of Japan at the battle of Söng-hwan were only 32, and that there were about forty wounded.

The following telegrams have been received by the same agency:—Shanghai, 7 p.m., 8th instant. Under the escort of the *Ting-yuen*, three Chinese transports started for the coast of Wi-ju; some of the troops on board belonged to the Cho-ji Army, and some were new recruits.

Fusan, 3.40 p.m., of the 9th instant:—The apprehension that navigation in Korean waters is dangerous in consequence of the departure of seven Chinese war-vessels from Wei-hai-wei, is groundless. The voyage between this port and Chemulpho and Wön-san is daily carried on with perfect security.

THE "TSAO-KIANG" AND THE "KOWSHING."

The *Nichi Nichi's* Nagasaki correspondent has succeeded, after arduous inquiries, in obtaining many new facts pertaining to the war-vessel *Tsao-kiang* and transport *Kowshing*. We extract the following:—When the crew of the *Tsao-kiang* found that nothing could save them but surrender, they were in great consternation. They thought that should they deliver themselves up to the Japanese they would be mutilated, as by cutting off of ears or noses, while to return home in disgrace, if indeed to return alive were possible, would be death to them. At this juncture a Dane, who was on board the vessel and was going A-San on telegraphic business, strongly urged them to surrender, assuring them at the same time that the Japanese would not inflict any such barbarous treatment on them. His advice

was adopted and they surrendered. It is said that whenever a Chinese prisoner chanced to meet this Dane at the Saseho prison-yard he thanks him cordially for having persuaded him to surrender. The vessel was brought to Saseho in tow on the morning of the 8th instant. The foreign crew of the *Kowshing* were 11 in all, of whom only three were saved. Captain Gal-sworthy is said to have told the captain of the *Saikio Maru* in Nagasaki that it was Von Hanneken himself that ordered the Chinese to fire at the Chinese who jumped into the sea to save their lives. He professes to be a German officer, but is believed to be an Austrian Jew. He got on board the *Kowshing* when she was on the point of leaving Taku, as a passenger, with an introduction from Li Hung-chang. He was, however, a foreign employé of the Chinese Government. The vessel started from Taku under sealed orders.

When the Captain opened his letter of instructions in the open sea, he was directed to take the troops to A-San, but to leave the ship in case a battle should take place with a Japanese ship.

The Company that owns the ship was evidently aware of what the Chinese Government intended to do, for it obliged the latter to advance £40,000 security for the ship, which was not worth more than £25,000. It thus provided itself against all emergencies. The Indo-China Steam Navigation Company ought to be thankful to Japan for having sunk the vessel, observes the *Nichi Nichi*.

KOREA.

(FROM OUR OWN CORRESPONDENT.)

Soul, July 24th.

Sleepy Soul was awakened yesterday at five in the morning by the Korean war-cry for which the people have been listening ever since the arrival of the Japanese troops. Half an hour later there was sharp firing in the direction of the Royal Palace, and about the same time troops were seen in all the gates of the city and at the Government buildings in Chong-wo. For a few minutes the firing was very vigorous and the results show that other than blank cartridge were fired. The Korean troops were just warming up to their work when the command was issued to "cease firing." They promptly obeyed, and the Japanese troops with fixed bayonets entered, undisputed masters of the King and his Palace.

While these things were going on in the Palace, some high "Generals" of the army were knocking at the gates of the different Foreign Legations asking, like cravens, for a hiding-place in cellar or outhouse. The exodus from the city which then began still continues, thousands seeking the kindly protection of a pine or brush oak on the hill side.

In the afternoon the Japanese troops assaulted the barracks in the eastern part of the city. Here again an attempt at resistance was offered, but strict orders came from the Royal Palace not to fire, but to surrender. They threw down their arms, and tore their uniforms from their backs and ran; a few disgusted at the cowardice of their generals, the majority glad to get away from danger. Three Koreans and one Japanese are reported as killed, the number wounded are put at thirty, but this is not confirmed.

The Japanese are in possession of the King and his capital city. The Chinese were conspicuously absent. Their flag was flying at their Residency, but all the gates were closed, and within it was still death when I passed by in the morning. The Koreans were expecting a Chinese army at eight o'clock "last evening," and are looking for it to come "to-day." The Japanese are in possession of the city it is true, but the heart of the Korean people is with China, and if they had a capable leader would resist unto death every advance movement of Japan in Korea; as it is, the people lack a leader, just as the soldiers yesterday lacked commanders.

The high officials of the Queen's family are rigidly excluded from the Palace. The King

father has been called to assist in the reorganization of the Government. He went to the Palace yesterday escorted by the Japanese. Ministers known for their pronounced progressive sentiments are allowed to enter the royal presence at will, but others, of whom there is any doubt, are not permitted to pass the gates. For the next three or four days, which the King and his Ministers have asked for to consider the measures of reform proposed, we may look for all sorts of rumours; after that, if the Chinese continue to remain away, we may look for some vigorous work in Government reorganization. If the Chinese decide to come to Korea and fight here, Japan will take the trouble to meet them out at sea at Chemulpho or A-San.

Business is at a stand-still. The gentry stroll about with a pipe in one hand and a fan in the other; women with heavy bundles on their heads and a child or two at their side make for the nearest gate on their way to the country. The English marines are here guarding their property, and the lives of English and Chinese subjects who placed themselves under their protection.

HONGKONG NEWS.

The Acting Puisne Judge in Hongkong recently displayed his clemency to a juror, says the *China Mail*. The gentleman in the box had slumbered peacefully through a three days' lawsuit, and was not even called to order for contempt of court. At last His Lordship noticed the "sleeping beauty" and interrupted the case by saying—"Gentlemen of the jury, can you hear distinctly what is being said?" The foreman said they could, whereupon His Lordship replied, "I am certain there is one of you who does not hear a word."

Mr. Jackson, a Bangkok pilot, was drowned on the 22nd July in consequence of the capsizing of a boat. Mr. Jackson first went to Bangkok in 1858 and with a few years' interval has resided there ever since. He was the pilot who took the French up the river in July last year.

At Worhai, near Amoy, a Chinaman has just died at the age, as is reported, of a hundred and fourteen. The last advice he gave to his great grandchildren, while on his deathbed, was, "Eat as many oysters as I used to do and every one will reach his hundredth birthday." He was a dealer in oysters.

The vexed question as to the right of lawyers of other nationalities to practice in the British Consular Court at Bangkok is, says the *Bangkok Times*, at last settled. It will be remembered that on the arrival of Mr. Kellet, an American subject, the members of the English Bar lodged a protest against his being allowed to practise in the British Court. This protest was forwarded to the Attorney-General at Singapore, who referred it to Chief Justice Tarring, of the Consular Court at Constantinople, to ascertain what rule obtained there. The following reply has been received by H.B.M. Acting Consul:—"We hear that any man is qualified to practice as advocate in any of the Courts holding sittings at Constantinople, besides English Barristers and solicitors." The effect of this is that any person other than an English lawyer qualified to practice in any of the Consular Courts will also be allowed to appear in the British Court, a condition which applies to Mr. Kellet. This upholds the ruling of Mr. French in 1889. We understand, also, that opinions have been received from the American Consulates at Yokohama and Shanghai that American lawyers are admitted to practise in the English Courts there and that a reciprocal courtesy is extended to the English lawyers in the American Courts.

Official literature is often amusing (says a Madras paper), but it is sometimes ridiculous. Here is a curiosity:—"Lieutenant-General Frederick Dormer Plowden, Madras Infantry, since deceased, is transferred to the Unemployed Supernumerary List." There is a touch about this cruel advertisement which is irresistible.

On the 29th ult. a large cobra, about four feet

six inches in length and of unusual girth, was captured alive on Mount Gough, Hongkong, by the Indian overseer in the Waterworks Department. It was on the path between the Police Station and Mr. Layton's residence. The overseer stunned it by a blow on the neck with his stick, and then seized it by the back of the neck, securing it later on with string. It was a handsome specimen of the black cobra.

The steamer *Quantock*, of 2,193 tons, Captain J. C. Main, which left Barrow on the 2nd June, with a cargo of railway materials for Japan, put into Bombay harbour on the 5th July owing to having experienced bad weather after leaving Perim for Colombo, which caused her cargo to shift from side to side. The cargo having been righted, the steamer left for her destination at 8 a.m. on the 10th July, but after leaving harbour she again encountered very bad weather, and the cargo in her after-hold again shifting the captain deemed it advisable to put back to Bombay. She arrived in harbour at about 8 p.m. the same day.

At a recent meeting of the Hongkong Sanitary Board, Dr. Hartigan asked the following question:—"Since it appears that Hongkong itself is almost if not quite free from plague, if we except cases brought over from British Kowloon, is it not therefore in the opinion of this Board inadvisable to introduce plague patients from these districts into Hongkong, or to remove plague corpses thence for burial on this Island, in order that the City of Victoria may be declared free from infectious diseases at as early a date as possible?" The President in reply first said that it did not appear that Hongkong was yet free from plague, and it would be very foolish to take any precipitate action for the sake of making out that it was free from the disease. Supposing, however, that the city was absolutely free, he did not see that it followed because plague patients were removed from Yau-mat and Kowloon to the plague hospitals at the western extremity of the island that therefore they could not proclaim the city uninfected. Although they removed plague patients to Kennedy Town it did not in any way endanger the most speedy declaration that the port was free. The Colony is expected to be declared free on or about the 10th or 11th inst.

The Chinese coolie, like all his craft whether in India, Burmah, or other country further East, is ever ready to perjure his immortal soul in a Police Court. The other day in Hongkong one of the fraternity, who was charged with having entered a house which had been closed by the Sanitary Authority, gave two explanations of this presence on forbidden ground which illustrate our opening remark. The evidence showed that he must have got in through the roof; he had taken down a bed-curtain, and wanted to get away with it. He was seen trying to lift the street door off its hinges. His statement in defence was a curious specimen of reckless and unthinking mendacity. "Seeing that the door was open [as a matter of fact it was shut, locked, barred, and nailed up] I went in to see if any whitewashing required to be done. I am a white-washer, but have no brush, etc., with me now—they are all in Sai-ying-poon." Then, apparently seeing that his whitewash story was too thin and quite transparent, he added, "I owed a man ten cents, and he chased me, so I took refuge there." He admitted previous conviction for house-breaking, says the *China Mail*, and now he is on stone-breaking and kindred pursuits for nine months. Many curious excuses have been made in Hongkong Police Court by Chinese prisoners, but we never heard one to beat that of a man who was brought before the late Mr. Charles May. He had been employed at the Aberdeen Dock, and exciting suspicion at the gate he left at the close of the day's work on account of an undue thickness about the waist, he was rubbed down and found to be carrying round his body several fathoms of iron chain. He declared to his worship that he was no thief—that he had simply taken the loan of the chain from the ship on which he had been working, as, in the morning having lost his key, he had borrowed the chain to keep his trousers up.

THE SINKING OF THE "KOWSHING."

MAJOR VON HENNICKE, at one time an officer in the German army, and subsequently, with the permission of the German Government, in the Chinese service, was a passenger on board the *Kowshing*. He escaped from drowning, and made his way to Chemulpho. A correspondent of the *Kobe Chronicle* obtained from him the following particulars of the affair:

The *Kowshing*, a British steamer of 1,500 tons, arrived off the coast of Korea on the 25th ultimo having some 1,500 Chinese soldiers on board, and in addition to six European officers carrying two German passengers, both in the Chinese service, one of them being Mr. von Hennicke. Shortly before she reached the place where she was to disembark the troops, an engagement took place between three Chinese men-of-war, accompanied by a dispatch-vessel, and three Japanese men-of-war. One of these latter was the *Naniwa Kan*, which signalled the *Kowshing* to stop. Captain Galsworthy accordingly let go his anchor, and an officer from the Japanese man-of-war came on board to make inquiries, after which he instructed the Captain to heave up his anchor and follow the men-of-war. To this the Captain demurred, and pointed out that the *Kowshing* was an English ship, and as war had not been declared when he left China he was doing a perfectly justifiable thing in carrying troops. Besides, had he desired to obey the order, he could not do so, as the troops on board had announced their determination to prevent him.

The officer then went back to the *Naniwa Kan*, and returning shortly afterwards informed the Captain that the Europeans would be given two hours to leave the ship before the *Naniwa* opened fire. The Captain again replied that it was impossible for them to leave, as the crew would not permit it.

As the officer, having delivered his message, was descending the gangway one of the Chinese officers rushed at the second officer of the *Kowshing* (whose name, according to the list already published, is Mr. T. Welsh) and slashed him across the back of the neck with a sword, almost severing his head from his body, the unfortunate man falling dead immediately. The reason for this attack was that the officer was looking down the gangway after the retreating Japanese officer, and the Chinese suspected him of an intention to leave the ship.

The Chinese told the Captain not to permit the Europeans to leave the ship, and said that she was a British vessel and they looked upon him to protect them. All the Europeans then went forward to the bridge, and were guarded there by Chinese, in order to prevent any attempt at escape. At the expiration of the two hours the *Naniwa Kan* steamed round and got into position and then fired a torpedo at the bunkers. Whether this struck the steamer is not known, but it was succeeded by a broadside of five guns, which injured the *Kowshing* so severely that she began to sink, and as she was settling down the Gatling guns of the *Naniwa* were fired at the poor wretches struggling in the water. As soon as the firing commenced the Europeans jumped from the bridge into the water, having first of all taken the precaution to put on life-belts. After being in the water for some time Mr. von Hennicke lost consciousness and remembers nothing more until he found himself lying on the beach, upon which he had been thrown after being, as he estimated, three hours in the water. He was afraid that the other foreigners were lost, though it is possible some of them were picked up by the *Naniwa's* boats. The general impression in Seoul was that they were all drowned or shot. Mr. von Hennicke afterwards made his way to an island where he found six Chinese sailors who had escaped, and, disguised as Koreans, the seven survivors managed to get a fisherman to take them in his boat to Chemulpho, where Mr. von Hennicke took refuge on board the German gun-boat *Ilts*.

The *Ilts* went out on Sunday, the 29th ult., for the purpose of cruising among the islands and endeavouring to pick up any survivors who might have reached land. It is believed that of the 1,500 men on board the *Kowshing* only 150 were saved, but information had not reached Seoul at the time the latest mail left as to whether these comprised any Europeans.

A Yokohama contemporary published yesterday a short account said to be derived from the "Manila" quarter-master, of the

steamer *Kowshing*, who was brought to Chefoo by the French gunboat *Lion*, and arrived at Shanghai before the departure of the *Empress of Japan*. His account is substantially the same as that of Major VON HENNICKE, and he also asserts that the Japanese machine guns were turned on the men that had jumped overboard.

In our issue of Saturday we published Captain GALSWORTHY'S account of the affair, which differs considerably from that of Major von HENNICKE. This account was obtained from Captain GALSWORTHY by the *Nichi Nichi's* correspondent at Sasebo. Captain GALSWORTHY arrived at Nagasaki on Sunday, and in our yesterday's issue we published a telegram which is, as far as it goes, confirmatory of the account published by the *Nichi Nichi*. We give in parallel columns some extracts from Major von HENNICKE'S account, and from our Nagasaki telegram yesterday.

MAJOR VON HENNICKE'S ACCOUNT (as given in the *Kobe Chronicle*.)

"One of the Chinese officers rushed at the second officer of the *Kowshing*, and slashed him across the back of the neck with a sword, almost severing his head from his body, the unfortunate man falling dead almost immediately. . . . The *Kowshing*, . . . began to sink, and as she was settling down the Gatling guns of the *Naniwa* were fired at the poor wretches struggling in the water."

It is, to say the least, curious that Captain GALSWORTHY should have made no mention of the death of his second officer. A Japanese newspaper tells us that the foreigner now under treatment at Sasebo was wounded by a shot in the neck from one of the Chinese soldiers.

But from the facts before us it is difficult to avoid the suspicion that the "second officer" who was nearly decapitated and fell dead almost immediately is identical with the "quartermaster" now under treatment at Sasebo for a wound in the neck. Should this prove to be the case it must be evident that Major VON HENNICKE'S powers of accurate observation failed him under the agitating circumstances in which he was placed, and he may well, while himself in peril of his life, have mistaken the vessel from which the shots were fired at the poor wretches struggling in the water. It will certainly be well to suspend our judgment on the affair until we receive a fuller account from Captain GALSWORTHY.

THE FOREIGN COMMUNITY AND THE WAR.

WHATEVER may be the military issue of the present war between China and Japan, its effect upon the feeling of the Japanese nation toward the foreign residents must be very grave. Judged by the utterances of a majority of the local foreign press published in Japan, there has always

existed among the open-port communities a sentiment of hostility to the people of this country. It is true that even the most violent of these newspapers claim to be influenced by a spirit of stern friendship. They pretend that their defamatory utterances are dictated, not by a wish to condemn, but simply by a desire to effect improvements; that, in short, the bettering of Japan's condition is their object, not the blasting of its reputation. Well, the candid friend is undoubtedly a blessing in disguise, not always agreeable but often useful. Friendship, however, that never loses an opportunity to be critical; that invariably couches its criticisms in insulting terms; that never fails to attribute doubtful acts to despicable motives; that minimizes every achievement worthy of praise and magnifies every fault or miscarriage; that substitutes sneer for suggestion and obloquy for advice; that accepts the worst report on the slenderest evidence, rejects the best deserved applause without the most conclusive proof, and dubs every breath of praise "fulsome flattery;" that lauds all detractors and backbiters, and virulently abuses all approvers; that, in short, adopts an attitude always consistent with deep dislike and never reconcilable with genuine good-will—of such friendship we can only say that it belongs to an age happily still unborn and appeals to an order of intelligence fortunately not yet educated. There is no alternative standard of friendship, and we do not hesitate to say, after more than a quarter-of-a-century's perusal of the writings of the local foreign press, that any Japanese who could mistake them for the utterances of friendship must be superhumanly credulous.

Why these things should be, it is hard to explain. Nobody can pretend that the Japanese of the *Meiji* era have ever failed in amity toward Occidentals. With exceptions so rare as to be wholly unworthy of record, they have been invariably courteous, kind, and conciliatory. What there can be to dislike in a people so polite, so refined, so intelligent, and so liberal; above all, what credit can attach to their defamation, we have never been able to understand. These things, however, are an old story. They have worked their mischief: have sown seeds that may one day bear evil fruit. But the process of growth is gradual and perhaps still capable of being permanently arrested by altered conditions. It is not so, we fear, with regard to the displays evoked by the present occasion. Japan is now passing through a sharp crisis of her national history. She has embarked upon a war that may tax her resources to the utmost. She has drawn the sword in the very cause that prompted England to send a fleet here 37 years ago—the propagandism of Occidental civilization. The heart of the nation is in the struggle. Its spirit is deeply stirred. Its lights, not for military

supremacy, but to show how far it has profited by the new systems of its adoption, and how much real capacity it possesses for the civilization it has embraced. There is not a man in the empire, from SOVEREIGN to scavenger, whose patriotism has not been fired by the event, and who would not give his life to insure the issue. At such a time the sympathy of the foreign residents ought to be strongly enlisted in Japan's cause. If any, doubting the justice of her policy, be incapable of sympathising with it, their plain duty is at least to refrain from openly discrediting and abusing her. Has such reserve been exercised, such good-will been displayed? On the contrary, several of the foreign local journals have done everything in their power to poison the public mind against Japan, and have made no attempt to conceal their hope that disaster may attend her arms. We need not quote written evidence. Every reader of the local foreign press knows well what we mean. Every reader of the local foreign press knows also that these journals reflect a sentiment entertained by a considerable section of the foreign community. They want Japan to be beaten. Living here under the provisions of a treaty of amity and commerce; coming hither to earn a livelihood; depending upon Japanese for their daily bread, there are nevertheless found among us many men who hope, and hope avowedly, that the Japanese, the first and only Oriental disciples of Western civilization, will be defeated in war by the Chinese, the most bigoted and unfriendly of Oriental conservatives. In what light must the foreign community appear to the Japanese? Can we possibly expect that any fragment of Japanese amity will survive for a body of strangers who, while enjoying the nation's hospitality and living by trade with it, take the side of its foes in a life-and-death struggle? The people of the United States have not forgotten or forgiven England's most unfortunate leaning towards the Southern seceders thirty years ago. The situation in the present case is much more striking, and we may be sure that its effects upon the Japanese will be correspondingly acute.

Among the many examples of this unfriendly attitude on the part of local foreign journalists, none is more conspicuous than an article published by the *Japan Gazette* on the subject of the Imperial Decree declaring a State of War. We give to the *Japan Gazette* full credit for the moderation of tone originally displayed by it in discussing the Korean complication, but we are compelled to say that its article of the 3rd instant destroys every vestige of its previous prudence. It says that the SOVEREIGN's manifesto "proclaims Japan to be eager for aggrandisement and anxious to advertise," whereas the manifesto explicitly denies any such purpose. It says that China's

refusal to coöperate in the reform of Korea's administration was owing to the fact that Japan "proposed terms to which China could not possibly accede," whereas the *Japan Gazette* has no knowledge whatever of the terms proposed by Japan; whereas the reforms mapped out by Japan were in truth of the simplest and most moderate character, and whereas no such attempt was ever made to tie China's hands. It says that "China never provoked war," whereas, in truth, China's interference in Korean affairs during the past ten years has been a perpetual provocation, and whereas, while relying on the intervention of Foreign Powers to avert war, her statesmen did not fail to hold language in the highest degree insulting to Japan. It discredits the EMPEROR'S allegation as to the side that fired the first shot, simply because it is a Japanese statement, and it predicts, with wanton insolence, that we may "expect to hear more falsehood than truth from both sides." It accuses the SOVEREIGN of deliberate falsehood, not in terms, indeed, but in perfectly unequivocal language. It declares that China has always been "most anxious for peace," though her war-ships commenced the fighting, and though, while seeking to gain time by means of European intervention, she was shipping troops to the peninsula and marching a large army across its northern frontier. Finally, it dubs the whole manifesto "a string of childish accusations which, had they been all as true as most of them are without foundation, would in no case have warranted Japan in invoking upon the two nations a terrible war." No one can pretend to think that such criticisms are inspired by any spirit of justice. They are simply unfriendly. Nothing could be worse than the taste that they display; nothing more graceless than the form in which they are preferred; nothing more calculated to provoke Japanese umbrage than their insulting recklessness of fact and sweeping airiness of condemnation. Every fair-minded and intelligent foreign resident must be revolted by such an exhibition, and we would ask the Japanese to understand that it has evoked far more denunciation than approval among the foreign community.

THE IMPERIAL ORDINANCE OF THE 4TH.

THE action taken by the Japanese Government with respect to Chinese subjects residing in this empire is consistent with the best traditions of Western civilization. An Imperial Ordinance, issued on the 4th instant and translated in these columns, guarantees to Chinese subjects in Japanese dominions the same security of life and property as is enjoyed by Japanese subjects themselves. Of course no new privileges of trade or travel are granted. The time is not opportune for

anything of that kind. But all persons of Chinese nationality now in Japan are assured that they may continue to live and carry on business at any place where they have hitherto been permitted to trade and reside, that is to say, at the open ports. From the first moment when war between China and Japan became a probable outcome of the Korean complication, the Chinese residing in this empire fell into a state of trepidation. They appeared to take it for granted that the Japanese people were so imperfectly civilized as to recognise no distinction between combatants and non-combatants in an international struggle, and that the Japanese Government had so slight a perception of its higher functions or so little competence to discharge them, that the lives and properties of peaceful Chinese subjects, who had settled in Japan under the ægis of a treaty of amity and commerce concluded in happier times, would be exposed to unrestrained mob violence or arbitrarily deprived of official protection. The fact that such an apprehension prevailed so widely argues ill for the treatment that Japanese subjects are likely to receive in China under existing circumstances. The things that Chinese settlers in Japan look to suffer at Japanese hands may be taken as an index of the things that Japanese settlers in China may expect to suffer at Chinese hands. Be that as it may, however, what we have here to note is that a considerable exodus of Chinese has taken place from Japan since the air began to be full of rumours of war, and that great loss and inconvenience must have been incurred in consequence. The Ordinance of the 4th instant should put an end to anything of the kind. We can not tell how far the Chinese may be disposed to rely on the Ordinance. They may continue to take their own ethics as a basis of inference, and may conclude that the issue of a benevolent Ordinance in time of war deserves no large outlay of practical confidence. We should hope, however, that they are not such blind readers of recent history, and that they will be able to estimate the value of the recent Ordinance from the earnestness, good faith, and thoroughness hitherto displayed by the Japanese Government in the discharge of its legal obligations. All that a Chinese subject has now to do should he desire to continue his residence in Japan, is to register himself just as Japanese subjects are required to register. That is an obviously necessary precaution, as is also the proviso that hereafter no Chinese subject will be allowed to enter Japan without a special permit signed by the Minister of State for Home Affairs.

We did not for an instant anticipate that the Japanese Government would hesitate to take this action in due season, nevertheless we may be permitted to congratulate the EMPEROR'S Ministers on

the new proof they have thus furnished of their allegiance to the best canons of international usage.

A specially interesting feature of the Ordinance is that Chinese subjects in Japan are brought by it under Japanese jurisdiction. That followed, indeed, as an inevitable corollary of the breaking out of hostilities between the two empires, for since treaties of amity and commerce naturally cease to have any binding effect when the contracting parties become belligerents, the treaty that reserved for the Chinese the privilege of extraterritorial jurisdiction in Japan, has lapsed *de facto*. It will be for Japan to consider what treaty, if any, she will make with the Middle Kingdom when peace is restored. Our conjecture is that no treaty will be needed, unless it be a convention relating to some special matters of commerce.

It may be well to allude here to a mistake repeated over and over again and contradicted nearly as frequently, namely, that China constituted a stumbling block in the path to Treaty Revision, since if the country were thrown open to Europeans and Americans, it must be thrown open to Chinese also, a contingency of very grave import. No such difficulty existed. China never was a party to the Treaty Revision negotiations, for the simple reason that her treaty with Japan contained no most-favoured-nation clause, and that its revision, had revision been mutually desired, would have been matter for special and independent discussion. Some embarrassment might have arisen in connection with the tariff, since it would have been highly inconvenient that Chinese subjects should continue to import goods under the present schedule after the rates had been raised for other nationals. That is another affair, however. We allude to it here merely for the purpose of noting that whatever perplexity it once involved is now at an end, since China can not resume treaty relations with Japan except on terms such as may be acceptable to the latter.

Gradually the force of events is striking off the fetters of Consular Jurisdiction from Japan's limbs. The Portuguese link was the first to snap, owing to Portugal's failure to discharge her judicial functions. The Hawaiian followed by voluntary surrender. The Chinese is now broken by war. How long will it be ere the larger links also are struck off? They hang already very loose.

The *Unity* gives the following as copied from the hymn book used in a popular church at Chicago:—

O sinner, see your dangerous state,
And think of Hell e'er 'tis too late.
When worldly cares would drown each thought,
Pray call to mind that Hell is hot!
Still to increase your godly fears
Let this be sounding in your ears,
Still bear in mind that Hell is hot,
Remember and forget it not.

NAVAL AFFAIRS.

THE continued absence of any distinct news indicating that a contest has taken place between the Japanese and Chinese navies, has suggested many rumours, and we need scarcely say that such of them as have their origin at the open ports are invariably hostile to the Japanese. It is announced, for example, that the Japanese fleet is blockaded by the Chinese in Chemulpho, though this statement is given only as a report. It is further whispered that more than one Japanese man-of-war has been sunk; that the Chinese have command of the sea; that Japan's communications with Korea are practically suspended, and that the inferiority of the Japanese Navy has been clearly demonstrated. The most confident ventilator of such stories has been the *Japan Gazette*. With all the credulity that distinguished him while in charge of the *Hyogo News*, its editor does not hesitate to elevate hearsay to the rank of established fact. In his issue of the 4th instant he wrote:—"The *Yamashiro Maru* has undoubtedly been taken, and there appears to be reason to fear that the *Matsushima* has gone under, while the *Naniwa Kan* seems to have had a shell lodged in her engine-room, though fortunately it did not explode." Now the *Yamashiro Maru* has not been taken, despite the "certainty" announced by the *Japan Gazette*, neither has the *Matsushima Kan* gone under, and as to the unexploded shell in the engine-room of the *Naniwa*, it is so paltry an incident as to be scarcely worth mention. There is no reason to be surprised that false tales find their way into circulation, but there is much reason to be surprised that newspapers should accept them with such fatuity, endorse them with such recklessness, and publish them with such irresponsibility. Our contemporary, in the same article writes:—

Japan's fleet is considerably inferior in strength to that of China. To grapple with it must mean severe loss in ships and men, unless the Chinese run away, which they evince no intention of doing. We must therefore anticipate that several Japanese cruisers will find a resting-place at the bottom of the sea, and that others will have to change their flag from that of the Rising Sun to the emblem of the Middle Kingdom.

That is precisely the belief that prevailed some time ago at the open ports. It was confirmed by a statement, officially credited for a time, that the Chinese fleet had put boldly to sea and was cruising, or at anchor, off the Korean coast near A-San, thus evidently courting a battle with the Japanese. Since, therefore, a battle did not take place, a fair inference seemed to be that the Japanese were avoiding it, and this of course strengthened the idea of the Chinese fleet's superiority and gave colour to various canards about disasters suffered by the Japanese ships. But the truth will out, and very ugly truth it is in the present case. There has been

no naval fight for the simple reason that the Chinese fleets have hidden themselves away. It is related of a certain colossal and corpulent gentleman that whenever he founded a mosquito inside his net, he submitted quietly to be made a meal of, arguing that with his great bulk he could afford to be indifferent to the attacks of such a comparatively puny tormentor. China's mood is evidently identical with that of the fat philosopher. She knows that to struggle would probably entail much more pain than any ordinary enemy can inflict on her, and she therefore allows Japan to do its worst, devoting herself uniquely to two objects; first, to relegating the arena of battle to the greatest possible distance, and secondly to avoiding any conspicuous disaster. It will be difficult for the Chinese nation to discover exactly what happens in the Korean peninsula. Japan may claim victories there, but the Chinese can deny them, and who in the Middle Kingdom will be able to decide between the two? But a naval engagement with iron-clads and fast cruisers fighting on each side, would attract the attention of the whole world and its issue could not be concealed. Hence China apparently intends that there shall be no naval engagement. She kept her fleet intact during the "state of reprisals" with France ten years ago, and she did it by making the ships lie concealed in fortified harbours. That seems to be again her policy. It does not greatly surprise us. Indeed we predicted at the outset that it was not an unlikely line of procedure, and if for a moment there appeared to be a prospect that a more manly attitude would be taken, the hope has now to be abandoned. The big iron-clads, fast cruisers, and alphabetical gunboats are not to be exposed to the risks of battle, but are to be carefully preserved until peace is restored, when they will emerge from their hiding places and once again "demonstrate" in the Empire's waters, showing what a fine squadron flies the dragon flag, and what a big Power China is at sea. Western ideas of the use of a navy may be a little revolted by China's methods. But China does not care about that. Her motto is "To bear is to conquer our fate." Will Japanese naval men respect her patience.

THE "KOWSHING" AFFAIR.

SENSATIONAL and conflicting accounts are published of the incidents that took place at the sinking of the *Kowshing*. It is abundantly evident that the widest discrepancies of view exist among the witnesses of the affair, but we should not by any means be justified in concluding that deliberately false testimony has been given. Two observers of the same event may subsequently record diametrically different yet equally honest impressions of what occurred, and both may be totally at variance with the truth. Thus far there

have been three accounts from foreign sources, namely, from Captain GALSWORTHY, from Mr. VON HANNEKEN and from an anonymous correspondent of the *North China Daily News*. Among these there can be no doubt that the story of Captain GALSWORTHY is most deserving of credence. He alone can be supposed to have become personally acquainted with all the facts he describes, and he alone can be counted impartial. Mr. VON HANNEKEN is a German subject. He serves in the Chinese army, and was on his way to A-San with the intention of planning its fortification against the Japanese. The bias of such a witness is plain. The correspondent of the Shanghai journal is evidently an illiterate man, incapable of weighing the value of his own statements, and so confused in his ideas that he flatly contradicts himself in one and the same sentence. Moreover, he makes allegations known to be wholly contrary to fact and evidently inconsistent; as, for example, when he accuses the *Naniwa Kan* of "returning and deliberately shooting down" an unfortunate foreigner who had ascended the mast of the sunken ship, and when he adds that the *Naniwa* "had to fire several shots before she hit the foreigner," and that she "left several Chinese soldiers who were clinging to the same mast." The truth, as described by Captain GALSWORTHY and his fellow-survivors, is that the foreign officers of the ship jumped overboard together, and were saved by the *Naniwa's* boats. Plainly the purpose of the anonymous correspondent of the Shanghai journal is to accuse the Japanese of being animated by special feelings of hostility toward the foreign officers, whereas, in another part of his letter, he says that an officer sent from the *Naniwa Kan* invited the foreign captain and officers of the *Kowshing* to go on board the man-of-war before she opened fire. Indeed, the letter of this correspondent will not support the slightest test of analysis, and does not deserve a moment's serious consideration. Moreover, he differs from both Mr. VON HANNEKEN and Captain GALSWORTHY, for whereas the two latter allege that the commander and officers of the *Kowshing* were willing to surrender her, and would have done so had not the Chinese mutilated, the Shanghai correspondent is full of eulogy for Captain GALSWORTHY and his officers because they "refused as one man to leave their fellow passengers and ship in the hour of danger."

Among this mass of conflicting testimony there are but two points of real moment—did the *Naniwa Kan* fire Gatling guns at the Chinese struggling in the water, and why did not the Japanese man-of-war take steps to pick up the soldiers after the sinking of the *Kowshing*? In connection with the first point, we note that Mr. VON HANNEKEN'S statement is this:—"The *Kowshing*

gan to sink, and as she was settling down, the Gatling guns of the *Naniwa* were fired at the poor wretches struggling in the water." The *Kowshing*, then, had not sunk when this occurred, and if she had not actually sunk, who is to determine whether the Gatling guns of the *Naniwa* were fired at the men on board or at the men in the water? Again, if the ship had not sunk, how came the men to be in the water? Either Mr. VON HANNEKEN'S story is very clumsily told, or he has sought to attach an unwarrantable significance to a warrantable act. Of course, if the Chinese soldiers on board the transport refused to surrender, there was nothing for it but to sink her or suffer her to escape. As to that there need be no question. But we find it difficult to understand why the *Naniwa* did not save some of the soldiers after the sinking of the ship. Explanations have been given, but we confess that they do not appear satisfactory. Something is accounted for by the alleged fact that the *Naniwa* was alone in the affair, the other two Japanese vessels having gone in pursuit of the Chinese, and not having remained on the spot as was originally reported. Something further is accounted for by the fact that the *Naniwa* had to look after the *Tsakiang*, remove her crew, and put a prize crew on board. But these are only partial explanations. The *Naniwa*, we are constrained to think, should have found means to rescue some of the drowning Chinese, and her failure to do so, deprives the Japanese ships of any small credit that might otherwise have accrued to them. It was in no sense a feat of arms that three strong vessels routed three weak ones, but it would have been a feat of civilization had the *Naniwa's* boats rescued four or five hundred of the Chinese braves. We regret sincerely for Japan's sake that the opportunity was missed.

THE FIGHTING IN KOREA.

WE have had but meagre accounts of the fighting between the Japanese and Chinese in Korea, and on the whole it seems that there is not very much to tell. The Chinese showed themselves lacking in nearly all the qualities essential to military success. They had a splendid position and a strong force—for although only twenty-eight hundred were engaged in the defence of Sōng-hwan, it is pretty certain that fully twice that number were under the command of the Chinese General. Experience has shown that for offensive purposes the Chinaman makes a poor soldier. But in defensive warfare he is good: he can and will fight stoutly behind a parapet. In that respect he closely resembles the Turk: for garrison purposes both are equally excellent if well armed and well drilled. Hence, when it was rumoured that the Chinese force had

devoted some three weeks to fortifying A-San, had mined the approaches on the only accessible side, and had constructed a number of military obstacles, the general supposition was that an attack must involve heavy loss of life, if not temporary failure. People talked, indeed, of a probability that something in the nature of regular investment might be necessary, and that unless Japan could obtain command of the place on the sea-front as well as on land, her troops might be unable to reduce it. Another factor also received much weight in all thoughtful estimates of the situation. It was argued that, however feeble the Chinese soldiery might show itself in the face of a European foe, it would fight fiercely against the Japanese, upon whom the people of the Middle Kingdom look with contempt and of whom they have no manner of fear. But events have demonstrated the falsity of all these inferences and predictions. The Chinese have shown themselves thoroughly faithful to their old traditions of incompetence and weakness. Their defence of an almost impregnable position seems to have been almost farcical, and the proud courage attributed to them in a combat with Japanese troops, had no existence at the crucial moment. When news came of the fight at Sōng-hwan, a place some few miles distant from A-San, the conclusion formed was that this was an affair of outworks only, and that the retiring Chinese had merely fallen back upon the garrison of A-San, after defending Sōng-hwan as long as was expedient. The fact, however, is alleged to be that their only real stand was made at Sōng-hwan; that their retreat from it was almost a craven flight, with the notable exception of a small body of picked men; and that their subsequent conduct displayed no element of courage or patriotism. Where the remainder of the Chinese force was posted, or what it was doing, throughout the attack on Sōng-hwan, we can not find anyone that knows. But it certainly was not playing the natural part of support and reserve, neither was it preparing to make a final stand at A-San, for when the Japanese attacked that stronghold its defenders had already betaken themselves to flight. One body of braves, wearing a surcoat marked with ideographs signifying "select," made a most gallant resistance, and died almost to a man where they stood. But the rest simply ran away, and had not divested themselves of that tendency when the assault was delivered on A-San itself. They and their comrades then resumed the business of flying, and the Japanese won a very easy victory. Whither the Chinese troops betook themselves, we do not know. Probably they abandoned all idea of further combined resistance, and scattered throughout Korea to live as best they could; an evil look-out for the Koreans. On the whole, these encounters show that the Chinese fight no better against a

Japanese army than against a European, and we may fairly conclude that the whole story of this war will be in keeping with its first chapters. Some say that China has placed only a very small contingent of her best troops in the field, not venturing to denude the empire of them, or doubting their loyalty. But it does not much matter what process of selection she has employed. The result alone concerns us for the moment, and that result is that the Chinese forces fight badly and are ill equipped.

FOREIGN OPINION AND THE WAR.

OUR comments on the feeling entertained by the foreign community toward Japan at the present juncture have elicited a reply from the journal to which we referred by name, the *Japan Gazette*. In making those comments, we were careful to explain that our general condemnation of the foreign local newspapers' unfriendly attitude was not intended to apply to the *Japan Gazette*, for though that journal displays a singular aptitude for collecting and publishing, with all semblance of assurance, items of intelligence obviously based on the flimsiest rumours and generally unfavourable to Japan, its tone, with one notable exception, has been fair and discriminating throughout the Korean complication, and we are persuaded that it has enhanced its reputation by this moderation. The exception was most unfortunate, being, in fact, a violent and ill-considered criticism of the Imperial Proclamation declaring a state of war. Leaving that apart, however, we venture to compliment the *Gazette* on the sentiments expressed in its leading article in reply to our comments. We are glad to find its sympathies emphatically proclaimed on the side of the nation that represents progress and enlightenment, and that has not shrunk from war in order to secure for a neighbouring people the benefits derived by itself from Occidental civilization. At the same time, it is only just to point out that the *Japan Gazette* explicitly confirms our estimate of the sentiment swaying a considerable section of the foreign community. "We should be sorry to see Japan beaten," writes our contemporary. "In saying this we run counter to popularity, but we look beyond merely local likes and dislikes to the great question which the war must solve directly or indirectly." So, then, the *Japan Gazette* finds itself environed by opinion hostile to Japan and anxious to see her defeated in the present struggle. That is precisely the point upon which our original comments were based. We were astonished by journalistic evidences of the existence of a strong anti-Japanese sentiment at the present juncture, and we ventured to question the justice of the feeling as well as the prudence of parading it so openly. For doing so we are now accused by the *Japan Gazette* of ex-

hibiting the "hate of a dissimulator whose machinations are exposed;" are charged with "savage insolence;" are arraigned for "insulting the Yokohama community;" and are declared to have written with the object of "directly inciting the lowest class of Japanese to make an uprising against the foreigners in their midst." This is comical and characteristically refined. The *Japan Gazette* itself admits that foreign local sentiment is hostile to the Japanese and desirous of seeing them beaten, but when the *Japan Mail* says so, it is at once denounced as "a savagely insolent insulter of the foreign community," "a renegade detester" of its own countrymen, and an impotent inciter of Japanese mob violence against foreigners. The device is quaint, but so hacknied as to be growing a little tiresome. We can always be absolutely certain of the answer that will be elicited by any attempt on our part to protest against anti-Japanese injustice. Our good contemporaries at once ask the public to believe that they themselves may go on perpetually sticking knives into Japan without hurting her, but that if any other journalist condemns the practice, he at once becomes solely responsible for the wounds inflicted. Well, the public has discrimination. It can appreciate that kind of silliness.

JUJUTSU.

(COMMUNICATED).

THE national athletic exercises of the Japanese are few in number. They are not, as a people, fond of outdoor sports. Cricket and base-ball have been introduced, but only a faint enthusiasm is exhibited for either, the majority condemning both games as "childish" or "unmanly." Rowing is coming each year into greater favour, yet regattas are held by the students of only two or three Government schools, the publicity necessarily attendant upon such exhibitions being disliked. There are, in fact, only three kinds of athletic exercises in which the Japanese either consent to take part or deem worthy of cultivation. The first, a kind of polo, is now known to very few people. It is a game requiring much skill, constant practice, a steady eye, and no mean knowledge of equestrianism. There are very few old families in which this fine sport is still kept up, for it has always been a game patronised exclusively by noblemen or *Samurai* of higher rank. Then comes *kenjutsu*, the "sword-art" or fencing, an athletic exercise of the highest value and one which has, in Japan, developed in a purely national manner; the whole art being totally different from what it is in other countries. The sword is held in both hands, the attacks and parries are novel and subject to unusual rules; yet it is an exercise eminently calculated to bring every muscle of the body into play,

to train the eye and quicken the perceptive faculties, for, Japanese swordsmen are wont to say, the secret of success is to perceive what stroke the opponent is about to give before he actually lunges, or, in other words, to read the opponent's thoughts. Prior to the Restoration, a knowledge of fencing was vastly more important than an acquaintance with reading and writing. Every *Samurai* was taught that his trenchant blade was as his very soul; and even merchants and craftsmen, such as had no right to wear swords, were given to practising the art, as the best form of self-defence. But since the early years of the *Meiji* period fencing has gone greatly out of vogue; it is still kept up, and in quiet streets one can often hear the clash of the split bamboo fencing-sticks, mingling with the shouts of the combatants. Yet the art of fencing will never again be what it once was. With the secret of forging those matchless blades of Bizen, the time-honoured masterpieces of such men as MASAMUNE and HORIMITSU, the great love for the art has passed away. The art is now practised mostly by youths, who take it up as a sort of hygienic exercise. There used to be hundreds of celebrated masters of the sword; at present there are not so many score. An era of peace is sure to mark the decadence of all military accomplishments.

There is, however, one art that is still kept alive and that, in the opinion of the greatest and most patriotic men of Japan, should become still more popular and enjoy a wide-spread favour. This is *Jujutsu*, literally the "gentle art," a misnomer indeed if it is supposed to imply any passive condition, for of all athletic exercises it demands the greatest amount of physical activity, brings every muscle into play, and requires years of constant and assiduous practice to be understood. It is, in a word, a kind of wrestling, which teaches not only how to throw, disable, or maim an antagonist, but which also and in particular teaches how to be thrown without injury, or how seemingly to yield to superior strength and finally to win; or at least to hold one's own, by dint of admirable address, muscular suppleness, and undaunted courage. It teaches, first of all, a remarkable degree of presence of mind. There is no attack, however adroit, but what an adept *Jujutsuka*, though of puny physique, knows not how to meet and parry. If the hundreds of tricks, twists, turns, or falls he has been taught prove of no avail, he knows where to plant a blow which, not given with much force, will lay his stronger opponent unconscious or kill him outright. There are secrets taught, after a long course of study, which not only show a profound knowledge of the physical form, but would even do credit to a past master of anatomy. The muscles are so perfectly trained that a blow will fall harmless even on the pit of the stomach. *Jujutsu* deals preëminently with what

would be deemed foul blows and foul catches in Western lands. Its professors are simply ready to meet any kind of attack and proceed to any extremity themselves in order to secure the victory. It is a "gentle art" therefore only in so far as it teaches those who are not physically strong to cope successfully with vastly superior force. As such it is infinitely more scientific, more thorough, and more valuable a knowledge than any kind of wrestling taught elsewhere, though in its principal features it remarkably resembles the Cornish system.

It is generally held that, in the early days of the MING dynasty, a Chinaman named CHIN GENPIN came as a political refugee to Japan and taught the rudiments of *Jujutsu* to three *Samurai* named FUKUNO, ISOBE, and MIURA, each of whom founded a special system on what he had learned. Others again claim that AKIYAMA, a physician of Nagasaki, visited China some 250 years ago, and that during his sojourn in the latter country he acquired a knowledge of certain kicks and falls, blows, and the recovering of a man temporarily suffocated, or of one from whom life has apparently fled; and that finally the whole system of *Jujutsu* was afterwards developed from these three arts. A third opinion is that the origin of the "gentle art" dates from mythological times and is a purely Japanese invention. CHIN GENPIN came to Japan in 1654 and died here in 1671; all that he taught was several remarkable kicks and fatal blows. But a system of dangerous falls and deadly blows was known under the name of *Takenouchi-ryū*, as early as 1532, the founder of this style being a famous swordsman. From every appearance, *Jujutsu* is a comparatively modern art, and it was not until the era of IEMITSU that it became universally popular. From that time until the Restoration, in 1867, the art was diligently studied and grew to be an unparalleled system of attack and parry. But with the disappearance of the two-sworded *Samurai* the great art fell into decay, and it was not until 1882 that Mr. KANO JIGORO, the present Principal of the Higher Normal School, revived it by founding and maintaining a great school of *Jujutsu* at his own expense. This was formerly in Fujimi-cho, Tokyo, but has recently removed to Ushigome. Thanks to Mr. KANO'S enthusiastic labours, the art has quite recently become popular again, as it well deserves to be, so that now we find the highest educational authorities advocating its acquisition by students, as it admirably serves the purpose of keeping the body in perfect health and vigour. Mr. KANO has invented a peculiar style of his own, known as *judo*.

From the *Dai Nippon Shokwai Jii*, a well-known encyclopaedia published by the *Keigai Zasshi* Office, we learn that a number of styles have enjoyed comparative popularity since the last century.

among these are the *Kito-ryu*, the "Standing and falling" style; the *Tenshin-Shinyo-ryu*, or "Willow" style; and the *Shingan-ryu*, or "True Face" style. It would be far beyond our present limits to give a description of these three; indeed, they must be seen to be properly understood. Moreover, each and every style includes the two departments of *Satsu* (or *atemi*), the art of rendering an opponent powerless, of suffocating, laming, or otherwise putting him *hors de combat*; and *Katsu*, the art of reviving an unconscious person or one apparently dead. In both of these departments really marvellous things are taught, many of which would surprise even medical adepts. Bone-setting after a peculiar and secret fashion is also included in the mysteries of the art. Two years ago a professor of the Imperial University gave a course of public lectures in which he declared that many of the arts of *Jujutsu* would prove, upon investigation, wholly unknown to science, particularly in the *Satsu* department. Without going so far as this perhaps, it will be seen from this necessarily brief and inadequate description that *Jujutsu* is a formidable craft even in the hands of a man of no great physical strength. It is unquestionably worthy of adoption and study in the Occident, and of the very highest value to the Japanese who, as a nation, are physically less well developed than their neighbours or treaty allies.

JAPANESE JOURNALISTS.

WITH every due apology to our *Japanese confrères* for discussing their circumstances editorially, we proceed to note a few facts that will interest our foreign readers. Journalists outside the capital shall not occupy our attention, for with the conspicuous exception of one or two in Osaka, they do not yet deserve notice. Neither need we consider editors of periodicals, for periodical literature in Japan is still at a very incipient stage of its development. We confine ourselves, therefore, to the editors of Tokyo dailies, and to their case also we apply the still severer limit, editors of political importance. Japanese readers of the press are wont to set up the distinction *O-shimbun* and *Ko-shimbun*, or great and small journals. But it is a distinction resting on confused bases, and no longer possessing any emphatic significance. Let us then be still more concrete, and cut down our list to the twelve well-known journals, the *Fiji*, the *Nichi Nichi*, the *Nippon*, the *Kokumin*, the *Mainichi*, the *Hochi*, the *Kokkai*, the *Shin Choya*, the *Niroku*, the *Fiyu*, the *Chuo*, and the *Yomiuri*. Perhaps the most noteworthy fact about these journals is the extremely scant remuneration they bring to their editors. A hundred *yen* per month is about the maximum. Only the very favoured few reach that figure. Rumour, indeed, says that there are but two cases

in Tokyo. From this summit of opulence the scale descends by rapid gradations to sixty, fifty, and thirty *yen*, and finally to cipher. Party organs are conspicuous for the small stipends they pay their editors, partly because the extreme bias displayed by such journals necessarily limits the number of their subscribers, and partly because the editors are expected to substitute political devotion for pecuniary reward. Thus, of the editors of the five chief party organs, one receives 60 *yen* per month, two receive 30 *yen*, and the other two work for nothing, or at most an occasional honorarium. Of course it is impossible for educated men to toil on such terms. It becomes necessary for them to devote themselves to some bread-earning pursuit as a principal business, and to treat their journalistic duties as secondary, leaving the chief part of the work to sub-editors, who, though even more poorly paid, can afford to sell their inferior qualifications for a pittance. Newspaper proprietors are not to blame for this unsatisfactory state of affairs. They are said to be as liberal to their editors as circumstances permit. For example, the *Osaka Asahi* and the *Tokyo Asahi* are among the very few journals successfully conducted on business principles, and their proprietor pays his staff with proportionate liberality. The editor of the *Osaka Asahi*, Mr. TAKAHASHI KENZO, formerly Chief of the *Official Gazette* Bureau, is the prince of Japanese journalists in the matter of remuneration; he has a monthly salary of 200 *yen*. The writer of the *feuilletons* in the *Tokyo Asahi*, Mr. AYEBA KOSON, enjoys a similar distinction; his stipend of 100 or 120 *yen* per month places him at the head of his craft. These two papers, however, have a circulation that warrants the munificence of their owner. Other journals are in a very different condition. We do not purpose to give here accurate statistics of circulation. It will be enough to note that owing to various causes, some remediable, some irremediable—to the latter category belongs the fact that the use of ideographs necessarily precludes circulation abroad—political newspapers have a comparatively small circle of subscribers, and, with one or two exceptions, are not self-supporting. Owing their continued existence to subventions of some kind, impartiality becomes impossible to them, and the prejudice and virulence of their writings have few parallels among journals of similar nominal standing elsewhere. It is an evil state of affairs, but it reflects with fidelity the politics of the time.

It may easily be supposed that impecuniosity is the normal condition of Japanese editors under such circumstances. "Chill poverty" is their constant companion. In Japan, however, poverty counts for comparatively little. The people's attitude toward each other does not verify their familiar proverb, "To be poor is to be des-

bised." An "out-at-elbow" condition is characteristic of the great majority of the intellectual stars of the rising generation, but society does not turn its back on them for that reason. The editor's case, however, is exceptionally hard. Constrained by all the best canons of the "dignity of the press," he generally struggles to support his position, until his last state becomes distinctly pitiable.

Even more interesting, perhaps, is the question, what education does the Japanese editor possess and what experience does he bring to the discharge of his duties? We can answer this best, perhaps, by reference to the biographies of the editors of the twelve journals enumerated above. Among the twelve, then, we find that one received a complete University education, and two almost finished their University courses; three are graduates of the Keiogijuku (Mr. FUKUZAWA's college); three have had a miscellaneous education; two are Chinese scholars, and one is a graduate of the Doshisha (the American Board Mission College in Kyoto). Moreover, five of them can read foreign books and journals with facility, and the other seven have either a defective acquaintance or none at all with Western tongues. In this analysis our readers will probably find a sufficient explanation of the ignorance too often displayed by Japanese editors where Occidental affairs are under discussion, and of the want of penetration they frequently show when writing about the affairs of their own country. It is true that the same criticism may be pronounced against foreign editors of journals published in Japan. But the foreigner has the advantage of being familiar with the motives and principles of Occidental civilization, which are also the motives and principles of Japanese modern progress, and can further command the services of competent Japanese assistants, whereas no corresponding aid is within reach of the Japanese editor. On the whole, the writings of Japanese journalists indicate comparatively restricted erudition and limited mental resources. Examining their articles throughout the space of, say, a year, we find that they divide themselves into two general classes, attacks upon the Government and attacks upon their own *confrères*. Of course the easy-going temper of the Japanese public is to some extent responsible for this, but there can be no question that until the press proves itself much more capable of discharging the rôle of mentor which it arrogates, its writings will continue to be lightly regarded. Youth and want of experience are also characteristics of Japanese editors. Very few of them are over forty years of age, and still fewer have had ten years' practice in their profession.

It will readily be inferred from what has been said above that the social consideration enjoyed by journalists in Japan is

small. To be distinguished as a journalist is unheard of. Men who were once journalists have become distinguished in other lines, as Mr. FURUZAWA, Governor of Nara; Mr. KAWAZU, ex-Vice-Minister of State for Communications; Mr. YANO FUMIO, of the Imperial Household, and Mr. NAKAMIGAWA, Manager-in-Chief of the Mitsui Bank. With these men journalism was at best a stepping-stone. In truth, we may say without exaggeration that to be a newspaper editor is the *pis-aller* of an educated man in Japan, and it is not easy to detect any factors likely to correct this state of affairs. We must premise that the *Fiji Shimpō* is excluded from these comments. The *Fiji* stands head and shoulders above its contemporaries in impartiality, in accuracy of information, and generally in the traits of good journalism. The *Nichi Nichi Shimbun* of course is an excellent paper—better even than the *Fiji* as an exponent of official views and motives. But the *Nichi Nichi* has a distinctly political bias whereas the *Fiji* is absolutely independent. The preëminence of the *Fiji* is generally, and doubtless rightly, attributed to the high qualities of its editor-in-chief, Mr. FUKUZAWA, one of Japan's best scholars and deepest thinkers. Mr. FUKUZAWA started the *Fiji*, and is its owner as well as its editor. Probably in such a combination lies the only hope for Japanese journalism. It is said that Mr. FUKUZAWA derives an income of \$4,000 a month from the *Fiji*. We doubt that. But even supposing the amount to be only a fourth of that sum, it would still contrast very strikingly with the miserable pittance earned by the editors of other journals. There are not many Mr. FUKUZAWAS, and there never will be another in Japanese journalism until men of capacity and capital see their account in devoting money and brains to found newspapers on Occidental lines in lieu of the hand-to-mouth irresponsible affairs that now represent the youthful press. An editor who is also proprietor has a field before him, we are persuaded.

THE KOREAN IMBROGLIO.

THE motive of China's policy towards the petty States on her frontiers has always been clear. She has sought to utilize them as buffers for softening the shock of foreign contact. But she has steadily contrived, at the same time, that her relation with them should involve no inconvenient responsibilities. The aggressive impulses of the outside world were to be restrained by an unproclaimed understanding that the territories of these States partook of the inviolability of the Middle Kingdom itself, while the States, on their side, must never expect their suzerain to shoulder the consequences of their acts. It was an arrangement depending largely on sentiment and prestige. To the little nations was assured whatever security might be found under the shadow of China's

wing, but they were not to count on her active protection unless their character as buffers was threatened. In old times, when the majesty of China possessed substantial significance, such a relation easily survived the course of events. But at the touch of modern Occidental practicality its fictitious nature became speedily apparent. In one instance after another China was obliged to modify it, and such modification always meant the surrender of her title to suzerainty. Hitherto her theory had been that these border States were independent toward all the world except herself. Now she had to confess their independence of herself also. This happened in the case of Tonquin, of Annam, of Siam, of Burmah. But with regard to Korea, China proved more tenacious. The possession of the peninsula by a foreign Power carries with it the command of the Gulf of Pechili, and therefore of the maritime route to the Chinese capital, and also gives easy access to Manchuria, the cradle of the present Chinese dynasty. Therefore the statesmen in Peking have endeavoured to preserve their country's old-time relations with the little Kingdom. But they could never persuade themselves to modify the indirect methods sanctioned by tradition. Instead of boldly declaring the peninsula a dependency of the Middle Kingdom, a step that might have been taken twenty-five years ago without provoking serious opposition from abroad, they have sought to keep up the fiction of ultimate dependence and intermediate freedom. In pursuance of this policy Korea was suffered to conclude (1876) with Japan a treaty, the first article of which declares that "Chosen being an independent State, enjoys the same rights as does Japan;" and subsequently to make with the United States (1882), with Great Britain (1883), and with others Powers, treaties in which her independence is admitted by implication. China, however, did not by any means intend that Korea should exercise the independence thus conventionally recognised. A Chinese Resident was placed in Sōul, and a system of steady but covert interference in Korea's domestic and foreign affairs was inaugurated. Japan chiefly suffered by these anomalous conditions. China had always entertained a rooted apprehension of Japanese aggression in the peninsula, and that distrust tinged all the influence exerted by her agents there. It would be an endless task to recapitulate the occasions upon which Japan was made sensible of the discrimination thus exercised against her. Little by little the consciousness roused her umbrage, and although no single occasion constituted a sufficient ground for strong international protest, the Japanese people gradually acquired a sense of being perpetually baffled, thwarted, and humiliated by China's interference in the peninsula's affairs. Still more serious were the consequences of that

interference when considered from the point of view of Korean administration. The rulers of the country lost all sense of national responsibility, and gave unrestrained sway to selfish ambition. The functions of the judiciary and of the executive alike came to be discharged by bribery only. Family interests predominated over those of the State. Taxes were imposed in proportion to the greed of local officials. No thought whatever was taken for the welfare of the people or for the development of the country's resources. Among the upper classes faction struggles, among the lower insurrections, began to be more and more frequent. Personal responsibility was unknown among officials, family influence overshadowing everything. To be a member of the MING family was to possess a passport to office and an indemnity against the consequences of abuse of power, however flagrant. The MING was the QUEEN's family. Its members were supreme in every department of State. So paramount was their power that any attempt to rebel against its exercise or remonstrate against its tyranny was utterly futile. This family, pledged to conservatism and to the maintenance of Chinese suzerainty, received the powerful support of the Middle Kingdom, whose Representative in Söul, Mr. YUAN, occupied virtually the position of a sovereign and dictator. From time to time the advocates of progress or the victims of oppression rose in arms. They effected nothing, however, except to recall to the world's recollection the miserable condition into which the peninsula had fallen. Chinese military aid was always readily furnished for the suppression of these *émeutes*, and thus the BIN family learned to base its tenure of power on ability to conciliate the Middle Kingdom and readiness to obey Chinese dictation, while the people at large fell into the thoughtless apathetic condition of men who possess neither the blessing of security of property nor the incentive of national independence.

To Japan this state of affairs grew daily more intolerable. Her modern relations with Korea had their origin in a treaty explicitly acknowledging Korea's independence, and placing the Peninsular Kingdom on a footing of equality with the Japanese Empire. Yet in all her dealings with Korea, in all complications that arose out of her comparatively large trade with the peninsula, in all questions connected with her numerous settlers there, Japan found herself negotiating with a dependency of China and with officials who took their orders from the Chinese Representative. To appreciate the bitterness of such conditions, we have to remember that for the past thirty years China has treated Japan as a contemptible deserter from the canons of the Orient, and has openly regarded her progressive efforts with disdainful aversion; while Japan, on her side, has chafed more and more at the

striking evidence of the wisdom of her preference for Occidental civilization. In the breast of each people there has been smouldering a sentiment of umbrage that could scarcely fail to be translated sooner or later into hostile action, unless either Japan reverted to conservatism, or China became progressive. Further, as a matter of State policy, the Korean question caused grave anxiety to Japan. Not merely did Korea's spirit of independence languish in the shadow of Chinese interference; not merely was the development of the country's resources effectually checked by the maladministration and gross corruption of its officials; but in the struggles of rival factions and the insurrections of suffering provinces, constant opportunities for foreign aggression were furnished. Whatever interest China may have in preserving Korea from the grasp of a Western Power, Japan has at least an equal interest. The security of each empire is deeply concerned in this question, and to suffer the peninsular Kingdom to drift into a condition of such administrative incompetence and national debility that a strong aggressor might at any moment find occasion and plea for interference, would argue as blind fatuity on the part of Japanese statesmen as though England were to withdraw all supervision from the Indian Free States, and allow them to become hot-beds of intrigue and corruption.

It has been stated above that the various *émeutes* and disturbances fomented in the peninsula during the past 15 years by the corruption or the conservatism of the Government, were suppressed by China's armed intervention whenever they assumed serious dimensions. That occurred notably in 1882 and 1884, and on both occasions the partizans of the victors, regarding Japan as the head and front of progressive tendencies, attacked and destroyed the Japanese Legation in Söul and compelled its inmates to leave the city. Japan behaved with great forbearance at these crises, but in the consequent negotiations she acquired conventional rights that touched the core of China's alleged suzerainty. For, in 1882, her right to maintain troops in Korea for the protection of her Legation was admitted, and, in 1885, she concluded with China a convention by which each Power pledged itself not to send troops to the Peninsula without notifying the other, the two empires being thus placed on an equal military footing with regard to the peninsular Kingdom.

Things remained thus until the spring of the present year, when a serious insurrection broke out in Korea. The insurgents, in several fights, proved themselves superior to the ill-disciplined, ill-equipped troops of the Government, and the BIN family finally had recourse to its familiar expedient, appeal to China's aid. This appeal was promptly responded to, and on the 6th of July 2,500 troops embarked at Tientsin and were transported

to the peninsula, where they went into camp at A-San, a place on the south-west coast, a little south of Chemulpho. Notice of this step was given by the Chinese Government to the Japanese Representative in Peking, according to treaty.

During the interval immediately preceding these events Japan had been rendered more than ever acutely sensible of China's arbitrary and unfriendly interference in the peninsula. Twice the efforts of the Japanese Government to obtain redress for unlawful and ruinous trade prohibitions issued by the Korean Authorities, had been hampered by the action of the Chinese Representative in Söul; and once an ultimatum addressed to the Söul Government in the sequel of long and vexatious delay, elicited from the Viceroy Li in Tientsin an insolent threat of Chinese armed opposition. Still more strikingly provocative of national indignation was China's procedure with regard to the murder of KIM OK-KYÜN. The assassination had been planned by Koreans in Japan, where KIM had for many years been a political refugee. The unfortunate man had been inveigled from Japan to Shanghai, accompanied thither by a fellow-countryman, and then treacherously shot in a Japanese hotel. China, instead of punishing the assassin as any civilized Power must have done, conveyed him, together with the corpse of his victim, in a war-ship of her own to Korea, the murderer to be publicly honoured, the body to be brutally mutilated. From this incident alone might be truly inferred the hostile and uncivilized spirit of Chinese interference in Korea wherever Japan was concerned.

When, therefore, shortly after the KIM OK-KYÜN incident and its revolting sequel, news was received of another insurrection in Korea, and when it became known that the MING family had once more solicited Chinese armed intervention, the Tokyo Government concluded that in the interests, first of the Japanese empire, and secondly of civilization in the Orient, steps must be taken to put an end once for all to the barbarous corruption and misrule that rendered Korea a scene of perpetual disturbance, offered incessant invitations to Western aggression, and effectually checked the country's capacity to maintain its independence. How was this to be effected? Japan, never claiming on her own account rights or interests in the peninsula superior to those possessed by China, was always prepared to work hand in hand with the Middle Kingdom in inaugurating and carrying out any efficient system of reform. But simply to invite such coöperation would have been plainly futile. Was there the faintest probability that China, having from the outset obstinately and contemptuously rejected on her own account all the progressive measures embraced by Japan, would listen to a gentle perfunctory request from the latter, and consent to join in forcing upon

a neighbouring Oriental Kingdom the very reforms against which her own face had always been rigidly set? Had Japan advanced such a proposal by the ordinary channels of every-day diplomacy, the world would have questioned her earnestness and Peking would have laughed at her. In point of fact proposals pointing to the settlement of the Korean problem by the agency of a joint commission of the two empires had been informally brought upon the *tapis* some months previously but had failed to command any attention at the hands of China's statesmen. The Japanese have probably as clear a conception of Chinese methods as any nation has. They have learned by experience what a marvellous potentiality for procrastination resides in that Protean body called the Tsung-li Yamén, which shows a different face to the same negotiators every week in the year. Had they approached Peking by common diplomatic avenues and invited the Middle Kingdom's coöperation in a scheme for bringing Korea under the regimen of Western civilization, they would have been simply involving themselves in an interminable labyrinth of evasion, obstruction, prevarication, and indifference. They resolved, therefore, that, as the problem called for a practical solution, and as the patience of the Japanese nation was already exhausted, they must not offer themselves to be the plaything of Chinese dalliance and dilatoriness, but must at once contrive a situation such as not only would place them beyond the reach of diplomatic obstacles, but would also enable them to pursue their programme even in the event of China's definite refusal to coöperate. With that object they sent a strong force of troops to Korea, prefacing the act, of course, by due notice to China. These troops proceeded at once to occupy positions of vantage in and around the Korean capital, and at the same time the Japanese Government unfolded to the authorities in Peking and Söul a programme of reform which they designated as essential, in their opinion, to secure Korea against the continual recurrence of domestic broils and to develop the little kingdom's capacity for independence.

It has been argued that Japan's action at this stage was at once precipitate and unpractical. Precipitate, because without any preliminary negotiations she called upon China to coöperate in a measure more or less self-stultifying; unpractical because, judging the Koreans by her own people, she believed them capable of assimilating novelties for which there was no warrant to imagine that they had either taste or aptitude. As to the former point, a sufficient answer is furnished by the explanation given above of the hopelessness of attempting any ordinary solution of this extraordinary problem. Japan simply guaranteed herself from the out-

set against becoming a victim of Chinese conservatism and inertia. As to the second criticism, its justice depends plainly on the nature of the reforms proposed. They were very simple—namely, that the personal responsibility of officials should be recognized; that a separate department should be established having charge of foreign relations, instead of entrusting them as heretofore to a subordinate office presided over by an inferior official whose resignation could at any moment be resorted to as a means of interrupting inconvenient negotiations; that the judiciary should be reorganized; that public works should be undertaken with a view to the improvement of means of communication; that a system of strict scrutiny into matters of revenue and expenditure should be adopted; that the educational system should be improved, and that students of promise should be selected for study abroad. Such a programme obviously included nothing that should have been beyond the strength and capacity of any ordinarily intelligent people, and might have been adopted by Korea with certainty of at least partial success.

China, however, declined to coöperate, or even to negotiate, upon the above basis. From the outset her action was calculated to provoke controversy. In notifying Japan of her dispatch of troops to Korea, she spoke of the latter as her own "subject State." Now Japan, in deference to China's susceptibilities, had always avoided any official reference to Korea's status. It was well understood that China still clung affectionately to the sceptre of universal sovereignty once swayed by her in the Orient, and her friendly neighbours had no disposition to call into needless question her tacit assumption of obsolete titles. But when she thrust those titles into the forefront of an international discussion the case was altered. Japan, having for eighteen years held treaty relations with the kingdom of Korea on an explicitly declared basis of independence and equality, could not suffer China to officially relegate Korea to the inferior rank of a subject State. Such a clumsy and uncalled-for declaration placed an immediate obstacle in the path to an *entente*. It was in fact the throwing down of the gauntlet by China. Japan was compelled to take it up. It is just to emphasize this point, because the Tokyo Cabinet has been roundly charged with a wanton assault upon China's suzerain title, whereas in truth Japan never raised the question at all until China thrust it upon her. After that there was no choice: the Japanese representative in Söul was at once instructed to ask for a categorical statement of Korea's status in view of the treaty of 1876, and Korea unhesitatingly replied that she was an independent State.

China's explicit refusal to coöperate in the regeneration of the peninsular Kingdom having been received, Japan declared

her resolve to proceed with the task alone. She had made ample provision against this very contingency, and she went to work resolutely, always, however, maintaining toward the Korean Government an attitude of friendliness and courtesy, and always emphatically disclaiming any aggressive designs.

Then ensued a series of evasions and intrigues on the part of Korea. Japan, having from the outset disavowed every aggressive project and indicated the permanent maintenance of Korean independence as her sole purpose, was naturally desirous of avoiding all recourse to violent measures. The consequence of her moderation was that she found herself baffled and thwarted at every turn by the scheming of the Chinese Representative. To-day, the Korean Government would promise everything; to-morrow, they would make the withdrawal of the Japanese troops an essential preliminary; at one moment, they would endorse the proposed reforms; at another, they would formulate endless difficulties and objections. They were in fact fighting for a great stake—their long-enjoyed opportunities of plundering the people—and were therefore only too ready to promote the more subtle object of the Chinese Representative. It finally became apparent that so long as the MING family and its ally, the Chinese Representative, swayed the counsels of the Korean Court, light could never be evolved. The KING himself, who seems by this time to have appreciated the situation, now resolved to entrust the direction of the administration to his father, the TAI WÖN-KUN, an old Prince of proved ability and resolution, who during many years of retirement had been regarded as the secret leader of the party of progress. The TAI WÖN-KUN had no reason to love China. Made prisoner by an extraordinary ruse in 1885, he had been carried into captivity in the Middle Kingdom and only obtained his release after years of exile. The summons of this statesman to the Palace was made the occasion of a violent demonstration by the MING family. They ordered the Korean soldiers to open fire upon an escort of Japanese troops which the Representative of Japan, acting at the request of the KING, had detailed to guard the TAI WÖN-KUN's person *en route*. The MING statesmen cannot have hoped for any success in this undertaking. Doubtless their sole object was to taint the TAI WÖN-KUN's advent to power with an atmosphere of armed violence and to discredit the initiatory stage of the new reforms. The Japanese troops made short work of their assailants. With trifling loss to themselves they put the Koreans to flight, and seizing all their arms, large and small, terminated their capacity for further obstruction. The TAI WÖN-KUN was placed in charge of the administration; Korea publicly renounced her conventions with China, and the Chinese Representative

withdrew from the city where, during nine years, he had played the part of an uncrowned king. His last act was in keeping with the extraordinarily inconsistent policy pursued by China toward the peninsula. For before leaving Söul he entrusted to the British Representative the guardianship of Chinese interests—the peninsula thus offering the spectacle of China having recourse to the good offices of a neutral Power for the protection of her people in a country that she designated a subject State of her own.

We have somewhat anticipated the course of events for the sake of our narrative's continuity. In point of fact, the stage to which we have carried our readers was not reached without the mediation of foreign Powers. It is unnecessary, even were it expedient, to explain how that intervention was at first secured. We may say, however, that it was at China's instance. She seems to have been persuaded until the eleventh hour that the Western Powers would never suffer the situation to reach a belligerent stage, and on the strength of that conviction she even permitted herself to indulge in lofty language that materially helped to complicate the negotiations. As for the Powers, they lent their good offices with all earnestness, not collectively but separately. It is, perhaps, premature to analyse the reasons of their failure. We are disposed to doubt whether, at the outset, they appreciated how irrevocably Japan was pledged to carry her undertaking to a really practical issue, and how impossible it would have been for her Government to accept anything like an abortive issue. When these things came to be better understood, the mediators applied themselves to modify China's attitude, and to some extent they succeeded. It is true that the Peking statesmen remained obdurate on two cardinal points. They declined to acknowledge Japan's political equality with the Middle Kingdom in the peninsula, and although they undertook to guarantee Korea's integrity, they stopped short of her independence. For the rest, they expressed their willingness to recommend a programme of reform in Korea, but were resolved to limit themselves to advice, leaving the Koreans free to adopt or reject it at will. It must be confessed that fate devised a very cruel stroke of irony when she compelled the Middle Kingdom to choose between drawing the sword or forming a partnership with Japan to force upon a neighbouring Oriental State a system of reform repugnant to all the instincts of Chinese conservatism. On the other hand, Japan would have been taking part in something very like an international farce had she, in the sequel of all her own practical effort and sacrifice, agreed that the adoption of her proposed programme by Korea should become dependent solely on the earnestness of Chinese recommendations. Still

there was here a basis on which some kind of effective understanding might have been built. But the opportunity came too late. Korea had already accepted Japan's programme and the measures necessary for its achievement were in actual operation. Moreover, all possibility of an amicable settlement disappeared at this stage. Chinese men-of-war opened fire upon Japanese, and a naval engagement removed the question at once from the field of diplomacy.

On the subject of this naval engagement and the events immediately preceding it, a few words are necessary. Japan, as described above, had sent a considerable military force to Korea simultaneously with the despatch of Chinese troops to the peninsula. Her object in doing so had been to guarantee the success of a programme that she deemed essential to her own safety and to the permanent tranquillity of the East. She seems to have fully recognised the significance of the step and to have been prepared to accept all its consequences. On the other hand, China, at the outset, sent twenty-five hundred men only, and since her avowed purpose was to kill an insurrection that died almost before her troops were landed, she made at first no attempt to re-inforce them. But she did not withdraw them. She kept them in the peninsula, her declared reason for doing so being the presence of a Japanese military force. Thus, throughout the subsequent negotiations, the Chinese troops lay in an entrenched camp at A-San while the Japanese occupied Söul. The trend of events had not yet imparted any character of direct mutual hostility to the two armies. But when it became evident that scarcely the faintest hope of friendly coöperation between the two empires could any longer be entertained, and when Japan single-handed, had fully embarked upon her scheme of regenerating Korea, not only did the continued presence of a Chinese military force in the peninsula assume special significance, but any attempt on China's part to send re-inforcements could be construed in one sense only, namely, as an unequivocal declaration of resolve to oppose Japan's proceedings by force of arms. Japan did not fail to warn the Peking Government that such would be her construction of any act of the kind. Nevertheless China not only despatched troops by sea to re-inforce the camp at A-San, but also sent an army overland across the northern frontier of the peninsula. It may, of course, be argued that Japan's original despatch of a large force to Korea might also have been interpreted in a hostile sense by China. That is true, to some extent. But Japan's despatch of troops had been preliminary to a proposal of friendly coöperation with China, and could not therefore possess any such significance as necessarily attached to the sending of Chinese armies to the peninsula after

China's refusal to coöperate and after the relations between the two Powers had been strained to breaking point. It was at this stage that an act of war took place. Three Chinese men-of-war, conveying a transport bound for A-San, with 1,200 troops on board, encountered and fired upon three Japanese cruisers. One of the Chinese ships was taken; another was so shattered that she had to be beached and abandoned; the third escaped to China in a dilapidated condition, and the transport was sunk, while the sum of the injuries received by the Japanese ships was one shell that penetrated the engine-room of the *Naniwa Kan* but failed to explode. Unfortunately, the transport was a British steamer chartered by the Chinese ostensibly for purposes of peaceful trade. Hence a question arose as to the propriety of sinking her. The Tokyo Government, foreseeing the possibility of such contingencies, had been careful to avert them by employing Japanese-owned steamers alone for transport purposes. But the Peking Government did not exercise equal forethought, and thus, at the crisis of the complication, a British steamer was found carrying Chinese troops and convoyed by Chinese men-of-war prepared to fire upon any Japanese cruiser that crossed their path. It is not to be supposed for an instant that Japan was bound to refrain from opposing the transport of troops to be employed against herself merely because a British steamer had been chartered to carry them. If one British steamer had the right to perform such a service unmolested, then a hundred or a thousand had an equal right, and China might have landed fifty thousand men in Korea while Japan sat with folded hands.

The narrative we have here set down represents the last chapter only of a history having its beginnings a quarter of a century ago. From the moment that Japan set herself to break away from Oriental traditions and snap from her limbs the fetters of Oriental conservatism, from that moment it was inevitable that a widening gulf should gradually grow between herself and the inveterate representative of those traditions and that conservatism. The struggle now commencing in Korea is not to determine China's shadowy suzerainty or Japan's political supremacy. It is a contest between Japanese progress and Chinese stagnation. To secure Korea's immunity from foreign aggression is of paramount importance to both empires. Japan believes that such security can be attained only by introducing into the peninsula the civilization that has contributed so signally to the development of her own strength and resources. China thinks that she can guarantee it without any departure from old-fashioned grooves and by the same perfunctory processes of protection that have failed so signally in the cases of

Annam, Tonquin, Burmah, and Siam. Hence the issue really at stake is whether Japan shall be suffered to act as the Eastern propagandist of Western progress, or whether her efforts in that cause shall be held in check by Chinese conservatism and anti-Occidental bigotry.

IMPERIAL ORDINANCE.

We publish below an authorized translation of the important Imperial Ordinance of the 4th instant:—

We hereby sanction the present Regulations relating to Chinese subjects residing in Japan and order the same to be promulgated.

(Privy Seal.)

(H.I.M.'s Sign-Manual.)

The 4th day, the 8th month,
the 27th year of *Meiji*.

(Countersigned)

COUNT ITO HIROBUMI,
Minister President of State;
COUNT INOUE KAORU,
Minister of State for Home Affairs;
MUTSU MUNEMITSU,
Minister of State for Foreign Affairs;
YOSHIKAWA AKIMASA,
Minister of State for Justice.

IMPERIAL ORDINANCE No. 137.

Art. 1.—Chinese subjects are authorized, subject to the provisions of this Ordinance, to continue to reside in those places in Japan where they have hitherto been permitted to reside and there to engage in all peaceful and lawful occupations with due protection of life and property, and subject to the jurisdiction of Japanese Courts.

Art. 2.—Chinese subjects residing in Japan in accordance with the preceding Article shall, within twenty days after the promulgation of this Ordinance, apply to the Governor of the prefecture where they reside to register their residences, occupations, and names.

Art. 3.—Certificates of registration will be issued by the Governors of Prefectures to Chinese subjects who register themselves in pursuance of the preceding Article.

Art. 4.—Chinese subjects who register themselves according to Art. 2 shall be entitled to change their places of residence provided they obtain from the Governor of the prefecture where they are registered, visés upon the certificates of registration and apply to the Governor of the Prefecture of their new residence within three days after arrival to be re-registered as prescribed by Art. 2.

Art. 5.—The Governors of Prefectures may expel from the territories of Japan, Chinese subjects who fail to register themselves as required by this Ordinance.

Art. 6.—Chinese subjects who injure the interests of Japan, commit offences, or disturb order, or are suspected of any of the above acts, shall, in addition to the penalties denounced for such acts, be liable to expulsion by the Governors of Prefectures from the territories of Japan.

Art. 7.—The present Ordinance applies to Chinese subjects employed by the Japanese Government or subjects.

Art. 8.—The present Ordinance does not affect the orders and measures of the Imperial Military Authorities which may be issued against Chinese subjects residing in Japan in connection with warlike matters.

Art. 9.—Permissions to Chinese subjects to enter the territories of Japan after the promulgation of this Ordinance shall be limited to those specially granted by the Minister of Home Affairs through Governors of Prefectures.

Art. 10.—The present Ordinance shall be enforced from the date of promulgation.

IMPERIAL RESCRIPT.

We, relying on the glorious spirits of Our Imperial Ancestors and the coöperation of Our Subjects, and through the instrumentality of Our loyal and gallant land and naval forces are determined to preserve the dignity and prestige of Our realm. We know that it is on account of their loyalty and patriotism that Our Subjects in various localities are undertaking to organize volunteer corps. But deeming, We do that there are fixed institutions in the country as well as fixed avocations for the people, it is Our desire that except in cases requiring extraordinary recourse to their services Our subjects should continue industriously to pursue their accustomed avocations, so as to promote the industrial development of the realm, and to cultivate the national resources. At present, We do not deem that there is any need of volunteer troops, and We enjoin Local Governors to instruct the people concerning Our wishes.

[His Imperial Majesty's Sign Manual.]

[Privy Seal.]

Dated August, 27th of the year of *Meiji* (Aug. 4th, 1894.)

Countersigned by the Ministers of the State.

RAISING CONTRIBUTIONS TOWARD WAR EXPENSES.

As already referred to in these columns, a special meeting of various wealthy inhabitants of Tokyo and Yokohama was held at the Clearing House, Sakamotocho, Tokyo, on the 1st inst., to discuss the question of raising contributions towards the War Expenses. The originators of this patriotic scheme are Count Higashikaze and Messrs. Mitsui Hachiroemon, Iwasaki Hisaya, Fukuzawa Yukichi, and Shibuzawa Eiichi. The circulars were sent to more than 200 persons, but, owing to the suddenness of the project, only some half of them were able to attend the meeting.

Mr. Fukuzawa, in behalf of the promoters, spoke as follows—The troubles in Korea have gradually involved Japan and China in a quarrel, and at last news has reached us that on the 25th ultimo a naval engagement took place between the squadrons of the two countries off the coast of A-San resulting in a signal victory to Japan. This news, coming as it did at the outset of the breaking out of hostilities between the two nations, gives us unbounded satisfaction. Still, at the same time, we must not forget to consider the future. Our trust is in the army despatched abroad, and we sympathize with their lot and thank them for the hardships which they endure for the welfare of the country. Recently, with a view to provide comforts for the troops and seamen stationed abroad, a number of people have presented either money or articles to the Authorities. This, exemplifying as it does the patriotic spirit of the people, should be praised highly. Indeed, the present affair being one of the most important things that have happened to Japan during three centuries, and moreover being enacted before the eyes of the world, every step which the country is to take incidental to it will not only redound either to the glory or to the disgrace of the Empire but will even affect its very existence. Under the circumstances, even though matters of fighting be left to the care of soldiers and seamen, those at home must not stand idle, but must strive to discharge their proper duties. It is with this motive that we propose to raise contributions on a large scale and to devise measures for replenishing the Treasury to enable it to meet the extraordinary demands that may be made on it by the war. The cost of the war cannot, of course, be predicted by any one, but at any rate the nation must bear the burden. The money needed might be raised in various ways—by taxation for one. Such a procedure, however, would not fail to affect, to a greater or less degree, the economical condition of the country, especially if the Government should be obliged to interfere with the currency, or to appropriate the specie reserves, and thus deprive the present notes of the power

of convertibility. If this should occur, capitalists might find their properties reduced to half the present value, and the day of cessation of war might be a day of financial disaster. Consequently, it would be wise to make provision against any such financial disturbance, and also to display the loyalty and patriotism of the country, and to raise for those purposes suitable contributions from among the eight million families and 40 million inhabitants found in the Empire, and to provide at once the war expenses by voluntary contribution. Needless to say, we have not conceived the present project for the sake of any personal motive. To say the truth we hate war; but as things have turned out, war was inevitable. Our chief object, now that war has been declared, must be to maintain throughout the world the prestige of Japan. Now a large war-fund is an important means of giving free scope to the exercise of strategy, and so if our soldiers and seamen fight abroad by shedding their blood, we who are living at home must, to the utmost capacity of our means, supply the funds, and thus the operations abroad must be supported at home. It is with this spirit, and it is with the desire of preserving our empire, that we have conceived the present idea. In other words, the idea is that the Japanese nation should exert itself to the utmost for the safety of the country and should not prove false in the discharge of its proper duties. The money is for national purposes, but if we are asked to name its destination more distinctly, we beg humbly to place it in the hands of our Emperor, and if our action should conduce in the least degree toward alleviating the anxiety of the royal heart, then we shall declare ourselves unbouedly gratified. While our army and our navy will thus be enabled to pursue their work of conquest without being impeded by any consideration of expense, the present enterprise will not fail, on the other hand, to impress foreigners strongly. They will see the Japanese are really a loyal and gallant people, that, despite their party quarrels in time of peace, at the moment of any emergency their former feuds are forgotten at once and that the forty million brethren cordially act with the brother's spirit—the warriors in war and the citizens in providing money to the full extent of their capacity as if their only regret lay in their not being permitted to personally engage in the service. The Japanese troops, they will say, are therefore not the Government troops, but are a national army; the 40 million people are in fact all troops; the Government troops may be successfully combatted, but that the people's troops cannot be easily encountered. Thus they will be struck with awe, and the prestige of the Japanese Empire abroad will greatly increase. War vessels and cannon may prove efficacious in war, but in point of inspiring other countries with fear and respect we are firmly persuaded that the present enterprise of raising a war fund must prove far more efficacious. It is a superfluous thing to speak of patriotism, and so it is very briefly touched upon. We meet simply with the view to consult on the business of raising a fund, which is one way of attesting the loyalty and the patriotism indelibly inscribed on the hearts of our people.

The above speech ended, Mr. Shibuzawa stated his views as to the mode of collection, and asked the opinion of the assembly, who expressed their unanimous approbation and further desired to entrust the whole matter to the care of the projectors. The designation of the association was then talked of, and it was decided to dub it the Hokoku-kai (Patriotic Association). In addition to the five projectors, twenty-five men were further nominated, and thus the committee has come to be composed of thirty leading capitalists and influential personages in Tokyo and Yokohama. The names of the new members are as follows:—

Messrs. Miura Yasu, Yonekura Ippei, Yasuda Zenjiro, Amenomiya Keijiro, Okura Kibachiro, Nishimura Sutezo, Kikuchi Choshiro, Hara Rokuro, Mogi Sobel, Watanabe Koki, Shoda Heigoro, Nakakamigawa Hikojiro, Horikoshi Kakuro, Sonoda Kokichi, Sugimura Jiubei,

Watanabe Jiyemon, Hara Zenzaburo, Oye Taku, Abe Taizo, Oku Saburobei, Kakinuma Tanizo, Morimura Ichiyemon, Mayejima Mitsun, Soda Kinsaku, Watanabe Fukusaburo.

INTERNATIONAL LAW.

Considerable objections have been raised to the term "international law," on the ground that the ideas to which the name is applied are not legal at all, but moral, and it has been proposed to substitute the name "international positive morality." What are the differences between law and morality? Briefly they are two, one relating to the method of enforcement, the other to the mode of definition of the legal and the moral rule respectively. A law is a rule the violation of which is prevented or punished by the action of Government, directly or indirectly; whereas the violation of a moral rule, is punished only by social disapprobation and its consequences. Again, a law is embodied, more or less clearly, in a written code, the interpretation of which is left to the judgment of trained experts; whereas a moral rule is merely the expression of the general sense of right in a community in relation to the matter with which the rule deals, and while the opinions of individuals will be found to differ widely with regard to many important moral rules, there is no authoritative tribunal to which such differences can be referred for decision. Now when we come to consider the mutual obligations of those organic communities called nations, and to discuss on the one hand how those duties are to be defined, and on the other how they are to be enforced, we see at once that in many respects they bear a stronger resemblance to the dictates of morality than to the commands of law.

It has been often pointed out that in the gradual evolution of society there has been a concurrent enlargement of the social unit to which the individual is responsible for his actions. In a patriarchal state of society we find that outside the family moral obligation had no existence. After a time the idea of tribal morality was evolved. With the progress of civilization and the formation of states occupying large territories, there were necessarily associated, at once as cause and concomitant, first the development of national law and morality, and secondly written law. But the idea of international obligation has been of slower growth; it is still vague and unformed; and it lacks the definite sanctions of national law.

States still bear to one another the individualistic relation in which each seeks mainly its own interest, and the idea of common good is barely understood; the rules of international conduct are far from being clearly defined or universally admitted; and from the very nature of the individualistic relation there exists no authoritative tribunal to which differences of opinion can be referred.

It is obvious, however, that the very idea of international law implies an attempt to get beyond this state of anarchic individualism, an effort, however imperfect, to attain a universal political order, in which war shall be no more, and the world shall be controlled by a federation of civilized States. For the assumption underlying any attempt to punish a State for an infraction of international law is that the States have a higher social good, for the promotion of which the immediate interests of any particular State may be sacrificed. But only when that at present so distant ideal, "the parliament of man, the federation of the world" becomes actual, will the word "law," in the phrase "international law," have the same meaning as it has in ordinary national jurisprudence. At present, however, it is idle to talk of international law as if it were a code at once clearly defined and easily enforced. It is, and will long remain, a kind of compromise between the nascent sense of international morality, and individual States' ideas of political expediency.

A useful definition of international law is given by Sidgwick in his work on *The Elements*

of Politics. "If we keep close to actual facts, we can only define international law as a system of rules to which it is generally held that States, under ordinary circumstances, not only ought to conform, but may legitimately be compelled to conform; and which will accordingly be applied, in deciding disputes between States, by duly qualified arbitrators: while we at the same time admit that circumstances are liable to arise under which a State will not be widely disapproved for overriding these rules on the ground either of some imperative national interest or some alleged higher principle of international morality."

CHECKS ON DEMOCRACY IN AMERICA.

Mr. Stead said recently that the Constitution of the United States appeared to him to bear more resemblance to that of Russia than to that of any other country in the world. He was referring to the extreme difficulty of bringing about changes in the Constitution and to the spirit of "let things alone" that pervades the American Republic. In an article in the June number of the *Nineteenth Century*, Mr. Smalley, who has lived for many years in England, and who does not admire the English type of democracy—he quotes indeed with approval De Tocqueville's saying, "En Angleterre la Constitution peut changer sans cesse; ou plutôt elle n'existe pas"—explains and approves the Checks on Democracy in America. He fully admits the charge of Conservatism.

Aforetime it may have been a paradox, but it is now the mere simplicity of truth to say that America is probably the most Conservative country in the world. It is this Conservatism in the minds of the American people which ought to be placed first among the checks on Democracy. It springs from various causes, general and special, political and social. The Social question has hardly yet been raised in America; certainly it has not been raised in the same way and to the same extent as in Europe. But if we are to look at American Conservatism from a social point of view, it is to be said that there is no large class which has an interest in disturbing the present social fabric. It is a commonplace to speak of the prosperity and progress of the United States. It would not be a commonplace unless the prosperity were general and the industrial and commercial progress rapid, or unless all classes shared in it. What chance has Socialism in a community where every citizen either owns property or hopes to own it? There is no form of Socialism which does not imply tampering with property, and therefore no form of Socialism has got much of a foothold in America. So far as it exists, it is, like most other mischievous things in America, of foreign extraction. The Americans themselves have thoroughly digested Burke's saying that all men have equal rights, but not to equal things.

It may, indeed, be true, not that every man in the States hopes to own property, but that every man sees clearly the advantages given by the possession of property; but surely the ratio of the property-holders to the proletariat is not much greater in America than in the rest of the world; and surely the contrast between the proletariat and the bourgeoisie is as sharp and as bitter in America as it is elsewhere. The authors of two of the most widely read books of our time, "Progress and Poverty" and "Looking Backward" are both Americans, and they certainly do not share Mr. Smalley's views on the subject of American prosperity.

A few paragraphs later, Mr. Smalley thus sums up "the secret of the stability of the American Republic":—

Broad-based as it is, and ever has been, upon the will of the people, it is based upon the permanent, and not upon the shifting, occasional, transitory, will of the people. Principle governs, not impulse—an idea and not a caprice. And no check, or system of checks, upon Democracy is worth much which is not sufficient to insure the triumph of the permanent idea, and to defeat that which is but a gust of popular passion. The wind bloweth where it listeth, but the Republic has stood four-square to all the blasts.

This is very fine, and very true, but it is not the whole truth. We have repeatedly heard

Americans complain that the governing power in America as years have passed on has been more and more the power of the purse, the power of men who, with one of the writers in the *Biglow Papers*, say

I don't believe in principle,
But oh! I dew in interest.

And moreover, the success of the Federal Government, and the power of the Republic to stand four-square to all the blasts, are not the only things to consider. We recently read a thoughtful article by an American, complaining that the gradual removal of the municipal governments from effective democratic control had been the principal cause of the widespread corruption of civic administration. Surely in comparing the advantages and the disadvantages of immediate democratic control, the machinery and the results of local government must not be left out of count. Even if it be true that the system Mr. Smalley extols produces good results when applied to the Federal Government, yet surely those advantages may easily be outweighed by the apathy of the electors and by the corruptness of the elected produced by the same system when applied to municipal affairs?

A certain degree of inertia in a Constitution is doubtless a desideratum, but if, as may be true enough, the English Constitution is already excessively unstable, and the Radicals are in error in trying to make it still more so, yet it is possible to think that the American Constitution errs on the side of rigidity. Mr. Smalley thus explains the process that must be gone through to bring about a change in the American Constitution:—

Yet, when the American reformer has got his two-thirds of the House of Representatives and two-thirds of the Senate, he is only on the threshold of his difficulties. He must then go to the separate States, of which there are forty-four, and to the legislatures of the States, each of which is composed of two chambers. He has to appeal, that is, to eighty-eight separate legislative bodies, and he must manage to get a majority in three-fourths of these eighty-eight separate legislative bodies, before his proposed constitutional reform can become part of the Constitution. These States occupy half the North American continent; each one of them has a Constitution of its own; each has a population with distinctive traits and a strong State feeling; their legislatures are chosen under varying conditions of suffrage, meet at different periods of the year, and prescribe each their own methods of procedure. Yet three-fourths of them must concur in an amendment. If there be one less than three-fourths, the amendment fails.

Mr. Smalley thinks that the recent English views of America—he is speaking, of course, of the few Englishmen that have made an intelligent and sympathetic study of American characteristics and American institutions—have been too exclusively formed from Mr. Bryce's work on the *American Commonwealth*. Speaking of this book he says:—"We in America, I think, are just to Mr. Bryce, and sometimes more than just. The merits of his *American Commonwealth* are very great, the defect of it is one for which Americans can easily make allowance—Englishmen not so easily. It was Mr. Bryce's fortune to come in contact with a little clique of superior persons in America—some of them Americans, some not—who have made it their mission in life to expose abuses and point out blemishes, and endeavour to remedy the errors they detect in the working of municipal and State and national institutions. They so impressed their views upon Mr. Bryce that he has reproduced them in his book with great force. The result is that his own view lacks proportion. He has given too much space and too much emphasis to what might be called in New York 'Mugwump' notions. I have even heard Mr. Bryce's *American Commonwealth* called a Mugwump pamphlet. The phrase might be applied not unjustly to a chapter or two. Of the book as a whole, spite of its inevitably misleading effect abroad in some particulars, it is impossible for an American to speak without admiration and gratitude."

For an account of the American Constitution that seems to him on the whole better, though of course far shorter, than Mr. Bryce's, Mr.

Smalley would refer us to the last Chapter of Sir Henry Maine's *Popular Government*:—"I know of no account of the Constitution of the United States which, within the same limits, is equally full, specific, accurate, and instructive. Sir Henry Maine's book is made up of four separate essays. It is, nevertheless, a coherent whole. It is not a book which the authors of the *New-castle Programme* seem to have studied. It was published nearly ten years ago, but it is not out of date, nor will it be to any who care for political thinking of a very high order on great matters concerning the State. And what is most remarkable of all is this: that it is, as a whole, a protest against popular government and a panegyric on popular government in the United States. There and there only has Sir Henry Maine found what seemed to him sufficient and ample checks on the Democracy which, in its unbridled state, he dreads and dislikes. Of Democracy, however, as such, there is in America neither dread nor dislike. No American believes that his own Government could have been established on any other basis; but neither does any thinking American believe that its prosperity or its permanence would be promoted by abolishing the existing checks on Democracy."

Mr. Smalley's paper is to Englishmen both interesting and instructive, as a comparison between the English and the American types of democracy. In England the democratic principle is not yet completely triumphant, but the Royal power has for years been nothing more than a name, and the two remaining obstacles to democracy, the legislative power of a hereditary caste and the legislative power of the English Church, have obviously but a few years to last. When these are gone, we shall have a Democracy in which change in the Constitution will be as easy as in the United States it is difficult. It is obvious that such a state of affairs will be one of dangerous instability, a state of affairs in which some unwise change might be made in obedience to a transient popular enthusiasm. The American method could hardly be engrafted on the English Constitution; it is far more likely that the check put in force will have some resemblance to the Swiss referendum. But this expedient alone would not enable us to avoid one of the principal dangers of popular government of the type now taking shape in England—the danger that immediate popular control will impair the stability and the efficiency of the Executive.

JUSTIFICATION FOR THE KOREAN WAR.

By KANZO UCHIMURA.

"From whence come wars and fightings among you? Come they not hence, even of your lusts that war in your members?"

So run the weighty words of the great Apostle, as simple as they are profound, as demonstrable by the world's history as by the sad experiences of our daily lives. So much is his teaching generally true that more than one pious sect of Christians has pronounced war as unjustifiable upon any ground, and has forever condemned the sword as a weapon to be employed in the settlement of human affairs. And this materialistic century, conscious alike of the "lusts" that actuated all its wars, as of the unavoidableness of the same, has come to believe "lusts" as just causes for all wars, and to know of no war that has not "lusts" its primary aim and purposes. "War for Righteousness' sake" is now no more obsolete than the ways and customs of the Puritan days, and men only talk of such a war without any of them ever believing in it. No wonder then that the struggle now before us is construed with similar spirit, that sinister motives are imputed to us in our present occupation of Korea, and in the final conflict we have entered upon with our laughing and impudent neighbour.

But no one will doubt the existence of righteous wars in history. That was a righteous war that Gideon fought against the Midianites, when with "his sword and the Lord's"

he slew a hundred and twenty thousand by the waters of Jordan. That was also a righteous and just war that Militiades led against the Persian host, when, annihilating them upon the plain of Marathon, he checked the inroads of Asia into Europe. We call that a righteous and godly war that Gustavus Adolphus carried into the heart of Germany to relieve it from the Catholic oppression. The American Revolution was another righteous war, fought for mankind as they fought for their own independence,—an altogether noble and justifiable war. If wars in general come out of "lusts," all wars do not so come; and depreciate not the divine humanity by denying it altogether a nobler motive than the love of gain and empty honour, as it goes into war.

We believe the Korean War now opened between Japan and China to be such a war,—we mean, a *righteous war*. Righteous we say, not only in a legal sense, for legalities can be manufactured as sophistries of all kinds can, but righteous in a moral sense as well,—the only kind of righteousness that can justify any war. Let not Christendom doubt such a war, when righteous war having practically ceased to be reality within its own bounds, such a war is waged by a nation other than Christian. Such a war is not new with us, and we with our own light have believed in it and fought it. Heathenism if dark is earnest, and it may yet retain enthusiasm which Christendom has lost with its superstitions. A sort of chivalric spirit is yet with us, a spirit akin to Spartan courage, and Roman valour to crush the proud. If the West has passed its era of enthusiasm, the East is still in it, and a righteous war is still possible with us.

That Japan — a nation has entered only very reluctantly upon the present conflict must be acknowledged by all intelligent observers of our late situation guided by a very *unwarlike* Cabinet. At the time of the greatest prospect for the country's internal prosperity, war was a thing most to be avoided, and if "lusts" were our primary aim, no war should be our first and last policy. But China behaved against us, now for more than a score of years in as un-neighbourly and insolent a manner as we have ever been able to bear in our national existence. The great Saigo had seen this long before, and his sanguine wish for the immediate chastisement of China cost him his life, and the nation a terrible civil war. Indeed, *we killed our own that we might avoid a conflict with our neighbour*, so desirous have we been of peace. But how did China act against us in 1882, and again in 1884, and ever since then? Constant effrontery against us in Korea by constant interference with our friendly policy with that nation. While we laboured to open it to the world, China laboured to close it; and by imposing upon it its own Mongolian régime, endeavoured to keep it as a part of its own system,—a "hermit nation" like its own bulky self, alien to civilization and the world's progress. For the last ten years, Japan, who first introduced it to the world, was nothing more than an intruder in the Korean court, while China who came after, reigned supreme in all its affairs. It was a case of common incivility that aims to turn a man's affection from his trusted friend, to win him over by constant favours meant to satisfy his baser nature. But we bore this as a matter too puerile to be made a cause for bringing about an open infraction of international peace; and the nation that promised to be another rising star in the East has remained to this very day an occult star, with its resources all sealed, and bribery and misgovernment walking out in open daylight. What man with human heart could bear the treatment given to the body of poor Kim, an acknowledged guest of the Japanese nation, assassinated upon Chinese soil by an emissary of the Chino-Korean Government? The body and the assassin were sent to Korea in one of China's own gunboats to be delivered over to Kim's enemies, the body to be mutilated for exposure through the land, and the assassin to be loaded with honours of all kinds! Patience alone has kept us from open rupture with this insolent nation—an open violator of social laws, a foe of humanity, and

defender of savagery. And when the Tonglioh rebellion broke out in southern Korea,—itself a result of misgovernment conducted under Chinese interference,—how ridiculous to induce its puppet-government to call for aid from the "Mother Country," to bind it more by obligations which the country needed not, as was proved soon afterward. China has incapacitated in order Korea to keep it always her hanger-on,—the meanest bit of international policy that we know of in history. It is the very same policy pursued by a panderer to keep his victims always poor and dependent, that he may gain profit and glory thereby. Some fifteen millions of helpless souls kept ignorant and defenceless merely to satisfy the envy of the world's most retrogressive nation,—could this be borne by lovers of Freedom and ardent admirers of human rights? We only wished that we were not the first to raise our voice against the evil, that more Christian nations than we had taken the matter into their hearts long before we did, to heal this "open sore of the world."

Right here, legality steps in, and argues with us that we have no right to intermeddle with Korean affairs any more than China has; that we in sending our troops there are just as much blamable as China is in sending hers; that we and not she brought the final rupture of peace. To which our replies are as follow:—

1.—Interference itself is not wrong. We believe in the *laissez-faire* principle only to a certain extent. We have no right to interfere with our neighbours because they believe in religions not our own, because they have tastes different from ours, because they are engaged in trades unlike ours. But we have right to interfere, and it is our duty to interfere, when they are dying of hunger, when they are attacked by robbers, when our plain common-sense shows us that they are rapidly going toward the brink of destruction. *Laissez-faire* is a vicious principle if it means total indifference to all human souls. Christ and Buddha, Livingstone and John Howard would never have been were *laissez-faire* in this sense the heaven-settled law of society. Where it ends and where interference should begin is always not easy to tell; but that there are *intolerable* woes no sane man can doubt. When the Swedish Gustavus interfered with German politics, and Ferdinand and Wallenstein were curbed in their evil purposes, his action was good, noble, and manly. The hero of Lützen was a divine man, and well does the Protestant Germany cherish a regard bordering upon worship for its Swedish champion and deliverer. When the English Cromwell interfered with Alpine politics, and lent all his power and influence to the helpless Piedmontese to help them against the Catholic Duke of Savoy, his action was noble, manly, and Christian. The British "pity" was highest and purest then, and history echoes its glory for the vengeance demanded for "slaughtered saints, whose bones lie scattered on the Alpine mountains cold." Such interference, long ceased to be a reality in these "economic centuries," are worth repetition, if human welfare is really to be cared for; and the fact that they are now obsolete in Western politics is no reason that they should not be taken up in Eastern. We interfere with Korea because her independence is in jeopardy, because the world's most backward nation is grasping it in her benumbing coils, and savagery and inhumanity reign there when light and civilization are at her very doors. Right we have not to disturb her healthy peace, much less to degrade her; but to save her and to free her from evils too glaringly apparent, our sacred right of neighbourhood compels us to vigorous interference on her behalf.

2.—International law can in no wise condemn us for our first sending troops to Korea, for we did this in strict accordance with the letter and the spirit of the Tientsin Treaty of 1882. If an objection is still raised against us that the force we sent was altogether too large for the protection of our citizens there (the object expressed in our manifesto to China), we have but to ask our critics to examine the barbarities committed by the Chinese soldiery in 1884. And if we are still questioned as to the propriety of our occupying Soul at

once when the Chinese camped at Gasan, our plain reply is that we knew too well by our past experience the insidiousness of the Chinese politicians, and that we have a right to guard against knaves, in this case as in any other. If we are still criticized on the ground that our procedure could not but invite doubts and suspicions, we would only ask, "How else would you manage yourself, were you in our own position?" As we have said, legalities are manufactureable, and as such we attach but little value to them as justifiers of our cause; but considering what International Law demands, we believe we have been consistent with all its requirements.

3.—It is yet to be settled which side opened fire first in the recent naval engagement near Ginsen. We believe that China did; but we fear patriotism may bias us in this our judgment. But that is a minor question useless to decide the all-important question of the justice of either side in the war, which fostered and which avoided the war,—that is the question above all questions.

Let it be noticed here that it was well-nigh two full months from the beginning of the complication to the final rupture of peace. We on our side maintained the independence and integrity of the Korean Kingdom, and through our long telegraphic correspondence with the Chinese court, our constant efforts have been to cause that nation to join us in united efforts to reform the state of affairs in the peninsula. How our pacific proposal was haughtily rejected, how, on the contrary, China's emissaries at the Korean Court tried to foil all our efforts for reform, how China instigated the corrupt Court against us, and how all this while the Chinese were briskly arming themselves to meet us upon land and sea,—all these things we know, and any fair judge can know them beyond any possibility of doubt. If the well-known propensity of Chinamen to cheat foreigners has had its most conspicuous exercise, it was during the first eight weeks that preceded the first day of August, 1894, the date of the declaration of the war. Our neighbour was treacherous to the last degree, and civility failing to carry our point, we decided upon war. We feel confident that never in her history was China allowed to cheat more freely than in her present relations with Japan. Imagine had she had some Western Power to deal with instead of her good-natured Eastern neighbour; she would have learnt to her immense cost long before this how dangerous it is to cheat so long. The land that gave Mencius and Confucius to the world knows their morality no more; and the civilized world begins to see that it needs another law, different from that which the nations observe,—even the law of muscular force,—when it deals with this people, destitute of faith and honour and respect.

But leaving all legalities aside (though we by no means disregard them), is not a decisive conflict between Japan and China unavoidable?—we might almost say is it not a historical necessity? A smaller nation representing a newer civilization lying near a larger nation representing an older civilization,—was there ever such a situation in past History without the two coming into a life-and-death struggle with each other at last? Greece versus Persia, Rome versus Carthage, the England of Queen Elizabeth versus the Spain of Phillip II.—these are the more prominent examples to be mentioned, and Marathon, and Zama, and the "Invincible Armada" were as unavoidable as the two kinds of civilization were irreconcilable. And in the upward progress of the human race, Providence has always willed that the newer be represented by the smaller, and the older by the larger; evidently we believe that spirit be tried against flesh, and quality against quantity. And in the conflict of two such nations, after all vicissitudes of fortune, the palm of victory always fell upon the newer and smaller, evidently we also believe that mankind may honour "the spirit that quickeneth," and despise "the flesh that profiteth nothing." And so once more in history, here in the Far East, the same grand lesson is to be taught by bringing the newer and smaller Japan in conflict with the older and larger China. The

Korean war is to decide whether progress shall be the law in the East, as it has long been in the West, or whether retrogression, fostered once by the Persian Empire, then by Carthage, and again by Spain, and now at last (last in the world's history, we hope) by the Manchurian Empire of China, shall possess the Orient for ever. Japan's victory will mean free government, free education, free religion, and free commerce for 600,000,000 souls that live on this side of the globe, while her defeat and China's victory will mean—what, let the reader judge for himself.

In a war that carries such significant results as these, what friend of humanity will not wish God-speed to Japan and her cause. Let America ask this question to herself,—America who first led us to light and civilization, as Japan is now trying to lead Korea,—and the spirits of her Pilgrim Fathers, of William Penn and Lord Baltimore, of Lincoln and Sumner and other heroes, shall in unison join the cause that we represent here and now. Let England do likewise; and her Simon de Montfort, Hampden, and Cromwell, and her Puritan divines, her Wilberforce and Cobden and Bright, and all who loved justice and liberty, shall be Japan's unfailing friends. Let France do likewise; and her Lafayette and Mirabeau, Coligny and his Huguenot followers, Victor Hugo, of recent date, and all her chivalric haters of despotism shall be the supporters of "the smaller and newer." Let Germany do likewise; and her Luthers and Lessings and Schillers, and immortal Goethe who asked for "more light," and all her "watchers upon the Rhine," shall one and all be well wishers of Japan's conquest in the East. Let Italia do likewise; and her Dante and Savonarola, Rienzi and Arnold of Brescia, Garibaldi and Victor Emmanuel,—all her souls of intense sincerity, whose kinship in temperament we claim,—shall in no wise side with our enemy, the apostle of oppression and ignorance in the East. And finally, let our good Slavonic neighbour ask the same question of herself; notwithstanding her exiles in Siberia, and her rigorous censorship of the press, laws far from liberal, was not the aim of her mighty founder the enlightenment of the human race? From the Russia of Peter the Great we can expect hearty friendship; and if need be even co-operation, in our present attempt to civilize the East. Yea more, let the Universe ask this question of itself, and see whether it wishes to doom one half of the human race to the lethargy of Chinese civilization by keeping them forever under the Manchu rule! It was the late Louis Kossuth of Hungary who said that in his opinion the two greatest men of the nineteenth century were Prince Bismarck and the Emperor of Japan. He said this because of the mighty work inaugurated by our worthy Sovereign, not only for his people, but for the millions of benighted Asia as well. Japan is the champion of progress in the East and who except her deadly foe—China, the incorrigible hater of progress,—hopes not and prays not for our victory!

Yet in thus calling upon the nations of the world to see and understand the cause we fight for, we are not begging for their aid in the conflict. The struggle is too glorious a one to be shared with other nations, and we single-handed desire to fight it to the end. *Sympathetic neutrality* is all that we ask from them at present. Let Japan have this opportunity of serving the world, as she has been served by it too long in many things.

We began by saying that the war we entered upon is a righteous war. That it is so will be evident as soon as we shall have reached its end. We took up the cause of our poverty-stricken neighbour, and that nothing of material profit shall accrue to us from helping her is more than evident. The indemnity from China would never exceed our expenses in the war, seeing that her humiliation is not our aim, but her coming to consciousness of her own worth and duty, and to friendly co-operation with us in the reformation of the East. Thus we fight with eternal peace in view, and Heaven help our bleeding ones as they fall in this holy war. Never before in our history has the nation been

fired with a nobler aim, and now as one man we march to meet our foe, knowing that

"Whether on the scaffold high,
Or in the battle's van,
The fittest place where man can die
Is where we die for man."

Kyoto, Japan, August 7th, 1894.

CORRESPONDENCE.

MISREPRESENTING THE JAPANESE.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—Foreigners are sometimes blamed for not making themselves better acquainted with the Japanese people. Some of us have few opportunities, and others have little inclination to learn more than what is set directly before our eyes. We probably know as much as is necessary of the characters of those tradesmen, officials, or students, with whom we deal, and if we are satisfied with this knowledge, we may be content to plead guilty to a charge of mental apathy, of lack of intelligent curiosity. No more serious accusation can be brought against us. Missionaries, however, are in a different position. The nature of their work demands an intimate acquaintance with the people, their language, habits, and character. They are expected to possess this acquaintance, and their reports and speeches to those at home are received with confidence and eagerness. Accordingly it is both surprising and painful to read the reports of the C. M. S. Ladies' Anniversary Meeting held in London last May. Miss Box, a young lady who has resided in Japan for three years and a half, and who is head of a training establishment for Bible-women "portrayed in a striking manner the degraded condition of Japanese women, whose only possible chance of salvation, according to the mixed religion which she (sic) believes, lies in becoming a nian in her next life." Her pupils "are ignorant to a degree we can hardly realize in England," and so forth. This lady's address "retained the close attention of her audience from her first word to her last." Three years is not a very long time to study Japanese character, but it ought to be long enough to discover other characteristics of Japanese woman besides ignorance and degradation. Other observers have found amongst them "the ornament of a meek and quiet spirit," a willingness to "submit themselves to their husbands," and other virtues inculcated in the Bible. It is true that even a year after baptism, Japanese women "know nothing of the Old Testament, and look on its histories when explained to them much as English girls regard fairy tales."

Turning from the report of this meeting to that of the Bible Society, we find the Earl of Harrowby says: "We go to the islands of Japan, where we find a very backward and savage and degraded race. . . . The four Gospels have been given to that people, and we are now working on three of the Epistles, for which we are told they are ready and anxious." The noble earl ought to have been more explicit and accurate. It is hard to understand how such qualities as he attributes to this remarkable people can co-exist with a readiness and anxiety for the Epistles.

Yours truly,

August 7th, 1894.

KARUIZAWA MISSIONARY CONFERENCE.

PROGRAMME OF 1894.

SUNDAY, August 12.

11 a.m., Rev. B. Chappell: 7.30 p.m., Rev. W. C. Buchanan.

MONDAY, August 13.

9.30 a.m., Leonard Wigham: "Mission Work in Chung King, West China."
Rev. Dr. MacGregor: "Mission Work in China."

WEDNESDAY, August 15.

9.30 a.m., Miss Cosad: "Evangelistic Work among Women."
Miss Porter: "Work among Children."
7.30 p.m., Rev. H. B. Price: "The Spiritual Dangers peculiar to the study of the Language."

FRIDAY, August 17.

9.30 a.m., Rev. Geo. E. Albrecht: "The Teaching of Jesus in its relation to Judaism."

7.30 p.m., Rev. Dr. MacCaulay. Question Drawer.

SUNDAY, August 19.

11 a.m., Rev. Dr. McGregor.
7.30 p.m., Rev. J. H. Pattee.

THE CHINESE RESIDENTS IN JAPAN.

PUBLIC MEETING IN YOKOHAMA.

A largely attended public meeting was held in the rooms of the Chamber of Commerce on Thursday afternoon for the purpose of considering the present position of Chinese in the employ of foreign residents. Among those present were Messrs. J. Dodds, David Jackson, J. C. Budd, A. S. Garfit, A. J. Lines, R. D. Robison, J. T. Griffin, E. Whittall, D. Fraser, J. F. Lowder, P. Syme Thompson, J. D. Hutchison, A. H. Cole Watson, A. O. Gay, J. Holm, A. Conit, Ryle Holme, J. P. Mollison, James Walter, N. P. Kingdon, W. Ross, W. J. S. Shand, W. W. Till, R. A. Wylie, H. J. Sharp, E. Leopold, A. J. Wilkin, G. Middleton, M. Kaufmann, C. Weinberger, and others.

On the proposition of Mr. J. D. HUTCHINSON seconded by Mr. LEOPOLD, Mr. James Dodds was voted to the Chair.

The CHAIRMAN—Gentlemen, this meeting has been called in accordance with the terms of the following notice:—"A meeting of bankers and merchants will be held at the Chamber of Commerce Rooms (Keil's Building) to-morrow (Thursday) afternoon at 4 o'clock for the purpose of considering the present position of Chinese now in their employ." In acceding to your wish to occupy the chair at this meeting, I do so merely from a desire to facilitate business.—(Hear, hear.) I think I may inform you that since this meeting was first decided upon a change has occurred in respect to the position which we were called here to discuss. The Japanese Government acting quite within their rights, have issued an Ordinance dealing with the residence of Chinese now within their borders. It would have been quite within their power to expel them, but to avoid all unnecessary hardship or inconvenience, the Government offers to allow the Chinese to remain within the country if certain conditions are complied with by them; they also invite them to register at the Kencho so as to be able to afford them all due protection. These terms, cannot, I think, be called otherwise than liberal—(hear, hear)—and I think that we cannot do better, we who have Chinese in our employ, than to advise them to accept the terms and to register accordingly. As an employer of Chinese that is the course I have taken.—(Hear, hear.) I understand that the fears among the Chinese generally are very strong, and although they are so groundless, are, in any case, likely to become more exaggerated if not at once allayed. I think that the terms of the Ordinance are very reassuring. Now, as the question has been made so clear, there is nothing more that we can do, so far as I can see, than for this meeting of bankers and merchants, to appoint among ourselves a committee who can confer with the American Consul whenever the necessity arises of affording additional protection to the Chinese. The project is put before you, simply in order to open the discussion, and I throw out this question of the appointment of a Committee merely as a suggestion so as to obtain your views and expressions of opinion upon the question.

Mr. J. P. MOLLISON said that he quite agreed with all that the Chairman had said in regard to the terms of the Japanese Government being all that was liberal. Before the discussion commenced, however, he would like to know whether the meeting desired the presence of the gentlemen of the Press. He merely threw this out as a suggestion.

The CHAIRMAN said that this was a matter entirely for the meeting to decide. He would like to hear the opinions of the gentlemen present upon the matter.

Mr. N. P. KINGDON thought the Press should remain and report the proceedings. It was highly desirable that no false reports as to what passed at the meeting should be spread abroad. Besides, nothing that would be said that afternoon would be likely to give offence. He was in favour of the gentlemen of the Press remaining to report the proceedings, and would put it to the meeting as a proposition.

Mr. W. G. BAYNE seconded.

The CHAIRMAN said that personally he was quite in favour of the Press being represented.

Mr. LOWDER—What this community suffers from is not representation but misrepresentation by the press, and I am very glad to see its representatives here to-day.—(Hear, hear.)

The proposition was then put to the meeting and carried.

The CHAIRMAN—An important letter bearing on the question before us has been officially received by Mr. David Jackson, of the Hongkong and Shanghai Banking Corporation, from Mr. McIvor, the Consul-General of the United States in this port. With your permission I will read it:

Consulate-General of the United States,
Kanagawa (Yokohama), Japan.

To DAVID JACKSON, Esq. H. & S. B. Co.,
Aug. 8th, 1894.

DEAR SIR,—I acknowledge the receipt of your communication of 7th August, making enquiry as to the meaning, effect, and application to be made of Imperial Ordinance No. 137 of the Japanese Government. Allow me to explain that my delay in answering your note has been caused by my absence in Tokyo. I would say that I am unofficially but satisfactorily informed that the purpose and intent of Ordinance 137 is simply to require registration in order that the police authorities may know where these non-belligerent subjects are living, their names and occupations, with a view of giving them that protection which the Government of Japan wishes to guarantee to non-belligerents in the interests of humanity.

The purpose of the Ordinance and the required registration seem to have been very generally misunderstood. There is no intention or desire that the Chinese by submitting to it shall become Japanese subjects. There is no intention of imposing a tax; the Japanese Government even going so far as to allow them still to hold land in the Settlement under the conditions under which they have held it in the past. It is not intended even to impose a tax in the form of a trade license.

The registration then for the present will make no difference whatever in the status of the Chinese except that the police will give them the better protection, and except a small registration fee which they will have to pay. Of course the Japanese Government reserves the right to enforce such later enactments as International Law may permit, and they do not guarantee that they will not impose taxes later, but, as I understand it, they have, at the present time, no such intention. I would say that I am satisfied that their action as to Chinese here has been most generous, and that the honest wish of the officials is that non-belligerent Chinese within the territory of Japan shall be thoroughly protected and every force which they have at their command, I believe, will be used for this purpose.

I am, Sir, yours respectfully.

N. W. McIvor, Consul-General.

Mr. LOWDER—I think that letter would assure even the most unbelieving Chinese. I think that in the face of this explanation it would be quite undesirable to appoint the committee. The letter is quite satisfactory from every point of view.—(Hear, hear, and applause.)

Mr. A. O. GAY—I quite agree with Mr. Lowder. The Chinese will be quite safe under the terms of the Ordinance. They are, however, very timid people, but I don't think this meeting could do more than advise them to comply with the demands, and remain in foreign employ. This is all we ought to do.—(Hear, hear.)

The CHAIRMAN—In regard to the appointment of the Committee, it was suggested to me outside the room as a practical way to arrive at an issue, although personally I am not in its favour. I think myself that it will be sufficient for us all to advise our Chinese employes that it would be most desirable for them in their own interests to accept the conditions laid down by the Japanese Government.

Mr. WHITTALL said that general approval must be expressed of Mr. McIvor's letter. To go any further in the matter would not answer any purpose.

The CHAIRMAN thought it desirable to hear expressions on the other side. Some difficulty might have presented itself to some gentlemen while examining the Ordinance, which had not been conceived of by others.

Mr. JAMES WALTER said that the Chinese had at first great fears that by complying with the terms of the Ordinance they might become Japanese subjects. It was this reason which made them afraid of registering, for they thought that when once they had become Japanese subjects they might not be allowed to leave the country. The meeting could, however, assure them that this difficulty did not exist or was at an end, and that they need not be afraid to register.

Mr. WHITTALL—The registration was not devised with any intention of making them Japanese subjects, so far as I can learn, but simply to furnish information so that the police may the more efficiently protect them. I think this meeting should advise the Chinese to fall in with the terms of the Ordinance and to stop in our employ. They must register themselves, of course, within the time of grace.

Mr. JAMES WALTER—We should urge them to register.

Mr. WHITTALL—And dismiss the idea of their becoming Japanese subjects.

The CHAIRMAN—The point is fully covered in Mr. McIvor's letter.

Mr. MOLLISON suggested that a translation be made of Mr. McIvor's letter and the same be widely circulated among the Chinese. It would have a most reassuring effect, he felt certain. And it was just such a reassurance which that meeting could give.

Mr. KINGDON asked if Mr. McIvor guaranteed in addition to affording protection to the

Chinese, the Japanese Government would not force those who registered to become Japanese subjects.

Mr. JACKSON—He is perfectly satisfied that all due protection will be afforded them. In a personal interview, Mr. McIvor assured me that the Chinese could rest perfectly assured that they would be efficiently protected by the Government.

In answer to another question, Mr. JACKSON said the United States Consul-General had assured him that the Japanese Government would not interfere in any way with any Chinese leaving the country after he was registered. If the Chinese had to leave at a later period he was sure that they would have due notice, twenty days at the least, and no restriction would be placed upon their leaving for home.—(Hear, hear.)

Mr. LOWDER—I beg to move as a resolution, for the approval of this meeting, "That this meeting is of opinion that Chinese residents who elect to remain in Japan are receiving from the Japanese Government every assurance and every protection that may possibly be required by International Law."—(Applause.)

Mr. DONALD FRASER—I beg to second that.

The CHAIRMAN—I think the resolution just proposed by Mr. Lowder is a fit and proper one to be adopted at this meeting.—(Hear, hear.) It disposes of the case at once, and all of us now present can individually assure his Chinese employes that this resolution is the opinion expressed by this meeting. I think it will allay all their fears of any undue interference. Beyond this we cannot go, as I explained in my introductory remarks. Mr. McIvor has written a private note to Mr. Jackson assuring him that he may use the official letter as he thinks best—that it was written in fact to help brush away any misunderstanding that might have gathered upon the subject.

Mr. A. J. LINES—There is one point in Mr. McIvor's letter which I should like to refer to. I see that the Japanese reserve to themselves the privilege of exercising belligerent rights against the non-belligerent Chinese at any future time. That time may be to-morrow, or the day after, or immediately after the expiration of the 20 days' notice. No one knows when it may be enforced. They may be made Japanese subjects or be summarily forced to leave the country. We want some assurance that so long as they do nothing officious or against the Japanese that they remain in this country at peace. We desire to secure for these inoffensive people an assurance that they may continue at their businesses unmolested. Mr. McIvor's letter does not cover that point, nor could he assure me upon it in the course of a private interview. I want to be assured that there will not be any exercise of arbitrary powers. I fully understand that the Government has issued stringent police regulations in regard to the Chinese so long as they do not offend against the customs of this country. I think this meeting ought to ask that the Chinese be allowed to remain with us so long as they are peacefully employed.—(Cries of dissent.) If we do not do something like this what is the good of calling the meeting?

The CHAIRMAN—I think that in seeking that assurance we should be pushing the Japanese Government a little too far.—(Hear, hear.) I am personally opposed to such a course. Japan is and has been reasonable in her demands, and in the event of future emergencies compelling her, she would, I think, give fair and reasonable notice.—(Hear, hear.) I do not see that we can ask for any more guarantees.—(Hear, hear, and "Quite so.") It would not be wise or politic.

Mr. LINES thought that the meeting could have gone farther than it had done. They had been called together to consider what could best be done in the interests of their Chinese clerks, and to ascertain each others' private opinion on the subject. What they had done was not sufficient for the purpose.

The CHAIRMAN—As I explained in my opening remarks, fresh light has been thrown on the subject, and really there was no necessity for holding the meeting now. It was well to go on now, however, and carry the business to a conclusion.—(Hear, hear.)

Mr. LINES—Then I propose that as the meeting was called unnecessarily what has taken place up till now be annulled.—(Cries of dissent.)

The CHAIRMAN—I do not see that it is possible to annul what has been placed on record. I think that the meeting is doing all that it can in the matter.—(Hear, hear.) We had not all had access to Mr. McIvor's letter before the meeting, and as it has cleared the position, the business of the meeting, but for a proposition which is about to voted upon, is ended. Now we are in a position to advise our Chinese employes with confidence that they will be doing the best thing for themselves by complying with the terms of the Ordinance.—(Loud applause.)

Mr. GAY—There is nothing more to do than to pass Mr. Lowder's resolution.

The CHAIRMAN then read the resolution which was as follows:—

That this meeting is of opinion that Chinese residents who elect to remain in Japan are receiving from the Japanese Government every assurance and every protection that can possibly be required by International Law.

The resolution was then carried *nem. con.*

Mr. LOWDER—I will add to the words of my resolution, for the benefit of a previous speaker, that in all matters regarding International Law, the Japanese Government has been and is well advised, and should it come to giving the Chinese notice to leave, you may depend upon it, that one month's, possibly six months' notice will be given them.—(Hear, hear.)

A vote of thanks to the Chairman concluded the meeting.

LETTER FROM ST. LOUIS.

(FROM OUR OWN CORRESPONDENT.)

St. Louis, Mo., July 11th.
